What It Means to be President

By

Calvin Coolidge

WOOD ENGRAVING BY HOWARD MC CORMICK FROM PHOTOGRAPH © HARRIS & EWING

"If others make mistakes they can be relieved, and oftentimes a remedy can be provided. But the President cannot retire. His decisions are final and usually irreparable. This constitutes the appalling burden of his office"

AS I recall the mounting events of the years I spent in Washington, I appreciate how impossible it is to convey an adequate realization of the office of President. A few short paragraphs in the Constitution of the United States describe all his fundamental duties. Various laws passed over a period of nearly a century and a half have supplemented his authority. All of his actions can be analyzed. All of his goings and comings can be recited. The details of his daily life can be made known. The effect of his policies on his own country and on the world at large can be estimated. His methods of work, his associates, his place of abode, can all be described. But the relationship created by all these and more, which constitutes the magnitude of the office, does not yield to definition. Like the glory of a morning sunrise, it can only be experienced—it cannot be told.

In the discharge of the duties of the office there is one rule of action more important than all others. It consists in never doing anything that someone else can do for you. Like many other good rules, it is proven by its exceptions. But it indicates a course that should be very strictly followed in order to prevent being so entirely devoted to trifling details that there will be little opportunity to give the necessary consideration to policies of larger importance.

Like some other rules, this one has an important corollary which must be carefully observed in order to secure success. It is not sufficient to entrust details to someone else. They must be entrusted to someone who is competent. The Presidency is primarily an executive office. It is placed at the apex of our system of government. It is a place of last resort to which all questions are brought that others have not been able to answer. The ideal way for it to function is to assign to the various positions men of sufficient ability so that they can solve all the problems that arise under their jurisdiction. If there is a troublesome

situation in Nicaragua, a General McCoy can manage it. If we have differences with Mexico, a Morrow can compose them. If there is unrest in the Philippines, a Stimson can quiet them. About a dozen able, courageous, reliable, and experienced men in the House and the Senate can reduce the problems of legislation almost to a vanishing point.

Illustration by
JOSEPH SIMONT

WHILE it is wise for the President to get all the competent advice possible, final judgments are necessarily his own. No one can share with him the responsibility for them. No one can make his decisions for him. He stands at the center of things where no one else can stand. If others make mistakes, they can be relieved, and oftentimes a remedy can be provided. But he cannot retire. His decisions are final and usually irreparable. This constitutes the appalling burden of his office. Not only the welfare of 120,000,000 of his countrymen, but oftentimes the peaceful relations of the world are intrusted to his keeping. At the turn of his hand the guns of an enormous fleet would go into action anywhere in the world, carrying the iron might of death and destruction. His appointment confers the power to administer justice, inflict criminal penalties, declare acts of state legislatures and of the Congress void, and sit in judgment over the very life of the nation. Practically all the civil and military authorities of the Government, except the Congress and the courts, hold their office at his discretion. He appoints, and he can remove. The billions of dollars of government revenue are collected and expended under his direction. The Congress makes the laws, but it is the President who causes them to be executed. A power so vast in its implications has never been conferred upon any ruling sovereign.

Yet the President exercises his authority in accordance with the Constitution and the law. He is truly the agent of the people, performing such functions as they have intrusted to him. Some Presidents have seemed to interpret that as an authorization to take any action which the Constitution, or perhaps the law, does not specifically prohibit. Others have considered that their powers extended only to such acts as were specifically authorized by the Constitution and the statutes. This has always seemed to me to be a hypothetical question, which it would be idle to attempt to determine in advance. It would appear to be the better practice to wait to decide each question on its merits as it arises. Jefferson is said to have entertained the opinion that there was no constitutional warrant for enlarging the territory of the United States, but when the actual facts confronted him he did not hesitate to negotiate the Louisiana Purchase. For all ordinary occasions the specific powers assigned to the President will be found sufficient to provide for the welfare of the country. That is all he needs.

All situations that arise are likely to be simplified, and many of them completely solved, by an application of the Constitution and the law. If what they require to be done, is done, there is no opportunity for criticism and it would be seldom that anything better could be devised. A Commission once came to me with a proposal for adopting rules to regulate the conduct of its members. As they were evenly divided, each side wished me to decide against the other. They did this because, while it is always the nature of a Commissioner to claim that he is entirely independent of the President, he would usually welcome Presidential interference with any other Commissioner who does not agree with him. In this case it occurred to me that the Department of Justice should ascertain what the statute setting up this Commission required under the circumstances. A reference to the law disclosed that the Congress had specified the qualifications of the members of the Commission and that they could not by rule either enlarge or diminish the power of their individual members. So their problem was solved like many others by simply finding out what the law required.

EVERY day of the Presidential life is crowded with activities. When people not accustomed to Washington came to the office, or when I met them on some special occasion, they often remarked that it seemed to be my busy day, to which my stock reply came to be that all days were busy and there was little difference among them. It was my custom to be out of bed about six-thirty, except in the darkest mornings of winter. One of the doormen at the White House was an excellent barber, but I always preferred to shave myself with old-fashioned razors which I knew how to keep in good condition. It was my intention to take a short walk before breakfast, which Mrs. Coolidge and I ate together in our rooms. For me there was fruit and about one-half cup of coffee, with a home-made cereal obtained from boiling together two parts of unground wheat with one part of rye. To this was added a roll and a strip of bacon, which went mostly to our dogs.

"*The* Presidency *and the* Political Mind"

"The Political Mind," says Mr. Coolidge in his article next month, "is the product of men in public life who have been twice spoiled. They have been spoiled with praise, and they have been spoiled with abuse." But that is the mind the President must deal with if he is to get results. In this further exposition of the Presidential office, Mr. Coolidge also explains why that office has risen in popular estimation, while the Congress, he says, has declined.

Soon after eight found me dictating in the White House library in preparation for some public utterance. This would go on for more than an hour, after which I began to receive callers at the office. Most of these came by appointment, but in addition to the average of six to eight who were listed, there would be about as many more from my Cabinet and the Congress, to whom I was always accessible. Each one came to me with a different problem requiring my decision, which was usually made at once. About twelve-fifteen those began to be brought in who were to be somewhat formally presented. At twelve-thirty the doors were opened and a long line passed by who wished merely to shake hands with the President. On one occasion I shook hands with 1,900 in thirty-four minutes, which is probably my record. Instead of a burden, it was a pleasure and a relief to meet people in that way and listen to their greeting, which was often a benediction. It was at this same hour that the numerous groups assembled in the south grounds, where I joined them for the photographs used for news purposes and permanent mementoes of their White House visit.

Lunch came at one o'clock, at which we usually had guests. It made an opportunity for giving our friends a little more attention than could be extended through a mere handshake. About an hour was devoted to rest before returning to the office, where the afternoon was reserved for attention to the immense number of documents which pass over the desk of the President. These were all cleaned up each day. Before dinner another walk was in order, followed by exercises on some of the vibrating machines kept in my room. We gathered at the dinner table at seven o'clock, and within three-quarters of an hour work would be resumed with my stenographer, to continue until about ten o'clock. Of course, there were many variations, but this was the usual routine.

THE White House offices are under the direction of the Secretary to the President. They are the center of activities which are world-wide. Reports come in daily from heads of departments, from distant possessions, and from foreign diplomats and consular agents scattered all over the earth. A mass of correspondence, from the Congress, the officials of the States, and the general public, is constantly being received. All of this often reaches two thousand pieces in a day. Very much of it is sent at once to the department to which it refers, from which an answer is sent direct to the writer. Other parts are sent to different members of the office staff, and some is laid before the President. While I signed many letters, I did not dictate many. After indicating the nature of the reply, it was usually put into form by some of the Secretaries. A great many photographs were sent in to be inscribed, and a constant stream of autographs went to all who wrote for them.

At ten-thirty on Tuesdays and Fridays the Cabinet meetings were held. These were always very informal. Each member was asked if he had any problem he wished to lay before the President. When I first attended with President Harding at the beginning of a new administration, these were rather numerous. Later, they decreased, as each member felt better able to solve his own problems. After entire freedom of discussion, but always without a vote of any kind, I was accustomed to announce what the decision should be.

There never ought to be and never were marked differences of opinion in my Cabinet. As their duties were not to advise each other, but to advise the President, they could not disagree among themselves. I rarely failed to accept their recommendations. Sometimes they wished for larger appropriations than the state of the Treasury warranted, but they all coöperated most sincerely in the policy of economy and were content with such funds as I could assign to them.

THE Secretary of State is the agency through which the President exercises his constitutional authority to deal with foreign relations. As this subject is a matter of constant interchange, he makes no annual report upon it. Other Cabinet officers make annual reports to the President on the whole conduct of their departments, which he transmits to the Congress. All the intercourse with foreign governments is carried on through the Secretary of State, and a national of a foreign country could not be received by the President unless the accredited diplomatic representative (*Continued on page 92*)

It suddenly broke through Hives's opaque mentality that he still was encumbered with that implement of frog-catching

Dark HAPPINESS

THE first person to encounter the great black limousine and note the puzzling behavior of its occupants was a community half-wit, one "Hives" LaFlemme.

The encounter was unique.

Someone had gravely informed Hives of a newly discovered method for gathering frogs in quantities. With the edible properties of their galvanic parts in mind, one acquired an umbrella and likewise a shovel. Then one hunted such portion of a Vermont meadow brooklet as flowed beneath a bridge. Wading in beneath such bridge, one hoisted the umbrella, at the same time keeping firm grip on the shovel. According to Hives's informant, if one stood perfectly still for a time, the frogs gathered round. The spectacle of a human being holding a raised umbrella under a bridge so attracted and amazed them that one could easily bash them over their respective heads and harvest them copiously.

So Hives had been told. On that information he acted. Out from Lotusville toward Hebron he had trudged, umbrella in one hand, shovel in the other. Reaching the bridge that spanned Barnes Brook, he had pushed through the alders down into the water. Patiently he had experimented, testing pool after pool in the golden-brown current. He had held the umbrella close to the surface; he had hoisted it aloft; he had tried it open; he had tried it closed. One small, sleek froglet had scuttled downstream as he entered the shadows beneath the old bridge. Gone to fetch relatives, the half-wit accepted. But the afternoon waned. Soft saffron sunset closed that May day. No frogs appeared in numbers, to gasp at an umbrella and meet a lethal shovel.

NOW and then a gadfly was devoured by a trout. Two jaybirds scolded angrily at the intruder's appearance—he was a long-bodied, narrow-shouldered, small-headed youth whose thin shanks reflected like saplings in the water. Now and then, too, a farmer's noisy flivver would come out of the distance, pass over the bridge, sprinkle sand down from its flooring, and vanish

WILLIAM DUDLEY PELLEY'S *remarkable story of the strange happenings in the* House *of* Cravenside

in a dust-cloud toward Lotusville or Hebron. Hives had stayed motionless till such vehicles were gone. He had sense enough to realize that explanations might be awkward. But as somnolent twilight descended on the mountains, the conviction grew upon him that all men were liars.

He had seated himself on a granite boulder to meditate on this, feet in noiseless current, the unclosed umbrella tilting down his back, when the purring of a motor became audible above him. The acoustics of the spot in twilight were peculiar. Approaching the bridge, the machine seemed to throttle. Forthwith it halted. A safety brake rasped sharply. Whereupon came silence—a long, suggestive silence. . . .

LaFlemme grew perturbed.

Why had the car not continued over the bridge? In which direction was it headed? Why should it halt in that lonely district? No buildings were in sight—only scrub spruce pastures unroofed to the sky. Was Hives guilty of trespass? Had the driver of the car come out there to bag him? Hives had been "bagged" several times in his life. He could state from experience that such a thrill was not pleasant. He knew too of a law against taking fish with guns. Mightn't Vermont protect its frogs from umbrellas?

The halt could be caused, of course, by a tire. Or some amorous swain could have brought his sweetheart thither. . . . But the minutes ticked away . . . soundless minutes . . . and Hives LaFlemme knew panic. No auto doors banged. Came the clinking of no tire tools. Not even voices were in evidence above. Hives had to see that car and know what was happening.

HE GOT to his feet, though his foothold was precarious. Still clutching the umbrella, he skulked along the alders. Down the brook on the south he waded, found an opening in the undergrowth, pushed himself through it. He stood in scented pasture and surveyed the road above him.

That road ran east and west. Headed in the latter direction, a hundred feet from the bridge structure's eastern end, stood a

Standing motionless an instant, one foot advanced as if feeling for some cue, paused a bare-headed woman, hair loosened to her waist!

spectral black car of magnificent proportions. No lights showed about it. Its driver's seat was empty. Slightly off-road in low weeds it was halted, a heavy glass box resplendent with much nickel.

Had it been abandoned? If so, were finders keepers? Hives LaFlemme was perfectly content to lay claim to ownership on such a basis. He had immediately perceived that no game warden would come seeking him in a car so palatial, and with that perception his nervousness vanished. He climbed to the road to investigate closer. He still was unmindful that he carried the umbrella, opened above his head, though the first stars of evening betokened no hostile elements. Over the wall the pasture-path led him. He came on the limousine from behind.

FAR back down the highway, in the easterly direction from which the car had come, LaFlemme saw two figures—a man and a woman. Walking away from him they were. They had nearly reached the curve where a road forked off toward Barnes's.

This, to Hives's intellect, held a stunning significance: The elegant contrivance was being deserted while he watched. He stared at those figures with mouth sagging open. Could he—dared he—make good his salvage rights? To one who stalked frogs with umbrella and shovel such dramatic good fortune did not seem peculiar. Joe Seaver had once found a flivver so abandoned, with no owner appearing to demand its return. That Hives had found a limousine did not alter the premise.

True, he had a bad half-moment when the possibility of an empty gas tank's causing this abandonment punctured his daze. Still, people "out of gas" would scarcely walk toward Hebron—three miles to a house, fifteen back to town—when the hamlet of Lotusville lay a mile on ahead. Furthermore, a glance at the tank showed a huge, clock-faced gauge; three-quarters full, its indicator registered.

No, this car was *abandoned*. Anyone might claim it. Hives started about it in pride of possession. He shifted the umbrella. He tried its left door—which opened with the balance of a door to a bank vault. Blue velvet was disclosed, in deep-toned upholstery.

Then suddenly he squealed.

The machine was not empty. Its tonneau held a woman.

"Great heavens!" she exclaimed—at the sight Hives presented.

Hives nearly bolted. . . .

Leaning backward she had been, dozing perhaps, till something pop-eyed and rakish, overalls rolled to a pair of bony knees, sought to climb in beside her with an opened umbrella. Small wonder she was startled—as startled as Hives. The latter staggered backward.

"Where have *you* come from?" she contrived to demand. Had she been out beside him she might have glanced skyward for signs of freak aircraft. The incongruity of that umbrella, raised in pastoral twilight, suggested that Hives must have floated earthward from some empyrean dilemma, the mammoth umbrella an emergency parachute.

"Th' b-b-bridge," stammered Hives. "I come up from below."

Here was something brand-new in parachutes. One could use them, apparently, to go up as well as down.

"You came up from below? What on earth do you want?"

"This bus—I see 'em leavin' it. If I didn't take it, someone else might."

"You mean that you'd steal it?"

"Naw, only *find* it. I allus did hanker for such a machine."

THE woman repressed an impulse to laugh.

"But why are you carrying that ridiculous umbrella?"

It suddenly broke through Hives' opaque mentality that he still was encumbered with that implement of frog catching. He cast it from him as though it were hot. But it would not depart from him. It turned bottom up and screened his lean shanks.

"Oh I just had it. I allus take a umbrella when I go walkin'. No telling what'll happen 'fore I get back."

"Do you live hereabout?"

"In Lotusville, I do. I live t' Jessie Barnes's." The barnacling umbrella came in for a kick. It really was the limousine Hives wanted to kick, having it snatched from him, so to speak, by the presence of this occupant.

319326

"Does this road, then, lead straight into Lotusville? How far is it?"

"Only 'bout a mile."

"A mile? My goodness! We were right after all."

Forthwith the woman alighted from the tonneau. She got down to the road and glanced impatiently eastward.

"Them folks walked out on you?" Hives demanded curiously.

"My chauffeur walked back to read that last guidepost. My maid walked back with him. Suppose you run after them and tell them to return."

Hives considered. "Naw, 'tain't sense," he finally decided. "If they've went to read a sign, they'll come back anyhow, won't they? All we gotta do is *wait!*" And with the complacent disdain of a master mathematician who has drawn a perfect equation for a novice, Hives kicked the umbrella so that it stayed kicked and turned toward the car which had almost been his property.

The woman bit her lip.

SHE was a comely brunette, some thirty years in age. Her dark hair, unbobbed, fluffed softly on her temples, waved to a knot at the back of her head. She was hatless at the moment. A frock of pastel tan showed pretty throat and shoulders with elbow-length gloves doing service for sleeves. Her waist had a trimness; her ankles a fragility. But men could determine her caste from her eyes.

They were dark, deep-set eyes under high-arching brows. The lashes were long. There were shadows beneath them. They held an appealing, troubled wistfulness, though not unattended by a certain self-possession. Gazing upward into any man's face, they would meet, not his gaze in return, but his heart. . . .

Her features, however, could be marred by her mouth. As a mouth it was pretty. And yet it could be firm. Too firm. That firmness showed now as she scrutinized the east.

"You goin' t' Lotusville?" demanded the loony. Completely around the machine he had walked, till he faced its owner, who responded by a nod.

"You don't live there," Hives contended stoutly.

"Yes, I do."

She said it as though to defend herself with conversation, though the catcher of frogs had knowledge of the servants.

"You do *not!*" he blazed suddenly. "I know everybody t' Lotusville. An' I been told 'bout enough lies t'day. You remember that. I just can't stand it."

"I'm Mrs. Donald Cravenside. If you know everybody in Lotusville, you doubtless have heard of my husband."

Again came the half-wit's audible gasp, and again he recoiled—in a manner of fright.

"You're th' wife o' th' Haunt?"

"Haunt?" The woman turned sharply.

"Don Cravenside's dead. Everybody knows it. They's folks swears they've seen his haunt. I tried to m'self but John Forsythe chucked me off. There's a feller I'm gonna kill some day—if I ever get a good knife—"

"Does all Lotusville—the whole community—really think that my husband is dead?"

LaFlemme was perplexed. What sort of woman was this who didn't know her husband's cosmic status? She repeated her question before the half-wit found his tongue. Withal she seemed confused. Her face was eerie pale.

"Huh, didn't I tell you they's folks as have *seen* him? Joe Gleason claims he met Don Cravenside on the Paris road just week 'fore last. Had a fiddle under his arm, Don Cravenside did—that's how Joe knowed him. And Joe says he—he—walked right through him—"

"Stuff and nonsense!"

"ALL RIGHT. You arsk Joe. Jessie Barnes—she's seed him too. An' old Batty Baldwin swears if *he* ever meets him he'll call on God right then and there—blast him t' stay blasted—"

"I'll give you a whole dollar if you'll run back down the road and tell my servants to hurry."

"But I don't need a dollar. I already got a dollar. (*Continued on page 112*)

DRAWING BY ROLLIN KIRBY

Don't Fool *with* Tonics— They *may* Fool You

By

WILLIAM S. SADLER, M. D.

PEOPLE, when they are feeling a bit run down, are all too ready, as Doctor Sadler points out, to try to get a "lift" out of a patent medicine bottle or pill box. Instead of flying to these panaceas for all ills, which are usually of little or no medicinal value, these persons could improve their general health merely by calling plain horse sense to their aid. After reading this article, sit down and figure out the why and wherefore of *your* "all-in" feeling, what you have been doing that you shouldn't, or vice versa; and in the light of the information given you, discover your own tonic at no cost to your pocketbook. The Editor.

SCENE on any city street:

One man meets another.

"Looking kind of seedy, old man!"

"Yep; I'm not feeling any too good."

"Been working too hard?"

"Guess so. I'm off my feed, don't sleep well, and generally feel 'all in.'"

"Too bad, why don't you go to a doctor and get a tonic, or hop over to the drugstore and get a bottle of Pep-u-up-at-once. Jones said he took a bottle and after a few doses felt like a new man."

And so on, far into the year, the story runs. "Feeling all in?" A few magic pellets or a few doses of tonic will pep you up again!

Bosh! Getting rid of the "all-in" feeling isn't so easy as that.

You simply cannot abuse your body—overwork it, under-exercise it, wrongly feed it, get it all nervously exhausted—and expect it to respond to a panacea out of a bottle or a box.

No. You have to get right down to brass tacks and live by the rules of health.

Not that I wish to go on record as being against all tonics. That would be foolish. Tonics have their place in the field of medicine, but it is a field that should be controlled by reputable physicians, and not entered lightly by the laity.

As a matter of fact, I do occasionally prescribe tonics for my patients, even when I know they will not benefit from them to any extent physically. I do it for a psychological reason.

If a patient is suffering from that "all-in" feeling, he is likely to be in a pretty discouraged frame of mind. The mere act of taking something which he *thinks* is going to do him good helps his mental attitude. And thought is often a mighty efficacious medicine. Then, too, there are certain simple tonics which stimulate the appetite; thus the run-down patient is persuaded to eat more, he is better nourished, builds up strength, and is more easily made to see reason.

However, I am glad to say that nine times out of ten I am able to look a patient in the eye and tell him just what a tonic will do and what it won't do. Then I ask him whether he wants to take one, or whether he is willing to fight this run-down feeling along basic lines. If he is a sensible chap, he's willing to build up basically and will follow out my health rules to the letter.

Just here, before I go any farther, I want to say that alcohol, from a scien tific standpoint, is classified as a narcoti not a stimulant, although it has an *imm diate* stimulating effect. But this is alwa followed by a depressant reaction— "morning after."

Most of the people who crave stimul tion are suffering from low blood pressur or nervous exhaustion, or both, for the conditions frequently go together.

Now, these folks are not going to *cured* by tonics. They may, on the oth hand, be temporarily cheered up a encouraged over an unusual period stress or depression by some good, ol fashioned stand-by like the iron, quinir and strychnine tonic. But what th need, and must have, is a gradual buildi up of the body and nerves by strict tention to rest, diet, exercise, and wo Yes, *work*. For work seldom kills, a taken in the proper doses, it is an exc lent tonic in itself.

BUT we are up against a somewh different proposition when we have l blood pressure *not* associated with ner ous exhaustion.

These low-blood-pressure folks are oft helped by the moderate use of those t stimulants, tea and coffee. The caffein coffee and the thein of tea exert a r stimulating effect upon the brain cells a other nerve tissue.

An interesting thing about coffee is fact that it seems to have a minim tendency to establish "habit toleranc When it is used moderately, one is able get the same effects out of the same d from month to month and from year year. With the majority of the ot stimulants and drugs, the body becor habituated to the dose and it has to gradually increased.

Nevertheless, while many persons

Digitized by Google
Original from UNIVERSITY OF IOWA

tea and coffee in moderation (note I say *moderation*) throughout a lifetime, and do so without apparent harm, we see others who are made so nervous and whose digestion is so upset from their habitual use that we have to proscribe them.

Some individuals, whose blood pressure is down around 100 or below, but who are in good health in every other way, constantly yawn and can hardly keep awake all the afternoon. Very often a cup of ordinarily strong tea, taken about one or two o'clock, will put an end to their yawning. Milk or cream should always be added to the tea. This doesn't weaken the stimulating effect of the thein, but it does tend to prevent the possible deleterious effect of the tannin on the walls of the stomach.

Of course, I am aware that the use of tea and coffee represents themes on which there is a great difference of opinion, medical and otherwise. It is hard to find an intelligent and scientific discussion of the use of these stimulants, because of the fact that the personal equation enters into them. My own attitude is that we should make a special effort to see that children and young persons do not drink tea and coffee habitually; these beverages should not be used until the growth of the nervous system is fully attained. But the vast majority of adults, I think, have sufficient health margin to enable them to use tea and coffee in moderation.

I want it clearly understood that I am *not* addressing this advice to undernourished, highly nervous, irritable individuals with disturbed digestions. It is not possible to nourish nerves by stimulating them, nor to restore digestion by the aid of tonics.

People who are all a-quiver after drinking tea or coffee should have sense enough to leave it alone. There is a decided individual reaction to the use of these stimulants, a reaction not fully explained in the textbooks, and each person must work this reaction out for himself or herself. As a matter of fact, this whole health problem is one that has to be worked out thoughtfully and individually. It is impossible to formulate rules of general application. Only the broad principles of hygiene are universally applicable.

ANYWAY, why bother to buy tonics and stimulants when Nature will provide you with all you need free of charge, asking in return only common sense and self-control.

Take the simple matter of a noon-hour rest. All run-down, debilitated individuals, and those who are highly strung and chronically nervous, should make a point of resting and relaxing for one solid hour around noontime. I also advise all persons over fifty years of age to indulge in such a midday rest.

However, of all Nature's tonics, none can take the place of fresh air and sunshine. The only natural tonic that can compare with fresh air and sunshine in any way is the morning cold bath or shower, with its invigorating effect.

But—and here comes a word of precaution—if you are a bit anemic or run-down, take the cold bath in a warm room, and be careful to see that you don't perspire after it. If, two or three hours after your cold bath, you are dizzy, have a headache, or have chilly sensations up and down your spine, you have stayed too long in the bath or you haven't sufficient reserve energy to react to it. Try taking a bath in moderately warm water for a few minutes, finishing up with a very rapid cold shower.

WHEN we come to consider foods, sugar is probably our greatest tonic. An ounce of sugar contains 127.5 calories, and this energy is almost immediately available when the sugar is eaten.

If you happen to be tired out, or have some great exertion to make, take a little sugar. A few ounces of sweet chocolate bar are a wonderful pick-me-up on a tramp. Of course, like all other good things, taken in excess, sugar becomes dangerous. Here is where your common sense comes in.

A short while back I mentioned that work is a tonic. Let me tell you of a case in point.

Not long ago an unmarried woman in the early twenties came into the office with an empty bottle, saying that she had recently returned from the South and that a doctor down there had given her a tonic, as she was feeling all run down. She wanted another tonic equally good. She was persuaded to undergo an examination to determine whether she really needed a tonic. She didn't. It was a case of an idle, indolent, self-centered woman, living an unhygienic and inactive life on money from an estate. When told that there was no need for a tonic, that what she needed was a saner, normal life, the young woman consented to earn her own living for a year, not touching a penny of the income from the estate. After four months she was an entirely different being.

Let me try to make clear the difference between a medicinal tonic and a natural one. Ordinarily, when we give a medicine to produce certain reactions on the part of the body, we must, as time passes, give increasingly larger doses in order to obtain these reactions. This is the result of what I have already referred to as "habit tolerance." The body, in some way, comes to be able to tolerate increasing amounts of drugs and narcotics. This is well illustrated by the large amount of morphine which drug addicts can take, as well as by the large quantities of arsenic which the Austrian arsenic eaters are able to consume every day.

Now, if we can secure tonic effects from the use of cold baths and exercise, it develops that the same amount of Nature's tonic, or in some cases, even a less amount, will produce a given result and continue to produce it indefinitely. Take, for instance, strychnine as a stimulant for the muscles. It is a tonic and a very valuable medicine in certain emergency crises. We should hardly know how to practice medicine without it. But if we should depend upon strychnine to bring about a cure in the fatigue of neurasthenia, we should have to give increasingly large doses, until they became dangerously large.

In contrast with this, we find that the gymnasium work required to produce the same invigorating results will remain about the same, or even less as the muscles grow stronger. It is therefore evident that the best tonic for the muscular system is not strychnine but commonplace physical exercise.

Let me emphasize again that medicinal tonics should never be taken unless they are prescribed by a physician and that they should be taken only as long as the physician advises.

Someone may here interrupt and ask me about the good old stand-bys of our parents' days—sulphur and molasses, sarsaparilla, and sassafras tea, which were administered to the family around springtime. These tonics were all harmless, to say the least. And if the folks who took them believed in them—well, I've already spoken a good word for the power of thought as a medicine.

It is hard to get the public mind educated to the point where it will realize that it cannot get strength out of a bottle nor energy from a pill. Strength comes from nourishing food. Water drinking and correct breathing are also connected with this program of nourishment.

You cannot fatten or strengthen a tired-out horse by vigorously applying the whip. You must rest and feed him if you would build him up. While we recognize this fact, we also appreciate the value of having a whip handy in case the animal should take a sudden notion to stand still on a railroad track when a fast express is approaching. In such circumstances, the whip would be a life-saver. But just because a whip, a stimulant, is a life-saver in an emergency, don't take it as a steady diet; don't depend on it to take the place of nourishment and rest.

Some folks come to me thinking they need a tonic or stimulant, when really they need a sedative; they need complete relaxation and rest. They are all run down because they have been so long all wound up. These folks have to be taught how to relax, how to overcome habitual tension. Many of these nervous people are extravagant in the expenditure of their vital energy.

A middle-aged woman begged me for a tonic to pick her up. I soon saw that it was just the thing she should not have. Instead, she was given a sedative for ten days, put to bed, and then started out on a fattening diet. After resting six weeks, and gaining twenty-five pounds in weight, I heard no more from her about wanting a pick-me-up.

IF YOU who are reading this article feel that you need a tonic, or a bracer of some sort, don't resort to a medicinal tonic until you have tried some natural means of physical or nervous stimulation or relaxation. Get fresh air and sunlight, have regular hours of rest, eat the food which you find best agrees with you, and live a sane, healthy life. Take tonic baths. If you are nervous, a mild vibration to the spine, in the form of spinal manipulation or massage, is very valuable. But if you do go in for therapeutic treatments, see that the treatments are not too long. I have found that many masseurs and others who practice physical therapy tire nervous people out by treating them for too long a period at a time.

And keep this fact in mind: A tonic or stimulant may fool you into feeling better for the time being, but it is in no way adding to your energy reserve. You have to manufacture your own energy by not trying to dodge the rules of health. Remember, a tonic may fool *you*, but *you* cannot fool life.

(*The End*)

How Saun

PHOTOGRAPH BY UNDERWOOD & UNDERWOOD

A master salesman takes you into his confidence

By HELEN CHRISTINE BENNETT

BUSINESS is thoroughly rotten," said the district manager. "There are parts of my territory you *can't* sell."

The president of the Norvell-Shapleigh Company held up a restraining hand and then, leaning forward, he said:

"There isn't *any* territory that can't be sold," he said. "There isn't anything that can't be sold."

The district manager leaned back in his chair.

"Well, I'd just like to see anybody sell some of the people I've got," he muttered.

The president of the company was a young man, under forty, and he was guiding a newly organized concern over the dangers of the first years.

"Now, see here," he suggested. "Let's have a test case. You and I will agree on some object as the most difficult thing in our line to sell. You will pick out the hardest prospect you can find and I'll sell him."

Roused from his dejection, the district manager looked up with sudden alertness.

"All right," he said, "I'll do it."

The Norvell-Shapleigh Company was a hardware concern, and Saunders Norvell was its young president. Finally he and his district manager agreed upon a *gold house key* as the most difficult object to be sold. The factors that made a gold house key almost impossible to sell were these:

It was absolutely new; sales interest must be wholly built up. It cost about four hundred times as much as an ordinary key and was no more efficient. There was no talking point on value—that is, none was apparent.

For the human subject of the test they picked a banker, a man reputed to be a thorough conservative and a "crab." Norvell had a gold house key made for his own home, and arranged an appointment with the banker. He called at the bank and the two men began talking—about real estate. The gold key was on his watch-chain, and as he and the banker talked, Norvell played with it, taking it out of the fob pocket and returning it. The conversation veered to homes, and after a time Norvell said:

"YOU know, I have a great deal of sentiment about my home. To me my front door means entrance to a haven of content and rest. I've had a gold key made for that door. I don't suppose there's another gold house key on earth but this one."

He took the key from his pocket and showed it to the banker, who leaned forward to see it. Norvell detached the key from his chain and handed it over. It was a nicely made key and the shining gold gleamed invitingly. The conversation ran on, the key was returned. Norvell put it on his watch-chain.

"This key," he said thoughtfully, "epitomizes for me the meaning of home. I am having similar ones made for my wife, for my son, and for

Digitized by Google

ders Norvell *Sold* Gold *House* Keys

. . . to prove to his faltering salesmen that anything could be sold to anybody. In this interview he explains the essentials of salesmanship as he has practiced them

my daughters. I believe that I could give them no more unusual or welcome gift."

For a time the two men talked of other things. Then the banker said:

"I'm rather interested in that theory of yours about the key to your home. I'm a sentimental man. Could you have a key like that made for my house?"

"Why, yes," said Norvell. "Of course, I could."

"Well," said the banker, "I'm going to have one and to give one also to my wife and one to my son. What would they cost?"

Norvell told him. He walked out with an order for *three* keys. He had sold the almost impossible to the most difficult prospect in the countryside. He had done more. He had started a vogue for gold house keys. Not only did the banker get his keys, but other men liked the sentimental idea and there followed a number of orders.

The men in Norvell's organization received the news of the sale with amazement. And within them was born an unbounded admiration and affection for their boss, who had called for the most difficult proposition they could figure on, and had got away with it.

TWENTY years have passed since Norvell sold those gold house keys. But the story is still told from coast to coast by traveling hardware salesmen.

In those twenty years Norvell has fully justified the appraisal of himself as a great salesman. After ten years as the president of the Norvell-Shapleigh Company, with a record of an increase in business of a million a year for each one of the ten, he decided to retire. Three years later he again entered business as Chairman of the Board of McKesson and Robbins, Inc., wholesale druggists of New York City. After another ten notably successful years, Norvell again sold out and again tried to retire. Before the end of the year, he had entered business for the third time, taking his present office, that of president of the Remington Arms Company.

Norvell, the supersalesman, has become one of the ablest executives in the country. But he earned that place step by step. He began as a shipping clerk in the great hardware company of E. C. Simmons in St. Louis, rose to order clerk, salesman, district manager, general sales manager, vice president, and then left to head the Norvell-Shapleigh Company.

When I called on him at the office of the Remington Arms Company, it was with this long record in mind.

"You want me to tell you something about selling," he repeated. "All right. The first thing I would advise any man to do if he wants to sell is to train himself to be a good listener. Americans are probably the poorest listeners in the world, as any man who has traveled much in other countries will testify. Almost every man who applies to me for a job has an idea that his sales ability depends upon his talk. Naturally, he must learn to tell his tale, but it is as vitally important that he learns to LISTEN.

"The first point in salesmanship is to get the prospective customer's attention. There isn't any surer road to a man's attention than to be a good listener to *his* talk. I have sold more goods through asking for advice than in any other way. I've sold hardly less through asking for information. When I traveled—that should be present tense as I still travel and sell—I go into a town and find out something about my best prospects. In one town I found a retail man who had the local reputation of being a shark on tools. I went to him, and asked one simple question. He and I talked for a long time—and he did most of the talking. When we had finished, my goods were sold, and he hardly knew when he bought them. And I had learned things about tools that will help me the rest of my life.

"When I was on the road I suppose I was as fond of talking as any other salesman; anyway, I found it necessary to put a check on myself. I made one week in every four a LISTENING WEEK. It worked so well that I now use it in this business. On a given Monday I make up my mind to *listen* and to *talk as little as possible*. Then I invent excuses for asking the salesmen and various heads of departments to come in to see me, and I question them. In a little while they are talking freely, and I am listening. By the end of the week I have a fund of information that, when classified, is extremely valuable. I have been receptive all week, and the receptive man always learns.

"Salesmen can do likewise. Every month should see one listening week. If a man will patiently and persistently keep notes on what he hears, and classify it, he'll soon convince himself that listening is far more important than talking.

"I ALWAYS pick a salesman who, in answer to my questions, convinces me that he is able to SEE things as well as listen. A salesman needs to see everything about him, to study the road, his customers, the stores, every happening. He needs to know the porter at the hotel or the clerk or the local banker or someone who knows how local things are going; he must learn whose business is up and whose is down, who is prospering and who is not. It isn't much trouble to get all this and it is an enormous help to any salesman.

"With observation must go A GOOD MEMORY. Now, most men have pretty good memories when they concentrate sufficiently. But I find men who read the sporting pages of the newspapers every day and can reel off the names of fighters, golfers, and ball players for years back, but who cannot remember half a dozen names in the towns they visit every year. If these men spent the same amount of time remembering their customers' names they would make better salesmen.

"LET'S summarize as far as we have gone. We have a salesman who can *listen*, *see*, and *remember*. I would now caution him to take care of the WEARINESS FACTOR in selling.

"Some years ago, when I was on the road, I sold from a hardware catalog of 75,000 items. It weighed forty pounds. I watched my sales very carefully and made notes on all of them. I found that by far the majority of the sales were made of items in the first third of the catalog. By the time the customer and I had arrived that far we were weary; we went on in half-hearted fashion and we didn't do nearly so well. As an experiment, I tried beginning with the back of the catalog and working forward. Then I found I sold more goods from the last third. After that I had a regular routine. One trip I started at the front third, the second trip at the middle third, and the third trip I began at the back. The results justified me. I began to sell the whole line and the dealers turned over their stock oftener.

"Not everyone sells from a catalog. But the same thing applies to your sales talk, whatever it is. You tire of it; you don't do your best after the first third. All right; every thirty days take it out and make it over. Put the last third first or the middle third first, or introduce some novelty. Remember that if you are tired of it, you don't do it as well.

"Another way to get results is to make every month a (*Continued on page 110*)

LIONIZED

It's one thing to rope and hog-tie an African lion, but it's another thing to stand over him and cut the varmint loose

By PETER B. KYNE

Illustrated by WILL CRAWFORD

HE SAT beside me in the grandstand at the Salinas Rodeo—a thin, leathery-faced old man with tufts of hair growing out of his ears and the tips of two fingers on his left hand missing, wherefore I knew him for a cattleman even before I noted his hat, his thirty-dollar, high-heeled dress boots, and the tobacco tag hanging from his vest pocket. My diagnosis was further strengthened presently.

Some half-baked young fellow was trying to rope a two-months-old calf. Now, after the first day or two at a rodeo the calves used in the roping events become educated; when they break from the chutes they know what to expect, so they try to outrun the horse. This particular calf was forty feet beyond the dead line and stepping at the rate of a quarter in about twenty-five seconds, when the roper made his cast at fifteen feet—and missed.

"Arggh!" snarled the old gentleman with the tufts of hair in his ears. But the cowboy had another rope, and far down the field he managed to stop his calf. As he came crawling up the rope and endeavored to "flank" the little animal, preparatory to tying it, the calf butted him and knocked him back on his haunches. The cowboy recovered, grasped the calf again, slipped, and went down with the animal on top of him. And it was then that I knew my neighbor for the old cowboy he was.

"Hi!" he shouted in a high, thin voice, like a lobo wolf, "somebody give that calf a rope and he'll tie that cowboy yet!"

His witticism drew a laugh from the crowd, and in the democracy of the moment I dared start a conversation with the cynic.

"I see you know something about roping, yourself," I remarked.

He glanced guiltily at his fingers. "If I'd ever been a first-class roper I wouldn't have had the tips of them fingers tore off, mister," he replied candidly. "Come of letting the left hand stray over the pommel as you throw your dally and give your steer the bust. No, I ain't never been a star roper, although when I was that feller's age I could come home from town drunk, fork my pony backward, and do better roping than the majority of these so-called experts we're asked to pay a dollar to see."

I gave him a cigar, which he commenced to chew immediately. After a while he smiled reminiscently, and said: "Pete Ballantyne an' Mart Gandy was the last of the great ropers. In their prime them two cow-waddies didn't bar lions, which is a fact, because I seen 'em take on a lion that'd escaped from a circus at Tucson.

"THE critter hits for the hills straight off; he's about twenty-five miles up country when he runs across a Lazy Z yearling. With a glad roar he comes boundin' down the hillside an' nails the critter, just as Pete Ballantyne an' Mart Gandy an' me comes down the trail headed for town to see the circus.

"Me, I'm foreman of the Lazy Z at the time. Our ponies, scentin' this here lion, go high, wide, an' handsome for a couple of minutes before we get 'em under control, when we manage to ride up close enough for a look.

"'Which this here's the biggest panther I ever did see,' says Pete, who's never laid eye on an African lion heretofore, although he's seen pictures of them. 'I don't like the deep bass note in his meow, and I'd just as soon we hadn't met up with him, but seein' as how he's wrappin' himself around one of the boss's yearlin's, I reckon it's up to us to see he don't repeat the performance.' An' Pete sorts out his six-shooter.

"'You tarnation eediot, Pete,' I says, 'this here's an African lion, which the African lion is the king of beasts. And as this ain't Africa, I reckon this here anamile has escaped from that circus we're headed for to see in Tucson.'

"Mart Gandy slaps Pete's pistol down. 'Which we ain't goin' to kill no valuable piece of property like a circus lion, Pete,' he says. 'In all probability the circus wants him back, and if we capture him an' turn him over to them in good order, maybe they'll give us three a free pass into the circus, includin' the side-shows.'

"'Mart, you're just a-bustin' with bright ideas,' says Pete. 'There's merit in your contention, in addition to which most likely we bluff the circus people into paying four prices for this here yearlin' their lion has killed. Which, if we succeed, we'll each take a price and give one to the boss.'

"And Pete gets out his riata.

"'Wait a minute, Pete,' says Mart Gandy. 'Let's lay this here job out a little before we tackle it. We both seen this lion kill that there yearlin' with one pat of his paw. Don't it stand to reason he could do the same to a cowboy? An' with two pats of his paw ain't he liable to smack all the good out of a cow-pony?'

"'You got a head on you, Mart. We'll have to make long casts—and thank the

"Pete draws his loop half snug around Leo's loins"

Lord we come from California, where sensible cowmen use sixty-foot rawhide riatas. This sucker won't chew a rawhide riata in two half as fast as he masticates a maguey rope. Which will you take, Mart, heads or tails?'

"'Seein' as how he ain't got but one of each, I'll take his head. You snaffle him by the hind legs, Pete, an' you'—turnin' to me—'put your twine around his middle. You ain't an expert roper, but it don't take an expert roper to do that. Pullin' him in three directions all to onct that-a-way, I figure we can hold him.'

"'Not much, Mart,' I says. 'I got to be paid a lot of American money to get familiar with a lion on short acquaintance. My advice is to leave this critter alone. You two watch him an' see which way he heads, whilst I gallop into Tucson and notify the circus people.'

"'What?' says Pete. 'An' lose our free tickets to all three rings, not to mention the side-shows? Not for Pete Ballantyne.'

"HOLD everything,' says Mart. 'I don't figger this varmint any heavier than a two-year-old, but I've heard they've muscles like the late Señor Samson, an'll sure win over anything they get into a clinch with. I don't figger we can give him the bust. Understand, Pete, I ain't settin' up as an authority on lions, but me an' you've run an' roped many a big panther, an' we know a panther ain't a runner. If he was he wouldn't tree at the first opportunity. We know, too, Pete, that a panther gets winded in a fast half-mile dash, that he tires easy. Mebbe this imported cousin o' his is built along similar lines—so what do you say if we haze him around until he's plumb weary before we put our ropes on him?'

"'Which you're a scholar an' a philosopher, Mart,' says Pete, an' plants a bullet under the lion's nose, thus throwin' dirt into his face in a most insultin' manner. Immediately the lion roars an' charges, but we're mounted on the fastest an' best reined cow-ponies on earth, so we whirl an' dash off through the low sage. The lion chases Pete about a hundred yards, but seein' he can't outrun Pete's horse, he transfers his attentions to me. Which he gives me the thrill of my life before I'm out of his reach.

"Failin' to make connections, the lion sets down to think it over, but as it's no part of our program to let him rest, Mart makes a run at him an' the lion comes to meet him. Lordy me, boy, I can still see them long leaps of his'n; he seemed to travel over the tops of the sage. However, Pete evades him, an' when he stops, Mart puts another shot under his nose an' starts him ag'in. So, by one means or another, we keep that fool lion runnin' in circles for mebbe an hour, an' by that time he's leg-weary an' winded. So he sets down ag'in, an' nothin' we can do will induce him to give us another run.

"'Now is the time,' says Mart, 'for all good men an' true to come to the aid of their party. Pop, stand by with your pistol to stop him if the hair slips.' An' Mart makes a fast run about forty feet west of the lion, an' with a back-hand throw ropes the brute nice an' neat around the neck, throws his dally, an' gives Mr. African Lion a jerk that stifles his very best roar in its infancy.

"So the lion, bein' grossly offended, takes out after Mart, an' his horse, realizin' he's bein' asked to hold a tornado, lets out a scream of unadulterated terror an' allows he has business callin' him to Tucson in a hurry. He flattens out to the ground like a snake and keeps the rope taut, so Mart knows the lion ain't gainin' none on him a-tall, which even if the lion was, I doubt if the fool would have cut him loose, on account of thinkin' a lot of his pet riata, not to mention his standin' as a roper bein' at stake.

"'Hold him, cowboy,' yells Pete, an' takes after the lion, whilst I get out my gun an' take after Pete, who rides up alongside that there lion, makes a quick, snappy down-cast and draws his loop half snug around Leo's loins. When he throws his dally and gives the lion the bust; the rope slides down around the brute's hocks and holds!

"An' then the tug o' war starts. First the lion makes a dive at Mart, and before Mart can take up his slack, the lion reverses an' makes a dive at Pete.

"'It's ag'in' the California custom,' Pete yells, 'but we can't hold him on no dally. The horses is too wild an' scared. Tie hard an' fast, Mart, like a Texan, and let'em roll if they have to!'

"SO THEY tie hard an' fast, an' with both horses rearin' an' plungin' ag'in' the riatas, that there lion finds himself torn between two desires. For twenty minutes the battle rages across the mesa; then they come to a side-hill an' the lion, checked in a long leap at Pete, rolls over on his back. Mart's rope is stretched along the lion's neck an' between his ears, and once off his feet, with his hind legs stretched out behind him, old Leo gives a coughing

Digitized by Google

grunt—a half sob—an' lies still, lookin' up into the sky.

"Both Mart's Baldy an' Pete's Moocher are settin' down on their hocks, holdin' on for dear life, an' snortin' an' screamin', but them saddles has been cinched on to stay on, so Mart an' Pete flop off an' approach the lion with their tie ropes. Mart makes a small loop an' snaffles one front paw as the lion dabs at him; then he snugs it up on the lion's wrist or fetlock or whatever you call it, makes a half hitch and holds on. Meanwhile, Pete has done the same from his side; then they walk around his head an' exchange tie ropes an' drag the lion's front paws crosswise in a prayin' attitude; then, while I hold one paw, Pete makes the tie with my tie rope.

"THEN Mart an' Pete remove their tie ropes an' lace his hind legs together with one of 'em, after which they use the other to tie his forelegs and hindlegs together. Which he's surely hog-tied then. An' all the time them terrified horses, unable to escape, is keepin' him stretched so flat he don't get his head up to bite us.

"'We'd ought to gag the critter,' says Pete. 'If we can tie his jaws up, he won't be able to bite the tie ropes off'n his feet when we slack up on him.'

"So Pete takes his macarte and manages to get a small loop over the lion's muzzle at a moment when he ain't spittin' an' cussin' at him, an' they draw that taut, make three half hitches around his muzzle, three around his neck, an' the deed is done.

"'I never hearn tell that African lions is elastic,' Pete puffs, 'but this one has to be or git pulled apart. Mount up, Mark; back your horse in an' I'll cast off your riata.'

"Which Mart does the same, whereupon Pete's horse, discoverin' he's lost a lot o' strain on his riata, starts draggin' that lion around somethin' scandalous. We have quite a time to separate them two, but finally we done it, an' sat down to have a smoke an' talk things over. The lion, meanwhile, sobs softly, pitches an' twists, but finally gives it all up for a bad job an' lies quiet. Which us an' our ponies are all sweaty an' more or less tuckered, too.

"'Pop,' says Pete, addressin' me by my familiar appellation, in deference to my bald head an' my job as foreman, 'you know so dog-gone much about African lions, tell us how much one of 'em is worth, F. O. B. circus.'

"'Well, now, that depends. A lion that's bred an' whelped in captivity ain't so expensive, neither is he so desirable, on account the domestic lion never achieves the size of a lion that's captured wild.'

"'This one's wilder'n hell,' says Mart. 'It stands to reason he is, or he wouldn't have run away from home. An' we're discussin' this particular lion.'

"'Well, by the time a wild lion is captured in Africa, shipped to the United States, trained, groomed, fed, an' insured, I reckon he must stand the circus about fifteen hundred dollars.' (I don't know a thing about it, but never let it be said I wouldn't make a guess.)

"'Then, in addition to the free pass to the circus an' the side-shows,' Pete opines, 'we'd ought to get a liberal reward, oughtn't we?'

"'Which that's a question that ought to be answered right soon, son,' says I, 'for down the trail I see a cloud o' dust, about forty horsemen, an' a fancy-painted circus wagon, if I ever saw one—an' I seen four, to my personal recollection.'

"'Likewise,' says Pete, 'I hear the subdued bayin' o' foxhounds off on a flank. It's them circus folks trailin' their lion or I'm a Chinaman.'

"'Which we don't give him up until our claims is settled in cash,' says Mart. 'The members o' the Lazy Z Lion Hunt will now go into executive conference as a committee on the whole. Quick, Pop. What do we ask 'em for our lion?'

"Now, I'm a man who's always prided himself on bein' a good trader. I'd bought an' sold thousands of cows an' nobody'd ever swindled me in a deal yet—an' Pete an' Mart knew this.

"'We'll ask more'n we expect to git,' I announce, 'an' come down if we have to.'

"'Which I wouldn't rope another lion to please my own mother,' Pete avers. 'Ask enough, Pop.'

"'Person'lly,' says Mart, 'I expect to grow wrinkles an' gray hairs an' mutter in my sleep for a month to come. Five hundred would be little enough. You do the talkin' for the outfit, Pop, an' we'll split our winnin' three ways. An' don't forget to collect heavy for that yearlin'.'

"Havin' the issue put up to me that-a-way, of course, I have to make good. When the lion-hunters catch sight of us, an' hear the subdued roars of the king o' beasts, they come swarmin' down on us like a stampede; when they get close enough to see everything, they just stand still an' stare. The circus manager's first to sound off.

"'Who the dickens,' he says, 'roped my lion?'

"'I don't see no brand or earmark on the critter, mister,' I announced with becomin' coldness. 'How do we know he's your lion?'

"'He's *got* to be my lion. My lion's the only loose lion in the whole state of Arizona.'

"'The thunder he is,' Mart butts in. 'We breed lions right here on the Lazy Z. This is lion-brandin' time with us; as soon as we can start a fire we're goin' to run the Lazy Z iron on this critter an' earmark him—underslope the right ear an' swallow-fork the left.'

"'BUT who in hell roped him?' the manager persists.

"'We did—if you don't believe in fairies,' says Pete. 'An' permit me to state, mister, that while a-doin' of the same, we're closer to hell than usual.'

"'Boys, it ain't done,' says the circus manager.

"'Any time a lion starts killin' Lazy Z yearlin's it's done, mister,' says Mart. 'This here panther—or lion, as some folks calls 'em—being older'n bigger than any we've roped previous, we have more or less of a fuss with him, but—there he be.'

"'An' at that,' says the circus manager, 'Duke ain't reached his full growth by a hundred pound—mebbe more. You boys sure had your nerve with you tyin' onto him. Well'—turnin' to his retainers—'our lion's gagged an' tied so he's helpless to bite or claw, so somebody cut down a young willow for a pole so we can pass it between his bound legs, fore an' aft, an' lift him into the wagon.'

"'My friend,' says I, 'one moment, if you please. That's not your lion. It's ours.'

"'Perhaps you'll tell me why,' says the circus man, a mite haughty.

"'You bet I will, mister. A lion's a predatory anamile, an' in the sovereign state of Arizona there ain't no closed season on a predatory anamile, which this here lion's been predatatin' on the Lazy Z range an' killed one valuable, pure-bred, prize-winnin' Hereford heifer the boss wouldn't have took five hundred dollars for. There's her carcass yonder. Take a look. You can tell she's a Hereford by her white face.'

"One of the circus fellers laughed. 'Boss,' he says, 'don't be misled. She ain't a pure-bred. As long as there's a pin prick o' Hereford blood in a cow she'll drop a white-faced calf.'

"PETE gets up an' walks over to this here informer. 'Which you're a-misdoubtin' the word o' my friend,' he says, an' smacks the feller down. Then Mart gets up an' stretches himself. 'Who-all's a-goin' to move this here lion into the wagon?' he inquires careless-like.

"'The African lion's only predatory in his own country,' another circus-lawyer pipes up. 'Which he ain't nominated a predatory anamile of Arizona, an' I'll prove it.'

"'Smack him, Pete,' says Mart. So Pete smacks that feller down, an' just to prove possession's nine p'ints o' the law, he sets down on the rump of the lion an' proceeds to roll a cigarette, meanwhile recitin' a piece he'd learned in school:

"'Come one, come all, this cat shall fly
From his firm base as soon as I.'

"'Now, now, now,' says the circus manager, observin' all three of us is wearin' our artillery, 'don't let's have no misunderstandin' about this here lion. I realize you boys have had some trouble an' took some risk capturin' him, so suppose I give you five dollars each an' you hand over the lion peaceable.'

"'I had him by the neck an' he chawed my best sixty-foot rawhide riata so bad that next time I give a salty steer the bust, my twine parts. An' that riata cost me four bits a foot,' Mart mourns.

"'I ain't got no riata claim, on account o' ropin' him by the hind hocks, but I'm bruised an' bent somethin' scandalous,' Pete complains.

"'You don't act like it, but I'll not argue the question, my friend.' He turns to me. 'What part did you play in this here drammer, mister?'

"'Which I'm fifty years old,' I says, 'an' not fit to get fresh with no disrespectful lion, no matter what his nativity. I was the life insurance agent in this here enterprise. I rode around the fringes o' the combat, ready to put six forty-five bullets in this here predatory anamile if he gets away from Pete an' Mart.'

"'Which the lion couldn't have chawed the cowboy's rope more'n two foot from the end,' another circus-lawyer sounds off. 'He can snip off that bad two foot or three, bend another hondoo on it an' have just as good a riata as ever. A fifty-five-foot riata's five foot longer than most cowboys use, at that.'

"Mart makes a dive for the feller, pullin' his gun as he comes, an' there's a

Digitized by Google Original from UNIVERSITY OF IOWA

general scatterin' of the circus forces, all except the manager.

"'Look here, boys,' he says, very plausible, 'I can't do business with a syndicate. I got to do business with one man. Which is your respresentative?' I said I was, an' thereupon, in the interests of peace, he says he'll give us ten dollars each an' allow Mart five extra for the damage to his riata.

"'Mister,' I says plaintive-like, 'would you rope, throw, hog-tie, an' gag this lion for thirty-five dollars?'

"'I would.' Which we know him immediate for a natural liar.

"'ALL right,' says I, 'we'll turn him loose again, loan you an' your two best men our horses an' riatas, an' you go to it. If you do what we done we'll pay you a thousand dollars. Pete'll bend a new hondoo on Mart's riata before we untie the critter. Once we cast him loose he's a predatory anamile ag'in an' belongs to the first man that can trap him.'

"'I'll make it fifteen dollars each for capturin' him, boys, throw in three bottles of arnica, have our circus doctor look you boys over for broken bones an' sew up your scratches, an' give you each a ten-year pass to our circus, includin' the side-shows. Come, come, now, that's tradin' talk.'

"I see Pete and Mart exchanges glances, but as I'm their mouthpiece they don't say nothin'. 'Thunder 'n' lightnin',' I says to the circus man, 'we wouldn't take a cent less'n five hundred dollars. The critter's pelt is worth that much to us. The boss would maybe give us more'n that for the pelt of an African lion killed on his ranch. It'd be worth that to be able to brag about it to visitors.'

"'I'll consider your proposition a minute. Meanwhile, let's discuss the depredation. How many cows has this lion killed?'

"'We only see him kill one, an' yonder's the corpus delicti. We'd have to search the range for further evidence an' this here's a big range.'

"The circus manager smiled. 'Brother,' he says, 'we've trailed this here lion with dogs every foot o' the way from Tucson, an' we're prepared to prove in court this is the only cow he's killed. If there'd been others we'd have seed the carcasses.'

"'Well, we'll take your word for that,' I says, wishin' to appear fair, for I see they had a passel o' foxhounds on leash. 'You give us five hundred dollars for that heifer an' we'll call it square.'

"'Not a cent over a hundred,' he comes back at me, 'or we'll argy it in court.'

"'Sold!' says I.

"'Gimme the owner's name.'

"I give him the boss's name, an' he took out a check book an' wrote a check for a hundred; then he wrote across the back of the check:

The endorsement of this check is acknowledgment of the receipt in full, by the payee hereof, of all claims of any nature whatsoever to date against the Babcock & Grady Circus, Inc.

"Mart gives Mr. African Lion a jerk that stifles his very best roar in its infancy"

"'We'll just reduce that to writin',' says the circus manager"

"'Now, then,' he continues, takin' out his wallet an' beginnin' to count out a mess o' yaller-backs, 'I have here the sum of one thousand dollars, which I hereby hand to you, mister, with this understanding: You an' your friends turn my lion loose, an' if, five minutes after you've done it, he ain't my lion, safe an' sound an' unable to bite or claw any man here, you can keep the thousand dollars; otherwise you give it back to me. I'm makin' a bet, an' the bet nullifies all previous offers. This is a sportin' proposition. You win a thousand dollars, or you don't get a cent an' you forthwith abandon any an' all claims of any an' all nature whatsoever ag'in' the Babcock & Grady Circus, Incorporated.'

"PETE looked at Mart, Mart looked at Pete, an' the two of 'em look at me. They nod, for there ain't a sportin' chance on earth them two won't take.

"'Sold,' says I, an' Pete an' Mart nod their confirmation, for they was both men of few words. 'With this proviso,' says I, thinkin' fast a thought that maybe ain't occurred to Pete an' Mart. 'It's one thing to rope an' hog-tie an African lion, but it's another thing to stand over him an' cut the varmint loose.'

"'Ah,' says the circus manager, lookin' disapp'inted, 'I knew you boys wasn't as game as that.'

"'We're game enough,' says I, 'but we're too smart to jump into a proposition without givin' it some thought. Some slight consideration is due our families; we'd ought to have a doctor on the ground in case o' accident, an', inasmuch as this here unbindin' of the beast is sure goin' to be the sportiest an' most technical job ever pulled off in Arizona, naturally we'd like to have all the boys down from the Lazy Z to view the spectacle.'

"'I can readily understand your feelings in this regard, mister,' says the circus manager. 'State your proviso.'

"'You an' your gang retire one mile to yonder flat. Meanwhile, I will ride back to the ranch an' fetch the boys. When the lion is ready to be turned over to you, you will be given due notice and permitted to approach within (*Continued on page 137*)

How Big Men *Think and* Act

By M. K. WISEHART

IVY LEE has known scores of America's most powerful executives. He has worked with them—intimately. It has been his job to find out what is in their minds, and to tell them what is in the public's mind. In the course of his long experience as an adviser to important men, he has discovered five traits that are common attributes to business bigness. Here they are:

1. Accuracy of observation
2. Soundness of judgment
3. Frankness
4. Enthusiasm
5. Faith

These traits are explained and illustrated in the accompanying interview. . . .

RECENTLY, one of the regular Monday afternoon conferences in Philadelphia of the officers of the Pennsylvania Railroad was the background for an incident which I think will interest anyone who has ever watched the passing scene through the plate glass window of a railroad train.

At this meeting one of the road's officers submitted a report which had to do with certain economies in operation and maintenance. Among other things, it was recommended that, instead of plate glass, pressed glass should thenceforth be used in the windows of day coaches.

Now, in railroad operation, owing to a great variety of unavoidable minor accidents in the yards or while cars are in transit, the breakage of window glass is something enormous; and it was shown by the officer's report that, because of the lower price of pressed glass, its use would mean a saving of *a hundred thousand dollars a year.*

In attendance at this meeting was a man who participates, though he is not an officer of the road, in every official discussion of matters of importance to the Pennsylvania System, and the public it serves. The pressed glass proposal having been discussed by the officers from various points of view, the operating vice president turned to this man and said:

"What do you think the *public* would think about this question?"

"Before I answer," was the response, "I should like to ask whether pressed glass has a tendency to distort the vision?"

"It has," frankly admitted the officer who had submitted the report. "But the distortion is very slight. It doesn't amount to much."

"Nevertheless, in that case," returned the man whose opinion had been asked, "it seems to me that its use is not permissible. My judgment would be that we have no right to use glass that is going to strain the eyes of our passengers, *even though it strains them to such a slight degree that they do not know their eyes are being strained.* And that, I believe, is the view the public would take."

Moreover, I can tell you that that is the view which the Pennsylvania Railroad has taken. From the moment this opinion was expressed the discussion took a new turn. Presently, the pressed glass proposal was dropped.

To the railroad man who told me this story, I said: "Who is the man who gave that opinion?"

"Ivy L. Lee."

"Why do the officers of the Pennsylvania defer to *his* opinion?"

"Because," was the answer, "they have learned that, in certain matters, his opinion, based on long experience, is as valid as a fact tested by experiment."

Today, at the age of fifty-two, with dark hair, keen blue eyes, and robust, well-knit frame, Ivy Lee sits at a desk in the front office of a suite which occupies the entire thirty-fourth floor of the Equitable Trust Company Building, 15 Broad Street, New York. A publicity man, so-called, he is dean of a profession which has some ten thousand members in the United States. Among his clients are the John D. Rockefellers, both father and son, Charles M. Schwab, and other notable individuals. Also, he is publicity adviser for several internationally famous banking houses and numerous corporations engaged in the nation's basic industries—coal, oil, iron, steel, and copper. In addition, he represents railroad, textile, and meat-packing corporations.

WHEN I called, recently, at Mr. Lee's office, I asked this question: "From your observation, would you say that there is any *one* outstanding thing which accounts for the achievement of those whom we call America's big men?"

"Not one, but at least *two* things," was his answer, "and they go together. A man may have all the admirable old-school virtues—honesty, industriousness, punctuality, and the rest—but if he lacks the patience, training, and experience and the *brains* that are necessary to develop the power of accurate observation, he is not likely to get very far.

"I think the achievements of the big man in industry, business, or finance (or, for that matter, in any other sphere) depend upon these two things: First, *accuracy of observation;* second, *soundness of judgment. They* are the great foundation stones. The first inevitably makes for the second; the second cannot exist without the first."

Follow this narrative through and you will see that more will be said of the way in which these two traits, and certain others also, show themselves in the conduct of big men. In fact, there are *five* things which Mr. Lee believes the young men of America should know about the way big men think and act.

"I HAVE already said," he resumed, "that the keystone of the career of any really important man is *soundness of judgment.* In my experience I have seen this illustrated time and again.

"The last important executive act, for instance, of Alexander J. Cassatt, then president of the Pennsylvania Railroad, was the signing of an order for fifteen thousand freight cars at a cost of fifteen million dollars. At the time this order was signed everything indicated that the country was on the verge of an era of prosperity. Not long after Mr. Cassatt's death, his successor, President McCrea, detected signs of an exactly opposite character. Promptly, he did what I have no doubt Mr. Cassatt himself would have done had he been there to meet the changed conditions. He canceled the order for freight cars.

"Within twelve months thereafter, the yards and sidings of the Pennsylvania lines were crowded with idle, empty freight cars. You can readily see that had Mr. McCrea not been schooled in drawing sound deductions from carefully observed facts, the Pennsylvania would have had fifteen million dollars needlessly tied up at a time of financial depression.

"I have found that the man who has learned to *observe thoroughly and accurately* is almost certain to think straight, drawing sound inferences from what he observes. On the other hand, the man who lacks the patience, the training, and the skill for correct observation is certain to lack judgment in his business and also in his personal affairs.

"Remember this: *Observation has to do with phenomena—facts—matters—that can be definitely known by careful enumeration. Judgment, on the other hand, is the ability to decide what shall be done with reference to matters that cannot be definitely known in advance. Ordinarily, when we decide that certain acts, a line of conduct, or a policy will produce certain results, we are relying upon our judgment. Whether our judgment, in any specific instance, is good or bad, invariably depends upon past experience in observing and* (*Continued on page 125*)

Old Loyalty

By KATHARINE NEWLIN BURT

Illustrated by HANSON BOOTH

DOWN through the cobbled draw into Red Cañon, silent with October dusk as it had been silent with October dawn and day, came the rattling sound of horses' hoofs. It brought Kitty Grace to her cabin door with a hand against her throat.

She caught a glimpse of pack horses, white squares jogging unevenly above the chaparral, and of two riders, masculine and lean. This was enough to send her back to the wavy mirror, where, hardly for sudden excitement needing their aid to restore her vivid looks, she plied comb and powder puff and touched color to her mouth. She opened a little the neck of her emerald-green shirt, a boy's shirt dyed, turned up the bottoms of her jaunty blue-and-white striped overalls, which only a few bitter weeks before had so moved Herb to tender laughter, and replaced dusty footgear with scarlet silken stockings and a pair of slippers—Mary Anne in style, but for small brightness and for buckles, Queen Anne to look upon.

One more pat to the short, silken crop of flame and she was back again, balancing on her threshold, brilliant as some tropical spider who has felt the thrill of her telegraph wire and has run out quickly to the center of her web.

DUSK was already in the cañon with the tumbling sound of Folly River. A star glittered above the head of Old Loyalty, suddenly carved out of a pansy-colored sky.

Kitty's eyes shrank from the mountain, whose presence she had learned to fear. It was a grim, unlovely form which followed her unchangingly wherever she might move.

On her way into the valley she had been told something of its history: How, not long ago, a forest ranger had been sent into this country, then nameless as Eden in its infancy, and how, finding there a blue-eyed, lonely woman with a shining patience in her smile, who told him that her husband had left her on "business" five years before but would surely be back —would "come ridin' down some evenin'" over the red rim of Folly River—the forest ranger, after some further more personal experience, one fancies, had looked from Martha Grayle to the noble and simple starkness of the mountain, and had named it Loyalty.

It was from Martha Grayle that Kitty and Herbert had rented a cabin on the river bank for their runaway romance, and in that cabin she had found herself deserted —oh, entirely by her own fault, of course! —and there she had found herself forced to stay alone until a letter could reach Chicago and bring her, in answer, the reassurance of fresh funds. There had never before in her life been a loneliness like this strange one!—in a fiery land, a strip of emerald foliage running like a song through the red and yellow desert above it.

She would have run quickly up the hill to that other deserted woman, Martha Grayle, if, associating the woman with the mountain, she had not been afraid—more afraid of Martha than of solitude. The woman's blue eyes, Kitty fancied, had condemned her. And Kitty, who so often before had been weighed and found wanting, felt, for some reason, this woman's unspoken, her merely imagined, judgment most unbearable.

It was easier to wait alone than under the silent shining of this western woman's eyes. Yes, even if she still, in her solitude, had to face the mountain in the dusk.

Before Kitty—where she now stood at the bottom of her narrow hiding-place—all the land rose up, heightened and made formidable by the loss of detail and of foreground. Down through this steep dimness from the bright, bare land above, the horsemen were riding. They could ride nowhere, Kitty knew, but to her door. Her look was one of greediness and of suspense. The weeks of her solitude had been, for such a mind as hers, a vast obliteration of human intercourse. They had wiped the records of her facile nature as rain washes dust from a smooth rock.

The unshaded lamp in her cabin, which she thought must have beckoned down the riders from their plain above, shone strongly behind her, making bright, she knew, the edges of her fiery hair, her green shirt, her slim, silken ankles. Even the buckles on her shoes, she noticed, winked. She smiled to think how startling an apparition of ranch-wifery she must appear and, as the leader of the pack-train rode abruptly out into the circle of her light, she was glad that he was not Herbert, glad even that Herbert had so speedily returned that most eager of all tools to Kitty Grace: her liberty.

KITTY divided the world of men and women into people comfortable and uncomfortable. The comfortable people were usually her confidants; the uncomfortable, according to their sex, her enemies or lovers. This man who swung from his horse, took off his hat, and came up close before her was an uncomfortable person. The adjective always described Kitty's own sensations. The man himself was grimly and entirely at his ease, grimly and entirely, she feared, unaffected by the graceful brightness of her outline.

"My guide's been hurt," he said, and she knew him to be an easterner of the cosmopolitan type, a man of forty years or more, and a man who knew and cared little about women. Uncomfortable person . . . very. She had noted before he dismounted his handsome leanness and, as he removed his hat, the bronze head across which lay, like a flat feather, a streak of sudden whiteness. She saw now that he had somber eyes, which, changing from some more interested expression, pronounced her incredible, disappointing, but presumably useful in his emergency.

"It's a rope burn across the leg and it's got infected, I'm afraid. He's in a fever. We saw your light and hoped . . ."

"Bring him in quickly, please," said Kitty, and the grim face before her gleamed into a weary, grateful smile, an impersonal smile, but, Kitty thought, a very charming one.

The other rider had stopped, shadowy, at the edge of the brush. Her man—already Kitty in fancy possessed him, as she possessed in fancy all handsome, charming, difficult men—went quickly back, and the equestrian figure seemed to drop down and to be steadied and led towards her . . . a pallid youth, heavy-eyed, dry-lipped, one of those western riders, of the type familiar to every traveling American and to some who can go no farther for the magic of experience than the magic shadow-makers in their village street.

KITTY helped her man to ease his burden down into her longest, lowest chair, and from it, holding his injured leg between his hands, the brown, straight-featured boy looked up at her with that touching faith of the unembittered male in the mercy and the healing power of any woman.

Kitty Grace was born to justify masculine faith in mercy. She became on that instant, and probably for the first time in her life, a competent nursing-woman.

Between them, she and the older man got "Roy" to bed.

"He'll be comfortable here on the couch. I've got my own sleeping quarters and you perhaps—" the blood that always wanted to tell tales rose to her face— "perhaps you can camp down by Folly River."

"You're alone here?" the prospective camper asked incredulously.

"Alone," said Kitty; and her sad word sang, following him like a lost little creature down his trail to Folly River.

It seemed to Kitty, who, however, felt no resentment, that the man disliked her, and this seeming filled her instantly with so deep a craving to be liked and even to be loved by him that tears came to her eyes. It would be terrible, she thought, if Herb's punishment, the days and nights of frightened, weeping solitude, had mysteriously dried up the wellsprings of her confidence, had robbed her of that volatile, that vitally important fact, half achievement and half genius, which the world of men had called her charm.

After her patient slept, his pain and fever already mitigated by her treatment of hot and cold applications and of disinfectant, she stood for a longish while in front of her mirror wondering what, to the grim eyes of a worldling, was lacking in that lovely, hungered face. He had looked up towards it at first eagerly, questioningly, then there had come disappointment, indifference—a quaint inversion of all Kitty's past experience of such looks.

As soon as might be, she thought, she would question the young guide. He must know something about this intriguing, this most uncomfortable stranger.

"HIS name's Miles Farraday," said Roy two days later, looking from his couch and, as if in childish absent-mindedness, holding Kitty's hand in his. "He's from New York. He travels all day long, like that. . . grim sort-of, silent. He goes like there was somethin' on his tracks. And, say, it's sure wonderful the way he hates that mountain." Through the open door he gestured with his free hand toward Kitty's enemy.

Her eyebrows lifted.

"Hates it?"

"Yes, ma'am. He was real strange about it, too. I telled him there was a plenty of other mountains to look at, but it seemed like he couldn't get his mind from this one. And when he looked it up on the gov'ment map, he says, 'Loyalty Mountain, eh? *That* must be an extinct volcano.' I kinder had to turn that sayin' of his over in my mind a piece afore I savvied it. Then it come to me sort-of. 'On account of its name?' I asks him, and he says, 'On account of its name.' I reckoned that a man could find some loyalty a-layin' 'round if he chose to look for it, but Mr. Farraday said, 'I've had a lot more experience than you've had, Roy, and you take my word for it. Loyalty's as extinct as dodoes.' Mrs. Grace, what's . . . *dodoes*, ma'am?"

Kitty informed him. Then, "What," she asked, "made the two of you turn down into this country? I mean before you hurt your leg."

Roy looked surprised. "Why, I thought sure he'd told you. When I reckoned Loyalty Mountain was at the head of Red Cañon, he says, 'Ever been down into that country, Roy? Ever hear of Folly River?' I told him 'No.' 'Well,' says he, slow and considerin', 'I've got a introduction to a lady on the banks of Folly River and I'd like to go down and take a look at her!'"

Kitty rose abruptly and the hand she had jerked away from Roy's she pressed against her throat. She walked from him

Farraday went quickly to his knees, and kissed both her hands

"Stranger," said the man at the table, "I've a wife down by Folly River who's been waiting several years alone"

to the doorway, where she paused; then, with a sudden desperate purposefulness, went down the steep, short trail to Farraday's camping ground. She paused above it in an opening of the trees.

She had meant to give him full opportunity to relish the gay and lovely image she must make on this amazing morning, standing there, sunflecked in an arch of emerald foliage, but she forgot this, relishing, herself, the picture that he made. For she found him staring at the mountain. So straight and still he stood, beside the thin, blue smoke of his breakfast fire, that he seemed an Indian at worship. But his face looked worn, hard, and blackened with the marks of sleeplessness. Bitterly ridden he must be by memory, this traveler. Thought Kitty inevitably, "He must be trying to forget a woman," and, she said to herself, smiling like a mother for his weakness, "and he can't even forget a mountain. . . . Let's see," thought Kitty, "what can be done for him."

"Mr. Farraday!" she called.

He turned and looked up at her, and to her surprise his face grew darker with a flush. She had not yet visited his camp. When he had seen her it was on his dutiful visits of inquiry to the injured guide.

"Anything wrong?" he asked. "Roy worse?"

She came down, smiling, shaking her head, and seated herself upon a log close to the edge of the quick sliding water. She caught her knee in both her hands and looked up at him.

"No. He's so much better that we've been gossiping together. He told me that you had boasted of an introduction to some lady on Folly River." She could not now keep the suspense out of her voice. On his way in, he might have met Herbert . . . might even have known him.

Farraday answered quickly, with an air of annoyance. "It doesn't matter, Mrs. Grace. I mean, I had no introduction. Only . . . an odd experience." He paused, his eyes were drawn unwillingly again towards the harsh and brooding outlines of Old Loyalty. "And . . . I received a strange sort of message from a man . . . who fancied that there was a woman waiting alone down here . . . for his return."

KITTY'S face felt itself grow smaller, paler. She had forgotten the existence of Martha Grayle. The message seemed inevitably to be destined for her ears by Herbert. Herbert knew that she must wait and he meant to reassure her . . . to the point, that is, of sending him some repentant, some beseeching letter, that would make possible and dignified his own return. . . . "His name?" she whispered in a changed, dry little voice which brought Farraday suddenly over to her, his eyes lighted with astonishment.

"It . . . it can't be . . . *you?*"

Her suspenseful look glanced towards him, then wandered to the stream.

"Why . . . can't it be . . . me? Of course . . . it's me. I . . . I've been waiting." Her gesture outlined an eternity.

"Mrs. Grace. I'm sorry. I'm bitterly sorry. I don't know the man's name. I'll tell you about his message, if it can be called that. I was at Imbray's road house out in Copper City."

Herb would have gone out that way . . . . Kitty hid her face. She trembled. All the emotion associated with Herb seemed to force itself up from a blocked channel of her nervous system. She saw Herb's face, tender, delicate, impassioned, and her throat tightened with what was really only the memory of longing.

Farraday went on, looking at her anxiously. His whole attitude towards her had changed completely, almost violently. "I had been talking," he said, "to the barkeep about the plan of my trip, mentioning some of these valley names and asking for information, when, suddenly, a man seated at one of the tables spoke . . ."

"A man . . . ?" Kitty implored.

"A big, western-looking fellow, clean-shaven, fair . . ." Kitty unintelligibly gasped. "He said, 'If you're going into the Blue Forest country, stranger, you might swing over into Red Cañon and drop down to the bank of Folly River. I've a wife down there who's been waiting several years now alone . . . waiting for me to come back to her.' And he looked up then, Mrs. Grace. I keep seeing his eyes. They were the color of mica in the sun . . . brilliant, tragic, unforgettable."

KITTY sat still with her face covered, trembling. She had been wounded afresh and freshly punished. In the place of Herb's slight person, with his city air and his fine, dark moustache, there had been presented to her suspenseful mind a big, slow-speaking man. . . . Herb had sent her no message. She would never see him again—that tender, passionate face of his. Instead, forever Herb would remain—to harden and to hurt her soul—tight-lipped, pinched, jealous, gray.

"I did not believe then," Farraday was saying softly, "no, nor when I first saw you, that there could be such a woman."

And they were then both silent. Folly River talked.

Kitty began again to be aware of this man beside her, whose last speech she had hardly heard, certainly not understood. She felt a restrained emotion in his silence and, being sensitive to such disturbances, she knew that it was for her, this feeling, and that it had a vibration, moving and, hitherto to her, unknown. She looked up timidly and slowly towards him.

He was staring past her again towards the somber mountain, and something prompted her to speak of it . . . Roy's story of Farraday's unwilling obsession coming at the moment to her mind. She was anxious, besides, to get away from the burning pang of her disappointment. It would be a picturesque introduction for the story she meant to tell Farraday of Martha Grayle, whose husband out at Copper City must have made that strange announcement.

"Hereabouts," she said, speaking more softly even than her habit, "they call that mountain Old Loyalty, Mr. Farraday. It was named not very long ago by a forest ranger . . . in honor of a woman."

Farraday looked quickly at her.

"You are that woman," he said.

Now, there was at that moment in Farraday's grim blue eyes, hitherto so careless of her personality, a look that Kitty Grace had never seen in the eyes of any man before, and, half in scorn of his simple-minded blindness and half because, at that moment, she could ill (*Continued on page 73*)

Our Secret War

By
THOMAS
M.
JOHNSON

Illustration by Marshall Frantz

ON THE night of May 27, 1918, German lookouts crouching in the ruined French village of Cantigny felt as cheerful as men can feel in the front line. Across No Man's Land, the American trenches seemed quiet, peaceful. That day the Crown Prince had surprised Foch, the new Allied Generalissimo, broken through French and British on the Chemin des Dames, headed toward Paris. A good day. Germany might yet win before too many *verdammt* Americans came. A perfect spring evening.

"*Stille nacht, heilige nacht,*" hummed a gray *feldwebel*.

Suddenly, his pipe dropped from his lips, and he leaned forward, every nerve and muscle tight, ready to give the alarm. In the darkness, where the American front-line trenches were, he had seen spurts of flame, heard shots. Now he heard a single cry. Then silence.

"*Was war das?*" a companion asked, hurrying up. Both stared and listened, but they saw nothing, heard nothing. Minutes passed. More minutes. The first hint of dawn came through the ground mist. They relaxed with relief. A nervous American sentry, they thought, seeing things—nothing to worry over. Chuckling, they relit their pipes in the shadow of coal-scuttle helmets. Sixteen minutes before six, the matches showed. End of a quiet night.

BUT they never saw the day. With the sudden crash and roar of doom, behind the American lines hundreds of guns opened, hurling a torrent of bursting shells that made Cantigny a place where none could stay above ground and live. After the barrage came the doughboys, three thousand eager fire-eaters of the Twenty-eighth Infantry, first time over the top in their young lives. They swarmed over Cantigny, and what Germans would not surrender, they bayoneted. The first real American attack of the World War was a complete victory.

To make that possible, before a gun fired or a doughboy charged, the Americans had won another victory. It was not in the open war that the world knew, but in the war amid the shadows, the war known to few, who never told—the secret war of spy and counter-spy. Sometimes the turn of tide on its dark battlefields swayed great events more powerfully than did the struggle in the light of day. So, just as the night before Cantigny ended, there were shots and a cry—then silence.

That silence has shrouded to this day what happened in the American trenches. Few have heard of the dark figure, in American uniform, helmet, gas mask, clutching something beneath his slicker, that darted around a traverse of a front-line trench, into a little sap jutting out into No Man's Land. Few know of two other dark figures, similarly clad, that followed, hid around the traverse corner until their quarry climbed into No Man's Land and started running, bent over in the mist, straight for the German trenches. Then both sprang to the parapet.

"Halt!" one shouted sternly, and once more, "Halt!"

Then, in an instant: "Get him!"

Pistols flashed together, and just at the edge of the barbed wire the runner stopped, cried out once, fell, and lay still. The pursuers crept over to him.

"Got him," one whispered grimly.

The other held up what had been hidden beneath the dead man's slicker.

"Trench code book," he said.

That is why the Germans did not get the warning of coming attack that a German sergeant enlisted in our First Division tried to take to them the night before. That is how that sergeant died, whatever the official records may say. That is how the lives of many Americans were saved and Cantigny written in our history a surprise attack—swift, sure, successful. Our secret war was sometimes to the knife.

In unhallowed conflict, its furtive armies struck at one another over the world. "From the ends of the earth to the ends of the earth," its agents were at

UNIVERSITY OF IOWA

How it was carried forward by 50,000 "*Silent Watchers*" and a few hundred colorful "I. P.'s"

"We must take an oath!" cried Diaz. . . . "An oath in blood! 'Death to the Americans!'"

their unending game, seeking bits of information, large and small, to fit somehow into the eternal puzzle—"What is the enemy up to?" Fully fifty thousand Americans did some sort of secret work in Europe, yet that fact and others remain secret as the work they did.

WHO has heard, then or since, about accomplishments of American secret service abroad? Some were highly important, some were thrilling, some were amusing; almost all were interesting. Time now that they heard true tales of G-2-B, of the I. P., an astonishing body of men, of the "Silent Watchers," army within an army, unsuspected by the rest of the A. E. F., whereof they were part. These were not the M. P., the military police, nor the D. C. I., crime detectives. They were the ones who spied upon the enemy and upon his spies, who fought his secret service, who waged the secret war.

It is easier to thwart enemy spies than to spy successfully upon enemies. For that and other reasons, we attempted and accomplished more in counter-espionage, spy-chasing, than in actual espionage, spying. At the very beginning we had startling proof of the grimness of our task.

The Germans tried to wipe out the original American Expeditionary Force before it set foot on French soil. Two of the three transport convoys of the First Division, A. E. F., were attacked by submarines off the coast of France. The attacks were repulsed, the troops landed, partly because of American secret service. Before the first convoy sailed, the censorship on incoming and outgoing cable messages, established immediately we entered the war, had intercepted a cable to Amsterdam, asking quotations on various quantities of milling machines—in lots that corresponded exactly with the numbers of the regiments in the convoys, and almost exactly with the numerical strength of each regiment! The address in Amsterdam was one already suspected of covering a forwarding station of the German secret service. The sender of the cablegram, who did a small export business in Brooklyn, was already on the Allied suspect list. He spent the rest of the war interned.

While their submarines kept trying to torpedo American transports, German secret agents planted bombs aboard American ships leaving our ports, as already they had planted them aboard Allied ships. All told, they succeeded at least fifty times in New York harbor alone. Despite every precaution, they hid bombs in the coal bunkers of two American troop transports that caught fire at sea. They tried to blow up the old German liner, De Kalb, which, as a transport, crossed and recrossed the Atlantic repeatedly with crankshaft cut four-fifths through by German sabotage—which no one discovered until after the war. Several British tramp steamers out of New York blew up at sea, more caught fire, from German bombs, especially the chemical type ignited by slow-eating sulphuric acid after the ship had sailed. They were more dangerous than the clockwork type, which searchers sometimes heard ticking. The German bombs were small, covered with tar, and shaped to resemble chunks of the coal that hid them.

SINCE the days of Stieber, most notorious of all super-spies, the German secret service had been, with the exception of the Czarist Russian political police, the most vicious such organization in Europe. Stieber's stock in trade was human weakness. Perhaps his World War successors were more scrupulous, but the Americans were never sure of that. No wonder, when they discovered a German attempt to make drug fiends of American aviators.

That was a real plot, with ramifications in several American flying fields in France, especially the field at Tours, headquarters of the Services of Supply. Its weapons were that worthy pair, cocaine and loose women. Their prey were the young flying cadets, in training, just getting used to going into the air, taking each day their lives in their hands, seeing each day some comrade crash. The method was devilishly simple.

The women, some French, all utterly abandoned, would waylay the Americans each evening when they sought relaxation from the day's strain. They would lead the way to apartments where, pitying the "*pauvres garçons*," they would produce

Digitized by Google

liquor. Sometimes the liquor was drugged; often it was merely preliminary to powders. Before they realized it, a number of aviators were becoming slaves of the drug, unable to still the craving that was making its first deadly inroads into physical and moral strength. Which was what the Germans had hoped.

They were furnishing this vicious munition of the secret war to a group equally vicious, long experienced in drug peddling. This information the American secret service gathered and turned over to the French police, who recognized the members of the ring as desperate criminals. It took time to round them up, but it was done.

The scandalous affair of the Black Book showed again what the German secret service would do. The American secret service in Switzerland was able to thwart this game through the help of a German, known to this day only as Zero. It was he who revealed, without a cent of pay, how the Germans, in the twilight of their power in the fall of 1918, hoped to gain advantage in the negotiations that preceded the Armistice by blackmail.

Before 1914 many German agents abroad, not only in France and Russia, but also in England, were women, in varied positions: loose women, keepers of brothels and gambling houses; barmaids, governesses, nursemaids, chambermaids, in the homes of good, even exalted, families; and there were men club servants. Most of the secrets such ears would hear would be scandals—about the second apartment this one kept in another part of the city, and where that one's wife really spent her afternoons, and about the week-ends of Lord So-and-so. Not diplomatic or military information, but grist for the German mill. Every story, every scandal, every bit of filth, went into the Black Book, whose size is indicated by the title the British gave it—"The book of forty thousand names."

ALLIED secret services had heard of the book, but of little attempt to use it. They had even heard that the Kaiser had forbidden the only use to which it could be put. Late 1918 was the time, Germany's desperate need the cause, that brought it forth. Armed with its forty thousand barbed secrets, the German service set about forcing a propaganda in Allied countries for acceptance of German terms, a quick and easy peace.

"Germany wants peace," they would say. "You have influence in your country, political, military, financial, journalistic, whatever. Use that influence now to secure acceptance of the German proposals, or we will tell. You don't think we know? Ah, well, here is just a little of what is in the Black Book."

Some highly placed men and women faced sheer ruin, social or financial, sometimes both. By great good fortune, the Allied secret services were enabled, through information furnished by the Americans, to scotch this nest of blackmailers, and to close the Black Book. It remains closed, but where? How many people would like to know!

What manner of organization was this Imperial German secret service? How did it work, at whose command? Even eleven years afterward, very few, even in Germany, could answer that last question fully. The Allies never knew all about it.

When they accumulated some American prisoners of war—the total was 3,550, contrasted with 48,280 prisoners we took—the Germans tried to weaken their loyalty and possibly to recruit spies among them. Did any Americans turn traitor and join the German secret service? Colonel Nicolai, head of the German Military Intelligence, says not, and so far as this writer knows positively, he tells the truth.

The German General Staff had estimated before unrestricted submarine warfare was decided upon that a real American Army could never be raised, trained, and landed in France in time to prevent Allied defeat by starvation. But gradually the possibility dawned that the German General Staff was wrong. The Kaiser's secret agents were told to get the facts, and their estimate of how many Americans were in France from month to month was generally accurate, based as it was on secret service reports, but checked up for them by the periodic announcements of the American Chief of Staff, General Peyton C. March.

MORE and more proof comes to light of the influence this knowledge had on the German final demand for peace. The latest such proof is in the memoirs of Phillip Scheidemann, one of the leaders in the German revolution and the republic that followed. He reports a meeting of the Ministry of Prince Max of Baden, in mid-October, 1918, to decide what course to pursue in the armistice negotiations with President Wilson. To find out what chance, if any, Germany still had to win the war, the Ministers called in Colonel Heye of the Military Intelligence, now Commander of the German Army. This conversation took place:

Prince Max: "How many Americans land monthly in France?"

Colonel Heye: "An average of 250,000."

General Ludendorff: "In April, May, and June it was 350,000."

(A slight overstatement. Ludendorff's nerves were giving way.)

Prince Max: "How strong will the American Army be next Spring?"

Colonel Heye: "The American military leaders count on having 2,300,000 men by spring."

(It would have been fully that.)

Prince Max: "And have they the corresponding equipment?"

Colonel Heye: "If they continue at the present rate, they will have. The Americans have always been accurate in their estimates."

General Ludendorff: "Before we accept these armistice conditions, we ought to say to the enemy: 'Fight for them.'"

Prince Max: "But when they have won them by fighting, won't they impose worse terms?"

General Ludendorff: "There are no worse terms!"

Prince Max: "Oh, yes! They would break through into Germany, and devastate the country."

The ministers decided to tell President Wilson that his conditions for commencing armistice negotiations had been met. So we can be glad that German Intelligence, helped by General March's propaganda, was accurately informed of how our war effort was succeeding.

Yet, for all its reputation, the German secret service lost the secret war.

Colonel Nicolai says so. So does Field Marshal, now President, von Hindenburg in his memoirs:

"Our spy service produced only miserable results. In this sphere, even German gold succumbed in the struggle between our enemies and ourselves."

No little gold spent in that victory, especially in 1918, was American, financing Allied secret operations.

General Van Deman and Colonel Coxe, influenced partly by their English assistant, Colonel Dansey, stamped upon American secret service, whether at home or abroad, a character it never lost. They said:

"Spying and counter-spying are and always have been necessary in war. The spy who gets information that enables his army to capture a city serves his country as truly as the soldiers who scale the walls. Properly conducted, there is nothing disgraceful about secret service. There are temptations, hazards to character as well as to life. The greater the honor to those who can endure."

Today Americans and Englishmen who were "in that work," or "the service," are proud of it. Many are listed by Who's Who or Dun and Bradstreet or in the Social Register—college professors, musicians, bankers, brokers, lawyers, newspaper men. An unusual group gathers around the table at one of their occasional dinners in New York. If, as General Nolan once said, "It is sometimes necessary to have some accomplished liars in G-2," they lied like gentlemen, in a good cause—their country's.

THIS secret work was directed largely from the office behind the black door marked "S. S." in the old French barracks at American G. H. Q. in Chaumont. The original chief of the Division was Colonel Read, now dead, an old comrade of General Pershing. Later Colonel Coxe took his place. The two subdivisions of espionage and counter-espionage, spying and spy-chasing, were headed by two unusual men, Lieutenant Colonels N. W. Campanole and Aristides Moreno, masters of a half-dozen languages each. Their executive officer, Major J. S. S. Richardson, was a former newspaper man who, before we entered the war, helped the British secret service chase German spies. Since most of G-2-B's secret work was counter-espionage, this article is devoted to spy-chasing. American counter-espionage had two powerful arms—the Silent Watchers and the I. P.

"Silent Watchers" was not, of course, an official name, but it describes what they did. Forty or fifty thousand of them played in the A. E. F. a double rôle—outwardly soldiers like any others, drilling, hiking, fighting, but, unlike the others, never relaxing eyes, ears, wits in their search for spies and traitors in their midst. Their unsung service was heavy as it was unsuspected.

But their service was of incalculable value. Thanks in no small measure to it, the A. E. F. was probably the most loyal army that ever served the United States. More honor for its bright record, but honor also where hitherto it has not been bestowed, to the Silent Watchers. They detected the disloyal, who were quietly

Major General D. E. Nolan was Chief of Intelligence, A. E. F. He is now commanding the Fifth Corps Area, with headquarters at Columbus, Ohio

transferred where they could do no harm—usually before their units left the United States. In the Seventy-seventh Division alone, the polyglot New York City draft division, 800 men were weeded out and left behind through the work of the Silent Watchers.

Throughout the A. E. F., roughly, to every platoon, to every group of sixty men, there was one Silent Watcher. Nobody knew of his existence except one officer in his company to whom he reported. This officer, in turn, reported to another higher up, until the peak of the organization was reached in an officer of the Division Headquarters Staff, who, in his turn, reported directly to G-2-B at Chaumont. The organization had only one purpose, and stuck to it—to detect spying and disloyalty. (Silent Watchers did not report violation of regulations, lax morals, nor even crime.) The policy was to take no chances, but to transfer suspects without waiting for proof. An ounce of prevention was worth a pound of cure. Nor could the Silent Watchers reveal themselves or their organization by testifying in court.

The system worked so well in the Divisions that it was extended to the whole A. E. F.—Services of Supply, ports, replacement centers, hospitals—so that it covered every uniformed American in France or England.

It was the Silent Watchers who got the sergeant and his stolen code book the night before Cantigny. Barely in time, their suspicions had been aroused. The Silent Watchers discovered a movement to stir up race hatred among the negro troops, which resulted in their being sent home first of all (*Continued on page 132*)

No matter how Cranky passengers are

They Never GET Billy's Goat

An interview with the Chief Steward of the LEVIATHAN

By ROBERT H. DENEHEY

ONE of the greatest corporation lawyers in America sat down beneath the large dome in the dining-room of the steamship Leviathan and picked up the menu card, with its several hundred suggestions. The ship had left New York for Southampton that day, and now, on the first evening out, dinner was being served to the passengers. The lawyer scrutinized the menu and then glared at the waiter.

"See here, son, bring me some fried ham," he said.

The waiter presently returned with the ham and placed it before the noted jurist. That personage adjusted his glasses and looked at the piece of ham. Then he exclaimed: "That is not my idea of ham. Take it away. Bring me another slice with less fat."

When the waiter returned with another offering, which the chef had taken great pains to prepare, the lawyer gave it a swift appraisal and ordered in a surly voice: "Waiter, tell the chief steward I want to see him at once."

It took the chief steward only a few minutes to learn that it wasn't ham the lawyer wanted. What he really craved was special attention. It was an old, old story. The chief steward, however, knew what to do. Within ten minutes the waiter marched through the dining-room carrying a large platter on which were nineteen slices of fried ham. Some were thin, some were thick; some were all lean, while a few were fringed with fat. The lawyer looked them over carefully and selected a piece from the center of the plate.

When the waiter saw what had happened, he was the most dumfounded man on the boat. The lawyer had selected the same piece of ham that had been served to him the first time.

"Now, I call *that* real ham!" he exclaimed, as he began to cut it with his knife.

As the waiter made his way back towards the kitchen, he glanced curiously at the chief steward. That person, however, looked totally unruffled. He had just pleased another passenger and he was happy. The passenger may have been a crank, but pleasing cranks is a high art with William J. Linn, chief steward of the Leviathan.

A SEAGOING and salty chap is this man Linn, known affectionately to thousands of transatlantic tourists as "Billy." He has sailed the seas for twenty-six years and knows every "bump" on the ocean. Standing only five feet five inches in height, he is of fire-plug build. He has a smile that serves him equally well with passengers who travel *de luxe* and with those who cross in the steerage.

Twenty-six years ago, Billy Linn ran away to sea. Today his friends include Queen Marie of Roumania, General Pershing, Al Jolson, Cardinal Hayes, Sir Thomas Lipton, the Duchess of

Norfolk, former Secretary of State Charles E. Hughes, Douglas Fairbanks, and Mary Pickford . . . and hundreds of other persons not so much in the limelight who have traveled on the Leviathan between the shores of Europe and America.

Billy Linn's job brings him into rather intimate contact with famous men and women, "get-rich-quicks," cranks, and plain, everyday citizens. He has charge of the dining-room and kitchen and everything pertaining to food, and he must please every passenger on the ship.

"I have been asked frequently by my friends if I am ever stumped when a passenger calls for a special dish," he said. "I am not. I tell them that Billy Linn never says 'No.' And that goes for all requests within reason. I can't go out and catch a pink elephant on the crest of a wave, but I can serve mousseline of chicken favorite, Pomeranian goose giblet soup, or prepare any sort of meal that a man is likely to call for."

A MAN in Billy Linn's position must have crazy questions hurled at him on every trip, so I began by asking: "What was the most unreasonable request ever made of you?"

"Well, on one trip I was bothered by a wealthy Philadelphian who insisted that I place him at the same table with a famous movie actress. In fact, he wanted to sit next to her. Now, the seats around this actress were taken by her friends. In the face of my explanation of why it was impossible to accommodate my passenger from Philadelphia, the man produced a thousand-dollar bill and said to me: 'You get me the seat I want, and the thousand is yours.'

"The gentleman kept his thousand-dollar bill, and of course he did not get the seat he wanted.

"Movie actresses, as well as other stage folk, always like to sit beneath the big dome in the dining-room where they can be seen and will attract attention. And nearly every passenger believes that the best tables are in the center of the room. As a matter of fact, it is just the other way round. The best tables are along the sides of the room, because I always place my best waiters there. During mealtimes I have two points of vantage. One is at the kitchen exit, where I can watch the waiters when they pass into the dining-room with food. The other is at the head of the room, near the center. From this point, I can keep my eye on the waiters in the center of the saloon. Those who serve the tables at the sides are hidden by pillars, so you can understand why I pick my best men for the outside tables."

"Do you select passengers to sit at the captain's table?" I asked.

"I do not," said Billy Linn with emphasis. "Many passengers have the impression that I arrange the seating at the captain's table. The fact is, the captain selects his friends to dine with him, or more often the lucky ones are chosen at the head offices of the line."

Very few ocean travelers know, at first, whom or how much to tip. I asked Linn whether there was a guiding rule that he could give me to govern the distribution of money to waiters, stewards, bell boys, and other attendants.

"First of all," he said, "the so-called ten-per-cent tip as practiced on land is not heard of on board a ship. This is obvious, because the meals are paid for in advance.

"Waiters do not expect tips until the last meal. Before the war it was customary to tip your table waiter $2.50 at the end of the trip. Nowadays, they receive on an average $5.00, although many passengers tip more generously. I refer to first-class passengers. Second-class passengers usually tip about $3.50, third-class $1.75, and tourists about $2.00. The bedroom steward, the stewardess, and the deck steward, usually receive $5.00 apiece from each first-class passenger. Second- and third-class stewards receive about the same as waiters of their class. This includes rug and chair, with the exception of third class, where the tip is much smaller.

"SOME persons tip everybody. The bath steward often receives $2.00, and the smoking-room, social hall, and library stewards receive $1.00. Some passengers tip only the dining-room waiter. Others often remember everybody on board with a flat sum to be distributed. From this money even the chef, elevator boy, musicians, printers, swimming-pool attendants, and others receive a share.

"As for myself, I do not accept tips. One day, however, I was approached by an old lady who said in a motherly sort of way that she just had to thank me for what I had done for her on the trip over. Along with the speech, she handed me a dollar. The dear old lady was so sincere that I knew she would not understand at all if I refused to accept the dollar, so, rather than hurt her feelings, I took her tip. But I take pleasure in turning down a thousand-dollar tip from a millionaire."

I asked Linn how much a first-class passenger should tip if he desired to remember everybody on the boat; that is, if he desired that his tip should be distributed according to the scale

established by the stewards themselves.

"Fifty dollars would cover it," he replied.

Billy Linn's fondness for children and aged persons is well known in transatlantic shipping circles.

"One day," he told me, "I was called to the gangplank by a wealthy New York woman, who said: 'Here is little Johnny. His uncle will meet him in Southampton.' That was all. Johnny was placed in the hands of a steward and soon became acquainted with other children on the ship. He was only five years old and he had the run of the boat.

"The Leviathan has a special room fitted up for children, where special food is served, toys provided, and the best of attention given to the youngsters.

"On one trip we had on board a baby, one month old, who was traveling alone. She was placed in charge of a stewardess, and the entire crew sort of adopted the child as its own. Every morning I inquired about the little one's health. Of course, I was not able to prepare fancy dishes for this passenger, but I did see that she was treated like a queen.

"Another time a young girl walked into my office and said: 'Mr. Linn, you hardly remember me, but when I was eight years old I made my first Atlantic crossing. I shall never forget that trip. Everybody from the captain down made me enjoy the trip and I was so happy. I just had to call at your office now and say "How do you do?" I remember yet that you gave me a doll to play with and prepared special food when I got a little seasick.' This girl was going to be married in London, and of course she brought her husband back on the Leviathan.

"We have very few cases of seasickness on the Leviathan. The boat is the largest in the world and therefore it does not rock very much. The orchestra is playing every night to a packed dining-room, and everybody eats heartily.

"Some people, of course, overeat. Then when they feel uneasy in the region of the stomach, they blame it on the roughness of the sea. Naturally, an ocean trip stimulates the appetite. Persons who at home would eat only some orange juice, cereal, and rolls at breakfast, walk into the dining-room on the boat and order eggs, steaks, hot cakes, and several cups of coffee. If they would go at it a little easier, they would not jolt their stomachs and invite indisposition."

I ASKED Linn what he does with the pets that passengers bring on board.

"I'll say this," he began, "that the funniest thing happened one day, when one of the stewards reported that a woman had a dog in her room and refused to allow anybody to take the animal away from her. I hurried to the room with the steward, expecting to find a lap dog cuddled up on a pillow. But I was fooled. I was met at the door by a low growl, and looking into the room, saw a Great Dane. I call them flea dogs. He stood over two feet high.

"'Listen,' said the woman. 'Boxer and I have slept in the same room for eight years and we're not going to be separated now. He's my pal. Please let me keep him in my room, Steward!'

"I told her that we had a special place for pets on the boat—a room especially heated, where special meals were served to meet the requirements of each pet. She said she had never heard of such an arrangement, but when she saw the room, she realized that her dog would be properly cared for.

"Often women smuggle small dogs into their rooms under their coats. One night a section of the ship was aroused by a constant barking and we found two dogs in the room of a movie actress. Sometimes, we close our eyes and wink when we see very small dogs, such as Pekingese pups, smuggled on board. But don't think for a moment that the passengers fool us. We know what is going on. Yes, they come on board with all sorts of animals: lizards, cats, parrots, snakes, monkeys, and rabbits."

MY NEXT question of Linn concerned the romances that are born at sea.

"Of course, acquaintances formed at sea often lead to the altar," he said. "Many will recall the affair of one of America's most popular cartoonists, who met a beautiful woman on board the Leviathan while en route to Europe. It was surely a play in three acts. Their courtship was the talk of the ship. And I was surprised to see both of the lovers board the boat for a return passage to the United States. But I didn't expect them to ask the captain to marry them on the high seas. They did, however, and they actually took a third trip over to spend their honeymoon on the ocean.

"As a rule, steamship captains are not fond of marrying couples on the high seas. Often the love is merely temporary, the principals being blinded by the glamour of the sea, the steamship, and the trip. When they reach land, their love frequently cools.

"However, all is not love at sea, but I do what I can to promote harmony as far as possible. One time I was roundly abused because a prominent oil man among the passengers discovered that his waiter had served on a German submarine during the World War. He refused to be waited upon by a 'Hun' he said.

"I invited the oil man to step into my office some day when he had time for a little talk. He did. I asked him whether or not he knew that this German waiter was a naturalized citizen of the United States, and that he had married an American girl and had two American children. I asked him also if he realized that war is war and that this German boy had fought for his country just as millions of Americans had fought for theirs. He said he had never before looked at the matter in that light. He must have conquered his prejudice, because I learned afterwards that this waiter received a ten-dollar tip from the oil man."

"I suppose," I said, "that there are some passengers who want this, that, and everything else."

"Of course," admitted Linn, "I run into all sorts aboard ship. One of the most annoying types is the fellow who has picked up a lot of dough in a hurry. Perhaps he is a man who has made a quick fortune in the stock market, or who has received a legacy from a forgotten uncle. He comes aboard with his brand-new luggage and wants to meet the captain immediately. I tell him very gently that the captain is engaged with his navigation charts, but that I am prepared to render him any service. He usually shakes hands, offers me a cigar, presents his card, and tells me he is a friend of the Secretary of the Navy, Connie Mack, the president of the line, or Chief Justice Taft. This type of passenger is nearly always a loud talker who desires to impress everybody with his importance.

"Perhaps he hasn't got a room with a bath and wants to move into a suite for the same price, or desires to have a special steward cater to him alone during the trip. Or maybe he wants to know who the celebrities are on board, or perhaps he wants me to introduce him to an actress or to a prince. He knows full well that some of the requests cannot be granted, but he just has to get them off his chest.

"The cheapest passenger I ever encountered was a chap who raised Cain when his suit was smeared with fresh paint. He was going to sue the line for this and that and everything, but when his complaint was investigated I found that he was a stowaway. He had never paid his fare!

"Running a close second to him are the passengers who ask for rebates on their bills because seasickness prevented them from eating their meals regularly. A woman who had been seasick asked the matron for some caviar and other expensive foods when she was nearing port. She wanted to take these delicacies ashore and eat them in place of those she missed at sea.

"THE most interesting affair I ever had on board centered around a woman who was what I might call a 'professional trouble maker.' That is, she had a reputation in American and European hotels for raising disturbances without the least provocation. I had been tipped off before leaving Southampton that she was on our passenger list, so I was prepared for anything. In this case, the London office of our line had actually wired me to be on the lookout for her.

"I was sitting in my office on the first afternoon out, when a woman walked in with a cigarette in her mouth. She was a beautiful woman.

"'See here; of course you know who I am,' she began. 'I'm here to raise a little hell and I'm going to start in with you.'

"I offered her a chair, but she didn't even look at it. I then told her I did not know who she was. (I did, however, because the cable from our London office identified her!)

"'So you don't know me, eh?' she shot back. 'Well, I'm Mrs. So-and-so. I've stirred things up on every liner I ever sailed on and in hotels in Europe and the United States, and I'm here now to raise some more hell if I don't get the kind of service I pay for and demand. I want a table next to a window and I want it right away.'

"I made a quick decision. It was better to have it out with her right then and there.

"'Listen, Mrs. So-and-so,' I said. 'There is no hell going to be raised on this ship. If there is, I am the one to raise it. Now, go and take that table I gave you or—'

"'Stop!' she said. 'I shall see the captain at once. I have been insulted.'

"I called a steward and said: 'Steward, take this lady to the captain immediately.'

"Did she go to the captain? She did

Digitized by Google Original from UNIVERSITY OF IOWA

not. I called her bluff, and people tell me I was the first man who ever dared call her down. But she accepted the table I assigned to her. During the remainder of the voyage I had her watched carefully and every little whim was catered to by the dining-room captains and bedroom steward.

"Before she left the boat she reserved the same room for the return voyage and when she came on board I greeted her with a smile. I asked her if she cared for a nice table by the window and wanted the same stewards. She became one of my best friends and uses our line exclusively.

"ONE of the most amusing things we ever had happen on board the ship occurred one day when I walked up to a man who was leaning on the rail as the boat approached the shores of England. My curiosity was aroused because the man had not appeared in the dining-room during the entire trip, although he was the picture of health. I knew that he had regularly had sandwiches served to him all the way across and that he had tipped the waiter a quarter for each serving.

"Here is little Johnny," said the wealthy New York woman. "His uncle will meet him in Southampton."

"'Why didn't you come into the dining saloon?' I asked him. 'We have a lot of fun there.'

"'I can't afford it,' the man replied.

"When I recovered from the shock, I walked away without commenting. The poor chap actually did not know that his meals were included in the payment for his passage. And I was afraid to tell him the truth because I had an idea he might jump overboard when he realized he had paid for something he did not get!"

When I asked Linn who was the best traveler he ever had, he hesitated a minute. Then he said:

"The big people are always the best travelers. When I say big, I mean the men and women who have some personal achievement to their credit. Take, for example, Queen Marie of Roumania. On the voyage to America, the Queen wanted to know all about our people, their habits and customs, and what they ate in various sections. So, from time to time, I would see that she was served with Boston baked beans, with hot cakes and scrapple for Philadelphia, fried chicken à la Maryland for Baltimore, and a very heavy breakfast for the West.

"Her Majesty is one of the most democratic of women. She frequently enjoyed a dip in our swimming pool, where she was instructed by 'Jimmy' Connolly, the ship's swimming teacher. Queen Marie isn't a fancy swimmer—that is, she hasn't a great variety of strokes. Indeed, she uses only one, the breast stroke, but she uses that very well and she has splendid endurance. She visited the pool every day, and one morning she swam with the breast stroke for forty minutes continuously. Of course, she used the pool privately.

"Princess Ileana was quite 'ritzy,' but she was also popular with the passengers.

"ONE of the easiest persons to please is the Duchess of Norfolk, of the third ranking family of England. She is a very pleasant person to serve. She, too, is democratic and an experienced traveler.

"The man whom I have found the most liberal and easy to satisfy is William F. Kenny, friend of former Governor Al Smith. His breakfast consists of a glass of milk and his lunch is the same. For dinner he selects one cup of soup and a piece of toasted bread. Nothing ails him. He is as healthy as an oak—but he just believes in being a light eater. He is very generous too. He always sends several boxes of cigars down to the fireroom, and in some way or other remembers every man on board the ship.

"Al Jolson is another man we are always glad to see aboard. He is liberal with remembrances and songs. He is one of the best entertainers in the world and will sing anything any time when we are out on the high seas.

"General John J. Pershing is an ideal traveler. He is always the same—modest, quiet, and unassuming. He never makes a request for special favors, such as sitting at the captain's table or demanding a certain seat in the dining saloon.

"Sir Thomas Lipton, the famous English sportsman, eats alone and does not want to be fussed over. I recall that Sir Thomas is very fond of rice. Indeed, he used to carry a Hindu with him to prepare it in a special way. Later he taught one of our chefs how to prepare it. He is fond of oatmeal too, but I never saw a man eat it the way he does. He puts a lot of butter and salt on it and then dips it into a bowl of milk which he keeps on the side. I suppose this is the Scotch fashion of eating oatmeal."

"DO YOU have many girls and young women traveling alone?" I asked.

"Nowadays, a large number of young women travel alone," Linn replied. "Years ago, a young girl who went across the Atlantic unchaperoned would be considered a fit subject for a mental examination. Now it is quite the thing to do, and many avail themselves of tourist cabin rates for the May, June, July, and August trips.

"There are masters-at-arms or bedroom stewards within earshot of every stateroom. They patrol the halls of the ship every night just as regularly and as vigilantly as marines patrol a valuable government building. You can see for yourself that there is mighty little chance for a would-be criminal to get away with anything. It isn't like being on a railroad train—you can't get off at the next station—and a man who is caught in any wrongdoing can't jump off the ship into the middle of the Atlantic when he wants to escape from those who are after him.

"Of course, we still have card sharks aboard now and then. With all the well-worn warnings against them, it is amazing to think that passengers still fall for that friendly-game-of-cards gag, which is just as old as the shell game staged annually at the county fairs.

"My job isn't an easy one," Linn concluded. "The Leviathan is 960 feet long and she has thirteen decks. If stood upright, she would extend 250 feet higher in the air than the Woolworth Building. We burn 21,000 lights, or sufficient electricity to furnish light for a city of 70,000 inhabitants. The average number of meals I serve on a round trip is 144,000, so you see time never has a chance to hang heavy on my hands. And that's the way I like it to be—something doing every minute!"

(*The End*)

The THINKER

By
Clarence Budington Kelland

SCATTERGOOD BAINES was not what you would call a reading man—except when Mandy was away on a visit. That was an emergency he was prepared for by owning a book. It was a good book; and he had been reading it off and on for forty years. The name of it was "Frederick the Great," by Thomas Carlyle. He read it through about once in four years, and then started in again. Mandy wanted to know why he didn't get him a fresh book, but he told her he had tested this one out, knew it was good, and couldn't afford to experiment at his time of life.

He had been reading in bed until nearly ten o'clock before he got drowsy and then fell asleep in the silent house.

It was midnight when he was awakened by a light in his eyes and a rude hand upon his shoulder.

"Wake up and shut up," said a voice behind the beam of light.

Scattergood sat up and rubbed his eyes.

"W-al," he said. "W-al. How be ye?"

"Git up and dress," said the voice.

"Expect a body to find his pants in the dark?" asked Scattergood.

"Light the lamp," the voice ordered; and a second person touched a match to the wick of the lamp by which the old hardware merchant had been reading. Scattergood saw two men, whose features were concealed by red handkerchiefs. One of them held an electric flash-light and another object which undoubtedly was a revolver.

"Dunno's you'll git much to repay your trouble," Scattergood said mildly. "But the's pie in the ice box."

"Git dressed, and shut up," said the man who, apparently, was in command.

"Can't ye burgle a man's house with him in his nightgown?" asked Scattergood.

"You're goin' out," said the robber. "'Tain't anythin' to us if you go dressed or undressed."

"Goin' out, be I? Um. 'Tain't robbin' then, but kidnapin'." He chuckled. "Who d'ye calc'late's goin' to pay a reward to git me back?"

"You'll git back when we're through with you."

It was midnight when he was awakened by a light in his eyes. . . . "Wake up and shut up," said a voice behind the beam of light

Illustrated by
PAUL MEYLAN

"All most folks' heads is useful fer is to grow hair on," said Scattergood. "They'd be better off if they could use 'em to grow garden truck"

"You kind of int'rest me," said Scattergood. "What d'ye figger to use me fer? Eh?"

"We're goin' to take you to the bank," said the man; "and you're goin' to let us in and open up the vault. We know how much money the' is there. Then we'll tie you up, and you'll be found in the morning."

"Good idee," said Scattergood. "Shows consid'able intelligence. But what if I hain't of a mind to open up the vault?"

"I guess we'll manage to change it for you then."

"Time locks hain't to be opened till the hour they're set fer."

"There ain't no time lock on that vault door. Think we undertook this job without findin' out that?"

"Thorough, hain't ye. W-al, there'll be a time lock this time next week. Better lock the stable after the hoss is stole than never lock it at all. I dunno's I care about folks makin' a habit of kidnapin' me and forcin' me to open up. People'd be apt to criticize me if I done it twice."

"Stir yourself," growled the robber, and for a moment or so Scattergood was silent as he drew on his trousers and bent to lace his shoes. Then he straightened up and scratched his ear.

"STRANGERS around here, be'n't ye?" he inquired affably.

"Not so strange we don't know what we're doin'."

"Seems as though. Um. Hain't folks goin' to be kind of cur'ous seein' you drag me through the streets this time of night?"

"Nobody was ever awake in this town at this time of night," retorted the robber.

"You never kin tell," said Scattergood. "They might be runnin' fer a doctor, or have a house on fire, or what-not. Or some of the young fellers might be gittin' back from settin' with their best girls."

"It ain't your worry," said the robber. "Hustle! Ain't no time to waste."

"Still an' all," said Scattergood, "them's the kind of things a body ought to think about. It's jest little unexpected happenin's that upset plans. If I was a-goin' to rob a bank, I calc'late I'd set and think up everythin' that could happen, and then I'd git ready fer it. I wouldn't leave nothin' to chance. I shouldn't wonder but what I'd 'a' made a spankin' good robber if I'd set my mind to it."

"You're a spankin' good talker," said the robber. "We ain't no slouches, I guess. Hope you got them payrolls all done up in sacks," he went on, grinning. "Sacks saves a heap of trouble for us boys. Shag!"

They went out the back door, and Scattergood saw standing at the side of the house a rattletrap motor-car with a covered body, such as grocers use to deliver to their customers. Its rear doors stood open.

"Git in," ordered the robber.

"I swan," said Scattergood admiringly, "if you boys don't think of everythin'! Calc'late to carry me through the streets in that, eh? Now, that's what I call perty slick. Nobody kin see me."

"Yes," said the robber, "and if anybody hears you, you're goin' to git hurt. Jest let out one beller and see what happens to you. Git in."

Scattergood climbed with some difficulty over the tail of the car and sat heavily on the floor inside. The second of the robbers accompanied him; the first took the wheel. They removed the red handkerchiefs.

"Folks," said Scattergood presently, "is a-goin' to wonder what a delivery

UNIVERSITY OF IOWA

wagon is standin' by the bank fer."

"Think so?" asked the robber on the seat.

"And what'll they be thinkin' if they see me unloaded out of the back of this here wagon, like I was a side of beef, eh? Tell me that now. Hain't sich a sight calc'lated to raise suspicions?"

"Anybody 'd think you was scairt we'd be caught," said the robber.

"'Tain't that," said Scattergood. "I hope you be caught. But when anythin's goin' on I'm int'rested in it, kind of. I like to see how it's a-goin' to work out, as you might say. Now, you boys got a good scheme here that nobuddy could help but admire, kind of, and though I figger to come in for consid'able criticism over these doin's and my part in 'em, why, I'd kind of hate to see it all ruined jest by suthin' careless, or kind of unexpected."

"Huh," grunted the robber.

"YOU kin understand how I feel," Scattergood went on. "Kind of like a feller watching a ball game. He allus wants one team or tother to win, even if he hain't got no int'rest in neither. And it's funny, if you rode on the train or the bus with one team, that's allus the one you want to win. You feel kind of acquainted, I guess. Folks is funny that way. Folks is funny anyway," he added as an afterthought, shaking his head.

"Aw, shut up. You take my mind off my drivin'," said the robber.

Scattergood was silent a moment or so, but then he spoke again: "You boys do much of this here kind of work?"

"Plenty."

"Mostly night work, hain't it? Keeps ye away from home and all."

The robber snorted.

"Pay well?" asked Scattergood.

"It's goin' to tonight."

"Ye ought to be rich," said Scattergood.

"If we was, we wouldn't be monkeyin' with this."

"But a body wouldn't have to rob more'n two-three banks to git well fixed. Here folks goes and saves up their money, and puts it into banks all convenient fer you boys. Scads of it. Then you come along and git it. If 'twas me I calc'late I'd git rich on about three bank robberies."

"Well, we ain't," said the robber.

"Can't be a very good trade to foller, then," said Scattergood. "What ails it?"

The robber laughed shortly. "Folks ain't fond of havin' banks robbed. 'Tain't everybody comes along with a key to open up, like you do."

"Oh," said Scattergood, "then the's times when you hain't successful?"

"Some."

"You git up plans to rob a bank, and the plans fall through?"

"Sometimes."

"I'm gittin' kind of hopeful," Scattergood said. "Mebbe this here'll turn out to be one of them times."

"This time won't," said the robber.

"But s'posin' somebuddy was to see you unloadin' me and git suspicious, and go hollerin' fer help?"

"They won't, and if they do, why you're goin' to soothe 'em down. If there's anybody on the street you're goin' to say to 'em that we had some engine trouble and was out of spark plugs, so we waked you up and fetched you down to the store to git some."

"Um. . . . You do think of everythin', don't ye? Competent boys, that's what I'd say." He waggled his head. "Bein' as able as you be, I don't see why you hain't got rich."

"Luck," said the robber. "Say, you're a kind of a cool customer, ain't you? Most people 'ud have been kind of upset to git waked up in the night this way. Or are you jest dumb?"

"Hain't never been able to figger it out for myself," said Scattergood. "Some days I think I'm cool, and some days I think I'm dumb, and some days I don't care which, 'cause it seems to git the same results. We're jest passin' Deppity Hopper's place; you better go careful. He might suspicion suthin'."

"Anybody 'd think you wanted us to have good luck."

"What I want," said Scattergood, "is to git back into my bed with a whole skin. I come to a time of life where sleepin's more important'n cash money."

THE car hastened along the dusty road and Scattergood was not comfortable as he sat on the floor boards. The springs were not calculated for the pleasure of passengers, and there were periods when he found it advisable to keep his mouth tightly shut, lest he bite off his tongue. The situation was neither pleasant nor dignified, though the matter of dignity did not trouble Scattergood greatly. What attention he had to spare he was giving to the interests of the depositors in his bank.

The robbers had chosen well the time for their foray. It was the time of the week and of the month when it was necessary for the bank to carry heavy sums in cash to meet the payroll demands of various local enterprises, and when unusually large deposits were received. If these robbers succeeded in making a clean sweep of the stacks of currency and the bags of gold and silver coin, the condition of the bank would be serious.

"I dunno how long we got to stay here 'fore somebuddy comes along," said Scattergood; "but looks like you was a-goin' to be more uncomfortable'n what I be"

Digitized by Google
Original from UNIVERSITY OF IOWA

As is well known to all investors in the stock of banking enterprises, each stockholder is liable for double the amount of the face value of the stock he holds. And since Scattergood owned all the stock of the bank, with the exception of the shares necessary to qualify the other directors, the major part of the calamity would fall upon him. He did not regard the situation with equanimity.

But it did seem to him more economical to lose even that large sum of money than to invite by some rash action a bullet from one of the determined men who held him prisoner. His age and weight did not make for agility; he had been taken utterly unawares, with no opportunity for resistance, and the thing had been so well planned and so efficiently carried through to this point that its success seemed certain.

HE TALKED because he thought better when he talked, and because talking amused him. It was better to lose money and enjoy the delights of conversation, than merely to lose money in dour silence. So he chatted on, rather to the amazement of the hard citizens who guarded him, and who wondered what manner of individual he could be. This was so much on the right side of the ledger. It was bound to occupy a certain part of their minds when they would need the whole resources of those mental engines in the carrying through of their project.

"Somebody standin' on the sidewalk," said the driver in a whisper. "You git here on the seat beside me. Tim, you keep that gun against his ribs."

Scattergood scrambled over and sat down at the right of the robber, while something hard and unpleasant and threatening pressed against his spinal column.

"Don't forgit them spark plugs," said the driver.

"'Tain't nobuddy but Pliny Pickett; and what he's doin' up at this hour of the night's a conundrum," said Scattergood.

"You do the talkin'," said the robber.

The car moved along slowly now, and Pliny regarded it with curiosity, and then, as it came under the light, with astonishment. What in tunket was Scattergood Baines doing up at this hour of the night! And why was he riding in this delivery car? But his hunger for information was satisfied speedily.

"Evenin', Pliny," said Scattergood. "Up kind of late, hain't ye? Eh? Settin' the boys a bad example?"

"Been settin' up with Elder Hooper. He was took bad about eight o'clock. Better now, seems as though. Suthin' about his heart."

"Now, hain't that too bad. Um. . . . (*Continued on page 154*)

If You Ask Me:

The Market is Always Glutted With Speckled Axes

I WAS lunching with one of the wisest men I know. He's a genius in construction, management, and finance—an alchemist who turns into gold the base metals out of which buildings are built. They say that much of his achievement is due to the canny way in which he picks people for important jobs.

"What special mark do you look for in men?" I asked him.

"Granted average ability and honesty," he replied, "I want to know just one thing about a human being. Is he a *finisher*? If you ask him to do a job, will he always go get it, put it in a sack, tie a string around it, and set it on your desk? If he will, I'll back him against the world; if he won't, he's not worth office room.

"I spend much of my time watching our new men. I don't care particularly *what* they do or *how much* they do. But I'm keen to discover if they carry each job through to completion, instead of letting up when it is 'practically done.'

"On the race track, most beaten horses get tired in the last quarter. The same thing is true in business. Give me the man who'll fight through to the finish and I'll give you the man who's three whoops and a holler better than any obstacle that fate is likely to dump in his path."

SOMEHOW or other, these words sounded mighty familiar. I've heard other big business men make the same kind of talk. Staying qualities seem to be in great demand these days.

A choice story in Franklin's "Autobiography" is the one about the man with the new ax. It will bear repetition. This man, relates the immortal Benjamin, bought an ax of his neighbor, the smith. The cutting edge, of course, was sharp and bright, but all the rest of the ax-head was a dull black. The buyer announced that he wanted the whole of the surface as bright as the edge.

The smith consented to grind it all bright if the buyer would turn the grindstone. He turned and turned, while the smith pressed the broad face of the ax heavily on the stone. This made the turning very fatiguing. More and more frequently the man kept stopping to see how the grinding was getting on. Progress seemed disconcertingly slow.

"I'll take it the way it is," he said finally.

"Oh, no," retorted the smith, "turn on, turn on! We shall have it bright by and by; as yet it's only speckled."

"Yes," returned the man, "but I think I like a speckled ax best."

EVIDENTLY the business world today is a bit burdened with men who like speckled axes best. Otherwise we should not hear so many reports of big positions going begging for the right men to fill them.

Yesterday, in turning the pages of a book, I came across a picture of Sir Isaac Newton patiently blowing soap bubbles in his garden (as he formulated his theory of light), while his idle neighbors mocked his childlike pursuits.

This reminded me of Sir Isaac's answer to the man who asked him how he discovered the law of gravitation. "*By thinking about it all the time!*" he replied.

By the way, isn't that the answer to most achievement?

The Four Great Immoralities of Christianity

By GEORGE W. GRAY

AN AMERICAN missionary who had been seventeen years in India was home on furlough in 1925, and between speaking engagements he took a month off and wrote a book.

It was pounded out in a fever of haste, for he was eager to get back to his work in Asia. Indeed, he wrote only at the urging of a church executive who wanted a record of his missionary impressions. After it was finished, the writer was so doubtful of the literary value of his writing that he added a preface which was half apology. Leaving the manuscript to others to publish or not as they saw fit, he hurried to India; and he thought no more of it until a printed copy reached him in the interior late in the year.

By that time the English-speaking world was reading this book: "The Christ of the Indian Road." It was fast becoming a best seller. By December it had run into four editions. By 1929 it had sold to the extent of nearly 400,000 copies.

If you have read the book you know that it is an account of religion in practice—glimpses of how Christ's precepts work when freed of prejudice and self-interest. The book so impressed certain political leaders in England that they instructed their party's members of Parliament to read it as a help toward understanding India.

In London, a famous concert singer—who had scoffed at missionaries as creed peddlers—devoted an evening in Albert Hall to a sympathetic review of the book before a crowded audience.

In New York recently, a group of the "saved" on the Bowery were using it as their study manual; and at the same time, in New Jersey, the book was engaging the serious attention of a group of free thinkers. So far and so widely has it ranged.

But E. Stanley Jones lived this book before he wrote it—and therein, I think, is the secret of its amazing appeal. He, himself, has never ceased to wonder at the world-wide response which his simple portrayal has evoked. Letters, clippings, reviews have poured into Hindustan telling him what "The Christ of the Indian Road" was doing to people in other lands—how it had helped them to religious reality. Statesmen asked his advice; people in far-away places put their religious perplexities up to him. Suddenly this modest missionary found himself an international figure. He was being quoted all over Christendom. His church elected him bishop; he endured the office twenty-four hours and then resigned, praying to be allowed to go back to his work on the Indian road.

Last winter Doctor Jones was home again on furlough. That means, not a rest, only a change of scene. And in February the scene changed daily. Night after night he was filling engagements in cities throughout the United States, addressing great mass meetings, and next morning leading the local clergy in a two-hour conference. To interview him, I had to go along and use such time as he could spare.

> "HUNDREDS of thousands in India who reverence Christ," says Doctor Jones, "will not go into a Christian church to hear about Him. Said a prominent Hindu: 'A Christ cult is growing up in India entirely separate from the Christian church.' Jesus has become naturalized in India. He is part of their heritage now. They are proud that He was born in Asia, that He, too, came from a subject people; and there is even a local movement to prove that Jesus spent His hidden years in India. They are accepting Christ, but drawing a very sharp line as to what they accept of the church. What the East regards as 'Christian Immoralities' explains this attitude."

ONE day we met early in a quiet anteroom before the morning audience gathered. Another time, while pacing a railroad station platform waiting for a late train, the interview continued. Again, it was in the passenger coach that we talked. The longest session was during an automobile ride of one hundred and twenty-five miles, bumping and sliding over icy roads for nearly five hours. Thus the article was welded together in the field and represents not only what Doctor Jones said, but also what I observed and absorbed as he pushed cheerfully through the fagging ordeal of a two-thousand-mile speaking tour.

He was born in an old-fashioned Maryland village, Clarksville, in 1884; attended City College in Baltimore and Asbury College in Kentucky; and in 1907 went to India as a missionary of the Methodist Episcopal Church. His preference was Africa, but the board had a vacancy in India, and so asked him to go there.

"I went gladly, eagerly," he said, "but there was a 'but.' I yearned to convert the 'heathen,' but I didn't want to scratch or nick my own theology in the process. So I was afraid to find any good in the non-Christian religions lest it impair the superiority of my own. I went to teach, not to learn—and the intuitive Hindus, with their deep religious sense and keen perception, were not slow to size up the situation. The whole atmosphere seemed charged with criticism, suspicion, resentment. I scarcely ever looked into a native newspaper that the acid did not eat into my soul.

"I ENGAGED in public debates with Hindus, Buddhists, Moslems, arguing the superiority of Christianity. I had a long line to defend—the whole Bible from Genesis to Revelation; the miracles; the doctrines, rites, and discipline of the church; the practices of Western civilization. And it wasn't easy. The pundits came prepared—long lists of questions culled from the skeptical literature of the ages, facts from history, ugly stories of the hypocrisy and rapacity of the so-called Christian nations. Those early days in India were a tense and nervous struggle.

"I found that I was holding too long a line. I decided to shorten it. I would take my stand at Christ and make Him the central issue. Here I was on the universal. For Christ appeals to the soul as light appeals to the eye, as truth fits the conscience, as beauty speaks to the esthetic nature.

"The nonessentials had been blocking Christ there on the Indian Road.

"I once asked Gandhi, the great Indian leader, what we should do to naturalize Christianity in India.

"Gandhi replied: 'I would suggest four things: First, that you Christians, missionaries and all, should begin to live more like Jesus Christ; second, that you practice your religion without adulterating it or toning it down; third, that you make *love* your working force, for love is central in Christianity; and, fourth, that you study the non-Christian faiths more sympathetically in order to find any good in them and that you might have a more sympathetic approach to the people.'

"These four points went to the heart of things. I resolved to put them into practice. My chief emphasis should not be numbers and additions, but the production of Christlike character. Numbers would take care of themselves.

"Since I took (*Continued on page 143*)

E. Stanley Jones

DR. E. STANLEY JONES is one of the greatest men in modern missionary life. For seventeen years he worked in India, where he discarded what he considered the nonessentials from his own beliefs and emerged with a faith which, expressed in his book, "The Christ of the Indian Road," has made him an international figure. On the heels of his fame came election as a bishop of the Methodist Church, an office which Doctor Jones resigned at once, asking that he be left free to continue his work in India. He is a native of Clarksville, Maryland.

Mark Twain

"THERE are writers who belong to the history of their nation's literature," says Miss Keller. "Mark Twain is one of them. When we think of great Americans, we think of him. He incorporated the age he lived in. To me he symbolizes the large, free, humorous point of view of men who blaze trails through the wilderness. Mark Twain and the Mississippi River are inseparable in my mind. . . . For me, it was a wonderful experience to have him for a friend; he knew that we do not think with our eyes and ears, and that our capacity for thought is not measured by what we take in through our five senses."

MARK TWAIN
as Revealed *by* Himself *to*
HELEN KELLER

ONE of the most memorable events of my life was my visit to Mark Twain.

My memory of Mr. Clemens runs back to 1894, when he was still vigorous, before the shadows began to gather. Such was the affection he inspired in my young heart that my love for him has deepened with the years. More than anyone else I have ever known, except Dr. Alexander Graham Bell, and my teacher, Mrs. Macy, he aroused in me the feeling of mingled tenderness and awe. I met him many times at the home of my friend, Laurence Hutton, in New York, and later in Princeton; also at the residence of Mr. H. H. Rogers and at his own home at 21 Fifth Avenue, and last of all at Stormfield, Connecticut. Now and then I received letters from him. We were both too busy to write often, but whenever events of importance in our ives occurred we wrote to each other about them.

He knew with keen and sure intuition many things about me; how it felt to be blind and not to be able to keep up with the swift ones—things that others learned slowly or not at all. He never embarrassed me by saying how terrible it is not to see, or how dull life must be, lived always in the dark. He wove about my dark walls romance and adventure which made me feel happy and important. Once when Peter Dunne, the irrepressible Mr. Dooley, exclaimed, "God! How dull it must be for her; every day the same, and every night the same as the day," Mr. Clemens said, "You're damned wrong there. Blindness is an exciting business, I tell you. If you don't believe it, get up some dark night on the wrong side of your bed when the house is on fire and try to find the door."

The second time I met Mr. Clemens was in Princeton during a spring vacation when we were visiting the Huttons in their new home. We had many happy hours together at that time. One evening, in the library, he lectured to a distinguished company—Woodrow Wilson was present—on the situation in the Philippines. We listened breathlessly. He described how six hundred Moros—men, women, and children—had taken refuge in an extinct crater bowl near Jolo, where they were caught in a trap and executed by the Americans. A few days afterwards, the Americans captured Aguinaldo by disguising their military marauders in the uniform of the enemy and pretending to be friends of Aguinaldo's officers. Upon these military exploits Mr. Clemens poured out a volume of invective and ridicule. Only those who heard him can know his deep fervor and the potency of his flaming words. All his life he fought injustice wherever he saw it in the relations between man and man, in politics, and in war. I loved his views on public affairs; perhaps because they were so often the same as my own.

He thought he was a cynic, but his cynicism did not make him indifferent to the sight of cruelty, unkindness, meanness, or pretentiousness. He would often say, "Helen, the world is full of unseeing eyes—vacant, staring, soulless eyes." He would work himself into a frenzy over dull acquiescence in any evil that could be remedied. True, sometimes it seemed as if he let loose all the artillery of Heaven against an intruding mouse. But even then his "resplendent vocabulary" was a delight. Even when his ideas were quite wrong, they were expressed with such lucidity, conviction, and aggressiveness that one felt impelled to accept them—for the moment at least.

HE WAS interested in everything about me—my friends and little adventures and what I was writing. I loved him for his beautiful appreciation of my teacher's work. Of all the people who have written about me, he is almost the only one who has realized the importance of Mrs. Macy in my life; the only one who has appreciated her "brilliancy, penetration, wisdom, character, and the fine literary competences of her pen."

He often spoke tenderly of Mrs. Clemens and regretted that I had not known her.

"I am very lonely, sometimes, when I sit by the fire after my guests have departed," he used to say. "My thoughts trail away into the past. I think of Livy and Susie and I seem to be fumbling in the dark folds of confused dreams. I come upon memories of little intimate happenings of long ago that drop like stars into the silence. Some days everything breaks and crumbles. It did the day Livy died." Mr. Clemens repeated with emotion and inexpressible tenderness the lines which he had had carved on her tombstone:

> Warm summer sun,
> Shine kindly here;
> Warm Southern wind,
> Blow softly here;
> Green sod above,
> Lie light, lie light.
> Good night, dear heart,
> Good night, good night.

The year after her death, he said to me: "This has been the saddest year I have ever known. If it were not that work brings forgetfulness, life would be intolerable." He expressed regret that he had not accomplished more. I exclaimed, "Why, Mr. Clemens, the whole world has crowned you. Already your name is linked with the greatest names in our history. Bernard Shaw compares your work with that of Voltaire, and Kipling has called you the American Cervantes." "Ah, Helen," he replied, "you have a honeyed tongue; but you don't understand. I have only amused people. Their laughter has submerged me."

THERE are writers who belong to the history of their nation's literature. Mark Twain is one of them. When we think of great Americans, we think of him. He incorporated the age he lived in. To me he symbolizes the pioneer qualities—the large, free, unconventional, humorous point of view of men who sail new seas and blaze new trails through the wilderness. Mark Twain and the Mississippi River are inseparable in my mind.

When I told him that "Life on the Mississippi" was my favorite story of adventure, he said, "That amazes me. It wouldn't have occurred to me that a woman could find such rough reading interesting. But I don't know much about women. It would be impossible for a person to know less about women than I do." After some badinage back and forth about women, Mr. Clemens's manner changed. A sadness came into his voice. "Those were glorious days, the days on the Mississippi. They will come back no more, life has swallowed them up, and youth will come no more. They were days when the tide of life was high, when the heart was full of the sparkling wine of romance. There have been no other days like them," he said.

It was just after he had read my book, "The World I Live In," that he sent a note to me saying, "I command you and Mrs. Macy to come and spend a few days with me in Stormfield." It was indeed the summons of a beloved King. His carriage met us at Redding station. If my memory serves me, it was in February; there was a light snow upon the Connecticut hills. It was a glorious five-mile drive to Stormfield; little icicles hung from the edges of the leaves and there was a tang in the air of cedar and pine. We drove rapidly along the winding country roads; the horses were in high spirits. As we approached the Italian villa on the very top of the hill, they told me Mr. Clemens was standing on the veranda waiting. As the carriage rolled between the huge granite pillars, he waved his hand; (*Continued on page 80*)

We Were Happy *till* Golf *got* Us

By H. I. PHILLIPS

COMPANIONATE golf, as I call this man and wife business, doesn't go hand in hand with thrift. It is significant that President Coolidge has never been seen on a golf course. Ben Franklin, too, avoided it, and John D. Rockefeller became a swing-and-miss addict only after he had made his first fifty million.

When a man plays golf, he finds it expensive enough, but when his wife takes it up, it becomes something of a financial orgy. One of life's most pathetic spectacles is that of Mr. and Mrs. John Q. Whooziss trying to keep the wolf from the door with a mashie-niblick.

Woman's participation has put golf on a fancy-dress basis. Not so long ago a man could consider himself a completely equipped golf lunatic if he had a four-dollar cloth bag, six clubs, a dozen repainted golf balls, one pair of short pants, an old pair of shoes, one change of golf hose, and a couple of flannel shirts. As women began to dot the courses, he began dolling up more and more, until today he finds himself participating in a sort of male beauty contest. Some men dress better today for a round of golf than they do for a wedding. The competition in the matter of snappy golf hose has become particularly keen. Seven out of ten golfers today appear to be striving for recognition on the ground of sox appeal.

When a man and wife join a golf club, however costly, the initiation fee and dues are the cheapest part. It isn't the initial cost of golf, it's the upkeep. It is staggering how many checks two members of the same family can sign in a golf club grill in one month. Add the cost of frequent lessons, golf balls, guests, caddies, and Smart Modes for the Lady Golfer and you have a grand total the last day of each month that will smack the family budget for a row of papier-mâché savings banks.

In my case the worst is yet to come. Mrs. Phillips is now trying to convince me that I should really buy a second automobile, so that when I use the car to drive to the links with some male companions, she will have her own bus to use should a golfing mood seize her the same day. It looks pretty goofy to me. A cheaper way out, I think, would be to build a house across from the links.

Woman's place is, in the opinion of more and more wives and mothers, on the golf links.

Home in many parts of the country is becoming more and more regarded as the place to which Mommer and Popper go when it gets too dark to follow the flight of the ball.

Home is just a place to go to when it gets too dark to drive

The cricket on the hearth is too often the squeak made by Mother as she sandpapers her putter; the old-fashioned fireplace is fed chiefly with golf scores; and the old domestic picture showing the housewife at the sewing machine, baby at her side, while Pop, smoking a long pipe, plays with the kitten, is now being rapidly replaced by a scene showing Mommer practicing her back swing in front of a mirror, Popper trying to sink a twenty-foot putt across the living-room into a toy cup, and the maid rushing downstairs with the alarming news that the baby has just swallowed a handful of celluloid pegs.

Wives, mothers, daughters, sisters, cousins and aunts have gone over to golf in a body.

It was bad enough when Father roamed around Home, Sweet Home with a frustrated expression, reading aloud from Vardon's "Gist of Golf." But now that the girls have taken to arguing over the styles of Jones and Hagen, socking cotton golf balls all over the house, and breaking into long crying spells because "that terrible slice has come back again without the slightest warning," the situation in the Great American Home has become serious, if not tragic.

FOR five or six years I played golf now and then —say a dozen times a year—entirely for exercise and with no concern about my score. Golf meant nothing in my young life. I regarded it as a rather silly game out of which a man could get a kick only when grown too plump for vigorous pastimes and too prosperous to enjoy any exercise that could be had for nothing.

It seemed to me to be a social enterprise rather than an outdoor sport, and I never could see why a man who wouldn't walk from his porch to the corner delicatessen store without a court order, should walk four or five miles through swamps and woods and call it a pleasure simply because he had to buy

Puzzle: Find the quartette member whose wife is on the clubhouse veranda

"Fore" Better or "Fore" Worse

He loved his wife devoutly—
His faith in her was great—
Till, on the green
In seventeen,
Her putts ran up to eight!

She thought him strong and able,
A man among all men—
Until the sap
Got in a trap
And then got out in ten.

Their home life it was happy
In fair or wicked weather—
But, sad to say,
Not after they
Went in for golf together!

wo thousand dollars' worth of stock and pay dues of three undred dollars a year for the privilege.

It was my general theory that once you had socked the over-zed quinine pill two hundred yards you had shown yourself its aster, and that it was the height of folly to go on doing it all fternoon just because there were different trees each side of you.

OR many years I had considerable contempt for golfing en-thusiasts. I thought the game a bit "snooty." My idea was hat most addicts played golf, not because they liked the game, ut because it was accepted as indicating they could fford to meet people who professed to like it.

Two summers ago I took up the game in a serious way. Last summer I joined a club. Three months later my wife oined a club. Then the fun began.

Our home life isn't what it used to be. A new force as come into our lives, and what I am trying to decide is whether it is for better or for worse.

Time will tell. Maybe I should have known better than to take up the game. Maybe I made a greater mis-take letting my wife take it up. There are moments when I think archery, trap shooting, and pistol dueling safer domestic sports. All I can say for the experiment to date s that while it hasn't done anything for golf, it has given us lots of outdoor exercise and been a great help to us in the matter of lucid vocal expression. Our domestic life is more exciting. We have many more arguments. Golf—that's our weakness now.

Life with us has become a matter of swings and misses. I think of it in terms of the locker-room. Golf has so en-veloped us that only last week Mrs. Phillips stumbled over a living-room rug and unconsciously turned to re-place a divot.

She measures all distances, even from the house to the shopping district, in yards, and in all moments of indecision looks inquiringly around in search of advice from a caddy.

We even read the stroke-by-stroke reports of golf tourna-ments, and we take four different newspapers so we can read all the syndicated "How to Play Golf" articles by the established stars of the game. A hotel near our home has put a nine-hole miniature golf course on its roof and we would move there if we could break our present lease. It's all pretty ter-rible.

And expense! You never know what golf runs into until you have two people in the same family trying to play it. I can lose enough balls in one afternoon to work havoc with any budget. When we're both on the links it becomes a matter for the Repa-rations Commission. And even at that we use repaints. I am thinking of simplifying matters by asking my employer to pay me my salary in seventy-five-cent balls. It will be easier to strike a weekly balance.

The moss-grown joke about the wife who ransacks her hus-band's clothes for money during the (*Continued on page 149*)

The beginning of a great distrust

Young Jim Traft is "Tenderfoot Jim" No Longer

"Nope," replied Slinger. "I don't like the deal. An' if I happen to run into any of you Cibeque gents up on the Diamond, I'll take particular offense. Savvy thet?"

THE Drift

Illustrated by W. H. D. KOERNER

WHEN old Jim Traft sent to Missouri for his nephew, "Young Jim," to take charge of the rough Diamond outfit of cowboys and oversee the building of a hundred-mile "drift fence," he little dreamed what he was getting the boy involved in. For one hot afternoon, worn out by the constant heckling of the Diamond outfit, Jim rode into Flagerstown to a rodeo dance. And there he fell in love with little Molly Dunn of the Cibeque! Then he discovered that she was the daughter of a worthless homesteader and the sister of "Slinger" Dunn—notorious leader of the Cibeque gang of cattle rustlers who had sworn to stop the building of Old Jim's fence. Back in camp, Jim was faced with double misery: Insurrection of the men under him and gnawing doubts about the girl he loved. These latter were fed by the allusions of the outfit—half of whom had been in love with Molly and spurned by her. In one victorious fight after another, Jim began gradually to win the respect of his outfit, and the building of the fence went on despite the continued insubordination of Hack Jocelyn of the Diamond and the efforts of Slinger Dunn, Seth Haverly, and other members of the Cibeque gang. But he was still torn between his doubts and his love.

At last the fence was within a few miles of where Molly lived—in a tumble-down log cabin with her dreams and her longing to *be* somebody, and her hopeless love for the nephew of rich Jim Traft. Then things began to happen quickly. Jocelyn waylaid Molly in the woods and frightened her badly. She got away from him—but Slinger heard about it and that meant trouble. Also, Andy Stoneham, who had long loved Molly, told her he suspected that Jocelyn was making up to the Cibeque gang—and Molly did not know which way to turn. Finally, stirred by a new tenderness in her brother's manner, she told him the whole story of Jocelyn's holding her up, and confessed her love for Jim Traft. But this only infuriated Slinger. For days he hardly spoke to Molly, and early one morning she watched him ride off, a pack tied behind his saddle, on what mission she could only guess.

PART IV

FOR three endless days there came no word of Slinger Dunn. But on the third day, in the village with her mother, Molly heard that her brother was there, drunk and quarrelsome. At the store she met Andy Stoneham, who was a clerk for Enoch Summers. While waiting upon Molly, he contrived to whisper: "Heaps goin' on, an' hadn't I better come out tonight?" Molly nodded, and joined her mother.

Old Enoch was full of talk. "Did you heah the latest aboot Jim Traft, Mrs. Dunn? Wal, it's shore news. Young Traft has had notices put up thet he'd make no claim to cattle already drifted down into Sycamore Canyon. His drift fence has crossed the head of Sycamore an' is now

Digitized by Google

Fence

By ZANE GREY

out on the Diamond, an' movin' right along."

"Is *that* all the news," said Mrs. Dunn indifferently.

"Wal, most folks is agreed thet Jim Traft was shore more than square to the Cibeque when he done thet," went on Summers. "Mebbe there's more'n a thousand haid of steers, let alone cows an' calves, in the brakes of Sycamore. Seth Haverly an' his outfit sold near two hundred two-year-olds hyar yesterday. Forty-eight dollars a head! An' they've gone back fer another drive. Reckon they'll have most of thet stock, before the other boys get wind of it."

"Forty-eight a head!" ejaculated Mrs. Dunn, who appeared to be conjuring with figures. "Arch was in on that?"

"Wal, it seems not. He's had a fall-out with the Cibeque, or somethin'. Anyway, he was in town last night. It was Slinger who busted in here with news thet the drift fence had reached Tobe's Well. It shore upset all reckonin's around West Fork. Tobe's Well is way out on the Diamond."

WHILE her mother completed her purchases, Molly waited in the grip of conflicting feelings. She could not help a thrill to hear Jim Traft kindly spoken of, nor a start at the information that he had passed Sycamore Canyon with his fence. This was the dead line drawn by the riders of the brakes. Traft had disregarded their notice. Molly calculated that he was then actually within ten miles of West Fork and not more than forty from the east end of the Diamond.

After supper that evening she waited at the gate for Andy, something she had never done before.

"Shucks!" he ejaculated. "It's different when you want suthin' of somebody, ain't it, Molly?"

"I reckon so, Andy. You see what bein' friendly does. I'm doin' a heap of worryin' an' I'm just low-down enough to want your help."

"Wal, you've cause to worry, Molly Dunn," he said. "Let's get out of sight somewhere. I'm plumb scared of thet Hackamore Jocelyn."

Molly led him back of the cabin along the edge of the clearing to the creek, and halted beside a huge fallen pine. The amber creek babbled over the rocks below; the squirrels and jays were noisy; the woods were full of the golden glow of sunset.

"Molly, last night I happened on suthin' thet's got me scared stiff," he began. "After work I went up the crick to ketch a mess of trout. An' as I was comin' back

Digitized by Google

UNIVERSITY OF IOWA

Molly stood transfixed. . . . She drew her horse behind a thicket of pines

along the crick trail I seen Seth Haverly an' some riders. I ducked into the brush an' squatted down. I reckoned they'd pass. But I'm a son-of-a-gun if they didn't stop in a little glade not forty steps from where I hid. With Seth was his brother Sam, an' Hack Jocelyn. The Haverlys stayed in their saddles, but Jocelyn got off. He acted oneasy. An' he walked up an' down the trail. They was waitin' fer someone."

"I'll bet it was Slinger," said Molly, who sometimes in excitement used her brother's hated sobriquet.

"It shore was. Wal, fust off, Jocelyn swore Slinger wouldn't come an' Seth said he would. . . . Molly, they stayed there till dark an' I could repeat every blame word they said. But heah, short an' sweet, is what it all means. . . . Hack Jocelyn has got in with the Cibeque outfit, an' they're aimin' to double-cross Slinger. They're goin' to cut the drift fence an' lay the blame onto Slinger. They're goin' to kidnap young Jim Traft an' squeeze a big ransom out of his uncle. Thet's the stake Jocelyn is playin' fer. But I seen, if Seth couldn't, thet Hack is playin' a deeper game than they savvy. Mebbe Slinger is onto him. 'Cause Slinger wouldn't heah of Jocelyn throwin' in with the Cibeque. He wouldn't go in on the cattle drive they're plannin'. Thet all came out in their talk before Slinger got there."

"Oh—did he come?" cried Molly breathlessly.

"Yep. Jest before dark. Hart Merriwell an' Boyd Flick was with him. 'Seth,' says Slinger, cool-like, 'I'm splittin' with the Cibeque. No hard feelin's. You've got mebbe a better man than me in Jocelyn. Anyway, I cain't take the share of this cattle money you sent me. Much obliged, Seth. An' heah it is.'

"AN' THEN Seth says," went on Andy, after a pause, "'All right, Slinger. You're shore your own boss. An' if there's no hard feelin's on your side, there's shore none on mine. But you ought to come in on thet kidnapin' deal. Why, it's a gold mine. Old Jim Traft won't blink an eye at a hundred thousand.'

"Slinger owned it was a pretty slick deal an' easy money, but he jest couldn't see it thet way. 'An' there's more'n one reason for thet,' says Slinger. 'But particular with me is thet I happen to be goin' to shoot Jim Traft.'

"'So we figgered,' says Seth, 'but cain't you wait till we've got thet ransom money?'

"'Nope,' replies Slinger. 'I don't like the deal. An' if I happen to run into any of you Cibeque gents up on the Diamond, I'll take particular offense. Savvy thet?'

"'We ain't deaf, Slinger. But I, fer one, am shore plumb surprised,' answers Seth, slick-like.

"'Wal,' went on Slinger, 'I've been sort of surprised myself, lately.' . . . An' he shore said it full of meanin'. Slinger rode away then, an'—"

"YOU heahed all this last night?" interrupted Molly.

"Yes, before sundown."

"But we heahed Slinger was drunk!"

"Nary drunk. Somebody lied to you. He was as cool an' hard as ice. Those fellars was scared of him, Molly. I haven't seen him since. Now, to go on with what happened. You never heerd such cussin'. Some from Seth an' most from Jocelyn. Then they got their haids together again. It was all right with them aboot Slinger goin' to kill young Traft. But they didn't want that to spoil their stake. An' they reckoned they'd have to give up the ransom idee. Hack Jocelyn busts in then with another. An' it was that if Slinger did queer their kidnap deal by killin' Traft they'd have a chanct to rustle a big bunch of stock an' lay thet onto Slinger also. This struck Seth an' his brother all right. An' they won over the other fellars. Then they started off. One of the horses must have smelled me, fer he shied an' didn't come far from jumpin' on me.

"By this time I was pretty scared an' I up an' tore through the brush. Mebbe Jocelyn didn't let out a roar. An' he shot three times after me. I don't want no bullets closer to me."

"Oh, Andy, they'll find you out," cried Molly fearfully.

"Wal, mebbe, but I don't see how they can. I'd hate to have thet Hack Jocelyn meet up with me very soon, an' you bet I'll see him fust."

"But Jim Traft will never see *Slinger* first," wailed Molly.

"I reckon not. Molly, ain't you a little over-concerned about Traft?" asked Andy.

"No more than I am about Slinger," retorted Molly. "It's an awful mess. Oh, Andy, what can we do?"

Andy, roused to a sense of his importance, repeated parts of his story, and then guardedly leaned toward the possibility of telling Slinger of the plot against him.

"Molly, you might let on you heerd all

UNIVERSITY OF IOWA

Between them, they dragged Jim off the bloody-faced Jocelyn, who sat up groggily

this yourself," continued Andy. "I reckon Slinger would believe you. Shore he would. An' thet'd let me out. I'm plumb afraid of Hackamore Jocelyn. He's got it in fer me because of you."

"Andy, I'll not give you away," said Molly earnestly. "An' I'm shore owin' you a good deal. . . . Yes, I ought to tell Slinger. Oh, I must think. . . . Andy, I'll go back now. I don't want to risk missin' him."

They walked through the woods in the gloaming, and Molly did not repulse Andy when he timidly took her hand. He deserved some recompense for his interest in her brother's fortunes and his loyalty to her.

SHE went as far as the gate with him. "Andy, you've been good to me lately," she said. "An' I like you for it. I haven't a friend in all this valley, unless it's you. I wish I could be more to you. But I—I cain't."

Bidding him good night, she ran back to the cabin. It was quite dark under the porch. No lamp had been lighted.

"You better come a-runnin'," came in a slow, cool voice from the gloom. "Who was thet with you? Looked like Andy."

"Oh—Arch—" panted Molly, feeling her way to the porch. "Yes, it was Andy."

"Wal, Andy ain't as no-good as some of them. He works. An' he doesn't guzzle drink all the time."

"Arch, are you (*Continued on page 84*)

DON'T DO YOUR Strutting in the WATER!

All set for a racing start

By MILDRED HARRINGTON

PHOTOGRAPH BY WINEMILLER & M

Nita Sheffield, noted teacher of swimming, insists that a swimming certificate should be a necessary requirement for graduation from the public schools

LAST year, 466 New Yorkers were drowned on the various beaches near the city. Of those persons drowned, only twenty-one were women. In other words, to every woman, there were twenty-two men who lost their lives in the water. As a rule, during the bathing season, there are about an equal number of men and girls on the beaches. Yet any life guard will tell you that he is called on to rescue at least half a dozen men to one woman.

Does this mean that women are better swimmers than men?

According to Nita Sheffield, noted teacher of swimming and co-author with her sister of several standard books on the subject, it means nothing of the kind. It simply indicates that the average male cannot resist the temptation to strut a bit in the water. On the other hand, if a woman is bent on showing off, the chances are that she will choose to do so on the beach where both she and her new bathing suit are safe.

"It's perfectly natural for a man to enjoy demonstrating his strength and skill in the water," said Miss Sheffield. "It's especially natural for him to spread himself a little before his wife, or his sweetheart. The trouble is, he often gratifies instinct to show off by swimming out ther than either his strength or his s warrants him in doing.

"I HAVE noticed, though, that a mar man with children will not take chances which a bachelor, or even a nev wed, will laugh at. It is the young fell who are 'on the carpet' who see to it th life guard earns his board and keep!

"Several summers ago, a party young folks were bathing on

(Right) Treading water is an important safety measure for deep-water swimming, and is a good way to rest

Jersey coast. Late in the afternoon, two boys who had been competing for the favor of a pretty girl by exhibitions of fancy diving, suddenly decided to match their prowess by swimming out to a small island about a mile and a half from shore. They were warned by the life guard that it was not safe to go out so far at that time, as the tide was soon due to turn. One young chap sensibly returned to shore; the other refused to do so, condescendingly explaining to the guard that he was a long-distance swimmer and that he was perfectly capable of taking care of himself.

"AN HOUR later, when his companions reported that he had not yet returned, a guard went out in search of the young man. He was found about a mile from shore in a state of extreme exhaustion. Tired out by his swim to the island, he did not have the strength to fight his way back against the tide. Worst of all, he had completely lost his head. When the life guard approached him, he did his best to drown both himself and his rescuer by grabbing frantically at the guard's neck. It was only by waiting until he was so weak that he could no longer struggle that the guard was able to handle him at all.

"All of the cockiness was knocked out of the boy. Indeed, he was so thoroughly unnerved by his frightful experience that by the time he got within wading distance of the shore, he yelled feebly, 'Help! Help!' Even after he was safe, he continued to call for help. It was some time before his friends could quiet him down.

"All in all, the long-distance swimmer had made a pretty sorry spectacle of himself. Yet such is the perversity of the feminine heart that the girl in the case proceeded to lavish upon him the most devoted attention. From the way she acted, you would have thought he was a great hero instead of a foolhardy and badly scared young man.

"The first thing that this young fellow did," said Miss Sheffield, "was to let his desire to impress his sweetheart get the better of his common sense. He must have known before he started out alone that he was taking a good-sized chance. But his second mistake—that of losing his head when he found himself in a tight place—was a much more serious one. I wish that you could write this down in letters as tall as a box car: *Nine tenths of all the persons who drown do so because they lose their heads.*

"IF PEOPLE would only keep their wits about them, there is no reason on earth, or in the deepest ocean, why anybody should drown. Even those who can't swim could save themselves in most emergencies if they would not allow themselves to be stampeded by fear.

"The human body is lighter than the water which it displaces. Practically everybody can float if he only keeps cool and believes that he can. In all my experience in teaching folks to swim—and in the course of fifteen years, I have taught more thousands than I should like to stop and count up—I have found only two men and not a single woman whose body gravity was such that they could not float.

"All you have to do in order to float is to throw yourself on your back in the water, letting your head, with the chin held well in, go as far back as it will. Don't be alarmed if your face is partly submerged. Just as long as your mouth and nose are free of water, you are as safe as you would be lying on your own bed at home. If you are one of those extremely rare persons who find it hard to float while perfectly motionless, paddle gently with your hands palms downward, being careful not to lift your hands out of the water any more than is absolutely necessary.

"REMEMBER, the minute you throw an arm above your head, you are starting out to drown yourself very thoroughly and very scientifically. Every *upward* push of your hand or arm thrusts you down under the water. Every *downward* push sends you shooting up to the surface. Above all things, don't try to climb out of the water, as you would try to climb out of a pit, for instance. There is no quicker or more effective way to drown yourself. And don't 'holler' all the air out of your lungs. As long as your lungs are full of air, you can't drown.

"If, because of cramps, or for any other reason, you find yourself in a critical situation in the water, keep your head, take your time, and conserve your strength. If you are in the ocean and can manage to keep afloat, the waves will usually carry you to shore and safety anyway. The trouble is that the average individual is likely to exhaust his energy immediately in a wild effort to make land. What he ought to do, of course, is to use just enough strength to swim quietly, or (*Continued on page 102*)

WHY Gypsies Stick Together

By KONRAD BERCOVICI

Illustrated by HOWARD McCORMICK

The Gypsy *calls a* Fiddler Instead *of a* Doctor!

IN THE gypsy language, sickness and sadness are represented by the same word," says Mr. Bercovici. "A sad man is a sick man; a happy man is a healthy man. If sadness is the mother of all illness, reasons the gypsy, then surely gayety is the daughter of health. Therefore, instead of calling the doctor, he calls the best violinist, or surrounds himself with the most grotesque dancers, or listens to the most hilarious tales.

"And I, who have lived years among the gypsies, pledge you my word that I have seen more cures effected among them by this kind of medicine than by drugs!"

A PEOPLE like the gypsies, spread thinly over the surface of the globe, differing so greatly in their way of living from the people of the countries they traverse, must have their own laws by which to govern themselves, in order to preserve their identity. Such laws —oral because the gypsies have neither a literature nor an alphabet of their own—vary with every tribe. And yet the gypsies of Spain, the Balkan gypsies, the roaming gypsies of England, and the wanderers in the Americas, speak among themselves of a *leis pralo*, the law of the gypsy brotherhood, to which every brown brother and sister submits.

The attitude of the gypsies toward the laws of the country in which they find themselves is so totally different from their attitude toward their own law that it needs an explanation. Gypsies think that the laws of the *Gajo*, the white man, are not meant to be followed strictly; that they are a sort of game played by the white man. When a gypsy is caught in meshes of the white man's law, for thievery, vagrancy, or any sort of lawlessness, he is sympathized with by his friends because he has been unlucky; he doesn't lose caste because of dishonesty.

How different the attitude of the gypsy toward his own laws! The gypsy found guilty of a crime against his own tribe loses caste with the gypsies of the whole world; is branded forever with the mark of Cain!

No gypsy, whoever and wherever he may be, is outside the reach of the *Manlaslo*, the secret tribunal. A circular piece of wood with a peg driven through it, placed by a secret hand at the flap of a tent, or on the seat of a car or wagon, summons the gypsy before the tribunal. If the wood is uncolored, it summons a man. If the wood is painted red, it summons a woman.

A woman may be called before the *Manlaslo* and charged with infidelity to her husband even when that husband has brought no charges against her. When a gypsy woman receives such a summons, she will go to the nearest stream on the east and there find indications of where the judges are waiting. She has the right to defend herself against the accusation. The judges are masked. The chief of the tribe is ready to help the accused, but woe to the gypsy who tries to save himself from punishment by lying! If the culprit is a woman, she will never return to her tent. When her banishment is pronounced, she is made to leave there and then and go away in the direction opposite to that taken by the tribe.

The most severe punishment the *Manlaslo* can inflict upon a gypsy, next to capital punishment—so rare one seldom hears of its occurrence—is banishment, temporary or permanent. Banishment from all gypsy tribes is more cruel than death. The gypsy is such a peculiar kind of being that robbing him of the right to mix with his own kind is equivalent to burying him alive. A gypsy man or woman so banished will never mingle with other gypsies, no matter how far away is the country where he has been found guilty. I have met such gypsies in Europe and here in America. They are like fish out of water.

ALL scholars of gypsy life have harped upon the gypsy woman's purity and fidelity. In the Balkans, a gypsy wife will be severely reprimanded and punished if she but looks provokingly at another gypsy. The white man condemns much more sharply the woman who gives herself for gain than the one who succumbs to temptation. Not so the gypsy. The fundamental reason back of the severe punishment inflicted by the gypsies in cases of infidelity is that divorces are so easily obtained.

Should a man cease to love his wife, he can divorce himself from her by applying to the chief of the tribe and telling him he no longer wants to share his tent with her. The woman can do the same. There are neither social nor economic reasons why two people who no longer love each other should stay together. If there are children, they will be taken care of just as well as if the parents lived together. Indeed, considering the more or less communistic life led by every gypsy tribe, the children will hardly know the difference.

There is no "for better or for worse" in a gypsy wedding ceremony. Instead of committing himself eternally, the gypsy promises not to share the couch of the other when love has flown.

Marriage laws among gypsies are not everywhere the same. A gypsy is found guilty or innocent according to the laws of his own tribe, and not according to those of the tribe he happens to be with. The greatest sin is breaking faith with his own people.

Gypsy tribes in Turkey and the Balkans are polygamous and there are husbands who have a dozen and more wives, all of whom are sworn to fidelity to him. In Soka Banga, in Serbia, the woman chooses the man. The groom never has a word to say in the arrangement of the wedding. He is bought by the father of the girl. Should she want more than one husband, she can buy as many as her father's purse will permit, or as he will allow her.

Infidelity is one of the rarest crimes committed by gypsy men or woman. The passionate temperament, the almost absurd devotion to their children, keep gypsy families so absorbed, so amused, and so entertained, the partners have no time to think of each other's shortcomings.

Digitized by Google
Original from UNIVERSITY OF IOWA

The most severe punishment the "Manlaslo" can inflict upon a gypsy, next to capital punishment—so rare one seldom hears of its occurrence—is banishment, temporary or permanent

Some years ago I came upon a small, happy gypsy tribe near White Plains, New York. They were English gypsies. One of their girls, a brown-eyed, round-armed *Tchai*, had in a mysterious way picked up the ability to read and was reciting aloud a popular poem which began as follows:

"Tobacco is a filthy weed; I like it—" The gypsies roared with amusement. It expressed exactly their sentiments. The other girls pointed at young love partners and recited with a hundred different nuances, "John Kobra has a broken nose, but I like him." Husbands pointed at their wives: "Her hair is gray, her nose is short, but I like her."

I wondered whether that innocent poem had ever before caused as much merriment and had helped people express themselves as well. The readiness with which gypsies reach for every little thing that can make them laugh is their greatest secret, their key to happiness. The gypsy lives to laugh, love, sing, dance, and wander. How much happier would we all be if we could laugh as easily; if we could accept life with a broad smile! The man who laughs whole-heartedly and frequently does not have to knock at doors; they are all wide open for him.

THE gypsy believes that illness is caused only by man's negligence. To be ill is to have committed a crime against oneself. The intensity of the pain one suffers is simply punishment for the crime. A sick man, therefore, calls forth no sympathy. Gypsies don't believe in the existence of infectious diseases, and they scoff and laugh at germs and microbes. They will eat foods that would poison any other human being, yet they will never eat unless really hungry, and will never eat unless happy and contented. They have no definite lunch-hour, dinner-hour, and breakfast-time. Gypsies always sing and laugh and tell amusing stories while they eat. They believe that the mind taints and poisons the food that one tries to force into himself. Sadness, they say, is the distiller of all poisons, while happiness turns every poisonous morsel into healthful food.

In the Balkans, in the south of France, in Spain, and in some parts of England, the gypsies have been compelled to act as nurses and gravediggers every time cholera, the pest, or the plague has hit a city or a region. They carried out the duties imposed upon them with ease of heart and alacrity—the only people immune to infectious diseases, though they came in closer contact with the sick and the dead of the pestiferous regions than any white people. In recognition of such services, the white people frequently burned the gypsies as witches when the plague had diminished; burned them as witches because they had come in such close contact with the diseased and had not been infected.

Some people maintain that gypsy blood is immune to contagion because it developed immunity years ago in India. Here, pestilential diseases ravaged the populations for tens of centuries. The gypsies are the survivors of those natives who, in some mysterious natural way, possessed immunity from the diseases which hit India thousands of years ago.

ANOTHER theory equally acceptable and scientific is that the gypsy mode of living, out in the open air exposed to the wind and the sun, and his belief that he is immune to infectious diseases, make him immune. However, whenever and wherever gypsies have settled down in cities and towns they have not proved to be immune. On the contrary, they are the first to fall victims to such diseases. The White Plague claims more victims from the gypsy settlements in Chicago and in New York, and the settlements of Hungary and Roumania and Russia, than from any other people. The gypsy who has settled down and lives an unnatural life has lost his gayety; has become sad; and sadness is the mother of all illness.

Who knows how many sick people would be better helped by a visit to a funny play than by a bottle of medicine? If sadness is the mother of all illness, then gayety is the daughter of health.

In the gypsy language, sickness and sadness are represented by the same word. A sad man is a sick man. A happy man is a healthy man. Modern science tends more and more to confirm this gypsy truth. Sickness is often more psychological than physiological. Instead of calling a doctor, the gypsy calls the best violinist, or surrounds himself with the most grotesque dancers, or listens to the most hilarious tales. I pledge my word that I have seen more cures effected by this kind of medicine than by drugs.

While traveling with my family in Roumania, I once came upon a gypsy tribe that had pitched yellow, red, green, and blue tents along the shores of the Danube. The children were foraging for themselves and the cattle as best they could. The adult gypsies were all out working alongside the peasants in the wheatfields. Sometimes one or both of the parents would return to the tent at night, but more frequently the gypsy men and women were too tired to walk back the few miles, and remained to sleep in the fields, burrowing themselves into straw piles or using the wheat sheaves as pillows.

Original from
UNIVERSITY OF IOWA

At the noon-hour we came upon a threshing scene. The big English threshing machine was roaring and spitting chaff and dust. A half dozen gypsy men were pitching the heavy golden sheaves to the women who stood on top of the thresher. Oxcarts were carrying away the bulging bags filled with wheat, each bag weighing over a hundred pounds. The peasants worked silently. The gypsies kept up an uninterrupted chattering and singing and laughing.

When my eyes pierced through the cloud of dust, I saw on top of the machine a young gypsy woman so noticeably heavy with child that I turned around and reproached the owner of the farm for permitting the woman to do such heavy work.

He smiled. "It is indifferent to me," he said, "who does what kind of work. I have hired the gypsies to do the harvesting and threshing, and they have distributed the work amongst themselves as they think best. If they have put that woman up there to bend low and to raise the sheaves of wheat over her head, it is because they know. Try to interfere if you can, and see what happens!"

He had hardly finished talking when the woman was assisted down from the machine. She seemed to be in pain. I was urging the women in my company to help her. But the gypsies permitted no interference, though they recognized me. An old woman took the mother-to-be back of a stack of hay. The gypsies stopped work and began to dance and sing and make an ungodly noise. Two hours later, when the engine was started again, the young gypsy woman was sitting near the stack of hay and sewing bags. A brown bundle of flesh was lying beside her in a nest made of golden straw and was trying out its lusty lungs.

AT SUNDOWN the naked brown child was made the center of a large circle. The mother had been put to sleep on a pile of straw. The men and the women feasted. And though the wind got sharper and sharper as the night advanced, the child remained uncovered.

No gypsy woman is afraid of pregnancy. No gypsy woman anticipates childbirth with fear. As to the pregnant woman being made to work to the last minute, other people are more competent to speak of the wisdom of that action than I am. However, modern physicians no longer preach inaction to mothers-to-be. Another thing, the gypsies refer to a pregnant woman as a beautiful woman, and say that a woman is never so beautiful as when she is expecting a child. If all people felt that way, we should have a more contented womanhood in this world!

WHAT mother or father would allow a new-born baby to remain naked overnight outdoors while a sharp north wind is blowing? The child born indoors by an indoor mother must be kept under conditions favorable to its health. A child born of outdoor parents and destined for an outdoor life under all conditions, exposed to the snow and wind and sun of all climates, is hardened, seasoned, to such a life from the first hour of its birth. To begin by shielding the child from the very conditions it is going to meet throughout its life is to weaken it. If it isn't strong enough to survive such conditions, it is better dead than alive. Yet I can vouch for the fact, and others who have lived with gypsies will do the same, that the child death rate among gypsies is lower than the child death rate in America; lower than the child death rate in Germany, France, or England.

The third day after its birth, the Hungarian gypsies baptize the child by holding it over a little fire; probably a throwback to primitive fire worship. Some gypsies lay young children smeared with walnut juice in a concoction of herbs before the fire or in the sun. Roumanian gypsies anoint the child after it is first bathed in hare's fat and goose fat, the first supposed to protect the child against heat and the goose fat against cold.

For the first forty-eight hours of its life, the gypsy child belongs to the tribe. After that, it is given to the mother. Gypsy babies are all fed at the breast for at least two years. A gypsy woman would rather see her child dead than fed "on a bottle." Should the mother of a baby be sick and unable to feed it, the child is fed at the breast of some other woman, preferably that of a near relative. Breast feeding is one secret of the low death rate amongst gypsy children.

After the child has been christened, the chief of the tribe formally declares it a member of the tribe. Every member assumes an obligation toward it. "Until this moment," the chief says with pride, "I have been chief over one hundred and forty-two people. From now on I am chief over one hundred and forty-three." "One hundred and forty-three," every gypsy calls out. "We are one hundred and forty-three."

No matter what happens to the parents, that child will never lack food or shelter. It can never happen that a gypsy child will be well fed in one tent while another child in another tent will be undernourished or starving.

A GYPSY cannot understand how two people who have never passionately loved each other can live together. It is equally difficult for him to understand why people who have ceased loving each other should live together. Every gypsy is firmly convinced that children born from parents who are not deeply in love with each other are born crippled or mental defectives. The child's health and beauty depend entirely, according to the gypsy, upon prenatal conditions.

When a gypsy is sad, he never sleeps in the same tent with his wedded partner. When a gypsy loses father or mother, he separates himself from his wife for forty days. The return to the family tent is celebrated with as much gayety as the original wedding. The other gypsies vie with each other to see who can make the couple happiest. The clothing and the personal effects of a dead gypsy are destroyed.

Though dressed apparently in rags, gypsy men and women frequently wear the most expensive finery underneath

Digitized by Google Original from UNIVERSITY OF IOWA

their outside clothes. This manner of dressing symbolizes their contempt for the outer world and the great respect they have for their own bodies, as well as the inordinate pride they have in them. Before a marriage agreement is concluded, the parents of both parties strip the youngsters and examine their skin closely. Many a marriage is called off because of the coarseness of the bride's or the groom's skin or because of a defect in it. The most important part of the dowry of a gypsy girl consists of a trunkful of the finest linen and silk. After the groom has inspected his wife's finery, the bride is led to look at his treasures.

The Customs House men are frequently "flabbergasted" when they inspect the baggage of immigrant gypsies dressed in worn garments and discover in their trunks rich stuffs which they would naturally expect to find only in the possession of the wealthy.

ALONGSIDE the other lost secrets of Europe, there is the secret of the gypsies' Sea Mary church at the bottom of the Camargue country in the south of France near Arles, on the Gulf of Lyon. Every year, for the last three or four hundred years, the gypsies of Europe have come to look at their secret. On the 23d of May they arrive before the little parish church, coming in droves of hundreds—families, clans, tribes—and block the road and the dunes with their camps, their horses, and their wagons. They spend the first night singing and telling tales to one another. The smoke of hundreds of camps spreads over the surrounding villages. On the 24th of May they file in and out of the little church in a continual procession, looking at the image of their saint, and walking out as tight-lipped as if they had just been sworn to a great secrecy.

The little stone church is very old. The stone altar is decked in tinsel, and the plain wooden benches creep into the crypt under the sanctuary. Perched over the altar are the three Sea Marys carved in stone. One is Mary Jacoba; the second, Mary Salome; and the third, Mary Sarah. The third one is the gypsy saint. They come to see her. What do they say to her? Why do they come to look at her, at her only? I have joined the pilgrimage more than once, yet I have never grasped nor understood what happened under my eyes. Mystery of mysteries!

The third day they are gone; not a sign remains of their camps; not a single gypsy is left. The rest of the year the gypsies will give the little village where the church of the gypsy Sea Mary stands a wide berth. No European gypsy has ever divulged the secret. No one has ever told, or ever will tell, the reason for the yearly visit to the village at the bend of the Gulf of Lyon.

This yearly conclave in the south of France is not the only conclave of the gypsies. It is common practice for the gypsies to spread the news for months by the aid of *patterans* and then hold a grand conclave somewhere. In Roumania, they gather every fifth year before a little monastery in the Carpathians and stay for seven days. A few years ago, a grand gypsy conclave took place on Long Island.

SUCH periodical conclaves are very important to a roaming people. Not only do they get acquainted with one another in this way, but information about the roads is imparted rapidly and efficiently, and towns, villages, and cities are marked for their tolerance or intolerance to the brown brothers. Woe to the gypsy who has misinformed his kindred, even when the misinformation has not been deliberate! I have known gypsies to be ostracized from their own tribes because of such carelessness. Correct information is the first and highest virtue. "I did not mean to do wrong," is no excuse before a gypsy tribunal.

Not long ago, a young gypsy violinist came to this country in the wake of trumpet-blares of publicity. His tribe had preceded him. His managers, or whoever manipulated the affairs of the young man, set him up in one of the better hotels of the city. The great man, however, spent his nights sleeping on the floor of an empty store on the East Side where his people were located.

This young gypsy met a beautiful young actress with whom he fell deeply in love. He did not tell her he was a gypsy, but let her understand he was a Hindu. When his parents and his tribe found out that he intended to marry a white woman, they put on white clothes—mourning clothes for gypsies. The young gypsy was the son of a chief whose tribe prided itself on having kept racially pure through all the centuries of wandering. However, to help the young man keep up appearances, to help him marry the woman of his choice, the tribe impoverished itself, selling everything to buy the young man an automobile and fill his pockets with gold; that he might entertain lavishly the lady of his choice. They did all this with heavy hearts and broken spirits, but believing that a man's love was a man's love. The bride never knew and will never know her husband's origin; she will never know whence comes all the money her artist husband lavishes upon her.

ONE morning, the whole tribe was assembled around the father and mother, who sat in the center of a circle. A little before noon, a young man dressed as a Hindu appeared at the door. The gypsies bowed their heads. They had hoped and hoped that something might happen at the last moment. The father himself now pronounced the banishment of his son; excommunicating him, his children, and his children's children from the tribe. Yet after the excommunication, the old man said to his people:

"Rejoice! for my son has found great happiness. He knew he was going to lose forever the friendship of his brothers and sisters and the nearness of his father and mother. Yet so great was his love for this woman, he sacrificed everything after weighing carefully his love and us in the balance of life."

Suddenly the gypsies threw off their white clothes and began to sing, happy that one of theirs had found great happiness, even though that happiness was hurting them so much.

Where else can one find such deep understanding coupled with such lofty tolerance! (*The End*)

Salt *without* Savor

By CAPTAIN DINGLE

Illustrated by W. J. AYLWARD

THE first effect of the loss of his certificate upon Captain Keith was daze. Then he abruptly sprang to full realization that his life's work, his career, his good reputation, all, had come to a bad end. To cap the realization came the shameful fact that it was the spite of his trusted mate that had ruined him; then Keith went utterly mad.

He wandered the port for three days, seeking Talley to kill him; until friends who heard him muttering as he wandered took him away on pretense of helping him find his enemy, and watched him until his madness gave place to collapse. Then he suddenly disappeared; the port knew him no more.

He had passed half a lifetime as master of the ship Circe. No man sailing the seas had a higher reputation or a finer record. But all had been wiped out in that one crashing instant off the Horn, when his ship ran down and sank a Chilean steamer with four hundred lives. He had been drinking. That was the damning charge.

Forty days of bitter gales his ship had weathered, trying to gain past Old Stiff. For forty days he had never left the deck except to change into dry clothes. Sleep he had scarcely known, snatching cat naps on the settee in the chart-room. His mates had slept in their turns; but not he. He had given his mates, and his men, fair rations of stimulating grog; but he took none.

Then the weather cleared, the wind came fair; he allowed himself sorely needed rest. And to put life into his chilled blood, he did, at that last hour, permit himself to mix a hot toddy before falling into his bunk.

That had come up at the inquiry, to his mild surprise at first. He had not denied it. But he had suddenly discovered that Talley was stressing it. The steward, too, made a lot of it in his evidence.

"A drinking man, eh, Captain?" the grizzled old inquisitors nodded.

"I never drank at sea!" Keith had protested. He saw the grim unbelief in their eyes, they having heard the testimony, and he blurted, "That was the only time. I had been forty days out of my bed!"

THEN the helmsman had something to say. He had not seen the steamer, but he had noticed that the lookout never struck the bell, or reported the lights burning brightly. His binnacle light was out, but it was near the end of his trick and he had steered by a star until he had a chance to trim and light the lamp. The mate? Mr. Talley was in the chart-room over the chart. They were too near to Cape Horn.

The Board calmly wiped out the labor of a lifetime, and Keith faced a hostile world. He went as far from that port as the country would let him. He knew that Talley had got command of the Circe. The steward was with him too. T helmsman had been made bos'n. Keit kindly features twisted into a bitter mace which grew into permanency. hoped the precious trio would enjoy th good fortune. He knew he would m Talley again some day. He would or his life to that end. Then—

HE WORKED on a farm for th months. His beard grew, and his ha hardened to unaccustomed manual wo Then he got ink eradicator and altered oldest ships' discharges, and his na seeing no wrong in it, but driven to it desperation. He sought and found ployment on a little coaster. Short trip the coast, little intercourse with men of big ports, frequently changing crews. was sanctuary to him. No long pass to brood in. His skipper liked him, he was quiet, sober, utterly dependa

His shipmates of the forecastle were so warmly appreciative. His quiet al ness they called surliness; he never joi in their shore amusements. Nor woul drink with them. They called hir louse, drinking alone. And he knew much. All his efforts to be one of th could not hide a lifetime habit.

Most men in his place simply haule a rope when told, never knowing or ca why. If told to steer a course, they w hold that course and let the skipper w about current or tide, even thoug sudden unsuspected eddy, when in sigl

No man sailing the seas had a finer record than Captain Keith, but all had been wiped out in that one crashing instant off the Horn

the land, swerved the vessel from her given course.

Keith shrewdly allowed for such influences, as a matter of habit, never thinking it necessary to speak of it. When tacking or wearing the little brigantine, he went straight to the proper gear as soon as the first order was given, knowing the principle. They, caring nothing for principle, let go, or hauled, or trimmed when told, and not before.

FOR six months he nursed a scheme of ultimate vengeance against Talley. He would adjust himself to this new life until he lost his old perspective, then set himself upon Talley's heels. It might be that he would wait his chance and ship as a sailor aboard the Circe. Oh, it was a gaudy crowd on the Circe! Very nicely had Talley seized upon disaster and made it a ladder on which to climb to command. And, in climbing, he had not forgotten the rungs of the ladder.

Keith came nearer to smiling than he had in a long time when he thought of Talley, outwardly in command of a fine clipper and actually beholden to a couple of menials who knew far too much.

At the end of a year, he was surprised to find himself thinking less bitterly about the Circe and Talley and the rest. Men had come and gone in the little brigantine. Keith stayed on. The mate left for a bigger vessel, and Skipper Harris overtook Keith on one of his rare walks on the dock.

"Trent," he said, using the name Keith sailed under now, "Trent, you ought to try for your mate's ticket. If you had it now, I might offer you the mate's berth. If you're fond enough of the Janet to stay by her a whole year, you might as well be comfortable."

"I'm comfortable, thank you, sir," growled Trent, and a new mate was shipped. But the skipper's encouragement worked. It was something, it was a great deal, to know that even in the depths of disgrace and humiliation there was one man watching him with an eye to his advancement. By the time the Janet had made one of her rare long salt-fish voyages, he had made up his mind to challenge Fate again.

The new mate was dissatisfied—had already announced that he was quitting next time home. When the Janet docked, Trent told the skipper of his resolve, and got a glowing recommendation from him. Then he boldly presented himself for examination, and sat for an Only Mate's ticket. The moment of application tried him to the core. Would he be recognized? He was not. Nobody on that part of the coast had ever known him, except by the newsprints and photograph, and the affair of the Circe was going on for two years old now.

The examination, except for the mental strain at first, was child's play for the old deep-water master. He felt as proud of his new ticket as he had of his first deep-water parchment. It seemed to prove to him that the past was dead; that he might yet regain the eminence he had fallen from. And when he heard the skipper praise him to the owner, he went hot with queer pride. When he completed his first sea watch and went to his tiny, snug berth, an officer again, he slept without one recurring thought of the black past, without one trace of rancor.

Seamen still talk of that February gale that strewed the coast with wreckage and swept away the light on Burnt Ledge. The Janet groped in from the south in a blizzard dense as fog, seeking the light. The skipper was nervous. The cargo shifted. The light did not appear. The skipper had a weak heart too. He knuckled under to nervousness and heart together, and left things to his mate. That was a day of trial for Trent. From shifted cargo to reeling deck he alternated, sweating and freezing by turns, until through the mad sleet he caught the loom of the land where the light should be. There was no light.

"Ready about!" he yelled, taking the wheel himself.

He clawed the brigantine off. He detected a flicker of light, a lantern in anxious hands ashore, warning seamen that the big light was dead. And then the blizzard again, the murderous sea, the dead onshore gale. Trent held the wheel for ten hours, thrashing his vessel clear.

WHEN almost ready to drop, his stinging eyes saw the dizzy spars of a great full-rigged ship storming in from sea, groping for the light that was not there. Beset though he was, his innate seamanship urged him to intercept that ship and warn her of her peril. Long before a ship of that size could get near enough to see the flickering lanterns, she must strike, so deep would be her draft.

"You'll drown us!" the men cried. He carried on. And as he steered straight across the bows of the ship they rushed to him, trying to wrest the wheel from him. He fought them off, ran his vessel sheer across the big ship's stern, and roared his warning to two peering figures on her poop. He saw a hand waved in acknowledgment, then the ship passed out of sight; but he heard the thunder of her gear as she came about. And as he sped by her stern he had seen her name. The men saw it too.

UNIVERSITY OF IOWA

"Circe!" a man bawled, pointing. "Ain't that the ship that sunk that steamer and lost—?"

"Go up on the foreyard and keep a sharp lookout!" Trent shouted him down.

"It's good they were not sleeping!" he mused, bowed over the helm. The years came back. Years that had been full of hate had become mellowed by returning success. There was no bitterness now. He was glad his old ship was safe, and that he had been the instrument.

BUT when he brought his small vessel home, the doctor told him his feet were frostbitten. They amputated some toes. As for the skipper, his weak heart had scared him. He would never go to sea again. The owner visited Trent in the hospital as he was about to leave.

"If you care to get your master's ticket, Trent, you may take the Janet to sea," the owner said.

"It's kind of you, sir," said Trent confusedly. "I'll do it."

There was no word of trying. The owner smiled at the assurance, but Trent knew what he knew. He sat, filled his papers, took the quiz, and emerged once more the master mariner. He stepped a bit proudly, that was all. He took the skipper's cabin with a subdued sigh of gratitude. For the first time since his disaster he put pictures on his bulkheads. Soon there would be no past, only a tranquil present and a future full of content.

He read in a shipping paper that the Circe's owners were building a bigger ship, and that Captain Talley might have her. Trent even smiled gently at that, for his own employer had told him of a bigger vessel in view, and had hinted favorably of his interest. Much depended on the profits of this voyage in the Janet.

"I'll do my best, sir, and thank you," the new skipper replied.

The best was very good. The Janet made an outward passage so fast, landed her cargo so well cared for, that freight usually kept for a steamer was offered her and quickly loaded. The little tramp steamer that should have taken it rolled in on a cloud of smoke as the saucy little brigantine sailed out. And though the steamer left again the same evening, hard upon the Janet's heels, she never once caught sight of the brigantine's fore royal.

The Janet slipped into her home harbor under sail, disdaining a tug, passing by the pilot, and anchored within a line-throw of her own wharf before her owner had well digested the news of her quick outward passage.

When the owner came on board, all glowing with praise, there was a hawk-faced city man with him who scrutinized the skipper narrowly.

"Come to the office as soon as you can, Captain," the owner said in leaving. "We'll have a chat that'll perhaps interest you."

As the two men walked along the wharf, the keen-faced man talked animatedly to the owner, who turned, stopped, and gazed for a long minute at the skipper on the little vessel's deck. The skipper felt borne up on the tide of appreciation. They were still talking about his fine voyage. He hurried to reach the office.

"Captain," the owner greeted him, standing up and looking uneasy, "I'll not condemn a man unheard. Are you Keith, who commanded the ship Circe when she ran down that steamer?"

No reply was needed. Keith's face was ghastly. He tried to maintain a man's right to what he had won It was useless. The owner nodded, close-lipped; then said curtly:

"Sorry. You've served me well, Keith, but I'd never have let you step aboard plank of mine had I known you were the man who drowned those poor souls off the Horn. Of course, I'll give you a reference for the time you've served me. Good day."

A REFERENCE! He had a letter setting forth his merits. But everywhere he presented himself he found himself challenged as Keith. Bad news sped like the wind. After two refusals to employ him, all the shipping men along the coast had the rumor on their tongues that Keith, of the Circe, was looking for a ship again, under another name.

After six months, in which most of his new savings were eaten up, he stood on the shore one night and cursed all mankind. He saw Talley limned against the stars, and cursed him so deliberately and bitterly that a drunk staggering past from a beach speak-easy was brought up short for one stupefying moment, and afterward went sober to his bed.

KEITH, no longer hiding behind Trent, gravitated to the seashore, scratching a living from the sea with a net. He drifted from place to place, seeking solitude which would still be not desert enough to starve him. He bought an old boat, and patched her to seaworthiness. His fishing gear was poor, and clumsy; but he never sought markets, selling only the fish he could not eat, or when he needed new gear or other provisions.

Nobody knew him now. Even Keith was unknown down-shore. He almost built a shack in a lonely spot where fishing proved good; but the day when he put up the posts for his shack, a genial rum-runner visited him, with a full jug in a poacher's pocket, hailing a fellow craftsman. Who else would be building a shack there?

"If you want truckin' done, Cap'n—" the visitor winked, and hauled forth his jug. Keith's eyes blazed. Reaching out a shaking hand for the jug, he stuttered with rage. The man laughed, shoving the jug forward generously.

"Gosh A'mity! You need it bad, Cap'n! Take a good one," he said. Keith took it, dashing it in reeking shards on the rocks.

"Get yourself away from me!" panted Keith. "And don't ever come near me again, or it's you that'll get smashed! Go on! Shove off!"

His visitor sidled away, glancing back fearfully every few yards until at a safe distance; then he broke into a clumsy,

"There's work for you this night!" Keith shrieked, as the boat was run down to the tide edge

Digitized by Google Original from UNIVERSITY OF IOWA

"Were all those people saved?" Keith whispered hoarsely

broken-winded trot and kept on going.

Keith tore down his posts, loaded them in his boat, and sought a new sanctuary. He found it within sight, but out of sound, of the building of the new lighthouse on Burnt Ledge. His shack was set up and his stores laid in; he made a runway for his boat and built a lean-to shed to shelter it. And he settled down to lave his torn spirit in the solitude.

Days and nights alike soothed him. There, in the sound of the surf, with the strong ocean breezes in his face, the silent rocks and the whispering sands all about him, Keith found surcease. No man ever broke in upon his privacy. The gulls were not afraid of him. He sat for hours gazing seaward. When a sail or a smoke smudge broke the horizon, turning to a new course as soon as the land was identified, he watched almost breathlessly until the danger was past.

ONCE, when he had been there half a year, he saw the Circe make land again, and the lighthouse was not finished yet. He sat there as she came in from the sea, his face set and grim, his eyes hard and brilliant, like the points of ice that had cut his face that hideous time off the Horn. The weather was mild and the wind fair. The Circe changed her course, as others had done, and swam slowly down the coast for her port. When she was out of sight, hours later, Keith straightened stiff limbs and left the rock he had been sitting on. He was cold and aching, for all the weather's mildness.

"One time he'll come, and it won't be fine weather!" he gritted.

Watching for the Circe became his life's mania. He planted himself a little garden among the rocks, where he grew vegetables. Life he would not have about him. A cat wandered along, from the Lord knew where, and rubbed against his leg before he had noticed it. He leaped to his feet, cursing, and stoned the cat as far as he could run.

He grew ragged and haggard, his beard was tangled and rusty. One day he saw in the distance a new bit of activity afoot. The lighthouse was finished. The great, strong beam of light swept the skies like a friendly finger. And a new life-saving station was being established beside it. Men had realized the need; Keith saw a new intruder only.

For a long time his solitude was undisturbed; then one day a couple of clean-cut young fellows from the life-saving station rambled his way and stumbled upon his shack while he was out fishing. They were inspecting his little garden when he returned; as his boat grated on the shingle they stepped down and hauled it in, greeting him civilly.

"What d'ye want of me?" he growled surlily. "If you think to find rum here, you're—"

The youngsters only laughed good-humoredly. They dragged at his boat as long as he did, until it was safely on the runway. That job usually took half an hour. It was finished in five minutes with those young muscles at work.

"We're not in that business, sir," one youngster said. "We're life-savers. We're just rambling; that's all. Sort o' looking the new place over. Sorry if we're intruding."

They strolled away, but the old fellow caught himself gazing after them. They were civil; respectful; nothing like others he had fallen foul of since his misfortune. Besides, they lived down there at the life-saving station. When wrecks were doing, they were the lads with the front seats. If the Circe chanced along, one fine stormy night, and her lookouts were sleepy—! The next time they rambled along shore they struck off inland before coming to his shack. But he waved to them, singing out in his rusty old voice, quivering a bit:

"D'ye want some fresh fish, lads? You're welcome."

They hurried to accept. And before they left, they had been listening breathlessly to his profound lore of the deep waters. In spite of himself he talked, so eager was his audience. They invited him to visit the station, where there were a dozen young fellows like them. And after a week of backing and filling, of self-argument and indecision, he went, carrying fish, and feeling that he was going where he had no business to go.

IN HALF an hour all the crew were gathered about him while he changed some fittings on a new, untried boat. His sailorly fingers seemed to conjure wire and hemp; stiff, shop-new gear gave way under Keith's cunning hands and took on a useful suppleness that even a greenhorn could appreciate. He rigged a hauling tackle so tremendously more efficient than the one they were using that two men could haul and house their biggest boat in half the time it took six men to do it before.

When he started back to his shack, two lads walked with him, and they kept talking. The officer at the station had glanced at him, had warned the crew against giving an old beach comber too much freedom, but had left him unmolested with them. Not one man had mentioned the Circe. When asked his name, he said "Keith," in utter indifference. What more could man do to Keith (*Continued on page 140*)

Mrs. Coolidge said of the painting on the easel, "When I close the door upon that picture I feel as if I have closed it upon Mr. Coolidge himself"

He Captured in Oils The Man Inside Calvin Coolidge

HEAVENS, what a nose! If a painter could get into a portrait the character expressed by that nose, he would need no other achievement to prove him a great artist. It says, 'I am strong and unyielding, like granite; yet I am just, even kindly. I am inquisitive; want to know all, yet remain a riddle myself. I am a sphinx!'"

These were the thoughts that raced pell-mell through the head of an Italian immigrant boy who, on a certain spring morning twenty-three years ago, sat in the courthouse at Northampton, Massachusetts, and with avid interest drank in the homely drama about him.

The boy, a dark-haired, darker-eyed lad of sixteen, was seated as close to the front as he could get. He had listened with a mixture of eagerness and perplexity to everything that had gone on. Now his eyes were fastened upon the spare, keen-faced New Englander whose nose had arrested his attention. Its owner had paused a few feet away to exchange a laconic greeting with a fellow attorney.

"Some day, when I am an artist," the lad vowed to himself, "I shall paint that nose. Then all the world will know, and remember, that face!"

The boy thought all this in Italian, for in the few months he had been in America, he had learned barely enough English to get to and from his work in the big woolen factory in Northampton. That was why he was in the courthouse: to learn the language of his new country.

The lad's name was Ercole Cartotto.

The owner of the nose was Calvin Coolidge. Years later, the young artist's ambition was fulfilled, and he was called upon to paint three portraits of Mr. Coolidge.

One was made for Amherst College, Mr. Coolidge's alma mater; another for the Phi Gamma Delta House in New York City; the third, a study in silver point, was designed for Mrs. Coolidge's private collection.

The other day I sat in Mr. Cartotto's studio in New York and watched him while he worked at the portrait of a great business executive. After his sitter had gone, I asked Mr. Cartotto to tell me something about what happened between that far-away day in the courthouse at Northampton and that other memorable day last winter when he got a telegram bidding him go to the White House to paint the portrait of the President of the United States.

"Only this," he told me in his gentle, precise English, "I never got over wanting with all my heart to be an artist. After a miserable year or two of trying to learn to paint alone, I was fortunate enough to find somebody who was willing to lend me the money to go to Boston to study at the Boston School of the Museum of Fine Arts. At the end of seven years, they gave me an exhibition at the school and told me that I was ready to strike out on my own. But America had just gone into the World War. I went in, too.

"In 1918, I was back in this country. I settled down in New York, determined to become a portrait painter. A year later I won a prize offered by the National Academy. People began to want me to paint their portraits.

"One of my earliest New York patrons was George D. Pratt, a trustee of Amherst College. Several years ago Mr. Pratt conceived the idea that I must paint President Coolidge. One afternoon last December I got a telegram from Mr. Pratt which read: 'Can you be in Washington tomorrow morning by nine o'clock?'

"By seven-thirty the next morning I was at the White House. I had been warned that Mr. Coolidge is an early riser, and I did not want to risk missing a moment that I might have with him. Upon my arrival, I was immediately shown to the room in which I was to work, where I waited with some nervousness, I confess, for my distinguished sitter to appear. A few minutes after eight, the President entered.

"'So you have come to paint a portrait of the President?' were Mr. Coolidge's first words to me.

"'I have come to *try*, Mr. President,' I replied.

"Weeks later, he said to me in his dry way: 'You fellows all come to paint the President. Most of you overlook the man; you never even *see* me.'

"I did not dare remind him that he does not make it easy for people to *see* him, as he puts it. The President sat down in the chair I had placed for him and fell easily into the pose which is so characteristic—

knees crossed, hands folded in his lap, eyes alert in an otherwise impassive face.

"From the start, he was keenly interested in everything that I did. I could see he was observing me closely. As I drew, he watched to see what part of the body I was working on. If it were the head, he was careful not to move his head the least fraction of an inch. If a hand, he was careful not to disturb the position of that hand. Every now and then he would get up and cross the room to see how I was getting along. But he never offered a criticism until a sitting was finished. Then he always hit the nail squarely on the head. Outside a few fellow painters, he is the best critic I have ever had.

"At the end of the second morning, I had a satisfactory drawing of the President. Up to this time, he had expressed no feeling about my work. Now he nodded his head and said, 'That's me.' I could not have wished for higher praise.

"I never knew a man harder to work with, or one more inspiring. He put me on my mettle every moment I was in his presence, and he made me drive myself to the last limit of my endurance.

"In repeated sittings with him, I think I may say that I came to know the President very well indeed. I do not believe that he ever struck a pose in his life. He may not always be graceful, but he is certainly never unnatural.

"I had many evidences of the President's thoughtfulness. Once, when I told him that I should be unable to get home for the week-end, he sent Mrs. Cartotto a beautiful box of flowers. On another occasion I happened to mention that I expected to spend Sunday with the Chief Justice in Washington. 'I am glad of that,' said Mr. Coolidge. 'His folks are out of town; the poor fellow must be mighty lonesome.'" MILDRED HARRINGTON

Of Such Was America Made!

Mother Jones with three of her daughters, who help her run her bus lines in Dallas. When Marguerite, the one next to Ma, isn't driving a bus, she is running a church, being a full-fledged preacher

DISASTER struck viciously at Mrs. Ada Jones when it took her husband and left her to be both mother and father to nine children, the youngest barely more than a year old. But overwhelmed by the tragedy as she was, the wants of her brood gave her little time for useless grieving. So, before her widow's tears had dried, she crowded her sorrow to the background, leaving indulgence in grief to those who had leisure for it.

That was thirteen years ago.

Today this woman, known to thousands as "Mother Jones," is directing head of two bus transportation systems, on which three of her daughters and two of her sons are drivers. She is completing the rearing of her family to be respectable and self-sustaining citizens.

Hers is a saga of victory—victory despite overwhelming odds.

Mrs. Jones was living on their small truck farm near Whitesboro, Texas, at the time of the disaster in which her husband lost his life. She had always worked hard, but now she worked harder. And every child of school age went to school the full term. After school hours the children helped their mother to grow and sell produce.

The family rocked along, and even managed to save a little—enough to purchase sixteen dairy cows. Prices were good, and under "Mother's" fine management, the hard-working family prospered. But, one by one, as the four older children grew up, they went to Dallas to get jobs. Mrs. Jones decided that a family should stick together, so later on she followed them with the five younger children. They located in Freemont, a new little suburb of Dallas.

Then Old Lady Luck decided once more to interfere in the affairs of this fine, husky family. The children, for one reason or another, lost their positions. In the meantime there were taxes and payments to meet on their modest home, as well as food and clothes to purchase.

Whereupon Mother Jones became the mother of invention.

A little two-seated automobile, rusty and rattlesome, was the only means of transportation the family possessed. Few others in the new little suburb had even that much. The streets had not then been improved, and many homeseekers turned away from Freemont, with no desire to "live in the mud." So, in 1923, Mrs. Jones started one of her boys to hauling passengers between Freemont and Dallas in the little car. The next year she was able to put a fleet of six cars on the road, with her boys and girls as chauffeurs.

Today there are eleven commodious busses in the service, and she has had to hire extra help. Her three oldest boys and the oldest daughter are married, but they have all located within three blocks of their mother.

Florence, 19, Marguerite, 21, Ada May, 23, and the two younger boys, Timothy, 17, and Elton, 14, all man busses. After buying out another line, the Dallas-Lisbon, Mrs. Jones's business has trebled. Not only has she been able to build a modern, comfortable home for her family, but she has reached out to bless those around her.

Besides doing the little kindly deeds that won her the name of "Mother Jones" among all who knew her, Mrs. Jones took the interest of the entire community to heart. She donated the lot for a church. She advanced the money to build it and prayed for its life, as she helped establish it with less than fifty members.

Salt *without* Savor

By CAPTAIN DINGLE

Illustrated by W. J. AYLWARD

THE first effect of the loss of his certificate upon Captain Keith was daze. Then he abruptly sprang to full realization that his life's work, his career, his good reputation, all, had come to a bad end. To cap the realization came the shameful fact that it was the spite of his trusted mate that had ruined him; then Keith went utterly mad.

He wandered the port for three days, seeking Talley to kill him; until friends who heard him muttering as he wandered took him away on pretense of helping him find his enemy, and watched him until his madness gave place to collapse. Then he suddenly disappeared; the port knew him no more.

He had passed half a lifetime as master of the ship Circe. No man sailing the seas had a higher reputation or a finer record. But all had been wiped out in that one crashing instant off the Horn, when his ship ran down and sank a Chilean steamer with four hundred lives. He had been drinking. That was the damning charge.

Forty days of bitter gales his ship had weathered, trying to gain past Old Stiff. For forty days he had never left the deck except to change into dry clothes. Sleep he had scarcely known, snatching cat naps on the settee in the chart-room. His mates had slept in their turns; but not he. He had given his mates, and his men, fair rations of stimulating grog; but he took none.

Then the weather cleared, the wind came fair; he allowed himself sorely needed rest. And to put life into his chilled blood, he did, at that last hour, permit himself to mix a hot toddy before falling into his bunk.

That had come up at the inquiry, to his mild surprise at first. He had not denied it. But he had suddenly discovered that Talley was stressing it. The steward, too, made a lot of it in his evidence.

"A drinking man, eh, Captain?" the grizzled old inquisitors nodded.

"I never drank at sea!" Keith had protested. He saw the grim unbelief in their eyes, they having heard the testimony, and he blurted, "That was the only time. I had been forty days out of my bed!"

THEN the helmsman had something to say. He had not seen the steamer, but he had noticed that the lookout never struck the bell, or reported the lights burning brightly. His binnacle light was out, but it was near the end of his trick and he had steered by a star until he had a chance to trim and light the lamp. The mate? Mr. Talley was in the chart-room over the chart. They were too near to Cape Horn.

The Board calmly wiped out the labor of a lifetime, and Keith faced a hostile world. He went as far from that port as the country would let him. He knew that Talley had got command of the Circe. The steward was with him too. The helmsman had been made bos'n. Keith's kindly features twisted into a bitter grimace which grew into permanency. He hoped the precious trio would enjoy their good fortune. He knew he would meet Talley again some day. He would order his life to that end. Then—

HE WORKED on a farm for three months. His beard grew, and his hands hardened to unaccustomed manual work. Then he got ink eradicator and altered his oldest ships' discharges, and his name, seeing no wrong in it, but driven to it by desperation. He sought and found employment on a little coaster. Short trips on the coast, little intercourse with men of the big ports, frequently changing crews. It was sanctuary to him. No long passages to brood in. His skipper liked him, for he was quiet, sober, utterly dependable.

His shipmates of the forecastle were not so warmly appreciative. His quiet aloofness they called surliness; he never joined in their shore amusements. Nor would he drink with them. They called him a louse, drinking alone. And he knew too much. All his efforts to be one of them could not hide a lifetime habit.

Most men in his place simply hauled on a rope when told, never knowing or caring why. If told to steer a course, they would hold that course and let the skipper worry about current or tide, even though a sudden unsuspected eddy, when in sight of

the land, swerved the vessel from her given course.

Keith shrewdly allowed for such influences, as a matter of habit, never thinking it necessary to speak of it. When tacking or wearing the little brigantine, he went straight to the proper gear as soon as the first order was given, knowing the principle. They, caring nothing for principle, let go, or hauled, or trimmed when told, and not before.

FOR six months he nursed a scheme of ultimate vengeance against Talley. He would adjust himself to this new life until he lost his old perspective, then set himself upon Talley's heels. It might be that he would wait his chance and ship as a sailor aboard the Circe. Oh, it was a gaudy crowd on the Circe! Very nicely had Talley seized upon disaster and made it a ladder on which to climb to command. And, in climbing, he had not forgotten the rungs of the ladder.

Keith came nearer to smiling than he had in a long time when he thought of Talley, outwardly in command of a fine clipper and actually beholden to a couple of menials who knew far too much.

At the end of a year, he was surprised to find himself thinking less bitterly about the Circe and Talley and the rest. Men had come and gone in the little brigantine. Keith stayed on. The mate left for a bigger vessel, and Skipper Harris overtook Keith on one of his rare walks on the dock.

"Trent," he said, using the name Keith sailed under now, "Trent, you ought to try for your mate's ticket. If you had it now, I might offer you the mate's berth. If you're fond enough of the Janet to stay by her a whole year, you might as well be comfortable."

"I'm comfortable, thank you, sir," growled Trent, and a new mate was shipped. But the skipper's encouragement worked. It was something, it was a great deal, to know that even in the depths of disgrace and humiliation there was one man watching him with an eye to his advancement. By the time the Janet had made one of her rare long salt-fish voyages, he had made up his mind to challenge Fate again.

The new mate was dissatisfied—had already announced that he was quitting next time home. When the Janet docked, Trent told the skipper of his resolve, and got a glowing recommendation from him. Then he boldly presented himself for examination, and sat for an Only Mate's ticket. The moment of application tried him to the core. Would he be recognized? He was not. Nobody on that part of the coast had ever known him, except by the newsprints and photograph, and the affair of the Circe was going on for two years old now.

The examination, except for the mental strain at first, was child's play for the old deep-water master. He felt as proud of his new ticket as he had of his first deep-water parchment. It seemed to prove to him that the past was dead; that he might yet regain the eminence he had fallen from. And when he heard the skipper praise him to the owner, he went hot with queer pride. When he completed his first sea watch and went to his tiny, snug berth, an officer again, he slept without one recurring thought of the black past, without one trace of rancor.

Seamen still talk of that February gale that strewed the coast with wreckage and swept away the light on Burnt Ledge. The Janet groped in from the south in a blizzard dense as fog, seeking the light. The skipper was nervous. The cargo shifted. The light did not appear. The skipper had a weak heart too. He knuckled under to nervousness and heart together, and left things to his mate. That was a day of trial for Trent. From shifted cargo to reeling deck he alternated, sweating and freezing by turns, until through the mad sleet he caught the loom of the land where the light should be. There was no light.

"Ready about!" he yelled, taking the wheel himself.

He clawed the brigantine off. He detected a flicker of light, a lantern in anxious hands ashore, warning seamen that the big light was dead. And then the blizzard again, the murderous sea, the dead onshore gale. Trent held the wheel for ten hours, thrashing his vessel clear.

WHEN almost ready to drop, his stinging eyes saw the dizzy spars of a great full-rigged ship storming in from sea, groping for the light that was not there. Beset though he was, his innate seamanship urged him to intercept that ship and warn her of her peril. Long before a ship of that size could get near enough to see the flickering lanterns, she must strike, so deep would be her draft.

"You'll drown us!" the men cried. He carried on. And as he steered straight across the bows of the ship they rushed to him, trying to wrest the wheel from him. He fought them off, ran his vessel sheer across the big ship's stern, and roared his warning to two peering figures on her poop. He saw a hand waved in acknowledgment, then the ship passed out of sight; but he heard the thunder of her gear as she came about. And as he sped by her stern he had seen her name. The men saw it too.

Today the little white church is thriving, and Marguerite Jones is the pastor.

Right after her graduation from high school Marguerite felt the call to preach. She received her inspiration through her grandfather, the Reverend W. F. Pickett, who was once a circuit rider.

Although only just of age, she has married twenty-five couples and has baptized more than fifty in the little creek near the church. She has conducted over a dozen funerals. She preaches two sermons every Sunday and drives her bus thirteen hours a day, six days a week.

Every member of the family attends the church and takes active part in the worship. Florence is the song-leader, and Ada May, the pianist.

All the girls are extremely pretty. They adore each other and nowhere will a more congenial family be found. The brothers are pals, and the mother is "looked up to" and revered. Hats off to the Jones family!

KATHERINE NUNN

The Great Adventure of Life is Life Itself

Professor Julian Daniel Taylor, who has taught Latin in Colby College for sixty-one continuous years—a record unparalleled in the educational annals of America

ON JANUARY 29, 1846, not long before the United States declared war with Mexico, a boy was born on a farm in Winslow, Maine. Eighteen years later, while the battlefields of the Civil War were still red with blood, he entered Colby College, in the neighboring village of Waterville. President Andrew Johnson's stormy career was rushing toward the impeachment proceedings when the lean farmer boy received his diploma. And that autumn—1868—he stood up in the classroom he had just vacated as a student and taught his first college class in Latin.

Thirty years passed. The nation sprang to arms once more—to the battle cry of "Remember the Maine." That same boy, then a man of fifty-two, was still teaching Latin in the same college. Another twenty years, and American doughboys were breaking the "Hindenburg Line." He was still there—still teaching Latin. And today he sits at the same desk, in the same room, pouring knowledge (and wisdom that is more than knowledge!) into the stream of youth that flows in and out.

Sixty-one continuous years as a professor. In the same subject. And the same college. It is a record the like of which is unknown in the educational annals of America.

Julian Daniel Taylor wears his years as lightly as his honors. His fine, intellectual head still rides high. His clear blue eyes still look on the world with a keen interest. His step is firm, his mind alert. Save in the coldest days of a Maine winter, he walks without an overcoat from his home to his classes or to the conference room of the largest bank in the city, where, as the very active vice president, he prides himself on never missing a meeting of the board.

Two years ago, all by himself, he shingled the roof of his little farmhouse in Winslow, where he was born.

From the classroom of Julian Daniel Taylor have gone forth men (and women) who have made history in the land. He has fought in no wars—but he has given to the army and navy high-ranking officers. He has held no political office, but he has trained the minds of governors, senators, and congressmen by the score. In the waves of youth that have beaten against his desk there have been future captains of industry, scientists, explorers, college presidents, surgeons, supreme court justices, and journalists.

Perhaps some of the financial shrewdness of Brigadier General Herbert M. Lord, Director of the Budget of the United States, is due to the years he sat at the feet of "Judy" Taylor. It's more than likely, for everyone at the Ticonic National Bank pays tribute to the canniness of the venerable vice president.

A few paragraphs back, I mentioned Professor Taylor's great span of continuous service. And I meant *continuous*. No "Sabbatical years" for him. No leaves of absence for special purposes. Except for rare and brief illness, he has never missed a class in all this time.

His persisting vigor is largely due to his essential kinship with the spirit of the youth he handles, and to the calm and clear philosophy of life which has been his ballast for more than two generations. He has found that the Great Adventure of Life is Life itself.

"I have lived with and for Colby," he said to me, in that beautiful, clear-cut English which is the heritage of his training. "Within the sound of its bell, I was born. In hope and aspiration toward it, I passed my childhood. By this venerable institution my youth was molded and shaped. Within its walls my life-work has been done. Under its eaves I expect to spend my remaining days. And at the last, if anything be left of my ashes, any living spark, it will be my love for my college and for my old college friends."

"Have you ever regretted that you chose the quiet life of a professor?" I asked.

"Never for long. Teaching, of course, is a dangerous profession for the man who chooses it because he craves its shelter and its slippered ease. But it is a high calling for the man who sees its boundless possibilities in serving, in molding lives."

If he lives to be a hundred, there seems little chance that Professor Taylor will have any of that "slippered ease" to which he referred. For example, when Colby, a few months ago, decided to attempt the gigantic task of raising a half-million dollars for a Development Fund, the eighty-three-year-old professor of Latin was made vice chairman of the drive. Also, he still spends many hours a week in directing the affairs of the Sunset Home for Aged Women, which he helped to found and for which he has a lively sentiment.

"It is sentiment that rules the world, and woe would be the world if it did not," he said to me.

Old Loyalty

(*Continued from page 35*)

bear to destroy out of her hurt life that look of incredulous and amazed respect, Kitty, who lived by the light of men's eyes, made no denial.

If this man could worship only loyalty, then, for her immediate purpose, loyalty must be Kitty Grace.

She sat there with bent head, her small hands nervously occupied the one with the other, tears upon them.

Farraday went quickly to his knees, kissed both her hands, and lightly rose.

"I didn't know," he said, "that there was left in the world a woman with eyes and lips like yours who could love one unworthy man so faithfully."

It became necessary then for Kitty to rise and to go quickly out of his sight, for hysterical laughter was climbing up her throat, the laughter that is a ragged cloak for tears.

SHE was next driven to cover up the tracks of her deceit. That evening to her patient she said lightly:

"Roy, will you do something for me?"

Their adobe room was firelit and beautiful, the more so for Kitty's shining presence near her hearth, and not the less so certainly for Roy's, half dressed, half draped in a gorgeous Navajo blanket, sleekly brushed and washed, and restored to the natural deep brilliance of his healthful coloring.

In answer, he just looked at her.

"I want you to tell Mr. Farraday something when he next comes in to see you —something about Martha Grayle."

"Who's that?" asked Roy. "The woman you get things from?"

"Yes. She lives on the ranch just above us . . . in fact, this is really part of her property too. She is . . . a widow. Her son is away at present but will be back very soon. I would like Mr. Farraday to know those two facts."

Roy's clear young eyes showed his astonishment. "Why, sure," he said. "You think he's made acquaintance with her?"

"No. I don't believe he's even seen her yet. But I suppose he's bound to run into her, or she may happen upon him. And I've a good reason for wanting him to know just—well—just what she is, and to know it from you. You won't forget?"

"No, ma'am. I think I saw her," murmured Roy, "pushing a plow along up yonder. I thought 'twas a man."

"Yes, that would be Martha. Roy, tell me . . ." she moved closer, in the wondering, shy-appearing fashion of a little girl, "if you were in the habit of thinking about people, what would you think of me?"

"It ain't what I would, it's what I do," said Roy. "Hadn't I this leg here, I'd learn you quick enough what I been thinkin' about you, Mrs. Grace."

"You have . . . *learned* . . . me already," Kitty sighed. Then she came over and kneeled beside him, pressing her silken and disordered head against his side. "A sweet, wise, bad boy," she said.

And after a few minutes, during which Roy did the talking, she added, softly laughing, "What difference would your hurt make, Roy, in telling me all this?—Hush," she then said, rippling up, drawing herself away. "I think I heard someone." She fled over to her place beside the hearth and stood there, looking over to him with a finger on her lip. "Be careful, Roy, I'm trusting you," she said.

Roy understood perfectly that she was trusting him and with what, but his face had a changed look when he turned it a moment later in Farraday's direction . . . a watchful, twisted look. Roy was by no means incapable of jealousy. And the limited but profound experience of such wandering lives as his, combined with the western habit of shrewd and unbewildered observation, had made Kitty entirely comprehensible. There was no need to tell Roy who and what she was. Not with all the romantic inclination in the world could he have fitted to her Martha Grayle's pathetic history.

Farraday seemed to notice the change in his young guide's expression, for he jerked a quick and rather searching look from him to Kitty, standing the full width of the room away. Kitty's face felt itself color. She bestirred herself.

"Would you care for a cup of coffee, Mr. Farraday? Or some of the soup I made for Roy this evening?"

"Thanks, no. I can't stay a minute. I came to give you a message from a neighbor. I discovered this afternoon," and a harsher note in his voice betrayed suspicion to Kitty's throbbing anxiety, "for the first time, that we have a neighbor on Folly River."

"The widow-lady," Roy drawled.

Farraday turned quickly upon him.

"You know her?"

"I know somethin' about her. I know her husband died a while back and that she lives here with a growed son. He's away just now. Be back shortly."

"Ah!" said Farraday. Then he turned to Kitty.

"Martha Grayle told me to tell you that she was going out for the mail on Saturday." And he added, this time to Roy and almost with harshness, "When will you be ready to ride again, Roy?"

"I don't rightly know," said Roy, beseeching Kitty. "What you think, Mrs. Grace?"

"Not for a while yet, I'm afraid," said Kitty, and she saw Roy's young face flame and his eyes fall, trying to hide their ecstasy.

FARRADAY moved to the door, hesitated, then, with a look, beckoned Kitty out of doors.

"Tell me, won't you, Mrs. Grace . . . you're not having any trouble with Roy, are you? When I came in, it seemed to me, perhaps, that you were keeping the width of the room between yourself and him and that—well, I may be wrong . . . I fancied I caught an expression on his face . . ."

"Don't let that worry you," Kitty protested lightly. "I am quite capable of managing a child like Roy. Boys of that age fall in love with any not too hideous woman that happens to be in their line of vision. But Roy's a westerner, and a gentleman."

"I hope that's always a synonym," said Farraday dryly. His eyes traveled across the little space between the log-building which contained her living-room, her kitchen, and her invalid and the smaller cabin where she slept.

"Can he walk?"

"I think not, without a great deal of pain. Please don't imagine things, Mr. Farraday. I feel very safe . . . with you near by."

She just touched his arm and found herself tingling at the hard warmth of it, its mysterious radiation of response. And his face, she thought, had changed. . . .

Roy called groaningly. "Oh, Mrs. Grace, can you help me move this foot? . . . I got a cramp."

She went in to him but she did not hear Farraday's departing steps until she called to him a reassuring, sweet "Good night."

Then he walked down towards his own quarters. Kitty sang on her way to bed that night. She was not so much happy as excited. Her very uneasiness . . her fear of the old difficult, dangerous web she wove about two victims . . . made for her delight. Jealousy . . . dormant and unspoken, a growing disturbance in the detached soul of Farraday . . . Roy's enslavement . . . the use she could make of it to waken the sluggish blood of this uncomfortable stranger . . . matter enough for song and quickened pulses.

DURING the copper-shining days, the quicksilver-shining nights, that followed each other rapidly, the wavy mirror gave Kitty back a happy image, rejuvenated, lovely, feminine, and, looking at it, Kitty could only use an urchin's grin for Farraday's stupidity. That face to wait alone at the bottom of a desert cañon . . . for any man's return? Of course, he thought he had her word for her own history, but even with that, Kitty told herself, he should have given his perfectly obvious astonishment its rein and that would have led him directly to the truth.

But, no—this honorable gentleman, more that, surely, than the worldly-wise man she had at first imagined him to be, repressed his own astonishment and incredulity with sternness. His reverence for the woman he thought her to be moved Kitty. Under it she became gentle, and a little sorrowful—shy. Her hours with him, for all the delight they gave her, were rather difficult. And yet she would not spoil them. With one hand of her confused spirit she beckoned to the man, and with the other—the gloved and borrowed hand of Martha Grayle—she held him back.

She began to imagine a confusion in his eyes. He was sleeping badly. He told her that he was tortured by the lack of sleep; the least excitement, any disturbance of his nervous system, kept him wakeful until sunrise. Kitty did not ask what, down here in the bottom of Red Cañon, could possibly excite him.

It was a curious situation, for Kitty Grace. She knew that here was the sort of man whom her soul needed. She knew, as he looked at her with those blind eyes of his, that the brief reverence she now re-

Digitized by Google
Original from UNIVERSITY OF IOWA

ceived from him was the elixir that could cure her ills . . . that, once she struck its phial from his hand, it would be spilled forever to its last drop . . . that never in all her life could she taste the precious drink again. And she began to love him, because of this elixir, deeply, bitterly. And, by the same token, to be bored with Roy, in whom, quite naturally, her careful measuring of sweets bred an increasing hunger.

SO, UNHAPPY, restless, Kitty brought upon herself the crisis she had planned so nicely to avert. On the Saturday of Martha's absence in search of mail, Kitty tormented Roy. She taunted him, standing beyond his crippled grasp and laughing at him for a silly young boor who fancied, forsooth, that a beautiful woman of experience could possibly take his love-making *au grand sérieux* . . . "and that means in English, Master Cowboy Roy, with a great, long, solemn red face like yours."

Thus, with the little switch of her tongue and the great whip of her eyes, did she chastise him, until of a sudden up rose her invalid, bronze pale save for two bars of color across his cheek bones and, gritting his teeth, swung forward at her with all the young frenzy of outraged desire.

Kitty fled from him with such laughter and such cries as flying witches use, but, at the opening of Farraday's trail, he caught her and, with one last scream, she surrendered and let him taste her lips. Good—unalterably good—it was, to be so unthinkingly, so wildly embraced . . . she closed her eyes.

She opened them as Roy was wrenched violently away and saw . . . Farraday's dreadful face, satanic, twisted, white as his own panache. He struck at Roy as if he would strike him out of life forever.

"He thought I called for help," Kitty's scared wits informed her; "he thinks Roy has insulted me. He'll kill the man!" She heard herself calling, "Don't . . . don't hurt him, Mr. Farraday. Remember he's lame!"

But she did not hear herself calling to him the truth that would have saved Roy, body and honor, at a word. No—her wailing intercession had not the strength of truth. Farraday was minded to punish, to destroy with punishment, a savage who had insulted the woman whom he reverenced. And, though at first Roy's strong youth made the fight almost an equal one, his injury brought it to a quick end. . . .

Roy went down in silence, and in silence took his punishment, and when he was bidden to rise and make apology, he obeyed and spoke with bleeding, dusty lips, not looking his betrayer in the eyes: "I'm sorry, ma'am; I sure apologize."

"And now," Farraday said, between shifting teeth that worked themselves loose from their clenching, "since you seem able to stand and walk, and even to run upon occasion, I think you are able to catch up our horses and pack them. We'll move camp at once. Mrs. Grace has had too much of us."

Roy gave him one look, a look that froze Kitty's blood and might have served Farraday for warning, and limped away. Farraday stood moving a palm across his torn knuckles. He was winded and very white.

"I—I heard you call," he stammered gaspingly. "I—I saw you in his arms . . . That was unbearable to me." He came close to her and held himself taut there. "Well?" he asked her. "Well . . . ?" And then, before she could move or breathe, he caught her furiously in his own hard arms.

It was by no motion or protest of her own that she was freed. He pulled his muscles slowly from her and went back and away and down towards Folly River.

Neither of them, except for his queer questioning "Well?" had said a word.

Kitty turned and ran up the steep trail. She wanted to escape from the Cañon and its occupants. She wanted to stand out above them for a moment . . . free. She arrived, breathless, at the rim. All about her, like that groping human phrase, forever and forever and forever, stretched the golden land, rising by shallow layers, turquoise and copper and salmon pink, into quivering air, made tawny by its sun-drenched dust of a long desert day. There was no motion anywhere, no life nor sound. Only—stark, unaltered, having risen with her, Loyalty Mountain stood, looking her in the face.

There was no place—no wall, no crack, no bush—up here, within which she could hide away from him. He looked upon her, and she knew the reason for her hatred and her fear.

A symbol, that mountain, of the ultimate judge that even Kitty Grace could not escape. The judge that stands, like a mountain, in the mind, and makes all mountains beautiful or hateful. The judge of truth to one's own truth. Old Loyalty. No creed, no pronouncement, no theory, no revelation; just the dread necessity imposed upon an isolated mind . . . of ancient Loyalty. Let your truth be a malformed idol, if your ignorance is limited to a form so insignificant, but let your truth be . . . true.

FOR the first time in her life, Kitty, facing—instead of the usual soft human flatterer—that hard embodiment of truth, admitted sin without excuse. For vanity, for a liar's vanity, she had betrayed a friend, a gentleman, whom she had trusted and who, under torment, had been faithful to her trust.

There stood the mountain uttering speech.

For longer than she could endure its persecution, she faced it, then, remembering with a sharp sensation of fear that Farraday had given Roy his marching orders, she realized that in an hour or less the Red Cañon would again be desolate. Before that moment, she must do penance, be absolved. She must, for the peace of her own solitude, surrender to the spirit of the Cañon.

Kitty ran as a child runs who fears to be left alone in a dark place.

It was just before she entered into the steep downward trail that she heard the shot.

It brought her a terrified, breathless weakness. She stood still. No use trying to persuade herself that there might be a hundred natural causes for the firing of a gun. She could not forget Roy's face just before he turned it away to go and do Farraday's contemptuous bidding. Roy might be true to her trust in his magnanimity, but he would, with his own half-savage code, be true to his own honor.

Kitty knew this fact by instinct. It was instinct that had brought her to that frozen standstill of sheer horror on the trail. If she had only run faster . . . if she had not stood so long facing her mountain. How dark it was already down there in Red Cañon, filled with the troubling voice of Folly River.

There was no light anywhere, no camp fire. Nor did she hear a sound. . . . Yes . . . suddenly, beyond her . . . above her . . . horse's scrambling hoofs. Some man was riding fast and dangerously up to the desert level, riding as fast as if the law were at his heels.

"He has killed Farraday," said Kitty, "and that is my fault. Nothing like this has ever happened to me before."

She said this dazedly aloud and began, as if against its will, to direct her body down the cañon side.

FARRADAY lay across her threshold in a pool of blood. She saw that it was running from his leg, that his breeches were soaked red and his boot was filling. He seemed unconscious but, as she bent above him, opened his eyes.

"He told me . . . that . . . I . . . could have my turn at playing . . . invalid . . ." and, smiling in a twisted fashion, he showed Kitty his wound.

Kitty helped him to the lounge that Roy had occupied. "He gave me a chance to fire," Farraday then told her in a stronger voice, "but I couldn't believe he was in earnest and, after I was hit, though he waited, I . . . I couldn't shoot at him."

Kitty brought water and with a knife cut away the cloth from his hurt. A bullet had ripped through the flesh above his knee. It was exactly the location of Roy's own injury, an act of nicely measured justice. Roy would not betray his nurse, but he had put Farraday in case to understand the peril of her ministrations.

Had he seen Farraday with his arms about her? Would he presently come back to kill them both? Come back presently for some purpose somehow she knew he would.

Farraday lay there looking at her with his somber and enchanted eyes. She had still his reverence. She might have, she felt, his love. Later, perhaps, when she was sure of him, she might bring herself to spill that sweet elixir. A man who loves, forgives. . . . No, Kitty told herself, not a man like this one. There is in this man no forgiveness. He measures as the mountain measures, by stone and ice. Kitty, pale and shrinking, her eyes afraid, tended him ardently.

In his fever that night he talked of another woman, of Phyllis, who had been unfaithful to him.

He was sure, in that fever, that Kitty Grace was Phyllis. He begged that she would not touch him, please, only to leave him in peace, to recover from the wound that she had given to him. For physical pain became confused with mental misery, and Farraday had forgotten Roy, remembering his wife.

And toward morning he spoke about Old Loyalty. "I know you're in my own mind, you damn' staring, waiting heap of flint." He flung his arm before his face to shield it from the mountain. "Don't cry, Phyllis," he said. "It won't do any good. I am not going to forgive you." Then he would wait, sleep perhaps, until, seeing

7 Shaves for a Postage Stamp

4324

That is all it costs you to try this unique new shaving method—we stake everything on this free trial

GENTLEMEN:

The postman is our best salesman. For he brings the test that wins men to our new product. The product actually sells itself daily in the greatest laboratory of the world—America's bathroom.

Each morning hundreds of new users try Palmolive Shaving Cream at our expense. And 86% of them, we find, discard their former methods for it. Thus, our problem is to get men to take our test. To sign and mail the coupon.

If we can win so many millions in so short a time, surely you want to try this remarkable cream yourself. We do not want to sell you sight unseen. First let us prove our case—then you will *want* to buy.

Mail coupon—learn these 5 points

After rejecting 129 experimental formulas, our laboratories succeeded in embodying—all in one shaving cream—the 5 things men had asked for. 1000 men had been consulted, had given their advice.

1: Multiplies itself in lather 250 times.
2: Softens the beard in one minute.
3: Maintains its creamy fullness for 10 minutes on the face.
4: Strong bubbles hold the hairs erect for cutting.
5: Fine after-effects due to palm and olive oil content.

Now, whether your old shaving preparation suits or not, try ours. *You* risk nothing. *We* undertake, in 7 shaves, to win you. It's an open-and-shut proposition, and you are the judge. So won't you mail the coupon now?

PALMOLIVE RADIO HOUR—Broadcast every Wednesday night—from 9:30 to 10:30 p. m., eastern time; 8:30 to 9:30 p. m., central time; 7:30 to 8:30 p. m.. mountain time; 6:30 to 7:30 p. m., Pacific time—over station WEAF and 39 stations associated with The National Broadcasting Co.

To add the final touch to shaving luxury, we have created Palmolive After Shaving Talc—especially for men. Try the sample we are sending free with the Shaving Cream.

7 SHAVES FREE

and a can of Palmolive After Shaving Talc

Simply insert your name and address and mail to Dept. B-3075 Palmolive, 595 Fifth Ave., New York City. In Canada, address Palmolive, Toronto, 8.

Kitty's face, he would begin to talk to her again. "You have her eyes and lips . . . but you are true, aren't you? You've waited . . . years. Phyllis couldn't wait six months. I had to go away. I had to leave her, Kitty. What makes you look so like her . . . and yet be true? That's hard to bear, you know. And I want so much to kiss your mouth . . . Phyllis's mouth. Why aren't you like her? Why are you true to that brute that won't come back to you?"

BY AFTERNOON of the next day, he was clear in his head and free from fever. His hurt had begun to heal. But he was startlingly weak. Kitty made him some of her nourishing soup and held his head up so that he might drink it.

"I think I've told you," he said, between spoonfuls, in a whisper, smiling up at her, "I think I've heard myself telling you that you look like Phyllis, haven't I?"

"Yes," Kitty answered, wincing. "She is . . . she was . . . your wife?"

"She was . . ." said Farraday, and fell to sobbing. He was too weak to control this pent emotion that had fed upon his heart.

"Is Phyllis . . . dead?" asked Kitty, clinging to his hand, which had clenched itself on hers.

"No. I have . . . turned her out."

Kitty drew her hand away from his and walked slowly over to her window. The wind was blowing, and across Loyalty's face were driven golden veils of desert dust. The sun was visible only in a nimbus.

So . . . he had turned her out.

Farraday slept. That evening, sitting by her fire, she heard him speaking to her in a stronger voice:

"Will you come over to me, Kitty, please?"

She came. His eyes were lifted to her with a thirsty look. She faltered down beside him and leaned her head against his arm. With the other hand weakly he stroked her silken hair.

"Don't wait for him any longer, Kitty," he pleaded. "They're not worth waiting for . . . these leprechauns."

Under his hand Kitty winced.

"Leprechauns . . . ? What do you mean?"

"Trolls . . . demons . . . flibbertigibbets . . ."

"Ugly words. I don't know what they mean."

"They mean unfaithful lovers—women who throw that dirty little feather they call their love to any passer-by; women with cruel, childish eyes who pull the wings off a man's faith and laugh when they see it crawling about, blind and hideous and maimed. I mean . . . the little, soft, dark-eyed, sweet-lipped women whose body your soul mysteriously moves about in, Kitty. The miserable little traffickers in desire, whose vanity is their only soul."

Kitty crouched there beside him, hiding her face from him, shrinking under his lash. He spoke again in a tired and gentle voice:

"Kitty Grace, we have been deserted and deceived. We've loved and lost . . . our leprechauns. My traitor I will not forgive. How long are you going to waste your loyalty for yours?"

His hand that stroked her hair was tender. She knew that he had surrendered weakly, blindly, to that power of hers, and temptation opened its rose-mouthed pit for all her facile senses.

Curiously, it was the image of another woman that stood between her and acceptance—loyalty to a misnamed human being whose weakness, whose tragedy, whose punishment she understood.

She raised her head, so that his hand slid down, and looked Farraday straight in the eyes. They were bitter still, but the grimness had gone out of them.

"Do you believe in loyalty, Miles Farraday?" she asked him. "I wonder if you can tell me what you mean by loyalty."

He said nothing. He lay there, half lifted on his elbow, his face deeply flushed.

"Is it loyalty," said Kitty slowly, uncertainly, as if she were really seeking for a truth, "is it loyalty to be true to someone who has never done you any wrong, never given you cause for doubt or pain or anger? Is it loyalty to stand by the man—or the woman—who has always stood by you, who has never failed you nor looked away from your interests to right or left? Is it loyalty to be easily faithful, with no provocation to a lack of faith? If the friend is in deserved disgrace, in ruin, if the lover has fallen under temptation too strong for her weakness . . . is that no time for loyalty?

"You speak of leprechauns . . . of hobgoblins . . . soulless creatures . . . but it seems to me that love . . . your kind of loving . . . is as inhuman as a stone!"

Here Farraday said, looking up at her as a chastened worshiper will look, "Only a woman like you, a woman young, beautiful, who has waited alone for her man here in Red Cañon, has a right to plead for an unfaithful wife."

THEN Kitty remembered her stern mountain and she rose from her knees, making a lovely gesture of throwing aside that royal cloak she had borrowed for her crippled soul.

"I haven't waited here, my friend. The loyal wife whom you have so admired is Martha Grayle. I lied to you . . . but I believed you might have seen that story, in spite of my lie, written in *her* face and eyes and smile. But, no, it is the dark-eyed, sweet-lipped women that you, for very loyalty, must love and follow and cling to, Miles Farraday!"

Tears rained down across her face, surprising, angering her.

"Oh, I could take you from Phyllis, if I would. I could take you here and now and give you all that is left in me of loving. I could. I could. I don't just know what is preventing me. But when you tell me of her tears . . . how she implored you to forgive her . . . then, it seems to me that even *I* should teach you loyalty . . . its meaning. I have cried and begged, myself. And I have been treated to your brand . . . of faithfulness. Martha Grayle knows how to love and wait. But you don't love . . . nor wait . . . nor forgive. That man whom I implored didn't love . . . nor wait.

"No, he turned me out, a broken hobgoblin, who loved him—yes, as warmly as any real woman could—turned me out for a fault of loneliness and quick emotion and the very softness, I suppose, which made me in the first place lenient to him. He couldn't forgive. He couldn't wait for me to grow up to his measure. He preached his brand of loyalty . . . I call it treason. Treason to the weakness which must rely upon the mercy and the help of strength.

"Yes, I am a divorced woman—deservedly, disgracefully divorced. And my lover left me a few weeks ago because he was jealous of a man I flirted with, a sort of stray who camped down by your stream. When you and Roy came down I was lonely, desperate. I let Roy love me. It was my fault that he caught me down there by your trail and kissed me on the mouth. Roy was loyal. He wouldn't give that truth away. But he has left you here, wounded, to find out, without any word from him, the truth. Well, now you have learned it! You know just what I am.

"I've been waiting down here for a letter so that I might have money to get out of here, to go back to my old way of living. Some day your Phyllis will be waiting for a letter—in some Red Cañon of her life—and a man like you will come to her. . . . Ah, well, *who* turned her out, when she was a human being, to race and run with this world's . . . leprechauns? If you don't go back to her and show her the meaning of real loyalty, the feeling you've been hating, fighting with—some day your Phyllis will be . . . Kitty Grace!"

SHE turned then and saw Roy standing in her open doorway.

He looked unnaturally tall in his long, graceful cowboy's costume, of leather belt and chaps and high-heeled boots, tall and splendid and alarming, with his gun against his hip. She fell back from him to shelter Farraday. But, at the little faint cry of terror she had given, Roy smiled and slipped his weapon into its holster, relaxing as he did it, so that he leaned, slack and graceful, against the side of the opening. He rolled and lighted a cigarette.

"I heard you tellin' your . . . truth," said Roy.

Kitty looked pitifully from one to the other of the two men whose tall condemnation she had drawn down upon her littleness, and a profound longing for Martha Grayle surprised her heart. "Any time you want me, I'm here," Martha had said.

Kitty bent her head and moved fast, but, as she came to Roy, he stood back gravely, taking off his hat. Startled by his courtliness, she glanced at him sidelong, and caught the deep and shining tribute of his look—a look of incredulous and amazed respect!

Roy, who had known her from the beginning, knew just how brave a thing this Kitty Grace had done. And strangely, as she met his look, she knew that she was still as young as he was, as simple, at the bottom of her tired heart.

She stumbled past him and went out. There stood Old Loyalty, a somber vision under the moon. She stood to face him, and was aware of her release and renovation, a sensation strangely akin to ecstasy. Had not Roy offered to her the elixir which was the one need of her soul? She would not look back at him, although she felt his eyes fixed splendidly upon her. She turned away and chose the path to Martha Grayle.

Forgive her experience, if she went in the full knowledge that he would follow her.

For summer sports

Do you serve Chocolates in Summer?

Someone does! . . . . . .

Figures for eleven years show the American people buy one-third more Samplers in July and August than in February and March.

It is the chosen assortment to sweeten outdoor sports; comrade of the car, the canoe, the yacht, the game of golf.

It cheers the summer camp and the seashore cottage. It is the quiet but effective support of the strenuous, happy life out of doors.

And it can be bought conveniently, and fresh, wherever summer trails may take you.

All branches on the same tree; all growing out of the Chrysler root principle of Standardized Quality

Where Millions of Carefree Motoring Miles Begin

IF people who marvel at the unparalleled efficiency of Chrysler-built cars—their outstanding superiority in every field of motor car endeavor—could look behind the scenes of the great million-dollar engineering laboratory maintained by Chrysler Motors, they would find a convincing explanation of Chrysler supremacy.

In one vast and extraordinary building, everything imaginable in the way of a motoring hazard or hardship is reproduced. Here, under one roof, cars selected from production lines, endure tests that could not be duplicated if these cars were sent to the ends of the earth in search of conditions to try their mettle. Here is found man-made weather that is hotter than the Sahara and colder than the Poles. Here, the blistering, fading actinic rays of the equatorial sun are concentrated, in order that the quality of fabrics and finish may be proved. Here is a monstrous, diabolical machine that simulates a road so rough and a driving speed so high that no human hands could hold the steering wheel.

Even the most inconspicuous part is subjected to merciless trials that establish a capability far in excess of anything that could possibly be required of it in service.

This Chrysler Motors engineer is making sure that none but the finest distributors are included in Chrysler Motors vehicles.

This vast laboratory is the hub of Chrysler Standardized Quality. In it is written the assurance of safety, performance and durability that is the heritage of the owners of Chrysler-built products. Here millions of carefree motoring miles begin.

THE SEDAN

Owners Say We do Not Claim Enough

WHEN the new Dodge Brothers Six was introduced to the public, we made some strong claims for it, basing these claims on our knowledge that it was the best car that Dodge Brothers ever had presented. Now, we find that owners are even more enthusiastic than we had expected over the unusual performance and appealing beauty of the car. They tell us it is doing things in everyday driving that exceed even our most optimistic promises. It will be worth your while to come and see the car that is inspiring this enthusiasm. You can buy one on such easy terms, if you so desire, that the monthly installments will not impose any strain on the family budget.

Mark Twain as Revealed by Himself to Helen Keller

(*Continued from page 51*)

Mrs. Macy told me he was all in white and that his beautiful white hair glistened in the afternoon sunshine like the snow spray on the gray stones.

We were in the land of enchantment. We sat by the fire and had our tea and buttered toast, and he insisted that I must have strawberry jam on my toast. We were the only guests. Miss Lyon, Mr. Clemens's secretary, presided over the tea table.

It was obvious that Mr. Clemens took great satisfaction in his unusual house. He told us that it had been designed by the son of my lifelong friend, William Dean Howells. Delightedly he pointed out that the architecture was exactly suited to the natural surroundings; that the dark cedars and pines, which were always green, made a singularly beautiful setting for the white villa. Mr. Clemens particularly enjoyed the sunlight that came through the great windows and the glimpse of field and sky that could be seen through them. "You observe," he said to us, "there are no pictures on the walls. Pictures in this house would be an impertinence. No artist," he added, going to the window and looking out, "has ever equaled that landscape."

Our suite of rooms was next to his. On the mantelpiece, suspended from a candlestick, was a card explaining to possible burglars where articles of value were in the room. There had recently been a burglary in the house, and Mr. Clemens said that this was a precaution against being disturbed by intruders.

WE STAYED in our room till dinner was announced—dinner in Mr. Clemens's house was always a function where conversation was important, yes, more important than the food. It was a rule in that house that guests were relieved of the responsibility of conversation. Mr. Clemens said that his personal experience had taught him that you could not enjoy your dinner if the burden of finding something to say was weighing heavily upon you. He made it a rule, he said, to do all the talking in his own house, and expected when he was invited out that his hosts would do the same. He talked delightfully, audaciously, brilliantly. His talk was fragrant with tobacco and flamboyant with profanity. I adored him because he did not temper his conversation to any femininity. He was a play-boy sometimes and on occasions liked to show off. He had a natural sense of the dramatic and enjoyed posing as he talked. But in the core of him there was no make-believe. He never attempted to hide his light under a bushel.

I think it was Goethe who said, "Only clods are modest." If that is true, then in all the world there was not less of a clod than Mr. Clemens. He ate very little himself, and invariably grew restless before the dinner was finished. He would get up in the midst of a sentence, walk round the table or up and down the long dining-room, talking all the while. He would stop behind my chair and ask me if there was anything I wanted; he would sometimes take a flower from a vase, and if I happened to be able to identify it, he showed his pleasure by describing in an exaggerated manner the powers that lie latent in our faculties, declaring that the ordinary human being had not scratched the surface of his own brain. This line of observation usually led to a tirade upon the appalling stupidity of all normal human beings. Watching my teacher spelling to me, he drawled, "Can you spell into Helen's left hand and tell her the truth!" Sometimes the butler called his attention to a tempting dish and he would sit down and eat.

To test my powers of observation, he would leave the room quietly and start the self-playing organ in the living-room. My teacher told me how amusing it was to see him steal back to the dining-room and watch stealthily for any manifestations on my part that the vibrations had reached my feet. I did not often feel the musical vibrations, as I believe the floor was tiled, which prevented the sound waves from reaching me, but I did sometimes feel the chord vibrations through the table. I was always glad when I did, because it made Mr. Clemens so happy.

We gathered about the warm hearth after dinner and Mr. Clemens stood with his back to the fire talking to us. There he stood—our Mark Twain, our American, our humorist, the embodiment of our country. He seemed to have absorbed all America into himself. The great Mississippi River seemed forever flowing, flowing through his speech, through the shadowless white sands of his thought. His voice seemed to say, like the river, "Why hurry? Eternity is long; the ocean can wait."

WHEN the time came to say good night, Mr. Clemens led me to my room himself and told me that I would find cigars and a thermos bottle with Scotch whisky, or bourbon if I preferred it, in the bathroom. He told me that he spent the morning in bed writing, that his guests seldom saw him before lunch-time; but if I felt like coming in to see him about ten-thirty, he would be delighted, for there were some things he would like to say to me when my Guardian Angel was not present.

About ten o'clock the next morning, he sent for me. He liked to do his literary work in bed, dictating his notes to a stenographer. Propped up among his snowy pillows, he looked very handsome in his dressing gown of rich silk. He said if doing my work that way appealed to me, I might have half the bed, provided I maintained strict neutrality and did not talk. I told him the price was prohibitive, I could never yield woman's only prerogative, great as the temptation was.

It was a glorious bright day and the sun streamed through the great windows. Mr. Clemens said if I did not feel inclined to work after lunch (which was by way of sarcasm, he having previously remarked that I did not look industrious and that he believed I had somebody write my books for me), he would take a little walk with us and show us the "farm." He said he would not join us at lunch, as his doctor had put him on a strict diet. He appeared, however, just as dessert was being served. He said he had smelled the apple pie and could not resist. Miss Lyon protested timidly, "Oh, Mr. Clemens—" "Yes, I know," he conceded, "but fresh apple pie never killed anybody. But if Helen says I can't, I won't." I did not have the heart to say he couldn't, so we compromised on a very small piece, which was later augmented by a larger piece, after a pantomimic warning to the others not to betray him. I suspected what was going on and said, "Come, let us go before Mr. Clemens sends to the kitchen for another pie." He said, "Tell her, I suspected she was a psychic. That proves she is."

AFTER luncheon, he put on a fur-lined greatcoat and fur cap, filled his pockets with cigars, and declared himself ready to start on the walk.

He picked out a winding path which he thought I could follow easily. It was a delightful path, which lay between rocks and a saucy little brook that winter had not succeeded in binding with ice fetters. He asked Mrs. Macy to tell me there was a tall white building across an intervening valley from where we were standing. "Tell her it's a church," he said. "It used to stand on this side of the brook; but the congregation moved it last summer when I told them I had no use for it. I had no idea that New England people were so accommodating. At that distance it is just what a church should be—serene and pure and mystical."

We crossed the brook on a little rustic footbridge. He said it was a prehistoric bridge, and that the quiet brown pool underneath was the one celebrated in the Songs of Solomon. I quoted the passage he referred to: "Thine eyes like the fish-pools in Heshbon by the gate of Bath-rabbim." It was a joy being with him, holding his hand as he pointed out each lovely spot and told some charming untruth about it. Once he said, "The book of earth is wonderful. I wish I had time to read it. I think if I had begun it in my youth, I might have got through the first chapter. But it's too late to do anything about it now."

We wandered on and on, forgetful of time and distance, beguiled by stream and meadow and seductive stone walls wearing their autumn draperies of red and gold; vines a little dimmed by rain and snow but still exquisitely beautiful. When we turned at last and started to climb the hill, Mr. Clemens paused and stood gazing over the frosty New England valley; he said, "Age is like this; we stand on the summit and look back over the distance and time. Alas, how swift are the feet of the days of the years of youth."

We realized that he was very tired

What 60 miles, 60 minutes and the New Mobiloil proved—

for your engine—

Recently on the board speedway at Atlantic City we tested the endurance qualities of the New Mobiloil.

We used well-known makes of cars bought in the open market, and averaging in crankcase capacity 6 quarts of oil.

Running these cars at high speed — much of the time at sixty or more miles an hour—we discovered this: The New Mobiloil gave approximately 20% more oil mileage than we obtained with other oils generally sold for the same motors.

And it is an established engineering fact that the oil which lasts longest and stands up best at high speed is the oil which lubricates best at any speed.

We have checked up this fact by making long-distance driving tests with the New Mobiloil on dirt roads and paved highways. After driving for thousands of miles under the same conditions that you encounter we confidently say this:

With reasonable care, the New Mobiloil will keep your engine's first-year feel for at least 30,000 miles. We say "confidently" because Mobiloil has actually kept the first-year feel in many test engines for more than *twice* 30,000 miles!

When you need oil, look for the Mobiloil sign.

Somebody suggested that one member of the party should return cross-lots and meet us on the road with a carriage. Mr. Clemens thought this a good idea and agreed to pilot Mrs. Macy and me to the road, which he had every reason to suppose was just beyond that elephant of a hill. Our search for that road was a wonderful and fearsome adventure. It led through cow paths, across ditches filled with ice-cold water into fields dotted with little islands of red and gold which rose gently out of the white snow. On closer inspection, we found that these islands were composed of patches of dry goldenrod and huckleberry bushes. We picked our way through treacherously smiling cart-roads. He said, "Every path leading out of this jungle dwindles into a squirrel track and runs up a tree." The smiles proved to be ruts that ensnared our innocent feet. Mr. Clemens had the wary air of a discoverer as he turned and twisted between spreading branches of majestic pines and dwarfed hazel-bushes.

I remarked that we seemed to be away off our course. He answered, "This is the uncharted wilderness. We have wandered into the chaos that existed before Jehovah divided the waters from the land. The road is just over there," he asserted with conviction.

"Yes," we murmured faintly, wondering how we should ever ford the roaring, tumbling imp of a stream which flung itself at us out of the hills. There was no doubt about it: The road was just there "where you see that rail fence." Prophecy deepened into happy certainty when we saw the coachman waiting for us. "Stay where you are," he shouted. In a few seconds, he had dismembered the rail fence and was transporting it over the field. It did not take long to construct a rough bridge, over which we safely crossed the Redding Rubicon. And sure enough, there was the narrow road of civilization winding up the hillside between stone walls and clustering sumachs and wild cherry trees on which little icicles were beginning to form like pendants. Halfway down the drive, Miss Lyon met us with tearful reproaches. Mr. Clemens mumbled weakly, "It has happened again—the woman tempted me."

I think I never enjoyed a walk more. Sweet is the memory of hours spent with a beloved companion. Even being lost with Mr. Clemens was delightful, although I was terribly distressed that he should be exerting himself beyond his strength.

THE last evening of our visit we sat around a blazing log fire, and Mr. Clemens asked me whether I should like to have him read me "Eve's Diary." Of course, I was delighted. He asked, "How shall we manage it?" "Oh," I replied, "you will read aloud, and my teacher will spell your words into my hand." He said, "I had thought you would read my lips." "I should like to," I answered, "but I am afraid you will find it very wearisome. We'll start that way, anyhow, and if it doesn't work, we'll try the other way."

This was an experience, I am sure, no other person in the world had ever had. "You know, Mr. Clemens," I reminded him, "that we are going home tomorrow, and you promised to put on your Oxford robe for me before I go."

"So I did, Helen," he agreed, "and I will—I will do it now before I forget." Miss Lyon brought the gorgeous scarlet robe which he had worn when England's oldest university conferred upon him the degree of Doctor of Letters. He put it on and stood there in the firelight, the embodiment of gracious majesty. He seemed pleased that I was impressed. He drew me towards him and kissed me on the brow, as a cardinal or pope or a feudal monarch might have kissed a little child.

HOW I wish I could paint the picture of that evening! Mr. Clemens sat in his armchair, dressed in his white serge suit, the flaming scarlet robe draping his shoulders, and his white hair gleaming and glistening in the light of the lamp which shone down on his head. In one hand he held "Eve's Diary," in a glorious red cover. In the other he held his pipe. "If it gets in the way," he said, "I'll give it up, but I feel embarrassed without it."

I sat down near him in a low chair, my elbow on the arm of his chair, so that my fingers could rest lightly on his lips. And then the play began. Everything went smoothly for a time. I had no difficulty getting the words from his lips. His pleasant drawl was music to my touch. But when he began gesticulating with his pipe, the actors in the drama got mixed up with the properties and there was confusion until the ashes were gathered into the fireplace. Then a new setting was arranged. Mrs. Macy came and sat beside me and spelled the words into my right hand, while I looked at Mr. Clemens with my left, touching his face and hands and the book, following his gestures and every changing expression.

As the reading proceeded, we became utterly absorbed in the wistful, tender chronicle of our first parents. Surely the joy, the innocence, the opening mind of childhood are among life's most sacred mysteries, and if young Eve laughs she makes creation all the sweeter for her heaven-born merriment. The beauty of Mr. Clemens's voice when Eve sighed her love, and when Adam stood at her grave grieving bitterly, saying, "Wheresoever she was, there was Eden," caused me to weep openly and the others to swallow audibly.

To one hampered and circumscribed as I am, it was a wonderful experience to have a friend like Mr. Clemens. I recall many talks with him about human affairs. He never made me feel that my opinions were worthless, as so many people do. He knew that we do not think with eyes and ears, and that our capacity for thought is not measured by what we take in through our five senses. He kept me always in mind while he talked, and he treated me like a competent human being. That is why I loved him.

Perhaps my strongest impression of him was that of sorrow. There was about him the air of one who had suffered greatly. Whenever I touched his face, his expression was sad, even when he was telling a funny story. He smiled, not with the mouth but with his mind—a gesture of the soul rather than of the face. His voice was truly wonderful. To my touch, it was deep, resonant. He had the power of modulating it so as to suggest the most delicate shades of meaning, and he spoke so deliberately that I could get almost every word with my fingers on his lips. Ah, how sweet and poignant the memory of his soft, slow speech playing over my listening fingers! His words seemed to take strange, lovely shapes on my hands. His own hands were wonderfully mobile and changeable under the influence of emotion.

It has been said that life has treated me harshly; and sometimes I have complained in my heart because many pleasures of human experience have been withheld from me; but when I recollect the treasure of friendship that has been bestowed upon me, I withdraw all charges against life. If much has been denied me, much, very much, has been given me. So long as the memory of certain beloved friends lives in my heart I shall say that life is good.

The affluence of Mr. Clemens's mind impressed me vividly. His felicitous words gushed from it with the abundance of the Shasta Falls. Humor was on the surface, but in the center of his nature was a passion for truth, harmony, beauty. Once he remarked, in his pensive, cynical way, "There is so little in life that is not pretense."

"There is beauty, Mr. Clemens," I reminded him.

"Yes," he agreed, "there is beauty, and beauty is the seed of spirit from which we grow the flowers that shall endure."

Time passed at Stormfield as it passes everywhere else, and the day came when we had to say good-by. The kindly white figure stood on the veranda waving us farewell, as he had waved his welcome when we arrived. Silently, through Mrs. Macy's eyes, I watched the stately villa on the white hilltop fading into the purple distance. We said to each other sadly, "Shall we ever see him again?" And we never did. But we knew that we had a picture of him in our hearts which would remain there forever. In my finger tips was graven the image of his dear face with its halo of shining white hair; and in my memory his drawling, marvelous voice will always vibrate.

I HAVE visited Stormfield since Mark Twain's death. The flowers still bloom; the breezes still whisper and sough in the cedars, which have grown statelier year by year; the birds still sing, they tell me. But for me, the place is bereft of its lover. The last time I was there, the house was in ruins. Only the great chimney was standing erect, a charred shaft of bricks in the bright autumn landscape.

As I sat on the step where he had sat with me one day, my hand warm in his, thoughts of him, like shadowy presences, came and went, sweet with memory, and with regret. Then I fancied I felt someone approaching me; I reached out, and a red geranium blossom met my touch! The leaves of the plant were covered with ashes, and even the sturdy stalk had been partly broken off by a chip of falling plaster. But there was the bright flower smiling at me out of the ashes. I thought it said to me, "Please don't grieve." I brought the plant home and set it in a sunny corner of my garden, where always it seems to say the same thing to me—"Please don't grieve."

But I grieve nevertheless.

Cancer—Ostriches

THE old notion that ostriches have the habit of hiding their heads in the sand in time of danger has been disproved again and again. Nevertheless the expression "hiding his head in the sand like an ostrich" aptly describes the man who seeks to avoid danger by refusing to recognize it when it comes.

© 1929, M. L. I. CO.

EACH year thousands of people die of cancer—needlessly—because they accept as true some of the mistaken beliefs about this disease.

No. 1—That every case of cancer is hopeless. *It is not.*

No. 2—That cancer should be concealed because it results from a blood taint and is disgraceful. *It is not.*

No. 3—That nature can conquer a malignant cancer unaided. *It can not.*

No. 4—That cancer can be cured with medicine, with a serum or with some secret procedure. *It can not.*

Many cancer patients are neglected or avoided because of the mistaken belief that cancer is contagious. *It is not.*

Be on Watch for First Signs of Cancer

Be suspicious of all abnormal lumps or swellings or sores that refuse to heal, or unusual discharges from any part of the body. Do not neglect any strange growth. Look out for moles, old scars, birthmarks or warts that change in shape, appearance or size.

If you have jagged or broken teeth, have them smoothed off or removed. Continued irritation of the tongue or any other part of the body is often the beginning of cancer trouble.

In its early stages, various kinds of cancer yield to skilful use of surgery, radium or x-rays. Frequently a combination of surgery and x-rays or radium saves lives that would otherwise be lost. But with all their skill and with their splendid records of success, the best doctors in the world are powerless unless their aid is sought in time.

Beware of Plausible Quacks

Because cancer is usually spoken of furtively or in confidence, and because its nature and origin are largely shrouded in mystery, quacks and crooked institutions reap a cruel harvest. They prey upon the fear and ignorance of those who do not know the facts concerning cancer. They are often successful in making people believe that they have cancer when they have not. Later, with a great flourish, they boast of their "cures".

Gratefully the patients of the fakers, first thoroughly alarmed, later entirely reassured, are glad to sign testimonials with which new victims are trapped. Beware of those who advertise cancer cures.

An annual physical examination by your family physician, or the expert to whom he sends you, may be the means of detecting cancer in its early stages. Do not neglect it.

The Drift Fence

(*Continued from page 57*)

goin' to be home a while now?" asked Molly, sitting down beside him. She bumped against his gun, which contact gave her an icy little shudder.

"Pa had one of his sinkin' spells tonight," said Arch, ignoring her query. "I been sittin' heah thinkin', Molly. What're you goin' to do—when we bust up?"

"Oh—Arch," faltered Molly, and she felt for his hand, slipping hers into it.

"Might as well face it," he went on. "I'm goin' to get killed or have to leave the Cibeque country. Pa won't last long. An' Ma will go back to Illinois. Will you go with her?"

Molly pondered a long moment. "I wouldn't if she didn't make me. I'd hate to leave heah. . . . Arch, I can get work in Flag."

"Shore. An' it ain't a bad idee. But don't get any moonshine idees in your haid."

"What you mean, Arch?"

"Wal, aboot Jim Traft. Because you'll be in fer a heap more hurt than you've had."

MOLLY had fortified herself for the very thing hinted in his slow drawl; nevertheless, it made her blood run cold.

"I'm shore in for more hurt any way you look at it," said Molly sadly.

"Natural like. Life ain't no *fiesta* fer the Dunns. . . . If I'd only knowed when I was a kid what I know now!"

Molly thought the moment propitious.

"Arch, the Cibeque outfit is goin' to double-cross you. Hack Jocelyn is at the bottom of it. But Seth Haverly is as treacherous. They want you to throw in with them an' kidnap Jim Traft. Hold him for ransom. Course, you know this, because you refused to be in it. But there's a lot you don't know."

"Wal, you darned little wood mouse!" he ejaculated. "You was there last night—What was thet shootin' aboot, after I left?"

"Hack Jocelyn heahed a noise in the brush an' shot three times."

"Wal! I come darn near ridin' back. . . . Molly, what did you heah?"

Briefly then she told him what had happened along the trail, as related by Andy; and though the supposition was that she had been there, she did not actually lie.

"— —!" muttered Slinger Dunn, and he held her hand tight. "I had a hunch. I didn't trust Jocelyn. But thet Seth could be so low-down! My Lord!"

"Arch, it couldn't be no worse," went on Molly, in agitation. "They mean to cut the drift fence an' lay it onto you. An' if the ransom deal falls through—owin' to you killin' Jim Traft—they'll rustle a big bunch of cattle. An' it'll all be laid on you!"

She felt him freeze, and he was silent so long that she could not restrain an appeal for him to abandon the idea of revenge and to go away somewhere.

"An' leave it easy fer them?" he queried harshly. "I know their deal now. . . . I'll settle with them afterward."

He slipped off the porch. His moccasined feet made no sound and his dark form vanished in the gloom. Molly clapped a hand over her mouth. Of what avail to call out! Shaken and wretched, she climbed to her loft and crawled to her bed. Through the hours of distress that followed, one growing resolve at last found permanence, and then she slept.

In the gray of dawn she was peering down from the loft watching Slinger Dunn—while he rolled out of his bed on the porch, and pulled on his boots and buckled on his spurs and gun-belt—while he slipped off in the gloom, to return with his horse—while he packed blankets and biscuit and meat, and then rode away on his mission.

Molly sat there thinking out her plan. She would let Slinger get some miles ahead, then she would follow, climb the Diamond, and when some distance from Tobe's Well, she would make a detour and hit the trail beyond Traft's camp, and ride back to it.

Before her mother was up, Molly put on her buckskins and slipped down out of the loft with a blanket, which she carried out to the barn and strapped on her pony. She fed him grain. Then she coiled a lasso and tied it to the end of his halter.

After breakfast, the first moment that offered she ran to the barn, and leading Jigger out, she mounted him and rode into the woods.

Soon she came to the trail, in the dust of which she espied the tracks of Slinger's horse, and turning into it, she rode north. Jigger was not shod and his hoofs padded softly. It was still and cool in the forest, and Molly soon reached the zone where the Diamond cut off the morning sunlight. Here the dark shade was almost like twilight. At every turn of the trail Molly would peep around before going on. Always, too, she had a keen eye for Slinger's tracks.

After a few miles the forest changed and thickened. The wall of brown-streaked green rose on both sides. Through openings in the foliage she saw the lofty, gray crags of the Diamond promontories. Soon she would be climbing in earnest, and then she must exercise extreme caution.

Presently she missed Slinger's tracks in the dust of the trail. Molly rode back, bending in anxious scrutiny. She had been careless. Soon she found where he had turned out of the trail. Molly slipped off her horse. What could this mean? She dared not go on for fear she might get ahead of him. Perhaps he was going to climb the Diamond by a trail known only to himself. Molly stood in dismay, pondering the problem.

Suddenly, up the trail, a rifle shot rang, clear and sharp. A wild cry followed. Molly stood transfixed. Then came the clatter of rapid hoof beats. She drew her horse behind a thicket of pines.

IT WAS weeks before that sudden shot broke the forest stillness for Molly that Jim Traft, resting on the soft, fragrant mat behind a spruce tree and waiting for the call to supper, inadvertently heard conversation not intended for his ears.

They had made camp on Pine Creek, in the forest, on what was called the Saddle, halfway between Black Butte and the Diamond. Jim had long since worked and ridden out the soreness of muscle and bone that had made him suffer so excruciatingly. He was strong and hard. He could stick in a saddle. He could dig fence-post holes all day. In truth, he seemed vastly changed and improved, and almost happy, despite periodic spells of depression. The months had not paled Molly Dunn's charm.

"Nope!" Curly Prentiss's voice came clearly to Jim's ears. "You cain't deal no more cairds to me. I won't take a hand in any more deals against the boss."

"But, Curly, we all reckon you wasn't at your best when he licked you," rejoined Uphill Frost.

"How so?"

"Wal, you'd been drunk. An' you know how weak likker makes you. An' you was sort of in fun. You didn't get mad."

A silence betrayed that no doubt this eloquence and persuasion were balm to Curly's wounded vanity.

"Mebbe so. Dog-gone! . . . But he hit me on the nose an' seen how it hurt. Then he kept pokin' me again right there. An' thet's what he'll do to you, Up. An' you, Jack Way, if you pick a fight with our boss, Lord help you. Because you're weak spots all over. An' ev'ry time he cracks you with one of them big fists, you'll yell. I'll bet a month's pay."

"TAKE you up. Heah thet, Frost?" grumbled Way. "Fact is, though, I'm afeard he *will* lick me. He shore put it all over Lonestar last Saturday. But we gotta fight him. *Somebody* has gotta do it or the Diamond is done fer on the range. Hack Jocelyn says so an' Hack's an old-timer heah."

"You'd be smart not to listen to him," replied Curly, in lower tone. "Hack's out fer trouble. Not fun! He's stuck on Molly Dunn an' he cain't stand fer the Flag talk aboot the boss winnin' Molly. There'll be a fight one of these days as will be a *real* one. An' I wanna see it."

"Natural, you'd like to see Hack get licked proper," growled Frost.

"You can shore bet on thet," said Curly emphatically.

"Wal, you an' Bud have double-crossed us," complained Jackson. "Bud is clean out with it. He says, 'You can all do what you please. I'm sidin' with the boss.'"

"Boys, you cain't blame Bud much. The boss kept me out of jail but thet ain't a marker to what he done fer Bud. An' if you look back, hasn't this heah Jim Traft done somethin' fer each of us, 'ceptin', mebbe, Hack? Now, I ask you."

Both cowboys were significantly silent.

"I'm gonna pick a fight with him, anyway," concluded Up Frost. "He's sore at me an' it'll be easy."

"When you aim to pick it?"

"I had my mind made up more'n onct. But when I get near the son-of-a-gun, I don't stick to it."

"Ahuh. You jest cain't help likin' Jim Traft. If Hack Jocelyn wasn't in the outfit we'd all be fer the boss pronto."

The cowboys strolled away into camp, arguing and complaining, while Jim Traft lay there amused and touched and singularly pleased.

The call to supper disturbed his reverie. He got up, and keeping the thick, low-

How this Penetrating Foam Cleans Your Teeth Better

**Why Colgate's Cleans Crevices Where Tooth Decay May Start*

Greatly magnified picture of tiny tooth crevice. Note how ordinary, sluggish toothpaste (having high 'surface-tension") fails to penetrate down where the causes of decay lurk.

This diagram shows how Colgate's active foam (having low "surface-tension") penetrates deep into the crevice, cleansing it completely where the toothbrush cannot reach.

. . . and only 25¢ The famous 25c tube of Colgate's contains more toothpaste than any other leading brand priced at a quarter. This is because Colgate's is the largest selling dentifrice in the world—and volume production, everybody knows, means low price.

It not only polishes the outer surfaces . . . but its penetrating foam washes away the decaying food particles which cause trouble in the tiny crevices.

DON'T be content with merely polishing the outer surface of your teeth—that is easy. But be extra cautious about cleansing the tiny crevices where lurking, decaying food particles and mucin deposits lodge. Don't invite decay.

To wash away these hidden impurities, nothing equals Colgate's, accepted by dental scientists as having a greater penetrating power* than any other leading dentifrice.

When you brush your teeth with Colgate's, you do more than safely polish the surface. Colgate's penetrating foam possesses a remarkable property (low "surface-tension"). This means that it penetrates into every tiny crevice. There it dislodges the decaying impurities, washing them away in a detergent wave.

In this foam is carried a fine chalk powder, a polishing material used by dentists as safe, yet effective in keeping teeth white and attractive.

Consider Colgate's two superiorities. It not only polishes the surface thoroughly but because of its greater penetrability, it cleans where brushing can't.

Remember, the one function of a dentifrice is to *clean* the teeth. No toothpaste can cure pyorrhea; no toothpaste can correct acid conditions of the mouth. Any claim that any toothpaste can do these things is misleading.

spreading spruce tree between him and camp, he walked off into the woods, and, circling, came back to camp on the other side. Meanwhile, he had evolved a plan.

He found the boys at supper, and a sudden cessation of voices proved he had interrupted something unusual, for cowboys seldom talk during their brief meal time.

"Sorry to spoil your talk, boys," he said. "But I can't go without my meals to let you gab about me."

"Boss, you might flatter yourself," said Bud Chalfack.

"Sure. But not this time," said Jim, as he surveyed the masklike faces. "Hack looks mighty innocent and indifferent. The rest of you, though, strike me bad."

"We was only talkin' aboot the fence," put in Frost. "Me an' Jack stand by our argyment of this mawnin'. You're runnin' thet line wrong lately, keepin' to this thick woods hyar."

"Well, tomorrow we'll run off a way, then, into the open draws. And I'll give you and Jack the job of digging post holes for a few days."

A long howl of mirth made the welkin ring. After that had subsided, Uphill and Jackson rendered the air blue around camp.

JIM stood it a while and then, though it was not out of the ordinary, he pretended to take exception to such profanity.

"Shut your dirty mouths," he ordered. "If you want to rave, you can do it without such cuss words."

"Wha-at!" bawled Uphill. "Ain't this hyar a free range? Cain't I open my mouth?"

"Why don't you eat with it? This is supper-time. And the rest of us are hungry."

"You heered thet, Jack?" roared Up, in real or assumed wrath.

"I shore did," yelled Jack.

Whereupon the two of them burst out with another long string of profanity. Jim got up and deliberately punched Uphill in the mouth and then Jack. That certainly and effectually stilled the profanity, as well as all other vociferations.

"After supper I'll oblige you boys with all the satisfaction you want," said Jim, sitting down again.

Another silence fell. This time Hackamore Jocelyn broke it.

"So the Diamond's come to this!" he exclaimed, in derision. "My Lord! No wonder we're the talk of the range."

Jim bent a clear, straight gaze upon his one real enemy.

"Jocelyn, the Diamond is doing fine, according to reports from Flag," he said deliberately. "And I can see how it could do better."

"Ahuh. So can I," replied Jocelyn, with far less subtlety than Jim's.

"Aw, thunder," interposed Bud Chalfack, "there ain't no outfit on the range thet could run this drift fence."

"Wal, cowboy, you mean *would* run it, an' thet's no lie," returned Jocelyn sneeringly.

Uphill Frost finished his meal in remarkably quick time for him. And he arose to make most elaborate preparations for the fray.

"Any money to bet, Up?" inquired Curly. "Lay you ten to one you cain't lick Jim."

"*Jim!*" ejaculated Uphill, with a fierce snort. "Who's Jim?"

"Why, our boss, you darn fule," replied Curly innocently.

Jim got up with alacrity, and threw off his vest.

"Come on. Let's get it over," he said. "We've fence to build, you know."

After a few passes at each other, Uphill swung in like a snorting bull, and Jim, making a feint with his right, came up hard with his left. It connected. Bam!

"Wow!" yelled Curly.

Up had begun valiantly, evidently adhering to a preconceived plan of battle. They danced around, and presently Jim ran in to take a couple of blows in order to plant another, at the pit of Up's stomach. *Biff!* It had a solid sound. Up let out a groan, and from that instant he became a changed man. He left his face and head wholly unguarded, endeavoring to stem the attack on his lower anatomy.

Jim took the fight in hand then.

"You cussin' cow-puncher," he said, imitating the vernacular of his men. "You lazy, hole-diggin' gopher! Take this one in the gizzard." . . . *Wham!* . . . "You bow-legged, biscuit-eatin' rhinooscerosss!" . . . *Pop!* — "Right on the kisser! Forgot you had a face, hey, Up? Look out now!" . . . *Crack! Smack!* . . . *Zugg!*

That last one, a solid blow over Up's rather stout middle, elicited an awful groan from him. He sagged, and bent forward like a jackknife.

Jim lowered his fists.

"Have you got enough?"

"A-plenty," groaned Up.

"All right, then, provided you call it square for keeps and shake hands. Otherwise—"

"Boss," interrupted Frost hastily." I've ben ag'in you, jest natural an' cussed. But there was no sense in it. An' hyar you are!"

UPHILL showed the true manliness back of his contrary, cowboy, cantankerous spirit.

"Now, Jack, come on. It's the only way for us to settle the difficulty."

"I reckon so, boss," returned Jack ruefully. "But it ain't fair. My pore body has too many sprains an' dislocations an' cracks to stand your hammerin'. All the same I'll take my medicine."

And he did take it, putting up a better fight than Frost's, though at obvious pain to himself and less fun for the cowboys. Presently Jim caught him in the ribs. Jack went down in a heap, rolled over, and laboriously sat up, his face ashen.

"Jim—it was—bad enough—hittin' all my other—places," he panted. "But them busted—ribs! I knowed you'd find them. . . . Would you mind—callin' it off fer keeps?"

"If you want," replied Jim. "But I reckon I'd like to soak you some more."

"Aw, no. Take it out on Hackamore," replied Jack beseechingly, and he got up to offer his hand to Jim.

His suggestion instantly charged the atmosphere with something more compelling.

"Strikes me," said Jim quickly. "How about it, Jocelyn? You've a sore head. You've been mean and full of poison talk. And I haven't been as decent as I might have been. Let's have a whack at each other. It can't do any harm and it might do good."

"I wouldn't soil my gloves on you, Mister Traft," drawled Jocelyn, with undisguised malignity.

"Oh, wouldn't you? I reckon you're thinking more of your handsome face."

"Yep, I ben told it's handsome lately, an' I'm shore keepin' it so," returned Jocelyn, with caustic significance. No one there could have misinterpreted him.

Jim bit his tongue. It was no time for him to say more, nor make a move. Jocelyn packed his gun with the look of a man who would strain any chance to use it.

THAT incident marked the definite break between Jim and Jocelyn. Both Bud and Curly had warned Jim to let Hack alone, to take his own time. They assured Jim that Hack would go presently, but they could not quite figure just what he was up to. Jim was glad of their advice and this late evidence of friendship. It seemed, indeed, that Jocelyn was now the only thorn in the flesh of the Diamond. Day by day he became more alienated from Cherry Winters and Hump Stevens, who had been the last of his stand-bys.

Another Saturday came. Some of the boys went to Flagerstown. Hack had disappeared before daylight and, according to Bud and Curly, his horse tracks led south.

"Boss, he's gone to West Fork," claimed Bud, with a wise look.

"Shore as you're born," agreed Curly, wagging his bright head.

"Curly, let's ride down there too," suggested Bud.

The idea found favor with Curly.

"It ain't a bad idee, boss. We'll hit the Sycamore trail at Tobe's Well an' go off the mountain there. Thet's aboot at the haid of the brakes. We'll get a line on driftin' cattle, an' mebbe other thin's too."

"Go, by all means," replied Jim, and he found himself fighting an almost irresistible longing to go with them.

That was the longest week-end Jim had put in since his advent in Arizona. He was on pins and needles until Bud and Curly returned, late Sunday night. To his disappointment, they seemed uncommunicative and brought no news of any moment. They had not seen Hackamore Jocelyn. They did not mention either Slinger or Molly Dunn. They reported considerably more cattle than they had expected to run across. Numerous dead cows, and old carcasses, none of which had been killed by wolves or lions, lying in the open along the trails, attested to a changed and startling condition of affairs since the drift fence had been commenced.

Jim was too sick at heart to go into the subject of stolen stock any deeper that night. What had he expected of the boys? When he lay alone in the dark, his eyes peering through the canopy of foliage at the stars, he confessed to himself that he had yearned for even a word of Molly Dunn. Next morning at an opportune moment he asked Bud about her.

"Shore, I seen Molly," replied the cowboy frankly. "At the village. But she didn't see me."

"Did you hear anything about Hack?"

"Yep. An' it ain't good news," replied Bud soberly. "I wanted to tell you an' Curly talked ag'in' it."

"Jocelyn went to see Molly Dunn," asserted Jim quietly.

"He shore did, which ain't none of our bizness. But, boss, this is darn queer: Hack

Calling by Number takes *less* Time . . .

If you know the numbers on your out of town calls you can get many of them about as quickly as local calls. It is worth while keeping a list of numbers you frequently use. If you do not know them, "Information" will get them for you.

If there are a lot of them, write to the nearest Bell Telephone Business Office and ask them to make out the list for you.

If you want some one in a hurry, the telephone number is as important as the street address. That is why many concerns print their telephone numbers on their letterheads and send their telephone numbers to all of their customers, asking them to telephone when some service or shipment is wanted in a rush.

Making calls to other cities by number, and encouraging those dealing with you to call you by number, will further speed the growth of business by telephone. Bell Telephone Service is *Convenient . . . Economical . . . Universal.*

is makin' up to the Haverlys. An' thet means the Cibeque outfit!"

"Well, what of it? I wish he'd quit us, as he's hinted."

"What of it? Gosh, I don't know. But if Hack quits us, I'll shore tell you what Curly an' I think."

Hackamore Jocelyn did not ride into camp until late Monday night. This was breaking rules, and Jim saw that the cowboys were keen to get his reaction to it.

"Where've you been, Jocelyn?" he asked.

"Down in the brakes to see my gurl," replied the cowboy, almost gayly. He had not been drinking. There seemed to be a singular elation or buoyancy about him.

"Why didn't you get back Sunday night, same as Curly and Bud? They went down to West Fork."

In a twinkling Jocelyn was his old self. "Wal, if you want to know, I was havin' too sweet a time with Molly."

"I'm not inquiring into your private affairs," said Jim coldly. "But if you take another day off without permission, I'll fire you. . . . Do you understand?"

"Wal, I ain't hard of hearin', Mister Traft," replied Jocelyn softly.

No more was said. Jocelyn ate his supper alone. The cowboys sat silent. Jim sought his bed presently, and tried to find ease from his pain in slumber.

THE drift fence went on mile after mile, and one camp followed another. And early in August, young Jim Traft, acting solely upon his own judgment and responsibility, celebrated his fencing off of the many heads of Sycamore Canyon from the brakes of the Cibeque by posting notices that the Diamond would lay no further claim to stock in and north of Sycamore and west of the drift fence.

It was a strategic move on Jim's part. It caught the fancy of every cowboy in his outfit, except Jocelyn, who, nevertheless, was staggered by it. Jim won his cowboys by that act, and further alienated Jocelyn. The homesteaders called at his camp, unmistakably friendly and grateful. They all profited by it. One of them told Bud that he could now make a good start at ranching.

"He was stealin' a few cattle," vowed Bud. "An' he admitted it. Any honest cattleman will admit he's run a few haid not strictly his. . . . Dog-gone it, boys, Jim Traft has hit one plumb center!"

In mid-August, the drift fence, now up on the great triangular promontory, received its first backset from enemies. Half a dozen stretches, where it crossed the heads of Rocky Canyon, had been laid low, with wire cut and hopelessly tangled and posts broken down. Two days of hard labor were required to repair the damage.

"Boss, let me trail them hoss tracks," begged Curly Prentiss. "I can find out in two days who cut our wire."

"Suppose you do, Curly. What good will that do?"

"Wal, we can stop it from happenin' again! An' we cain't help matters by waitin'. Bud an' I agree it's thet Cibeque outfit, though we cain't prove it."

"Prentiss," spoke up Jocelyn bitingly. "I reckon you know it's onhealthy to speak names when you cain't prove nothin'."

"Hack, I can shore prove one thing darn pronto," snapped Curly. "I take offense at your speakin' up fer the Cibeque."

"Ahuh. But what does thet prove?"

"It proves you can git my game any minnit."

"Wal, if thet's so, there ain't any awful rush. I've a date with my gurl, Molly, on Sunday an' I shore wouldn't want to miss that."

"Aw, you're a liar, Hack," retorted Curly passionately.

Jim got between the two, and by backing Curly away from the camp fire he prevented more trouble for the present.

"Boss, he makes me see red," raved Curly, when they were alone. "I could uv stood his crack aboot the Cibeque, but he's all the time throwin' pore little Molly Dunn up to me. I liked her orful well, Jim. An' I cain't believe she's thick with him. I cain't! *Mebbe* she is. But I jest cain't believe it. He's a — — — liar!"

"Thick!" echoed Jim. "What do you mean by thick?"

"Wal, it's pretty low-down fer a gurl as sweet an' young as Molly."

"But you—it might be true?"

"Lord, yes. Thet's what hurts so. Shore, he'll marry her sooner or later, if it's true. Gurls like Molly don't grow on all the bushes. An' I reckon most uv the cowboys would take her no matter what she was. Bud swore he would."

"How about you, Curly?" asked Jim, in a strangely level voice.

"I would too. In a minnit," replied Curly, with his fair head lifting in a way to thrill Jim. "What chance has thet pore kid had? Her father's no good. An' they say her mother will cock her eye at a cowboy. An' Slinger Dunn! He'd be enough to ruin any gurl."

Jim made no immediate reply. "Curly, I wish I were as much of a man as you are," he said presently.

"Aw, boss, thet's nonsense. You shore are an' more," burst out Curly, nonplused, yet pleased. "It's bin a drill fer you—this Diamond job. But the outfit's with you. Honest, Jim, an' heah's my hand on it. We cain't count Jocelyn. I reckon you'd better fire him pronto."

"Curly, I couldn't answer for my temper—if I faced him again tonight," replied Jim unsteadily. "Perhaps tomorrow or soon."

"Jim, ain't you takin' this hombre too serious? After all, you're boss of the Diamond. An' who's Hack Jocelyn?"

"It's not *who* he is, but what he *claims* that's dug into me," replied Jim frankly.

"Claims! You mean aboot Molly?" asked Curly incredulously. "Fust Bud, an' then me. An' now you! Aw! . . . Who'd ever thunk it?"

"Curly, I'd bet my life she's decent," declared Jim, with emotion.

"So would I. But it's a long shot, an' we're takin' odds!"

THE day came when Jim Traft had his first look at the country from the rim of the Diamond.

It was from the western promontory, under which the Cibeque curled like a winding snake. The splendid panorama transported Jim. He gazed long, and ever his eyes traveled back to the picturesque little homestead in the bend of the Cibeque, where he imagined Molly Dunn lived.

He lingered there a long while. This, his first sight of Arizona land from a lofty prospect, had staggered him with its vastness, its magnificence, its tremendous note of solitude and the wild. For weeks a subtle happiness in his surroundings had been almost imperceptibly stealing over Jim. He had grown to love the forest and the life in the open. He could not hate this beautiful wilderness, though through it he had received the cruelest hurt he had ever suffered. And when at length he clambered over the rocks, up to a level and to his horse, he realized that Arizona had claimed him.

On the way back to camp, while riding across one of the grassy draws which headed on the western side of the Diamond, Jim found another placard nailed to a tree. It was identical with one Hackamore Jocelyn had brought in from the head of Sycamore, and its crude, misspelled message read the same—the Cibeque specified the limit for the drift fence. This notice, however, had a round black spot in the center. Upon tearing the placard loose Jim saw that the spot was a bullet hole. It stirred a curious heat in his veins. And he was reminded of Curly's admonition, not to ride around alone through the forest.

"An' please take another hunch from me," Curly added. "From this next camp we're makin' I'm advisin' you to have one man whose job is to keep back off the fence line an' watch."

"That's not a bad idea, Curly," replied Jim. "You can take turns, one man a day."

Next day Jim moved camp to Quaking Asp and inaugurated the scout duty for one man. It was hailed with satisfaction, except by Jocelyn, who ridiculed it as another "newfangled idee from Missourie."

ANOTHER Saturday arrived, and at noon, when the cowboys knocked off for the week, Jocelyn, with more than usual of his donning his best and gaudiest, made a parade of his start for West Fork.

Jeff Davis, the dumb cook, electrified Jim and prostrated the cowboys.

"I'm a quiet man an' I like peace," he began, in a perfectly clear and resonant voice. "Thet's why I never talk. But thet — — — — — — Jocelyn has got me riled. An' if some of you — — — — cow-punchers don't shet him up, I'll slip some coyote poison in the — — — — meat!"

Such profanity had never before been heard in the Diamond camp, at least since Jim had taken charge. The boys gave the cook wide-eyed and gaping stares; then, after their usual manner when enraptured, they whooped like Indians and rolled on the ground. Upon partial recovery, they delivered themselves with characteristic remarks.

"Our tongue-tied cook!"

"Deaf and *dumb*! Haw! haw!"

"An' mebbe he cain't cuss!"

No other of the Diamond outfit left camp that week-end. They had a lazy, jolly time of it, interspersed with some thoughtful conferences about the obstacles ahead. At Quaking Asp, a stream of cold water ran down into the canyon, and half a mile below the rim there were pools full of fine trout. On Sunday Bud took Jim fishing, and Curly begged to go too. They had a great day on the brook, and it wanted an hour to sunset when they arrived back in camp.

You wouldn't care to meet Marvin

Money. Charm. Ability. In all New York there was no abler man in his field. Yet people called him "the prince of pariahs."

Men thought him a great fellow—for a little while. Women grew romantic about him—until they *knew*. People welcomed him at first—then dropped him as though he were an outcast.

Poor Marvin, yearning so for companionship and always denied it. Poor Marvin, ignorant of his nickname and ignorant, likewise, of the foundation for it.

Halitosis (unpleasant breath) is the damning, unforgivable, social fault. It doesn't announce its presence to its victims. Consequently it is the last thing people suspect themselves of having—*but it ought to be the first.*

For halitosis is a definite daily threat to all. And for very obvious reasons, physicians explain. So slight a matter as a decaying tooth may cause it. Or an abnormal condition of the gums. Or fermenting food particles skipped by the tooth brush. Or minor nose and throat infections. Or excesses of eating, drinking and smoking.

Intelligent people recognize the risk and minimize it by the regular use of full strength Listerine as a mouth wash and gargle. Night and morning. And between times before meeting others.

Listerine quickly checks halitosis because Listerine is an effective antiseptic and germicide★ which immediately strikes at the cause of odors. Furthermore, it is a powerful deodorant, capable of overcoming even the scent of onion and fish.

Keep Listerine handy in home and office. Carry it when you travel. Take it with you on your vacation. It is better to be safe than snubbed. Lambert Pharmacal Company, St. Louis, Mo., U. S. A.

★Full strength Listerine is so safe it may be used in any body cavity, yet so powerful it kills even the stubborn Bacillus Typhosus (typhoid) and Staphylococcus Aureus (pus) germs in 15 seconds. We could not make this statement unless we were prepared to prove it to the entire satisfaction of the medical profession and the U. S. Government.

LISTERINE

To Jim's amazement, Hack Jocelyn had just ridden in and had kicked his chaps off. Jim's quick eyes noted the cowboy's gun-belt hanging on the pommel of his saddle. The sight seemed to make every fiber in Jim leap. Jocelyn presented a marked contrast to the debonair braggart of a courtier who had left for West Fork only the day before. His garb looked as if he had slept in a hayloft. His face was haggard, dark, and sullen. Not many hours past he had been under the influence of liquor.

If Jocelyn saw the approach of Jim and his companions, he gave no evidence of it, but went on in forceful harangue to Cherry Winters and Lonestar.

JIM caught the tail end of a speech that drew him up, strong and sharp. In a few strides he was upon Jocelyn and with hard hand jerked him round.

"Were you speaking of Molly Dunn?" he demanded.

"Wal, if it's any of your — — mix, yes, I was," returned Jocelyn deliberately, and the way he squared himself and dropped his right hand to his side was not to be overlooked. Only, he had forgotten that his gun hung in his belt over the pommel of his saddle.

"Jocelyn, you're fired!" rang out Jim.

"Nope. Beat you to it, Traft. I quit," replied Jocelyn.

"All right. Get out of my camp. You can't even eat here."

"Traft, thet ain't western—to send a man out hungry," said Jocelyn darkly.

"Is it western to speak vilely of a girl?" flashed Jim hotly.

"Depends on thet gurl, Mister Traft!"

Then Jim lunged out with all the fury of might and grief. His big fist covered one of Jocelyn's malignant eyes. The cowboy fell over the bench, knocking Winters down. Jim leaped after them and plunged upon Jocelyn to kick him fiercely, and then fell on him like a battering-ram.

Curly was the first to leap and grasp Jim. But he could do nothing.

"Help, somebody!" he yelled. "Bulldog him, Bud! . . . There!—Why, boss, shore, you'd killed the fellar. Come now. . . . You shore lost your temper."

Between them, they dragged Jim off the bloody-faced Jocelyn, who sat up groggily.

"Some of you—lead him out of—camp," panted Jim, struggling for breath. "Then come back for his horse and pack. . . . And his wages, too."

Jim turned away unsteadily, with Bud still holding his arm. They crossed to where Jim had his bed and pack. "Fetch my bag, the one I keep my money in," said Jim, as he sat down. He was visibly shaking, and the sweat dropped from his face. Bud brought out the little bag and opened it. "Ought to have jumped him long ago!" Jim looked at his big, dirty, red-stained hands. "Get out the money, Bud. . . ."

Jim did not look up from the ground until he had recovered his balance. Jocelyn had evidently been led off into the woods, for Cherry appeared to be following with his horse, and Hump Stevens with his pack. They disappeared. Whereupon Curly and Bud returned to Jim.

"Boys, I couldn't stand him any longer. I couldn't," broke out Jim, spreading wide his hands. "I suppose he'll kill me, but I couldn't have done otherwise."

"Wal, Jim, it's *done*," rejoined Curly. "He's shore slated fer wuss company. I'll bet my spurs Slinger Dunn will kill him. But the thing fer you to make up your mind aboot is—if you ever meet Jocelyn ag'in, no matter where, grab your gun an' begin to shoot. Savvy?"

"Boss, will you promise to do thet little trick?" asked Bud, as earnestly.

"Yes, boys. I promise," replied Jim.

"Fine an' dandy," declared Curly. "You're no slouch with a gun an' Hack ain't so much. It'd ben plumb murder fer me to draw on him. But the chances are slim you'll ever meet up with Jocelyn alone. If he gets in the Cibeque an' Slinger Dunn stands fer it—which I'll gamble he won't—he'll be jumpin' out of the fryin' pan into the fire. The Cibeque will be the wuss off with Jocelyn. They'll cut our fence an' rustle our stock. An', boss, if you don't hold the Diamond back, every darn one of thet two-bit outfit will be daid or in jail before the snow flies."

"Boss," added Bud impressively. "Curly an' I know right now thet the Haverlys are cuttin' our fence an' rustlin' our cattle. We didn't ride down to West Fork fer nothin'."

"Why didn't you tell me?"

"Wal, you had trouble enough. An' we reckoned we'd keep it as long as we could."

"If you give me proofs I—I'll not hold the Diamond back," declared Jim, and probably that decision marked the moment when the West claimed him for its own.

"Wal, we cain't lay a hand on proof jest this minnit, but it'll shore come," replied Bud.

THE Diamond operated out of that camp until wagonloads of fresh supplies and more wire arrived from Flagerstown. Then they pushed on to Tobe's Well, which was the end of the road. Thereafter all transports had to be packed on horseback.

Each succeeding camp site had added something to Jim's appreciation of Arizona; and Tobe's Well outdid them all.

Tobe, an obscure bear-hunter, had long ago built a log shack there; after which the canyon and the bubbling well had taken his name. The well was a huge, crystal spring at the upper end of the clearing, and the wonderful flow of water boiled and bubbled up in the center. Under a magnificent spruce, the dead top of which tipped the rim-wall above, stood the old log shack in ruins.

There were several outlets to this miniature lake, little rivulets that wound away under grass and fern-bordered banks to merge into one stream in the center of the gorge. Soon it gathered velocity and plunged with a low roar through the canyon neck, thereafter to fall precipitously down to the Cibeque.

On the second day at Tobe's Well the drift fence was run below and around this famous water hole and back up on the Diamond.

The sixth day from that fell to Jim as his turn for the scout duty he had initiated. He had saddled and mounted while yet the others were at breakfast.

"Boss, how fur do you aim to ride back along the line?" asked Bud.

"I'll make for Sycamore, strike the fence, and work this way," replied Jim.

"Wal, keep your eye peeled," said Curly gruffly.

Jim rode out of the canyon and up to the rim above, from which he gazed down with a stinging sensation of pleasure at the wild camp site, the does and fawns grazing with the horses, the blue column of smoke curling upward, and at the circle of cowboys round the fire.

Lonestar's mellow voice floated up: "O, I am a Texas cowboy, Jest off the Texas plains, My trade is cinchin' saddles—"

JIM wheeled his horse off into the pines, conscious that his full heart could not quite attain the joy of realization. He loved the West; he was proving his mettle to his uncle and his father; he had begun to fit in with these elemental, dare-devil cowboys; he liked life in the open and the wild. But he could not rid himself of the pang and oppression in his breast, of the persistence of a bitter, sickening doubt and regret.

Long weeks, even months, had not killed his love for Molly Dunn. Time and thought, long hours in the lonely nights, and bitter reflection had proved to Jim that the one constant, ever-growing thing had been love. Some day, before long, he would ride down to West Fork and see Molly Dunn—see for himself what she was and if there was not reason for his blind faith.

Arriving at Sycamore, he rode west a short distance until he came to the fence, when he turned south to follow it. He walked his horse, and peered ahead with keen eyes. He covered several miles in this cautious manner and came out on the bank of a swampy swale, from which water drained down into Rocky Canyon.

Jim found the fence down in a section clear across this gateway to the brakes. He really had not expected to find a cut and, hard on his surprise and dismay, roused his slumbering wrath.

He proceeded, though less cautiously, with his rifle across the pommel. And along toward noon he rode down the wooded slope under Tobe's Well. Cattle were working down here too. Not drifting! Jim prepared himself for another surprise. The bottle-neck width of Tobe's Canyon had been sheared of its wire fence. A clean cut job it was, every wire strand having been cut on each side of trees and posts.

Jim descried fresh hoof tracks in the dim, seldom-used trail. Such was his wrath now that he followed them, keeping on the grass and under the pines, where his horse walked quietly. His intent was to trail this fence-cutter clear to his hole, wherever that was; and his excitement kept him from realizing how many miles he descended until he got down on comparative level, in the midst of a most beautiful forest of spruce and pine.

Suddenly his horse elevated his ears and stopped. The trail ran straight for twenty paces, and turned at a huge, brown pine. A man stepped out, silent as a shadow. Jim recognized the lithe, buckskin-clad form—the dark face, the eyes like holes that exposed fire behind. The man leveled a gun, took deliberate aim, while Jim froze in his saddle.

He saw red belch from the gun. A sharp impact as from a violent gust of wind struck him. Then a terrific shock, a tearing rend of flesh, a thundering crash! Jim's horse plunged to throw him.

NEW DEPARTURE BALL BEARINGS

In Automobiles

NOTHING ROLLS LIKE A BALL

Today's automobile would not be possible without anti-friction bearings. Its great speed—pick-up—smoothness—quietness—long life—even the maximum use of its surging power are only realized because friction and wear have been banished by the use of anti-friction bearings. New Departures are the highest type of anti-friction bearings, because pure rolling motion is frictionless—*and nothing rolls like a ball.*

New Departure Ball Bearings contain the roundest, strongest spheres ever made by man, rolling freely between sturdy raceways of costly alloy steel. In the wheels, transmission, differential, clutch, pinion, steering gear, fan and generator, they eliminate friction and wear, withstanding all loads with matchless efficiency. That is why practically all builders of American automobiles use New Departures — the bearings that cost more and are worth more to the motor car owner.

He needn't have worried if he'd shaved with Small-Bubble Lather

Now that morning shave can last much longer. Closer shaving than ever gives millions of men new satisfaction.

A SHAVE that lasts . . . what man does not seek it? And how easy to attain it now that small-bubble lather has been perfected by Colgate chemists. More moisture at the base of the hairs—so they cut off closely. Note the comparative pictures . . . you'll see the point. Better still, you'll *feel* the difference, once you try Colgate's.

The minute you lather up with Colgate's, two things happen: 1.—The soap in the lather breaks up the oil film that covers each hair. 2.—Billions of tiny, moisture-laden bubbles seep down through your beard . . . crowd around each whisker . . . soak it soft with water.

Instantly your beard gets moist and pliable . . . limp and lifeless . . . scientifically softened right down at the base . . . ready for your razor.

Thousands of men, after various trials with ordinary lathers, have adopted Colgate's as supreme. To prove its superiority, mail the coupon below. We will send also, a sample of After-Shave, a new lotion—refreshing delightful . . . the perfect shave finale.

COLGATE LATHER

Colgate's lather (greatly magnified) showing moisture contact with beard and minimum air. A common-sense principle scientifically authenticated and proved out practically by millions of men.

ORDINARY LATHER

Ordinary, big-bubble lather (greatly magnified.) Note air-filled bubbles which can't soften the beard sufficiently. Only water can do the job. Only small bubbles permit sufficient water.

COLGATE, Dept. B-1713, 595 Fifth Avenue, New York

Please send me, FREE, the seven-day trial tube of Colgate's Rapid Shave Cream; also a sample bottle of "After-Shave."

What It Means to Be President

(*Continued from page 17*)

of his government made an appointment for him through the State Department.

All foreign approaches to the President are through this Department. When an Ambassador or Minister is to present his credentials, the Undersecretary of State brings him to the White House and escorts him to the Green Room. After the President has taken his position, standing in the Blue Room accompanied by his aides, the diplomat is then brought before him. He presents his letters with a short formal statement, to which the President responds in kind. When the mutual expressions of friendly interest and good will have been exchanged, the accompanying staff of the diplomat is brought in for presentation, after which he retires. Except when foreign officials are presented for an audience in this way, the etiquette of the White House requires that those who are present should remain until the President and the Mistress of the White House retire from the room.

A COMPETENT man is assigned from the State Department to have the management of the White House official social functions. He has under him a considerable staff located in one of the basement rooms, known as the Social Bureau. They keep a careful list of all those who leave cards and of the officials who should be invited to receptions, which is constantly revised to meet changing conditions. While the President has supervision over all these functions, the most effective way to deal with them is to provide a capable Mistress of the White House. I have often been complimented on the choice which I made nearly twenty-five years ago. These functions were so much in the hands of Mrs. Coolidge that oftentimes I did not know what guests were to be present until I met them in the Blue Room just before going in to dinner.

These social functions are almost as much a part of the life of official Washington as a session of the Congress or a term of the Supreme Court. The season opens with the Cabinet dinner. Following this come the Diplomatic reception, the Diplomatic dinner, then the Judicial reception, the Supreme Court dinner, then the Congressional reception, and the Speaker's dinner, with the last reception of the year tendered to the Army and Navy. About fifty guests assemble at the dinners, except that given to the diplomats, when the presence of the Ambassadors or Ministers of each country represented in Washington, together with their wives, brings the number up to about ninety. The Marine Band is in attendance on all these occasions. Following the dinners a short musical recital by famous artists is given in the East Room, to which many additional guests are invited.

A reception is a particularly colorful event. About 3,500 invitations are issued. When the guests are assembled, the President and his wife, preceded by his aides and followed by the Cabinet and his

Where else *could you invest your money so wisely?*

.. as in the purchase of Frigidaire

WHAT could you buy for your home that would mean so much to every member of the family in health, convenience and in the saving of time and work?

Hundreds of thousands of home owners would tell you that they would sooner give up any other item of household equipment than Frigidaire.

Frigidaire renders a unique service . . . a service that cannot be duplicated by any other make of electric refrigerator or type of refrigeration.

The "Cold Control" for faster freezing of ice.

Here is an automatic refrigerator that is so quiet that you don't hear it start, or stop, or run. Here is real beauty and symmetry of design, clean surfaces that stay clean, a gleaming porcelain enamel or Duco finish, a cabinet with all mechanical parts completely enclosed. Here are elevated food shelves to make stooping unnecessary . . . extra power to guarantee that food will be kept safely cold on the hottest days. And here is the "Cold Control" that gives faster freezing of ice and perfect results in the making of salads and desserts.

Remember it is Frigidaire that offers this combination of important features of beauty and power and convenience. They have made Frigidaire the choice of more buyers than of all other electric refrigerators combined. Low prices, convenient terms and exceptionally low operating cost put Frigidaire within the reach of every home.

See it today at display rooms everywhere, or write for an illustrated catalog and a copy of the new Frigidaire recipe book.

Leading cars use this Quiet NEW Brake Lining

Johns-Manville Moulded offers every car owner an end to screaming brakes

IT WAS not alone the fact that J-M Moulded Brake Lining ends screeching, noisy brakes that caused it to be chosen as factory equipment by seven famous car builders. Besides its quietness in action, J-M Moulded takes hold with a new smoothness—never grabbing, gently gripping yet with mighty force this new Johns-Manville Brake Lining will stop cars more safely, and go on doing so for more months, than was ever thought possible.

Leading cars—over a million of them—will be factory equipped with J-M Moulded during the next year. You can easily modernize your own brakes. J-M Moulded is now available for 150 cars and trucks, made by 41 manufacturers. Order it installed in your car at the first sign of worn lining. You will probably never have to buy any more brake lining while you drive the car.

Johns-Manville Moulded takes hold with a sure, safe grip for tens of thousands of stops.

• • •

Johns-Manville Asbestos Brake Lining, for years famous for its safety and long life, continues to be available for all cars.

MOULDED TO FIT

Johns-Manville

MOULDED BRAKE LINING

Secretary and their wives, go down the main staircase, pausing for a moment to receive the military salute of the band, and then pass to the Blue Room, where the receptions are always held. When the foreign diplomats are present in their official dress, the scene is very brilliant. After all the presentations have been made, the President and his retinue return to the second floor. Immediately after this there is dancing in the East Room to furnish entertainment while the long line of cars comes up to take the guests home.

Whenever the prominent officials of foreign governments visit Washington, it is customary to receive them at a luncheon or dinner at the White House. When the Prince of Wales was here in 1924, we were in mourning, because of the loss of our son, so that he lunched with us informally without any other invited guests. When the Queen of Rumania came to Washington, she was entertained at dinner. There have also been Princes of the reigning houses of Japan and of Sweden, the Premier of France, the Governor-General of Canada, the Presidents of the Irish Free State, of Cuba, and of Mexico, who have been received and entertained in some manner. Whenever an official gathering of foreigners, like the Panama Conference, convenes in Washington, the President and the Mistress of the White House tender them a reception and a dinner.

Besides these formal social gatherings, there were various afternoon teas and musicales, which I sometimes neglected, and usually one or two garden parties held in the south grounds, one of which was for the disabled veterans who were patients in Washington hospitals. These were accompanied with band music and light refreshments, which always seemed to be appreciated by the veterans.

My personal social functions consisted of the White House breakfasts, which were attended by fifteen to twenty-five members of the House and Senate and others, who gathered around my table at eight o'clock in the morning to partake of a meal which ended with wheat cakes and Vermont maple syrup. During the last session of the Congress I invited all the members of the Senate, all the chairmen and ranking Democratic members of the committees of the House, and finally had breakfast with the officers of both houses of the Congress. Although we did not undertake to discuss matters of public business at these breakfasts, they were productive of a spirit of good fellowship, which was no doubt a helpful influence to the transaction of public business.

IN ADDITION to these White House events, the President and his wife go out to twelve official dinners. They begin with the Vice President, go on among the ten members of the Cabinet, and close with the Speaker of the House. Aside from these, it is not customary for the President to accept the hospitality of any individuals. This results not from any desire on his part to be exclusive, but rather arises from an application of the principle of equality. The number of days in his term of office is limited. If he gave up all the time when he is not otherwise necessarily engaged, it is doubtful if he could find fifty evenings in a year when he could accept invitations. At once he

If you could take your health troubles to these great doctors . . .

Lafayette, Ltd., London

Sir W. Arbuthnot Lane, Bart., C. B., England's great surgeon, says, "Constipation is civilization's curse. Fresh yeast stimulates intestinal action—has a most important effect on constipation."

He treated German royalty! Dr. Kurt Henius, famous lecturer at the University of Berlin, declares, "In constipation, yeast promotes easy elimination. It is a reliable remedy for boils."

ON the roll of distinguished medical service these seven names stand high!

Bearers of titles and degrees from governments and universities throughout the world, they have led thousands from despondency and ill health to radiant happiness and vigor.

They realize that what they say may influence thousands of people. And unqualifiedly, without hesitation, they say, "For better health—eat yeast!"

Of course you cannot bring your health troubles to them. But read what they tell you about one important health measure. Benefit by it.

One hundred and forty billion living yeast plants in each cake of Fleischmann's fresh Yeast help prevent the formation and spread of poisons from clogging food wastes.

Better digestion is the quick result. Complexion troubles fade away. Rich new stores of energy are released! Millions already have turned to this modern, *natural* way to health.

Eat 3 cakes of Fleischmann's Yeast daily, before or between meals, plain or in water, cold or as hot as you can easily drink. At grocers, restaurants, soda fountains. Send for booklet. Health Research Dept. J-66, The Fleischmann Company, 701 Washington St., N.Y.C.

The doctor of the schools of Paris, Dr. Georges Rosenthal, says, "Yeast is the watchful policeman of the intestinal tract. It reduces the poisons, purifies."

Decorated by half the governments of Europe, Dr. Edvard Ehlers, famous Copenhagen skin specialist, states, "I invariably prescribe yeast in all cases of boils and rebellious acne."

Fayer, Vienna

Vienna's official food expert, Dr. Viktor Grafe, says, "Yeast aids digestion."

The U. S. Government appointed him its official expert on medicines. Dean Henry Hurd Rusby, M. D., of New York, is Professor of Physiology in a leading university. "I have recommended yeast for forty years," he says in a forthcoming textbook.

Photograph from "La Clinique"

Americans eagerly await the forthcoming publication in English of his latest book, "Le Chemin du Bonheur" (The Road to Health). Dr. Victor Pauchet, eminent Paris surgeon and authority on the intestinal tract, says, "Unfortunately, constipation is often treated with irritating medications. Yeast, however, is a safe remedy."

feel it

LUBRICATE

—that's the Glycerine

BETWEEN your fingers you can feel the important new benefit given by Listerine Shaving Cream. *It lubricates the skin!*

Your first shave will prove how great an achievement this is. Instead of painful scrape and pull, instead of smarting friction as the razor is pulled across your face, you will enjoy a new sensation of smooth sailing by the blade as it slides on the lubricating lather of Listerine cream.

Right at the cutting line of each hair, where friction between beard and blade is greatest, this luxurious cream deposits a velvety film of glycerine. The skin is soothed and cooled. The path of the razor is prepared.

Cut up or down, with the grain or against it; the sharp steel edge glides as if on roller bearings, cleanly wiping *off* the whiskers. And your tender skin is protected by that salve-like film of cosmetic lubricant.

Besides, there is no need to change your shaving habits. Hot water or cold, rubbing-in or not, lotions or none; suit your old preference. And you will discover in Listerine lather an amazingly quick tamer of tough beards, a cool and gentle soother of tender skins, an antiseptic healer of careless nicks and abrasions.

157 shaves for 50c

To men who appreciate quality in everything they use, Listerine Shaving Cream will make a special appeal. It sells for 50c and is worth every penny of it. And its economy is obvious: the big white tube is crammed with 118 inches of velvety cream, good for 157 shaves. That is more than a five-months' supply, and makes the cost only 10c a month. Please write us if your drug or department store cannot supply you with this new-type cream.

LAMBERT PHARMACAL COMPANY,
St. Louis, Mo.

LISTERINE *Shaving Cream*

would be confronted with the necessity of deciding which to accept and which to reject. If he served eight years, he could touch only the fringe of official Washington, even if he chose to disregard all the rest of the country. The only escape from an otherwise impossible situation is to observe the rule of refusing all social invitations.

The President stands at the head of all official and social rank in the nation. As he is Commander-in-Chief of the Army and Navy—all their officers are his subordinates. As he is the head of the Government, he outranks all other public officials. As the first citizen, he is placed at the top of the social scale. Wherever he goes, whenever he appears, he must be assigned the place of honor. It follows from this that he cannot consistently attend a dinner or any other function given by someone else in honor of any other person. He can have ceremonies of his own at the White House, or outside, in which he recognizes the merit of others and bestows upon them appropriate honors. But his participation in any other occasion of such a nature is confined to sending an appropriate message.

It would make great confusion in all White House relations unless the rules of precedence were observed. If this were not done, the most ambitious and intruding would seize the place of honor, or it would be bestowed by favor. In both cases all official position would be ignored. In its working out, therefore, the adoption of rules which take no account of persons, but simply apply to places, is the only method which is in harmony with our spirit of equality. In its application it gives us more completely a government of laws and not of men.

AS HE is the head of the Government charged with making appointments, and clothed with the executive power, the President has a certain responsibility for the conduct of all departments, commissions, and independent bureaus. While I was willing to advise with the men in charge of them and to give these officers any assistance in my power, I always felt they should make their own decisions and I rarely volunteered any advice. Many applications are made requesting the President to seek to influence these bodies, and such applications were usually transmitted to them for their information without comment. Wherever they exercise judicial functions, I always felt that some impropriety might attach to any suggestions from me. The parties before them are entitled to a fair trial on the merits of their case, and to have judgment rendered by those to whom both sides have presented their evidence. If some one on the outside undertook to interfere, even if grave injustice was not done, the integrity of a commission which comes from a knowledge that it can be relied on to exercise its own independent judgment would be very much impaired.

I never hesitated to ask commissions to speed up their work and get their business done, but if they were not doing it correctly my remedy would be to supplant them with those who I thought would do better. At one time the Shipping Board adopted a resolution declaring their independence of the President and claiming they were responsible solely to the

The 4-Door Sedan, $1245 *Body by Fisher*

Successful because its owners are so thoroughly satisfied

From the day of its introduction . . . from the hour when its distinctive beauty was first viewed by the public... the New Oakland All-American Six was assured an impressive measure of success. It looked the part of a successful automobile . . . it acted the part. And the American people . . . quick to sense unusual value in motor cars . . . bestowed on the New All-American the success which so fine a car deserves.

But an even more important . . . even more gratifying success has been won by the New Oakland All-American Six in recent months. That is the success it has had in completely satisfying the most exacting and critical of its owners.

Dealers in every section report that the most enthusiastic claims they hear made for the car come not from the factory where it is produced . . . not from salesmen... but from owners who have driven it far enough to form an accurate opinion of the all-round goodness it provides.

That's why we suggest that . . . before you buy any medium-priced car . . . you talk with owners of the New Oakland All-American Six. From them you will hear a story of motor car value unequaled in Oakland's field.

Oakland All-American Six, $1145 to $1375, f. o. b. Pontiac, Mich., plus delivery charges.

Oakland Motor Car Company, Pontiac, Mich.

IN THE low-price group, the New Pontiac Big Six has also met with outstanding success. This car was created to appeal to those forward-looking people who had been seeking to *step up* the quality of their motor cars without stepping out of the low-priced field. It gives them big car style, big car comfort and big car performance without necessitating the payment of a big car price. And, in so doing, it has broken its own sales records month after month since the beginning of the year.

Consider the delivered price as well as the list price when comparing automobile values . . . Oakland-Pontiac delivered prices include only reasonable charges for delivery and financing.

The New OAKLAND All-American Six

JOHN HENRY MEARS tells *Jim Henry*

JOHN HENRY MEARS, *who holds the round-the-world record of 23 days, 15 hours, 18 minutes, shows Jim Henry, Mennen salesman, the route of his new globe-circling dash. Mr. Mears will travel by air, land and sea . . .*

"I'm racing around the world and MENNEN rides with me"

"A RACE ROUND-THE-WORLD is *some* test for a shaving cream. On a ship today—on land tomorrow—high in a speed plane over desert waste, sea or mountains. Different water, different weather, every time I shave! That's why I'm taking Mennen Shaving Cream with me. I've experimented, and I *know* that Mennen gives me the same smooth shave everywhere—with any water in any weather . . ."

Mennen Shaving Cream meets every shaving test to which men put it. Its scientific principle is Dermutation—an exclusive Mennen process which softens the beard, lubricates the blade, and tones the skin.

NOW! TWO TYPES OF MENNEN—*with or without Menthol*

Mennen Shaving Cream in the good old green-striped carton is the familiar favorite of millions of men. *Now* there is another Mennen cream—Mennen Menthol-iced with the triple-cool tingling lather. It is distinctly the *young man's shave.* Menthol-iced comes in a gay orange-striped carton. Your druggist has both Mennen creams. Take your choice.

AFTER YOUR SHAVE

Mennen Skin Balm—prolongs the refreshing comfort of your Mennen shave. *Mennen Talcum for Men,* the man's powder that does not show. Great after a bath, too.

MENNEN
FOR THE MODERN SHAVE

—2 kinds of

Mennen Shaving Cream *Menthol-iced* in the orange-striped carton. *Without menthol* in the green-striped carton.

Mennen Skin Balm—the cooling cream-like lotion in a tube. Non-greasy.

Mennen Talcum for Men—the natural-tint man's powder that does not show.

Congress. As I always considered they had a rather impossible task, I doubted whether anyone could be very successful in its performance. If they wished to try to relieve me of its responsibility, I had no personal objection and felt I should probably be saved from considerable criticism. But they found they could not carry on their work without the support of the President, so that some of them resigned and the remainder reëstablished their contact with the White House, which was always open to them.

THE practice which I followed in my relations with commissions and in the recognition of rank has been long established. President Jefferson seems to have entertained the opinion that even the Supreme Court should be influenced by his wishes, and that failing in this, a recalcitrant judge should be impeached by a complaisant Congress. This brought him into a sharp conflict with John Marshall, who resisted any encroachment upon the independence of the Court. In this controversy the position of Marshall has been vindicated. It is also said that at some of his official dinners President Jefferson left all his guests to the confusion of taking whatever seat they could find at his table. But this method did not survive the test of history. In spite of all his greatness, anyone who had as many ideas as Jefferson was bound to find that some of them would not work. But this does not detract from the wisdom of his faith in the people and his constant insistence that they be left to manage their own affairs. His opposition to bureaucracy will bear careful analysis, and the country could stand a great deal more of its application. The trouble with us is that we talk about Jefferson but do not follow him. In his theory that the people should manage their government, and not be managed by it, he was everlastingly right.

TRADITION and custom, it will be seen, are oftentimes determining factors in the Presidential office, as they are in all other walks of life. This is not because they are arbitrary or artificial, but because long experience has demonstrated that they are the best methods of dealing with human affairs. Things are done in a certain way after many repetitions show that way causes the least friction and is most likely to bring the desired result. While there are times when the people might enjoy the spectacular, in the end they will be satisfied only with accomplishments. The President gets the best advice he can find, uses the best judgment at his command, and leaves the event in the hands of Providence.

THOUSANDS OF DOLLARS for transatlantic telephone calls, and millions of dollars profit in the great bull market of 1928. That is an incident in a fascinating article next month about uses of the cross-ocean telephone. Big operators while traveling in Europe keep in daily touch with their brokers in Wall Street. The article also tells you the actual stories of operators, lovers, and others who use the telephone to talk from one continent to another.

It keeps your food safe
—the temperature is well below 50°—always!

For family health . . .
for appealing menus
. . . this is vital

In the General Electric Refrigerator the temperature is kept several degrees below fifty . . . *always!* Fifty degrees is accepted by scientists as the "danger point" in the preservation of food. When the temperature rises even a degree or two above that, bacteria multiply, foods become unsafe.

Perhaps you think your own refrigerator is always "cold enough." You cannot be *sure* unless you actually take your refrigerator's temperature under varying conditions. It is *constant* cold which is needed. When you own a General Electric Refrigerator, you need never worry.

Note these vital points of superiority

Countless superiorities give the General Electric Refrigerator its outstanding position . . . an hermetically sealed, dust-proof mechanism, mounted on top . . . an accessible temperature control . . . a new standard of quiet operation . . . no oiling . . . no troublesome machinery . . . simplified installation . . . no radio interference . . . an unqualified two-year service guarantee.

Now in addition to all these proved electrical and mechanical superiorities, General Electric offers . . . an *all-steel* cabinet! Beautiful. Non-warping. Strong as a safe. The new *all-steel* cabinets and the hermetically sealed mechanism combine to produce what we believe is the finest refrigerator ever made.

Mass production brings greater savings for the public.

The new *all-steel* General Electric Refrigerators are now priced as low as $215 at the factory. A small amount down places a General Electric in your home . . . a perfect servant . . . then you soon own it—after making a few easy monthly payments.

Visit the nearest General Electric Dealer—see these new models—they offer the greatest values of all. Or you may obtain the whole story of *safe* refrigeration by writing Electric Refrigeration Department of General Electric Company, Hanna Building, Cleveland, Ohio, for Booklet A-7.

Not a dollar for repairs

More than a quarter of a million homes are enjoying the convenience, economy and health-guarding services of the General Electric Refrigerator. And not one of these owners has ever paid a dollar for repairs or service . . . that was our guarantee to them! It's a record in the industry.

To whom will you entrust

Practical training first. The experts shown above train all new men in the practical field work. Every new man must go through a thorough course of training and be proved out—no untrained men are ever used. These selected instructors are men of character, intelligence, and professional attitude

Tumbling Team—Davey Institute of Tree Surgery, 1928-29. Davey Tree Surgeons are athletic types. They are carefully selected with the idea of physical fitness. The nature of the work and their training make them more so. In addition to intelligence and character, they have physical energy; that is why they are diligent workers

LET us talk about *your* trees. The are living things, subject to di ease, decay, starvation, insect attack mechanical injury and other ills. The are priceless to you—only time ca replace them, long time at that.

Just for the moment, think of t most valuable tree on your plac Suppose it is starving. Wouldn't yo in self interest, insist upon scienti cally trained experts who know wh to feed it, and how, and when—wit out guessing or experimenting?

If this priceless tree is decaying the trunk or limbs, and is growi steadily weaker, liable at any mome to break off or break apart in any hi wind, wouldn't you entrust its tre ment only to men with proven scienti knowledge and real personal skill?

If *anything* is wrong with that t —and dozens of things might wrong, because it is a living, brea ing organism—wouldn't you dema reliable experts who are trained diagnose tree troubles? Certai proper treatment cannot be gi without correct diagnosis.

You can trust Davey Tree Surge with a feeling of confidence and sa faction. They are carefully selec and reliable men. They are thoroug trained and have real demonstra skill. They are educated scientific in the Davey Institute of Tree S gery, the only school of its kind in world. They know how to diagnose ailments of trees. Their knowledge a skill are based upon a half century Davey experience. They are backed a responsible business organization

Scientific Training. A laboratory class at the Davey Institute of Tree Surgery—using high-powered microscopes and dissecting lenses to learn the sciences relating to their work. They must know the scientific reasons for all the things that they have been trained to do skilfully

Practical Training. This is a class learning important art of saw filing at the Davey Ins tute. Every man is taught how to keep his to sharp and in proper condition. Sharp to mean good and rapid work. Practical traini plus science means efficient service

your priceless trees?

Surprisingly low cost

In 1928, Davey Tree Surgeons served 21,608 clients from Boston to beyond Kansas City and from Canada to the Gulf. 76 per cent of these clients paid less than $100.00 each. The following table tells the story.

17,022 clients paid less than $100.00 each
2,223 paid from $100.00 to $200.00 each
1,642 paid from $200.00 to $500.00 each
721 clients paid more than $500.00 each

You can afford to employ the expert, reliable service of Davey Tree Surgeons for your trees. They will do as much work as you want —and no more. They will do their work right —they will save any tree that can be saved— they will give you professional and conscientious service. There is no charge except for working time, plus the necessary materials and expressage.

Davey service is local

Davey Tree Surgeons live and work in your vicinity. They are almost as conveniently located as your dentist or doctor or surgeon. They are not sent from Ohio for your individual work — they are trained in Ohio, but they live in your vicinity and work regularly for other nearby people.

Write or wire Kent, Ohio, for examination of your trees without cost or obligation. Permanent representatives are located in principal cities; the nearest one can serve you conveniently.

Everyone who sees Davey Tree Surgeons at work in the trees says, "They climb like squirrels." They certainly are remarkable climbers—they are trained to it. They get around in the trees with surprising agility and speed. But they use ropes—never injurious climbing spurs—to facilitate climbing, to prevent accidents, and to protect trees, wires and other property. They have diligence, speed, accuracy and a trained knowledge of their work

JOHN DAVEY
1846-1923
Father of Tree Surgery
Reg. U. S. Pat. Office

The Student Body of the Davey Institute of Tree Surgery, 1928-29, numbers 446 splendid young men in the Freshman, Junior and Senior classes, all selected from the proven men who have already been thoroughly trained in a practical way. The purpose of this resident school is to provide scientific knowledge and accuracy to supplement the practical skill that is given in the field training. This gives balanced education—Davey Tree Surgeons know both how and why. The Davey Institute of Tree Surgery has been in continuous operation for twenty years, the only school teaching the science of Tree Surgery. The Faculty of the Davey Institute of Tree Surgery includes 37 scientists and master Tree Surgeons.

Do Brains Work Better With a Pipe Between the Teeth?

Does *your* brain work better with a pipe between your teeth? Are you a little more self-possessed, a trifle steadier, apt to think more clearly when you're puffing a briar?

If you answer "Yes" to these questions you're on the side of some of the biggest men in business.

As Mr. Hie says, "A pipe is restful. It gives you time to think things out." Pack a briar, light a match, take a few deliberate puffs . . . and clear-cut decisions are *there*.

But let Mr. Hie tell it in his own words. (His and all other letters from Edgeworth smokers are absolutely genuine—unsolicited and unpaid.)

1702 East Street,
Pittsburgh, Pa.
March 7, 1929

Larus & Bro. Co., Inc.
Richmond, Va.

Gentlemen:

About five years ago I started to smoke a pipe; naturally the first thought in connection with this was to get a real pipe tobacco. I tried most everything on the market until one day—"Day of Days"—I tried the "tail end" of a can of Edgeworth Ready-Rubbed. The first puff was certainly a revelation. Since then I have smoked Edgeworth day in and day out.

Some months ago I tried Edgeworth Plug Slice and my faith was vindicated. I had known all along that Edgeworth was the best pipe tobacco, but when I tried the plug slice———— "Oh, Boy!" What a smoke!

A pipe is restful and real enjoyment—it gives you time to think things out and is a much more satisfying form of using tobacco.

Yours for real pipe enjoyment.
(signed) F. W. Hie

Mr. Hie's common sense seems to jibe with what science has *always* held: *that the sweetest, purest form in which tobacco can be smoked is in a pipe.*

A valuable tip to new pipe-smokers!

If you've never smoked a pipe—here's a chance to get off on the right foot! Let us send you *free* some generous pipefuls of Edgeworth Ready-Rubbed smoking tobacco. Simply write your name and address to Larus & Brother Co., 3 S. 21st Street, Richmond, Va.

Edgeworth—what a smoke! Mild, surely; yet with a full-bodied character to its Burley blend that almost invariably wins over pipe-smokers on the very first few puffs!

Both Edgeworth Ready-Rubbed and Edgeworth Plug Slice come in various sizes from small pocket packages to handsome pound humidor tins. Plug Slice Edgeworth is packed in thin slices, for pipe-smokers who like to "rub-up" their tobacco in the palm of the hand.

Don't Do Your Strutting in the Water!

(*Continued from page 59*)

simply to keep afloat on his back until help comes.

"The less you struggle, the better off you are. If somebody comes to your rescue, don't endanger his life and your own by grabbing at his neck or arms. Let your rescuer take hold of you. The best help that you can give is to flatten out and keep quiet.

"If you do not know how to swim, bear in mind that the quickness and ease with which you float depends largely upon your mental attitude. You must have faith that you can float.

"A FEW years ago, at a seaside resort, there was an incident which illustrates the value of faith and confidence in the water. A man and his two youngsters, a boy of six or seven and a girl of nine, were out swimming together in the surf. They were having a gorgeous time, and went out farther than they intended.

"All at once, the father realized that the children were both quite tired. Rounding up his little family, he started for the shore. But he had not gone far when he saw that the children could never make it on their own, and that he was too exhausted to swim the distance to land with a double burden. He quickly decided that the best thing to do was to take in the younger child, get help, and return for the little girl. Swimming up close to her, he called out that he was taking her brother in and that he would come back for her presently.

"'Remember, Jean,' he finished, 'that you can float on your back all day and be perfectly safe. Don't be frightened if it takes Daddy a long time. He will surely come back for you.'

"He barely managed to get in with the boy, and then the search began for little Jean. There were a hundred volunteers as soon as the word got out, and a dozen boats were launched in less than ten minutes after the father had told his story. But the child was only a tiny speck of humanity out there on the vast expanse of the ocean. It was almost dark when they found her after more than three hours of desperate search. Jean was floating quietly on her back; she was very tired, but not at all frightened.

"'No, I wasn't scared,' she explained gravely when they lifted her tenderly into a boat. 'You see, Daddy told me I would be all right if I kept on floating, and Daddy always tells the truth.'

"If," said Miss Sheffield, "there was something you could put into the heads of grown-ups that would make them act with the fine judgment that child used, there would not be so many tragic stories to tell of the accidents that happen year after year at bathing places."

"What," I asked, "is the first thing that you set out to teach beginners?"

"To get rid of their fear of the water," was the quick answer. "In order to do this, I must prove to them that the water is friendly—that even if somebody were to thrust you down under water, it would actually lift you to the surface again and support you there—provided you obey two simple, fundamental laws. They are, first, *the law of proper breath control;* and, second, *the law that practically all force exercised in the water must be on the downward stroke.* I will explain these laws in detail as we come to them.

"Many teachers," Miss Sheffield went on, "make the serious mistake of giving the first lessons in water so deep as to inspire fear in the beginner. This is unnecessary. From one and a half to three feet is deep enough for a giant to learn to swim.

"After they have learned to handle themselves in shallow water, my pupils are always quick to see the sense of this statement: If you know how to take care of yourself in one foot of water, there is no reason why you should be afraid of ten feet, or a hundred feet. You can drown yourself just as thoroughly in one inch of water in the bottom of a bathtub as you can in the middle of the Atlantic Ocean.

"AND this brings us to the first fundamental law in swimming: You must learn to breathe properly at the outset. It is impossible to swim any stroke successfully without having first mastered the art of breathing correctly. Proper breath control consists of rhythmic inhalations through the mouth and exhalations through the nose. Breathing in this manner prevents the possibility of choking and is a safeguard against sinus trouble from swimming.

"A good way to practice is to stand in shallow water with the shoulders submerged, arms resting on the water surface, or hands grasping some support—say, the rail of the pool. Place the right side of the face in the water and *look* to the side—this position is suggested because most persons swim on the right side. Lower the top of the head and tilt the chin upward, raising the mouth enough to clear the water.

"Now breathe in through the mouth and close it. Then submerge the face sufficiently to cover the mouth and nose, keeping the eyes at the water surface, and *look* straight ahead. Now forcibly exhale most of the air through the nose and watch the bubbles come up. Turn the head back to starting position and as quickly as possible expel the remaining air through the nostrils. Immediately draw in through your mouth enough air to fill your lungs again. Repeat without stopping for forty or fifty times until a definite rhythm is established.

"After you have mastered breath control, the next thing is to supply yourself with certain safety measures. In other words, learn to take care of yourself in the water before you learn to swim.

"The first step in this direction is to prove to yourself that you can float. The face-submerged float is, I think, the simplest and best for this test. Simply walk out into shallow water, take a deep breath, and throw yourself face downward with arms and legs outstretched. Your whole body will sink under water, but don't be frightened, for it will float right to the top again.

"I have already told you how to go about floating on your back. This is *the* great safety measure. The ability to float in this position has saved thousands of

Digitized by Google
Original from UNIVERSITY OF IOWA

lives. It is the best way to rest when fatigued, or attacked by cramps, or in any similar emergency.

"It is very amusing to see how surprised most novices are when they find out that they can float standing upright. Even after they have learned to float on their backs with ease and confidence, many beginners are skeptical about their ability to float vertically. Remember that the ability to float on your face, or on your back, is a positive guarantee that you can float in a standing position. The body displacement is the same in each attitude.

"It is best to try the vertical float first when close to the rail, or when somebody in whom you have confidence is standing near at hand to give you help if you need it. If you are on the edge of the pool, just let go the railing, spread your arms out sidewise on the water surface, and throw your head well back with the chin up. As you feel yourself buoyed gently upward, you will be convinced that the water has sufficient upward pressure to support you in this position.

"Of course, you cannot float vertically if you lift your head up. In order to keep afloat in this position, you will have to tread water. This may be accomplished by a movement of the arms, or the legs, or of both together. The arm movement is easily mastered. Start with the palms down, arms roughly approximating a side-horizontal position. Bring the hands up and in toward the chest; then move them down and out to the side. Exert a steady downward pressure throughout the last half of this movement. A leg movement similar to that made in riding a bicycle, or in walking upstairs, gives the body added support.

"IT IS in learning to float, either on your back, or vertically, that you have a chance to master the second fundamental law in swimming. I have already mentioned it, but it is worth repeating many times: Exert force on the *downward* stroke. Remember that downward pressure sends your body up toward the surface; that upward pressure sends it down under the water.

"'But,' you protest, 'after I have pushed downward once, I certainly cannot repeat the movement without pulling up my arms or legs for another downward jerk.'

"True enough. But here is the point: In recovering for a second stroke, always *raise the arms or legs very slowly and very gently.*"

Miss Sheffield firmly believes that if you are a beginner, you should feel reasonably at home and safe in shallow water before you try to learn a swimming stroke.

"Personally," she told me, "I always insist that my pupils begin by learning first to swim on their backs. The back stroke is the most readily acquired, and the most useful in an emergency. Of course, I have not space to go into the details of the stroke here. One word of advice, however: Master one stroke thoroughly before attempting a second one.

"From the elementary back stroke, it is an easy and natural step to the sculling and side strokes. In my program, the single overarm and the crawl come next. The breast stroke is one of the last that I teach. Do not bother about fancy strokes the first season. If you master the back and side strokes, you are doing well.

Will They Always Be Proud of You?

Of course, they're proud of their Daddy now. Their only standards are those of the nursery and the yard—where your ability shines in comparison with their own.

But ten, twelve years from now, when they measure you by what you have done and are doing in the outside world, as compared with the achievements of other Dads—where will you stand?

WHAT can you as a Dad do to insure their continued pride in you?

No use trying to bluff them—their keen minds will get the truth. No avail in appealing to their love—that is arguing for you already. No good explaining or alibi-ing—they know too little of life's difficulties and ironies to understand.

Your only sure way is so to build yourself now that success will come before they get out of the trusting age. Train yourself into the larger income and business standing that spell achievement to adult and youth alike.

Difficult? Not at all. *It takes only some real determination, your spare hours for a few months, and a small investment of money on easy terms. The returns last a lifetime.*

On—Up—To Bigger Ability and Pay

A traffic manager for a great wholesale house in the West, asking himself if he was willing to play chance with failure and success, answered with a ringing No!

Straightway he began to safeguard his success with sound and practical home-study training—on the proven theory that risks disappear when native ability and loyal service are fortified by knowledge.

First, he enrolled for Traffic Management because his work required an expert understanding of freight classifications, rates and routes. Feeling then the need for legal training—both as an aid in presenting cases before the various rate bodies and as a business broadener—he enrolled for training in Law, following this with training in Effective Public Speaking.

Today he is a major executive and is still moving on—and up—to even bigger opportunity and pay.

And from his own experience, he will tell you: "If you're willing to apply a portion of your spare time to acquiring proficiency in your chosen field, you'll be astonished at the end of a year's time what a store of practical knowledge you've accumulated."

From Order Clerk to General Manager in Five Years

Back in 1920, he was a young order clerk—in 1924 he was directing sales and advertising—a year later he was general manager. In between were five years of capable, loyal service and two completed LaSalle training courses—Modern Business Correspondence and Business Management.

Six months after starting his first course, he asked to handle correspondence and got the job and a raise; a few months later he suggested a new sales promotion department and was given the responsibility of organizing and directing it; soon after he recommended the beginning of advertising and was given that task.

No wonder he moved up fast. Any employer would welcome and reward initiative and ability like that.

Note his own comment: "My two training courses gave me more than I could have gained through ten years of experience."

How Much Do You Want to Get Ahead?

We'll Know After You Read These Paragraphs

Thousands will read this advertisement and do nothing. An occasional man or woman more in earnest, more far-seeing, will act. And one year, five years, ten years from now, the thousands will say, "Lucky chap! I wish I had had his chance."

As a matter of fact, we are glad the thousands turn the page. We do not want the wishers, the starters, the never-finishers. We want only the earnest individual who will investigate, decide and then carry through.

Are you that individual?

Then here's our suggestion to you: Fill in and mail the coupon below. Read carefully the interesting, informative free booklet which it will bring you. Find out exactly what our training is like and what it has helped others achieve. Then decide.

The first step is simple. Clip and mail the coupon now.

LaSalle Extension University

THE WORLD'S LARGEST BUSINESS TRAINING INSTITUTION

Find Yourself Through LaSalle!

LASALLE EXTENSION UNIVERSITY, Dept. 733-R, CHICAGO

I would welcome an outline of the LaSalle training plan, together with a copy of "Ten Years' Promotion in One," all without obligation.

- ☐ Business Management: Managerial, Sales and Executive positions.
- ☐ Higher Accountancy
- ☐ Expert Bookkeeping
- ☐ C. P. A. Coaching
- ☐ Modern Salesmanship
- ☐ Traffic Management
- ☐ Railway Station Management
- ☐ Modern Business Correspondence
- ☐ Stenography: Training in the new machine shorthand—Stenotypy.
- ☐ Law: LL.B. Degree
- ☐ Industrial Management
- ☐ Modern Foremanship
- ☐ Personnel Management
- ☐ Banking and Finance
- ☐ Stenotypy
- ☐ Credit and Collection Correspondence
- ☐ Business English ☐ Effective Speaking
- ☐ Commercial Law ☐ Commercial Spanish
- ☐ Telegraphy—Railway and Commercial

Get rid of
DANDRUFF

Your hair combs easier and stays in place. The natural oils of Sergeant's will lubricate the scalp and keep both hair and scalp in good condition. SEE dandruff disappear. Every day, use Sergeant's freely, rub it into the scalp with your finger tips. FEEL it waking up the scalp.

For fifty years, Sergeant's Mange Medicine has proven an effective treatment for dandruff and other hair and scalp complaints. After many years of research, Sergeant's chemists have refined this product so that it retains all the therapeutic qualities of mange medicine, but none of the disadvantages.

Ask your dealer for Sergeant's for the Hair—75c. Use it daily. Comb your hair with it. Rub it in. Keep the handy bottle in a convenient place. Write for free booklet on treatment of hair. Polk Miller Products Corp., 2310 W. Broad Street, Richmond, Va.

Sergeant's
for the HAIR

"Before a pupil is pronounced able to swim, he ought to be given a thorough test. A lot of folks make the mistake of thinking they can swim when they have learned barely to propel themselves across a pool. False confidence is the cause of a great many accidents. It is worse than no confidence at all. Before I give my pupils a certificate, I require them to swim at least three hundred yards without returning to shore. This means about thirty minutes in the water without any rest except what they can get by floating or treading water.

"AN EARLY start is a great advantage in learning to swim. For one thing, it keeps you from missing such a lot of fun! I know. Twenty years ago, my father, Doctor John Sheffield, organized the United States Life Saving Station at Venice, California, and for four years was physician to the crew. My sister and I grew up in an atmosphere which reduced swimming, diving, and life-saving to commonplace accomplishments.

"I realize that not all youngsters are as fortunate as my sister and I were. There is no need to be discouraged if you are one of the several millions in this country who have grown to voting age without learning to swim. I have had dozens of beginners of forty-odd and more who became excellent swimmers.

"A few years ago, I had in one of my classes a woman who said she was sixty-two years old. She told me that she wanted to learn to swim because she and her orphaned granddaughter, who lived with her, were going to spend their vacation together at a seaside resort. The girl, she assured me, was already 'a wonderful swimmer.' It turned out, however, that the girl who had learned by the old sink-or-swim method, had neither speed nor endurance. Before the end of the summer, she was totally outclassed by her grandmother!

"It has been estimated that of the 125,000,000 people in this country more than 100,000,000 are unable to take care of themselves in the water. Something ought to be done about it. I suggest—in all seriousness—that a swimming certificate be made a necessary requirement to graduation from the public schools. In Sweden, this has been a practice for a good many years, and in that country there are almost no fatalities from drowning.

"People often ask me whether I prefer fresh or salt water in which to start beginners. Fresh water, by all means. If you learn in salt water, you are likely to depend upon its greater buoyancy to keep you up. This makes swimming in fresh water difficult.

"I said at the beginning that nine tenths of all drownings occur because people lose their heads. This is absolutely true. I have seen fear actually transform men and women into insane creatures in the water. I recall the case of a university professor who was swimming in a pond one summer with his only son, the idol of his heart.

"The father was taken with cramps, lost his head, and began struggling violently. The boy set out from the other side of the pond to rescue him. When the young fellow reached his father, the crazed man grabbed his son around the neck and held on until both were drowned. And yet, under normal circumstances, I know that the professor would cheerfully have given his life for his boy!

"Here are six good don'ts to remember when you go in swimming:

1. Don't go into the water within two hours after a hearty meal, or within an hour after violent exercise.
2. No matter how good a swimmer you are, never go into the water alone, or get out of sight or call of another swimmer.
3. Never dive head foremost into strange or muddy water. If you have to dive, jump feet first, or in a sitting position.
4. If caught in a swift current, do not attempt to swim against it, but gradually progress in a diagonal course to the shore. Similarly, do not resist the undertow, but recede with it and work your way back to land with the breakers.
5. When frightened or fatigued, or when suffering from cramps, float, tread water, or swim on your back.
6. Don't struggle; *keep your head!*

"EVERYBODY who goes in the water at all, ought to learn the Schafer prone-pressure method of artificial respiration. For that matter, folks who never go near the water should know it, since it is equally useful in restoring a person suffering from apparent drowning, from an electric shock, or from gas. The important thing is to waste no time in beginning. Send for a doctor, but don't wait for him to come; go to work at once.

"In numerous cases, breathing has been restored after several hours of artificial respiration. Even if the victim appears to be dead, work should be continued for at least four hours without interruption.

"Don't try to improve on the Schafer method. Follow it faithfully. Reduced to its simplest terms, here it is:

1. Quickly feel with your fingers in the patient's mouth and remove any obstruction to breathing, such as tobacco or false teeth. If the mouth is shut tight, pay no attention to it until later.
2. Lay the patient on his stomach, one arm extended directly overhead, the other bent at the elbow, and with the face to one side, so that the nose and mouth are free for breathing.
3. Kneel, straddling the patient, with your knees resting on the ground just below his hip bones. Bend your body slightly forward, so that the weight of your shoulders can be brought into play. Place the palms of your hands on the small of his back, with your fingers over his ribs. The little finger should just touch the lowest rib; the thumb should lie alongside the fingers.
4. While counting, *one*, *two*, and with arms held straight, swing forward slowly so that the weight of the body is gradually, but not violently, brought to bear upon the patient.
5. While counting *three*, swing backward so as to remove the pressure, thus returning to your original position. It is during this interval that air is drawn into the patient's lungs.
6. While counting *four*, *five*, rest.
7. Repeat these operations, deliberately swinging forward and backward twelve to fifteen times a minute. *Keep time with your own breathing.* If natural breathing stops after being restored, use artificial respiration again. Watch your patient carefully and continuously.
8. Do not put any fluid into the mouth of an unconscious patient. When he becomes conscious, he may be given hot coffee. Keep him warm, quiet, and lying down for several hours.

"FINALLY, don't pay too much attention to bystanders who offer advice. Often, those who are most free with suggestions know the least about reviving a victim."

FOR FLAVOR
FOR EFFECTIVENESS

...the favorite of all the bran cereals in the world

Taste Post's Bran Flakes—and instantly you will know one reason why Post's Bran Flakes is eaten by more men, women and children than any other bran cereal in the world. So tempting, so delicate in flavor, you will find its crisp, delicious flakes, that you would want to eat it every day for the sheer enjoyment of it—even if you knew nothing of the other reason for its universal popularity.

But there's another reason. To the millions who eat it regularly every day, Post's Bran Flakes has proved that it provides a most delightful way of avoiding the dangers of constipation—naturally—normally—pleasantly. Try it yourself—and see, if you, too, don't feel better, brighter and happier, and *look* better, brighter and happier, when your body receives the daily benefit of this efficient regulator. Serve crisp from the package with milk or with cream, with berries or fruit, or in muffins or bread. Tomorrow is not too soon to start enjoying the most popular bran cereal in the world!

Cases of recurrent constipation, due to insufficient bulk in the diet, should yield to Post's Bran Flakes with other parts of wheat. If your case is abnormal, consult a competent physician at once and follow his advice.

"NOW YOU'LL LIKE BRAN"

POST'S BRAN MUFFINS

1 cup sifted flour	1 egg, well beaten
5 teaspoons baking powder	2 tablespoons sugar
½ teaspoon salt	¾ cup milk
1 cup Post's Bran Flakes	3 tablespoons butter, melted

Sift flour once, measure, add baking powder and salt, and sift again. Add Post's Bran Flakes. Combine egg, sugar, and milk. Add flour gradually, beating after each addition until smooth. Add butter and beat thoroughly. Pour batter into greased muffin pans, filling them ⅔ full. Bake in hot oven (450° F.) 25 minutes. Makes 12 medium-sized muffins. *All measurements are level.*

"BANISH DISEASES FROM THE EARTH!"

THERE probably have been greater scientists than Louis Pasteur—clearer thinkers, perhaps, and more careful workers. Yet there have been few men to whom it has been given to be of such great service to humanity.

His work as a chemist had brought Pasteur into constant contact with microbes. When Robert Koch proved that microbes cause disease, Pasteur felt that he must go further . . . that he must find the cure, now that the cause was known.

With all the determination and brilliancy of his great mind he set himself to the task. In his gloomy laboratory he performed remarkable experiments. And in the end he achieved this most wonderful feat. He turned microbes upon themselves . . . enlisted them as guardians of our health and well-being, instead of leaving them free to carry disease everywhere.

It was Pasteur's hope that microbes would be quickly conquered. Wherever he went he urged the importance of combating them. Always he was telling his audiences that diseases could be banished from the earth.

His ambition has not yet been realized. But we have made great progress. Many diseases have been conquered. Every day, almost, brings information of new discoveries and achievements in the preservation of health. Mortality, particularly in children, has been tremendously reduced.

In thus guarding us against diseases, physicians use many different therapeutic products. On the purity and reliability of these hang the gravest consequences.

E. R. Squibb & Sons have been dedicated for almost three-quarters of a century to the task of furnishing the medical profession with the finest therapeutic products that manufacturing skill and experience could produce.

Squibb products in all these years have always met the most exacting requirements. And the name "Squibb" upon a label is an assurance of absolute uniformity and efficacy. For the House of Squibb has been identified with prevention and with the highest ideals of the medical profession since 1858.

The Priceless Ingredient of every product is the honor and integrity of its maker.

THE SPORTFOLIO

The Greatest Athlete's Greatest Thrill

By Charley Paddock

World-Famous Sprinter and Sports Authority

If you should walk down a certain street on a sunny day in Hyde Park, Chicago, you would probably see, standing by the side of a moss-covered, tree-shaded wall, a giant figure of a man in his forties, who seems to be waiting for something that never happens. He is a handsome fellow, in a rugged, forbidding sort of way, with the stern, picturesque features of an Indian and the pondering eyes of an Irishman. He watches the children on their way to school, just around the corner, and it is obvious enough that big and little ones alike regard him with admiration. But they do not know him and they would not recognize his name. For he is of another generation.

Jim Thorpe

Twenty years and more ago he was the hero of the nation, the greatest football player of his or any other time, and the best all-round track and field performer the world has ever known, as well as a splendid basket-ball, baseball, and hockey player, and a hunter without equal. The grandson of an Indian chief on his mother's side and with a six-foot fighting Irishman for a father, this boy spent his early years in the woods and on the range. He could ride as soon as he could swim, and he could swim as soon as he could walk. When he had reached his twelfth year he possessed the strength of a man and the catlike agility of those denizens of the forest which had been his companions from infancy.

As a young man he attended the Carlisle Indian School, becoming a spectacular star in all collegiate sports, and twice being named on Walter Camp's All-America. He achieved the immortal gridiron distinction of being placed on the mythical All-Time team as a halfback, an honor which loyal football followers have claimed for Eckersall, Heston, Coy, Mahan, Oliphant, McMillin, Gipp, Grange, Nevers, and Drury. There have been endless disputes as to which four deserved the backfield places. Only one name went unargued, because that one could do everything that any of these other heroes could, and he could do it a little bit better. To all the old followers of sport there has been only one Jim Thorpe.

Not long ago I visited him at his little hotel in Hyde Park, where he lives in quiet seclusion, and after we had talked football and track and those other games that he had loved to play during the two decades while he was a star, I asked him what incident stood out in his mind, above all others, as he glanced back through the glorious vista of the years. And this is the story he told me:

"My biggest thrill in athletics didn't have so much to do with me as with a big Swede named H. K. Wieslander, who took second in the decathlon, or ten-event competition, at the 1912 Olympic Games. I won the event, along with the five-event contest at Stockholm that year, and came back to this country with a flock of trophies and prizes that had been given me by the King of Sweden and other notables. I felt justly proud of the prizes, not only because I had won the events, but because of the contacts I had made. I had no more than landed before the Amateur Athletic Union said that I was a professional because I had played semi-pro ball down South before the Olympics. So the A. A. U. requested that I send back all the loot to Wieslander, who had now been declared the champion of the world. I did so.

"But Wieslander never even opened that box which contained my prizes. He sent it right back to America with a message that I remember read something like this: 'I didn't win the Olympic Championship. James Thorpe won it. I do not know what your rules are in regard to amateurism, but I do know that Thorpe is the greatest athlete in the world.' And as far as I know those trophies still remain in the possession of the A. A. U., standing for what I was able to do in those days, but standing still more for the spirit of sportsmanship of a Swede named Wieslander. I don't know where that Swede is or what he is doing, but he gave me my greatest thrill!"

SIMONIZ Your Car

THE open road . . . your car Simonized! Then mile after mile you drive through dust and dirt in all kinds of weather. And, year after year, the beautiful, dustproof protection Simoniz provides guards the finish from injury, makes it last longer and keeps colors from fading.

Now that most cars are finished in Duco or lacquer, it is really fun to Simoniz a car. Even though dulled and discolored, Simoniz Kleener thoroughly cleans and quickly restores the lustre. Simoniz then gives lasting beauty and protection.

The sooner you Simoniz your car, the better.

LOOK AT THIS

Photographed in Los Angeles · · after

Just one of the 60 Silvertowns that negotiated the Coast-to-Coast Run without a single major trouble

THE VERDICT FOR TIRE BUYERS

These photographs should mean a lot to you. They were made in Los Angeles after the Silver Fleet rolled in, and show you the fine condition of the tires at the "half-way" point.

Picture above illustrates how tread depth was measured. Below you see pilot checking tire weight and at the right a Silvertown being examined after 12,000 miles.

LOOK at it closely! That tire in the picture, being so carefully examined. Would you think that tire had traveled over 12,000 miles?

Would you believe it had battled its way through ice, snow, mud, sand, gravel, rock . . . all the hardships of a tortuous course across the southern half of the country?

It sounds incredible . . . but the tire you see has done just that. It is on the Flagship of the Silver Fleet . . .

One of the sixty stock Goodrich Silvertowns on the Silver Fleet photographed when that shining caravan reached the half-way mark in its journey in Los Angeles! Think of the punishment that tire has taken . . .

Snow and ice in New York. Heat and sand in Florida. Rain in the Gulf States . . . gravel and heat and alkali dust in Texas. A 250-mile battle with a day-long sandstorm in Western Arizona . . . and a dramatic climb across the mountain ranges of Southern California.

Twelve thousand miles of such punishment . . . yet when the Silver Fleet rolled into Los Angeles . . . not a single tire

Digitized by Google

UNIVERSITY OF IOWA

SILVERTOWN!

12,000 Miles with the Silver Fleet

failure had marred the perfect record of this tire and its 59 blood-brothers!

But that is not all . . .

Tests made in Los Angeles after the fleet arrived showed an average of but ·9% loss in weight. Tread depth measurements showed negligible wear.

Tests of tread and side wall rubber disclosed the firm, sound, resiliency of brand new tires in spite of the hard service.

Tires showed wear, of course . . .

But ask any one who saw these tires in Los Angeles . . . "Will they last out through the long, hard trip back East?"

And you'll get a most emphatic answer . . . "They certainly will!"

To many car owners, 12,000 miles absolutely free from blow-outs, carcass breaks and other serious trouble is a good record.

But the 60 tires on the Silver Fleet have negotiated that distance with such a record . . . and in doing so, faced conditions far more severe than you will ever have to face!

The lesson of the Silver Fleet comes home when you recall that these are stock tires traveling on stock cars. To know and enjoy the same tire performance, drive into the service station of your nearest Goodrich dealer.

See him . . . for tires just like those on the Silver Fleet.

The B. F. Goodrich Rubber Co., Est. 1870, Akron, O. Pacific Goodrich Rubber Co., Los Angeles, Cal. In Canada: Canadian Goodrich Co., Kitchener, Ont.

WELCOMED to California! Just see the crowd that turned out to greet the Silver Fleet and its pilots when they rolled into Los Angeles! The small picture shows Mayor Cryer and Miss Anita Page, official host and hostess, as they inspected the Good Will Book brought all the way from New York City by the Fleet.

SILVERTOWN DE LUXE (*Right*) Superlative style and service . . . a tire that outlives your car. Its very lines say "Built to master every road."

THE FAMOUS SILVERTOWN (*Center*) The recognized standard of tire quality everywhere. Stretch-matched cord construction and water-curing have made it famous for service wherever tires are known.

GOODRICH CAVALIER (*Left*) A new tire. High quality at amazingly low prices. Made like Silvertowns, it is the choice of hard drivers and keen buyers.

Goodrich Silvertowns

Electricity *Without Books* in 90 Days!

I want to make you a real money maker. I want to take you from small-pay jobs that lead nowhere and never will pay you more than $40 or $50 a week. I want to double your earning power, and all I need is 90 days!

EARN a Good Salary *every week*

IN the great shops of Coyne you train on thousands of dollars worth of real electrical equipment—motors, generators, house wiring, autos, batteries, switchboards, radios, power plants, etc.—everything from doorbells to giant dynamos. Nowhere else in the world can you get such training. No useless theory—NOT by correspondence—all actual, practical work. In 90 days you get years of experience—far more than an ordinary electrician trying to pick up his trade will ever know.

No wonder Coyne men step into steady jobs—immediately after graduation! No wonder Coyne men are making $50 to $200 a week! Two weeks after graduation Clyde F. Hart got a position at over $100 a week. Clarence Ackland, farmer's son, earns over $60 a week in the little town of West Brooklyn, Ill. These are not unusual. Demand for Coyne men far exceeds the supply!

Don't worry about a job! This training ends the job question for life. 60,000 additional electricians are needed every year. Our employment bureau secures dozens of positions weekly.

12 Weeks' Training

RAILROAD Fare Allowed

Right now for a short time, I'll pay your fare to Chicago, and I am including Special Aviation, Radio and Automotive Electrical Courses without extra charge to those who enroll now—Send Coupon Now!

Let me make you a master electrician. I've done it for thousands of others—including mail carriers, clerks, farm boys, and men of every description. So I can do it for you.

You don't need special education. You don't need a day's experience. Don't let lack of money hold you back—we assist you to part-time work while training—and after graduation, we give you free employment service for life.

Big Free Book

Just give me a chance to tell you about the unlimited opportunities to earn $3,000 to $20,000 a year. Let me send you this big book, free, containing 150 photographs and all details of course, positions, salaries, etc. If you really want more money and a wonderful future, send for this book now. Simply mail the coupon.

How Saunders Norvell Sold Gold House Keys

(*Continued from page 25*)

SPECIALTY month. For instance, I would pick out a certain line of hardware and emphasize that line for thirty days. It meant that I made twelve concentrated efforts a year. This posted me thoroughly on the twelve lines.

"IS THERE such a thing as a *born* salesman? Maybe there is. Certainly, a man who is in robust health, who has a fine appearance and a naturally pleasant manner, has big assets. But many a man who started out with none of these things has managed to become a worth-while salesman. Three kinds of men seem to experience the greatest difficulty in selling: Mechanics, or men with a mechanical turn of mind; bookkeepers and accountants, or men whose tendencies are toward mathematics; and timid souls who let fear dominate them. The bookkeeper and mechanic types tend to respond methodically to exact laws. Salesmanship has some method and some law, but the supreme salesman is always an opportunist, dramatizing the moment, making it the big and vital thing. The methodical man who responds to exactness and who wishes to sell must train himself to watch for the advantage of the unexpected, pounce on it, and make it count.

"I have every sympathy with the fellow who finds it hard to sell, because I didn't want to go into business. I wanted to be an artist and I learned to sell hardware.

"But I hadn't sold goods three months before I found I liked the road. It gave me a great deal of experience, and the amount of time I got for reading as I traveled was something worth while.

"In 1886 I married and took my bride to Salina, Kansas, as this was to be my headquarters. I built a six-room house, and there we settled and were as happy as any two people could be."

Kansas in '86 was enjoying a boom. The hardware business was good. New stores were opening all through that part of the country. Settlers in prairie schooners were arriving by hundreds. Two years later came drought, and business went to pieces. The Norvells were transferred to Denver, Colorado, the center of the great mining boom. Norvell refuses to take credit to himself for much of the selling he did through the Middle West and West.

"As I look back on those days," he said, "I realize that the main factor in salesmanship was endurance. The man who could travel the hardest, sell goods the longest number of hours a day, and write the fastest, was the best salesman."

Norvell is unfair to himself. In Colorado he developed a force of salesmen to assist him and opened an office in one half of a store, engaged a secretary, and fitted up the store with show-cases and samples. The Simmons Hardware Company, for which he was working, knew nothing of this. One day E. C. Simmons, traveling to look over the territory, came to Denver and called on one of the customers, who referred him to "the Simmons office."

"Office," repeated Simmons. "I didn't know we had one here." When he saw the showroom, the secretary, and the piles of mail orders arriving through a worked-out system of circularizing, and when he went over the form letters and was introduced to some of the salesmen Norvell employed, he looked at that young man, now twenty-five, with a curious expression.

"I had no idea," he said, "that we were so well organized out here in Colorado."

In 1892, less than ten years since his start on the road, Norvell was called back to St. Louis to take the position of General Sales Manager. He was twenty-eight years old and he was full of elation at the promotion. In a month he had lost his enthusiasm. Barring the two years of his initiation into business, he had never been so miserable. In Colorado he had been free to come and go as he wished; now he spent long hours in an office at a desk. His former office had been peculiarly his own; now he had to work with many superiors.

"I was actually receiving less money as sales manager than as salesman," he said. "I had a fixed salary instead of salary and commission. I had to put up a better front. I was still paying for stock I had bought in the company, and that first year I was perpetually hard up. I had to join clubs, in the interest of the business but at my own expense. And I was expected to give all the salesmen a good time when they came to town. Many a morning I called myself a perfect ass for giving up my territory for a house job. To drown my sorrows, I plunged myself into work.

"There was plenty of that. I had to learn a new technique. I kept a memorandum book on each individual salesman, and in this book was a mêlée of everything—my thoughts on the man, my correspondence with him, his family circumstances—anything that would help me to know that man and appreciate his point of view. I began to acquire the reputation of having a remarkable memory, because after every interview I added to my memoranda and then filed the book. When the salesman came back, I got out his particular book, read my notes, and he found I could remember all we had talked about before. I also remembered his promises to me—and checked up on them!"

ONE of the most annoying anxieties of the young sales manager was that he did not seem to have full charge of his office. Nominally he was general sales manager, but often officers of the company would write to the salesmen about goods and prices without consulting Norvell. Quite naturally this produced confusion, and the young sales manager went to Mr. Simmons and complained bitterly.

"I was very angry," said Norvell. "I insisted that my authority should be clearly defined. Mr. Simmons heard me out and then said: 'Write down on this pad just what your duties are.'

"I wrote.

"'Now,' he said, 'I will protect you in these duties, but if you do anything besides them I will discharge you!'

"I was surprised, as he looked very fierce, but he suddenly smiled.

"'My dear boy,' he said,' how young you

Wherever You're Going you'll Save Money on a GREYHOUND BUS

FROM New York to the Golden Gate, from the Lakes to the Gulf of Mexico, connecting almost all the principal cities, stretch the routes of Greyhound and "Yelloway" Lines—largest, longest, most dependable motor bus system in America.

Wherever you want to go, there are Greyhound buses to take you. With regular and frequent schedules they bring new transportation convenience to a thousand formerly isolated places. Crossing the country over three distinct routes, they touch at almost every vacationland. One-fifth of the people in America live directly along the Greyhound lines.

Travel Costs Reduced

All history holds no travel opportunity comparable to that now offered by the Greyhound Buses. Travel costs are less than any other overland transportation known. You go farther on every dollar. Places and trips until now beyond your means become practical. And so, for short trips or transcontinental journeys, millions of people are riding these buses today.

Not only low cost, but new travel luxury is yours when you ride these Greyhounds of the highways. The modern, all-steel coaches are equipped with individual deep-cushioned seats, air brakes and hydraulic shock absorbers. Every comfort and safety device is built in. And at the controls is a driver from Greyhound Lines' own rigorous school—a man of character and integrity who has passed the most rigid physical, mental and experience tests.

To know the full pleasure and romance of travel, go the delightful motor bus way. Make your journeys over the glorious highways. Learn again the thrill of the cross country trail—the zest and exhilaration of motoring with none of the responsibilities.

Fares from your city, with complete departure and arrival information, are yours at your local bus depot. For interesting facts on motor bus vacation tours, write for the new booklet; "Circle Trip Suggestions." *Address Motor Transit Management Company, 1157 So. Wabash Ave., Chicago.*

WHEN IT'S GOT THE STUFF . . . A NICKEL'S ENOUGH

Rocky Ford 5¢

IMPORTED Sumatra wrapper . . . finest domestic long filler. Match ROCKY FORD against any ten cent brand. "When it's got the stuff . . . a nickel's enough."

. . . .

If you can't get ROCKY FORDS from your tobacconist, send 25 cents to P. Lorillard Co., Inc., 119 W. 40th St., New York, for trial package of 5 cigars.

To DEALERS: If your local jobber cannot supply you with ROCKY FORDS, write us.

© P. LORILLARD CO., EST. 1760

are! Don't you realize that every time a man builds a wall around his house he does two things? He walls out the others and walls himself in! Now, if you have the strength of character and the ability, you will in time assert yourself in this position so that your authority will never be encroached upon. If you are a weakling, I shall have to prop you up with an outline of your duties and warn others not to interfere.'

"I shall never forget that interview. I have lived to see that everywhere strong men make places for themselves, places with no boundaries and no limitations. Weak men are always asking that their duties be defined. Most young men have the feeling that they need protection from others. What they need is not to be protected, but to develop their own strength. Since that interview I have never asked for protection from anybody in the business struggle. I never again attempted to build up walls. I tore them down!"

UPON the retirement of E. C. Simmons to an advisory capacity in 1898 and the election of new officers, Norvell became vice president. Three years later he and a group of young men, Harry B. Gordon, William G. Yantis, and Taylor D. Kelley, bought a controlling interest in the Shapleigh Hardware Company and with Richard W. and Alfred L. Shapleigh formed a new corporation called the Norvell-Shapleigh Company.

"I believe every executive should have a fund," Norvell says, "with which to reward, instantly, any special service on the part of a worker. Then, I believe that at least twenty per cent of the profits of a concern should be paid to the people who produce the profits. This is not the old bonus idea. It means that the head of every department will decide which workers really produce profits and which ones merely earn their salaries. In the Remington Arms Company this past year we have made more money, and half of our increase in profits has come through salesmanship, half through reduction in production costs. The twenty per cent will be divided two ways and given to those men who made the profits either as salesmen or as workers.

"One reason that the Norvell-Shapleigh Company succeeded in building a business that increased a million in sales every year for ten years was that the people who produced knew they would have a quick share of the profits."

Another reason might lie in the example of a boss who could sell gold house keys! At the end of ten years Norvell decided that the firm could get along without him. He was a rich man; he had every prospect of becoming a much richer one. Yet he decided to retire. In order not to disturb the business, he agreed to remain a director for a few years, but in 1911 he left business, as he believed, forever.

HE WAS forty-seven years old. He still harbored the desire to study art. His daughter Lucy showed decided artistic talent. When Norvell proposed that they all live in Paris while he studied with his daughter, the whole family, three daughters and one son, gayly agreed. They had three gorgeous years, when the two art students went steadily to their classes and lectures, three years of companionship and happiness in a colorful world. But during the third year Norvell began to get restless.

"I began to ache for the old battle of business," he said. "I had been tied by just one string I owned a trade magazine and I managed that by correspondence. But on a good offer I sold that. McKesson and Robbins wrote me: A partner was in poor health, did I care to buy in? I went in cautiously, stipulating that I was to advise the salesmen, and that only. Then came the war. There is no credit due for the success we made. I didn't have to sell. The only question was, could we get enough goods to sell? I worked as I never had expected to work again. In 1926 we sold the business, and I decided to retire for good.

"Nine months later I found that I was running to seed. I had imagined—because I had had little time to read—that I could never get enough time to read all that I wanted. I had an idea—because I never had had enough time to play golf—that I could never get enough golf. In the months of idleness that preceded this position I found that I had played all the golf I wanted, that I had too much time to read, that I did less and less of everything and that I wou'd be doing nothing before long. Now I have just enough time to appreciate the luxury of a morning spent in bed reading, just enough time to enjoy a good round of golf. To be happy I have to be busy. That's why I came to the Remington Arms Company."

Dark Happiness

(*Continued from page 21*)

T' home at Jessie's I got a dollar. You goin' t' Lotusville t' live there—in th' hill house—haunted like 'tis?"

"How big a place is Lotusville?"

"It ain't so big as Hebron, or Paris, or Boston, or New York. Still, it's the biggest place *I* ever lived in. It's got th' post office an' Gleason's store, an' Carney's blacksmith shop, an' Bowen's sawmill. Th' rest o' th' place is nuthin' but houses. They's all o' ten, not countin' o' course th' Homestead on th' hill."

"You mean the Cravenside Homestead? Why not count that?"

"'Cos no one lives there regular, only that Spook."

"What did you mean a moment ago about John Forsythe 'chucking you off'? Who's John Forsythe? And from where did he 'chuck' you?"

"He's th' surveyor. He works for th' gov'mint. He draws pitchers o' mountains so's t' show all th' rivers. He chucked me off th' Cravenside place. He looks after it. You're th' ignorantest woman I ever heard tell on. *Or mebbe you're lyin' t' me!*" cried the youth in sudden anger. "Like Nat Sibley lied t' me, 'bout how t' catch frogs."

"This is my first visit to my husband's family homestead. You'll see I'm not lying to you," the woman answered with

Can the Cost of Life Insurance be *Safely Reduced*?

YES!

A frank discussion of a problem of vital interest to every American Home

Excerpts from the Annual Report to the Members of the ACACIA MUTUAL LIFE ASSOCIATION *by* William Montgomery, *President*

Object of Mutual Company

"THE prime object of all mutual old-line life insurance companies is, or should be, to furnish guaranteed life insurance at the lowest possible cost.

"Careful investigation convinced your directors that the premiums charged by the mutual old-line companies could be materially reduced, and still be sufficient to guarantee the insurance beyond question. They came to this conclusion because they found that the system of refunding the unnecessary part of the premium in form of a dividend was not economical, inasmuch as taxes, fees, agents' commissions and other expenses had to be deducted before anything could be refunded.

"On the other hand, the stock companies, which merchandise life insurance, promise no dividends to their policyholders, but pay the profits of the business to their stockholders, were as a whole highly successful, even though their initial premiums were lower than the premiums of the mutual companies.

"The success of these companies, the fact that they were paying such large dividends to their stockholders, the increased market value of their stocks, clearly proved their stability. It was evident, therefore, that a mutual company could also operate successfully under a reduced schedule of premium charges—with increased benefits to its policyholders.

Premiums Reduced

"Accordingly, in April, 1926, this Association adopted a schedule of premium rates reduced to the low level of those charged by the stock companies. In so doing, Acacia took the lead among mutual life insurance companies in passing along to its policyholders the benefits of lower premium charges.

"This was a bold step on the part of Acacia's directors, I will admit—but having convinced themselves of the correctness of their position, they had the courage to do what they believed the interests of the policyholders of any mutual company demand—that is, sell guaranteed life insurance at the lowest possible cost.

"There was another reason: The aim of your directors is to conduct the affairs of this Association in the most economical manner. Through the low premiums of this Association, extravagance is made impossible. The reduced premiums have now been in force about three years, and the record* of the Association best evidences whether or not they have fulfilled their purpose and justified the wisdom of their adoption.

Official Endorsement

"Outside of its own record, the best endorsement of this plan and the fact that it is commending itself to all thinking men who have the best interests of life insurance at heart, is shown by the fact that the retiring Superintendent of Insurance of the State of New York has recommended an amendment to the laws of that State, one of the ultimate effects of which would be to permit a reduction of the premiums for mutual life insurance. In answer to the statement of the life insurance agents' association protesting against the passage of the amendment, Mr. Beha states:

> 'I, therefore, reaffirm the statement in my memorandum of November 12, that it stands to reason if any participating company should reduce its gross premiums, it would reduce the net cost of the insurance by at least the amount of taxes and other expenses saved on the amount of the reduction of the premium.' (This amendment has since become a law.)

Demand for Reduced Premiums

"I believe it is no stretch of the imagination to say that within a few years all mutual companies will be selling insurance at lower rates. In my judgment, the insurance buying public will insist upon these reduced premium schedules because of the savings which will result.

"When the day that witnesses such a reduction of premiums arrives, we can feel that this Association, through its pioneering work, has made a real contribution to the benefit of all policyholders. I further believe that a lower schedule of premium rates will benefit both the companies and the agents, because there will follow an era of development and progress in the business greater than ever experienced."

Acacia's Slogan

Do not lapse your policy in any other old-line company to take one in ACACIA. Do not lapse your policy in ACACIA to take one in any other old-line company. You lose in either case.

ACACIA

MUTUAL LIFE ASSOCIATION

William Montgomery, *President*

HOME OFFICE · WASHINGTON, D. C.

FOUNDED 1869

***Acacia's Record**

ACACIA'S record of growth in recent years is without a parallel in life insurance history. Even under its new schedule of reduced premiums, it is paying its members satisfactory dividends at regular intervals.

"Please tell me ..."

JEAN CARROLL'S *Column on Hair Beauty*

So dry and dull I envy other girls

Dear Jean Carroll: It's been over a year since I last got my hair cut and it has not grown a half inch since. It is so dry and dull I envy other girls when I see them. My hair also is burnt very badly from marcels and from curling it myself. I don't know what to do.—E. R., Cleveland, O.

Dear, dear, E. R., I wish I could have caught you a year ago. And *how* I wish I could hide your curling iron and take away your spending money so you couldn't get a marcel for a month until we do something for that hair.

Then, *a special shampoo* to help you correct that dryness—that's the next thing I'd wish for you. There is a delightful shampoo especially for dry hair, made by the Packer Company, with whom I am associated. This is the lovely gold-colored *Packer's Olive Oil Shampoo*. It leaves dry hair softer and shinier than usual because it contains olive oil and soothing, softening glycerine. It won't make your sensitive scalp sting, and it helps the little natural lights to come back.

Use this special shampoo every ten days and get out your hair brush and polish up your hair. And watch! Perhaps, when you see sheen and life coming back you'll decide straight hair is becoming after all!

Oily hair ... and a special shampoo for relaxed oil glands

Dear Jean Carroll: What is good for oily hair? Sometimes my hair looks as if I have just come from a bath—it looks so damp. I shampoo every two weeks and sometimes I must do it more often. — Mrs. B. B., New Bedford, Mass.

Where *did* that "every two weeks" rule begin anyway? No doctor began it. The doctors who cooperate with the Packer Company say "Wash oily hair perhaps every four or five days until the oil glands become normalized."

The Packer Company makes a shampoo especially for oily hair—*Packer's Pine Tar Shampoo*. It could be used every day without deadening the hair. Packer's Pine Tar Shampoo is slightly astringent—and if you use it regularly, with daily massage of the scalp, you ought to begin to get the better of that excess oil. But probably for sometime you will have to wash your hair at least once a week to keep it fluffy.

Dandruff—and a remedy from the pine woods!

Dear Jean Carroll: I am having trouble with my hair—it is coming out in bunches, truly. Looking through the hair, I can see dandruff, lots of it, especially where my hair is heaviest. I have tried everything I can think of.—Mrs. A. W. A., Pittsburgh, Pa.

I don't want to alarm you but something should be done at once. Dandruff should be checked before it becomes so serious. For years, physicians have prescribed pine tar for dandruff. Use *Packer's Tar Soap*, shampooing every two or three days at first. Massage the good piney lather into your scalp. If eight or ten Packer shampoos don't show a real improvement, go to your own physician for further help.

My dear Miss Carroll: Some good news. I want to tell you of the satisfactory results I've had from following your directions. My hair was dreadfully dry, falling out so badly I scarcely had any left. And it was mousy and horrid looking. I have been using the Olive Oil Shampoo (as well as the Tar Soap) and massage as you recommended. And I must tell you that my hair is getting so nice and soft and so shiny I can see the lights in it again. And it scarcely comes out at all, and I have arrested the dandruff! Very gratefully.—Mrs. E. F., Quincy, Mass.

That's a letter to warm any editor's heart! I hope we get many more with the same kind of news. JEAN CARROLL

Radio talks by Miss Carroll on hair-beauty and becoming colors, every Friday 12 noon (Eastern Daylight Time) over the Columbia Broadcasting System.

• • •

If any of the letters above describes the condition of your hair, one of the PACKER products will help. If you have some special problem, write Miss Carroll personally.

Send for samples

(10c for one; 25c for all 3)

JEAN CARROLL, The Packer Mfg. Co., Inc. (Dept. 6-G), 101 W. 31st Street, New York, N. Y. Please send me your Packer Manual on the Care of the Hair, and sample of the Packer Shampoo I have checked. I enclose _____ cents (enclose 10c for 1 sample; 25c for all 3).

CITY STATE

dignity, yet seeking by her tone to conciliate the foolish one. "Where does this Mr. Forsythe live?"

"On th' road towards Bartlett's," Hives responded sullenly. "That's on th' southeast side o' th' hill from your place. He had a girl go back on him, everybody thinks. Anyhow, he lives there alone with his dog—"

"How old a man?"

"'Bout's old as you. I'm gonna kill him some day when I find a good knife. Every time I go past his place he lets Tripe bark at me."

"A sort of recluse, you say?"

"Naw, I said surveyor. An' he reads books that claims all folks was monkeys once an' didn't wear no clothes. I heard Beth Blackmer say he sleeps up to your house now an' then. He hopes he'll see Don Cravenside's ghost. He wants t' arsk it questions. That's how he caught me an' chucked me off. I wanted t' see Mr. Cravenside m'self. I guess he grabbed me thinkin' I was Cravenside. Then he was so mad he kicked me in th' pants. I'm gonna kill him when I get a good—"

"I think my chauffeur's coming. If we give you a ride into Lotusville, will you point out the road to Mr. Forsythe's house?"

JOHN FORSYTHE was breaking eggs absently into a skillet—in a cavernous ell kitchen—when a limousine's headlamps lighted his barn-front. The porch door stood open. With the big motor silenced, Tripe, the ever-watchful, came up across the orchard. With a long, furry growl the dog leaped the wall. John stepped to the door. He knew that growl's meaning. . . .

The woman in the limousine paused on its running board.

"Are you Mr. Forsythe?" she asked in the starlight—when the sullen, silenced Airedale had been ordered to the barn.

"I am," the other answered, awkwardly wrenching the apron from his waist.

"I'm Irene Cravenside. Donald Cravenside's wife!"

She saw the man start. It gave her self-confidence.

"I hope I'm not intruding. I suppose I should have written. The truth of the matter's been, I haven't known your name. That is, I mean, as caretaker of our property—"

"You're not intruding. I'm rather glad you've come."

"I decided the best course was to come up here deliberately, seize the dilemma by the horns, so to speak, remain here for a length of time and—well, rest, perhaps, from the strain of the ordeal I've been through."

She said this last as though it were a "feeler" to determine his knowledge of the Cravenside Enigma.

"I think I understand," John Forsythe said simply.

"I've always been curious to visit Don's homestead. Our marriage took place abroad, as you know, and returning to America, we lived in Philadelphia. Then, when Donald—but we'll speak of that later." She had stepped to the ground. "Just at present, I'm wondering if you'll go up with me and introduce me to the house while Katrina makes at least one chamber inhabitable?"

"Tonight?"

Digitized by Google Original from UNIVERSITY OF IOWA

"Certainly, tonight. Is there any good reason why it isn't advisable?"

Forsythe didn't answer. He seemed chagrined that this lady had so found him, cooking his own food, tied up in an apron. Hospitality demanded he invite her inside. Yet how could he take her through his badly cluttered kitchen?

"*Something's burning on your stove!*" came her sudden exclamation. She was looking toward the door where the lamplight flooded out.

The interior was smothering in bluish fumes of frying.

"I'm alone here," said the man, obviously vexed now that a strange woman, a perturbingly pretty woman, must call his attention to such culinary carelessness. "I'll bring out some chairs. It's cooler on the porch." And he started toward the door, requesting, "Please wait!"

But the woman didn't wait. Not, at least, in the yard. The owner stalked inside and caught up a towel. Wobbing it as a holder, he juggled the skillet from oilstove to sink. Black objects within it resembled curled leather. His early evening caller followed to the door. . . .

THIRTY-EIGHT years old he was, a cordy six-footer in khaki shirt and trousers. The legs of the latter were laced into brogans. His forehead was high; his jaw was clean-shaven. Copper-hued hair was silky-fine in texture. It lay down smoothly on a well-shaped head and grew in sideburns down two firm temples.

His eyes were cool gray, though good-humored wrinkles softened their corners.

This government topographer turned and saw the woman. She seemed watching him with interest, as though puzzled by his bachelorhood. She had pulled on her hat since coming from the bridge; a smart straw turban now hid her dark tresses. Her well-formed shoulders, too, were covered by a scarf. Yet the crudeness of that kitchen enhanced her feminine grace. John flushed beneath the tan that bespoke his outdoor life.

"That's that!" he laughed lamely. A sharp hiss of steam greeted water in the skillet. He left it in the sink.

"Have I ruined your dinner?" his caller consoled him.

"I guess I won't starve."

"Katrina and Jamie will open the house. Provisions, I presume, can be gotten at the store. Perhaps within an hour I can offer you a meal—"

"You mean to *stay* up there tonight?"

"Certainly. Why not?"

"But there's hotels in Hebron. Moreover in Paris. You'd better go to one till your house is put in shape."

"What shape is it in? You've slept there, I'm told."

"Who said I'd slept there?"

"A crack-brained fellow I met down by the bridge."

"Well, yes—I've slept there," Forsythe admitted. "But it's different for you. I was after something—to sort of learn something—"

"Hoping to see certain . . . rumors verified?"

"Mebbe," he answered. "Anyhow—supposing we talk a bit before you start up there. After you know particulars of what's happened 'round here lately—and you still want to sleep up there—well, it's your funeral. Come in my 'study.' It's

(Above) The September, 1776, dedication of Lt. Col. Joseph Wait's quaint Vermont Marble tablet, erected "by his brethren in arms" in Clarendon, Vt., where it still bears his Revolutionary War record.

(At left) A modern memorial tablet recently designed and carved from the same type of marble by the Vermont Marble Company.

150 YEARS APART . . . *Still the Nation's Memory Stone*

From Maine to California there are Vermont Marble memorials representing every generation of Americans since 1768. Today they proudly bear testimony—perpetuating family traditions, cherished names and personal achievements.

For the Tomb of the Unknown Soldier and the inspiring all-marble structure of the Memorial Amphitheatre near it at Arlington, the U. S. Government selected Vermont Marble. It has always been America's noblest Memory Stone.

For memorial or building purposes, Vermont Marble is America's matchless symbol of established culture and permanence. It is strong, enduring and beautiful. Vermont Marble memorials and modern designs are available in every American city through Master Craftsmen in Marble.

not very neat but it's no worse than this kitchen."

The woman took those dark, troubled eyes from him with an effort. But being invited into his "study" was obviously not distasteful. She entered almost eagerly.

"I don't receive many lady callers here, though the men of the town often make this place a clubroom," he apologized.

Irene made no comment. Again her eyes studied him. How had such a handsome, forceful fellow kept unsnarled from matrimony?

He pulled out a rocker of heavy black walnut, fluffed up the chair's cushion, reversed it—and dumped books and blueprints off a chair-seat for himself. Both of them sat down.

"I hope it's not the courage of ignorance that's brought you up here," John began. "Something's wrong with your house."

"THE first thing I'm interested in learning is whether my husband is up here in flesh. Has he found his way up here to Vermont in some sort of mental aberration? Is he skulking about here, a flesh and blood person? Or can it be possible—"

"*Skulking* about here? Why should he do that?"

"I've no more idea, Mr. Forsythe, than yourself."

"Well, first and foremost, I don't believe in ghosts. But of course there's no smoke without some sort of fire. These Lotusville people wouldn't get all het up and start a lot of old wives' tales without some kind of motivation. Yet my contention is—granted things are weird, there's a logical solution. That's what I'm hunting—a logical solution."

Forsythe dwarfed his chair with his body. The low, cluttered room was surcharged with his virility. An excellent specimen of a man he was to have as an associate when a pretty young woman came bagging a spirit.

"Won't you tell me what's happened? Perhaps I can help," she said.

"I'd like to ask some questions—if they wouldn't distress you. They'd sort of lay a premise."

"I'm perfectly willing to answer any questions."

Forsythe considered—as though choosing his words.

"There's a crazy local yarn, Mrs. Cravenside," he stated, "that an eerie black Shape is haunting this district. It seems to be a man, though no one says for sure. Most always it's seen on the Cravenside property. It moves about on the blackest midnight with quite as much ease as in brightest moonlight. Do you know what an Inverness cape is, Mrs. Cravenside?"

"Yes," Irene nodded. Her face seemed to pale.

"Did your husband ever own one?"

"He had a sort of mackintosh that resembled an Inverness. He was—he was—wearing it the night—that—that—"

"The night that he vanished? Tell me another thing—did your husband ever know how to play the violin?"

"He was—an expert—we were going to a violin recital the night he—"

"Well, it's about that disappearance of his, that I really want to question you. Before I tell you everything that's happened up here, I wish you'd set me straight on just how Donald vanished. I said there was a crazy local yarn hereabouts that an eerie black Shape is haunting the district. But there's a crazier yarn current that Don walked into his own house one rainy autumn night and utterly vanished off the face of the earth. As if such a thing could happen!"

"Yet that's exactly what *did* happen, Mr. Forsythe!"

"WHAT?"

"How well did you know my husband?"

Forsythe slumped forward, staring round-eyed. "I did a lot of work on lumber tracts for old Caleb," he answered, cogitating, "two or three years after getting out of college. That threw me with Don before his dad's death. I knew 'em both over five or six years—well enough anyhow to call 'em by first names."

"You've lived here ever since? In Lotusville, I mean?"

"Except when my job has shipped me 'round New England. I do government work—the Geological Survey. I came back from Maine one season to find Caleb had died and his boy gone to Europe. Don never did strike me as having any stomach for the lumber business. He wrote me, asking if I'd act as caretaker for the old home place, telling me to live there if I found it convenient."

"Well, why didn't you?"

"I wanted my own place, where my stuff could stay put. But I did as Don asked in keeping up the Homestead Checks for the taxes always came through; I went up there once a week and had a look around. Four times a year I had the house swept and cleaned by some woman of the village. I heard Don had married and expected him back—"

"We were married inFrance and stayed three years in Switzerland. Don had two interests, physics and music. He found Dr. Werner, the eminent physicist, in Switzerland, and the two did research work. Tell me, Don never said anything about me in his letters to you?"

"I wasn't in his confidence. It was one of those touch-and-go things, partly business, partly happenstance. But I knew when he came back to America, though I had to get the story of his—er—occultation—from some badly garbled sources. No, he never said anything in his letters about you. They were mainly business letters. About his disappearance . . . you really mean he went into a house, his own house, and never came out?"

IRENE CRAVENSIDE pulled off her hat. She fluffed up her hair with long, shapely fingers.

"Yes," she said faintly. "My husband vanished in his own house, where every possible exit was locked *from the inside.* Last October it was. Seven months ago. And in all of those months I haven't heard a word. No suggestion has come of where he might be, what could have happened, how it came about. No suggestion, that is, till one of my uncle's salesmen, stopping in Hebron, heard about the Homestead—the 'ghost,' I mean. He wired it to the office. I came up at once.

"I met my husband in France," Irene went on. "We lived in Switzerland and a little time in London. When we finally came home, we went to Philadelphia. I was born in Philadelphia. All my people lived there. But we settled there chiefly because my uncle Ludwig offered Donald

THE RELIABLE
KELVINATOR

Almost as a matter of course, those who wish the finest of automatic electric refrigeration invariably choose Kelvinator. The very name stands for proven reliability.

Food shelves at convenient level —no stooping. No exposed mechanism. You can have Kelvinator Electric Refrigeration installed in your home for as low as $195

Today, in the 1929 Kelvinator, it also stands for supreme operating silence, and for all that is new and at the same time proven in an industry which literally began with Kelvinator 15 years ago.

Every Kelvinator brings every Kelvinator superiority of automatic operation and low-cost refrigeration to every owner. In addition, Kelvinator offers the widest choice of beautiful cabinets, and combinations, in the market.

Since an electric refrigerator is a life-time investment, every buyer owes it to himself to narrow his selection down to that make which has established its reputation for reliability, efficiency and economy through the years.

No refrigeration choice can be wisely made until you see the new 1929 Kelvinator and learn how you can enjoy its benefits at once, on the basis you can afford, by means of Kelvinator's attractive ReDisCo monthly budget plan.

KELVINATOR CORPORATION

KELVINATOR OF CANADA, LIMITED, LONDON, ONT.

THE FINEST IN ELECTRIC REFRIGERATION

his laboratory. My uncle, you should know, is a manufacturing chemist—"

"What sort of work was your husband engaged in—that he needed such a workshop?"

"Donald had a theory that light is an infinitely fine form of matter. Or rather, perhaps, fantastic as it might seem, that every form of matter—all physical substance—is a manifestation of the phenomenon known as light. The light we're able to see with our eyes is only one phase—a very crude phase—of light in its real essence. Donald was even ready to go so far as to claim that light is the real carrier of the other phenomenon known as life—that the life germ in every protoplasm is planted there by light, though it might be a form which man hasn't discovered."

"Darned interesting subject. Were you interested in it with him?"

"No," came the answer—a rueful answer—"not then. But I've learned a lot since, trying to find out how my husband could have vanished. Suddenly, in the midst of his intricate experiments, a change came in Donald. He began acting queerly. I noticed it at first in a sort of absent-mindedness—forgetting things—asking for objects right under his nose. I'd come on him at times staring into space. He often scared me badly. His face would hold a look as though his eyes had seen something that somehow hazed his brain. Over a period of time he grew steadily worse—"

"Didn't you ask what ailed him?"

"It should go without saying that he wouldn't tell me. I wondered for a time if he secretly took drugs—not a nice thing to think, yet a possible solution. I persuaded him to put several thousand dollars more insurance on his life, for the sake of the physical examination attendant on getting it. The physicians declared my husband's health was perfect."

"YOU don't suppose he'd stumbled on anything in his experiments that—that—?"

"I'm coming to my own ultimate solution—or, rather, my private explanation—although you may think the strain has turned my senses. His health was perfect, I say, yet his mental lapses grew steadily worse. He muttered to himself. Often he'd insist, in the queerest way, that someone accompany him if he went into town where he had to meet crowds. It got on my nerves. I worried a lot—that the stress of his research might be breaking down his brain. He'd learned, while abroad, to play the violin. I finally coaxed him to go back to his practice. Strange to relate, he acquiesced eagerly. It seemed to give him solace. The night he disappeared, we were going to hear Kreisler."

"Do you know that violin music, of the most mystical sort, has been heard about this hilltop?"

"No, but the idiot boy told me this evening that something taken for a phantom had been seen carrying 'a fiddle,' as he called it. He perplexed me by adding, however, 'that's how Joe knowed him.' I wasn't aware anyone up here knew of my husband's talent on that instrument. For he did have a talent."

"The Shape has been seen by several people, carrying something at times that resembled a fiddle-case. Go on with your story."

UNIVERSITY OF IOWA

"Have you ever been in Philadelphia? Do you know how whole blocks of houses are constructed with walls tightly abutting each other, so that the whole block looks like one long house?"

The topographer nodded.

"Even the residences in the swankiest districts often follow that construction. We lived in such a section, in the end house on the corner of a very narrow side street. Don had been late getting home from the plant. It made us late with dinner. We kept three servants, but all of them had been released for the evening, for some reason or other, by the time Don got dressed. I don't know whether the absence of the servants that night, something that mightn't have happened again the month around, had any bearing on what followed. But, anyhow, we were planning to lock the house until our return from the recital. We finally got out and Don hailed a cab. It pulled to the corner of that narrow side street and we were about to enter, when I happened to glance back. Don, with his customary absent-mindedness, had left all the lamps burning on the floor abovestairs. It seemed a foolish waste of current. It was misting somewhat, but Don said he'd go back."

"THE taximan was witness that he entered the house?"

"Of course Don entered the house. I got into the machine—we hadn't wanted to bother with our own car. The driver backed the taxi from the corner to our front door. We know Don went within, because both of us, the driver and I, heard the door slam, and a moment later we saw the second-floor lights go off. Whereupon we waited for Don to come out."

"You were right in front of the door then, were you?—so he couldn't have come out without your seeing him?"

"We were right before the door. And he didn't come out. I soon got alarmed and went in to see what kept him. As I said, he'd let the door snap closed on entering the hall; but I had my own latch-key in a compartment on my wrist bag. I didn't light any lights at first. I simply called and waited for an answer. But I got no response. Then I did something that heightened the mystery later, though at the time unwittingly; not liking the taximan's looks and fearing he might follow me in, I slipped the chain-hook in place on the inner side of the street door while I took a look abovestairs. Later, on descending, I saw that the hook was still in place."

"How did that action heighten the mystery?"

"Why, it proved that Donald hadn't slipped out from below while I had gone abovestairs. That was most important. In fact, during the next half-hour I made the discovery that every window and door of our home, precisely like that vestibule exit, *was locked from inside*. Don had gone into his own house and absolutely vanished. Nowhere could I find him and neither could the officers."

"Officers!"

"Police whom I called when panic later seized me. Think of it! Not a sign of him was anywhere. I looked in every room, closet, pantry, and possible hiding-place. I even went so far as to look in chests and hampers. The taximan had grown tired

SO EASY TO KEEP IT SPOTLESS!

If good taste says "white or light-tinted walls and woodwork"...

And more and more greasy dust sifts indoors from increasing traffic...

And high-priced domestic help balks at endless scrubbing of walls and woodwork—which you haven't time to do yourself...

How can you have lasting cleanliness and beauty?

Thousands have found the answer in Barreled Sunlight, the paint enamel whose flawless surface *can't hold dirt embedded.* A damp cloth instantly removes every smudge.

•

Barreled Sunlight has a distinctive, rich depth all its own, and is guaranteed to remain white longest.

Extremely easy to apply—flowing freely from the brush and spreading evenly. No unsightly "laps" or brush marks!

Barreled Sunlight is sold in Gloss, Semi-Gloss and Flat Finishes. Cans of all sizes, and large drums. Where more than one coat is required, use Barreled Sunlight Undercoat as the first coat.

Mail the coupon for further information and a sample can.

Also ask your dealer or painter about the new exterior paint, Outside Barreled Sunlight, which is lending new distinction to white-painted houses everywhere.

U. S. Gutta Percha Paint Co.,
33-R Dudley Street, Providence, R. I.
Branches
New York—Chicago—San Francisco.
Distributors in all principal cities.
More than 7500 dealers.

A pure, lustrous white—easily tinted any shade

You can easily tint Barreled Sunlight any shade you wish. It is an "all-oil" product and blends readily with any good oil color, producing beautifully clear, lasting tints. Dealers carry handy tubes of Barreled Sunlight Tinting Colors. Quantities of five gallons or more are tinted to order at the factory, without extra charge.

If you must get your hair WET

finish up with a shot of Wildroot

IF YOU want to keep your hair—always use Wildroot Tonic after a swim, shower or shampoo*. It closes the pores—peps up the scalp, kills dandruff, relieves itching and neutralizes the ill effects of wetting the hair.

The daily use of Wildroot Hair Tonic instead of water on your hair is the best insurance against premature baldness. This safe, reliable hair tonic has been on the market for more than twenty years. Beware of substitutes. For sale by barbers, drug stores, department stores and hairdressers everywhere. Wildroot Co., Buffalo, N. Y.

**Try Wildroot Taroleum Shampoo. A free sample bottle is enclosed with each regular size bottle of Wildroot Hair Tonic.*

WILDROOT

Hair Tonic . . . Taroleum Shampoo

waiting. He came to the door and punched the bell angrily. I sent him for an officer. With this officer's flash-light we again searched the premises. Not a sign of Don was anywhere, not a mark of a struggle, not a clue to his whereabouts. The whole interior of our home was absolutely normal except for one item."

"Yes? What was that?"

"Our lights had blown out. When I first went in and called, I turned the hall switch before going upstairs. I made the discovery that a fuse had defaulted. I assure you I was frightened. My first thought was, Don hadn't come out because he might have touched a wire and got himself 'burned,' as he called electrocution. I made my first round of the premises by the light of a candle I kept on my vanity. Later the officers found the faulty fuse. A short circuit was responsible, yet nowhere could they find it."

IRENE halted. So quiet it was, that from the far corner of the yard came the low voice of the chauffeur talking to the maid. Through the two opened windows their voices could be heard.

"Well," concluded the woman, "that's how Donald vanished. Detectives came and fine-combed the premises. They put microscopes on door locks and window catches. They even found a trapdoor to the roof I hadn't known existed—yet it hadn't been disturbed—a cobweb showed them that. The night passed. The next day. The newspapers got hold of it. All sorts of cranks offered explanations. But the mystery only heightened. My husband had gone off without proper clothes, without taking luggage or much money, without settling his affairs, without a single thought—apparently—of the plight it meant to me. From that day to this, I haven't had a clue to him. Now comes this word of a phantom about the Homestead."

"You said you had some personal explanation?"

Irene hesitated. "Do you know anything about . . . vibration, Mr. Forsythe?" she asked.

"Something," he answered. His cool eye was acquiring a gradual respect for this winsome young widow who mightn't be a widow.

"Do you know that researchers have arrived at a point where they seem to have proved the disintegration of physical matter, its conveyance through a solid, and its concrete rebuilding into its original pattern?"

John shook his head skeptically.

"You can take my word for it, *I've actually seen it happen.* I saw a beautiful rose in a vase on a mantel on one floor of a house dissolve into air. A while later that identical flower was reassembled on a table two floors above, in the midst of a group of people, two closed and locked doors intervening and neither of them opened while the thing was happening."

"I don't believe it!"

"No? And neither does an African negro believe in ice. I tell you I've seen it happen, because I had marked the flower with a small, secret mutilation that no one else knew about. The rose, when it reappeared, had that private mutilation."

"Granted such a thing can happen, what's its relation to the mystery of your husband?"

"I'm on the verge of accepting, therefore, that there may be such a thing as some disassociation of the cells of the body—a dissolution into original cosmic energy perhaps—that can permeate or escape through such solids as walls—"

"Stuff and nonsense, Mrs. Cravenside!"

"I'm on the *verge* of accepting it, I say. Whether this disappearance of my husband proves or disproves it, is something to be determined. But I've traveled in India and seen things there that balk the understanding. Since Donald vanished I've done much investigating. Physicists like Lodge and Millikan—to say nothing of Faraday and Maxwell, who laid the groundwork—have demonstrated that matter as we know it, even the substance of our bodies, is nothing in the final analysis but a manifestation of etheric energy. Break down matter into atoms, break down atoms into electric granules, and you find the basic unit of all earthly substance is a so-called electron revolving around a proton. In other words, as I understand it, there's no such thing as matter. There's only electric energy manifesting *of*, and *in*, the ether. If Dr. Millikan in California can send his cosmic rays through twenty feet of solid lead, why mayn't the cosmic energy that represents an assembled human body find its way through the walls of a house? Is that more unique than hearing radio waves in a locked vault a hundred feet beneath the ground?"

John Forsythe sat speechless. He finally shrugged his shoulders. "I might accept disintegration," he declared, "but the thought of reappearance is preposterous."

"Well," began Irene, "after all, people don't *normally* go through doors or windows and then *lock them* on the inside! And there's an old chemist in Donald's laboratory who's succeeded—"

SHE paused. Someone, apparently, was entering the yard. The Airedale barked noisily. They heard swift footsteps, the sound of tense voices.

"She's in the house there," the chauffeur said audibly.

The footsteps came nearer. Someone scuffed on the doorstone at the porch before the kitchen. John Forsythe arose. A man was coming in.

He was a short, stout man in a bowl-like straw hat, with short-cropped chin-whiskers. His vest was unbuttoned on a shirt of blue gingham. Soiled, rumpled trousers were thrust in rubber boots.

"Hello, Joe Gleason," greeted the surveyor.

"I heard Mis' Cravenside—Don Cravenside's woman—was over here with you."

"Yes, this is Mrs. Cravenside. She's just reached Lotusville within the past hour."

"Hives said she was here. Say, you an' she oughta get up t' ol' Caleb's place. I run over here t' tell you."

"What about Caleb's place? You mean the hill Homestead?"

"Yeah. Batty Baldwin see a light in it, few minutes ago. He remembered th' Haunt and aimed t' investigate. The light went out 'fore he got t' th' top—o' th' driveway fr'm th' road. But he claims he's seed Donald. Donald's up in it. More'n that though . . . they's *another spook with him!*"

Digitized by Google Original from UNIVERSITY OF IOWA

John turned and faced Irene.

"Apparently," he laughed, "comes the mountain to Mohammed!" It was a nervous laugh, however. John Forsythe was upset.

"What had we—what had we—better—do?" The woman stood up. Her fingers gripped her hat.

"How do you feel? Do you want to go up?"

"We should go up, shouldn't we? I meant to do so, anyway."

"How many people have been told of this?" Forsythe asked the man.

"Well, Batty come int' th' store excited. Hives had jus' told us Mis' Cravenside was down here. Parker Fitch an' Mike Austin heard Batty's story. They said they'd wait by th' Rock till you joined us. They wanted t' be sure first 'twasn't you Batty 'd seen."

"He really saw someone, did he?"

"He says he stood waitin' at th' edge o' th' hilltop orchard f'r th' light t' appear again, when somethin' went past him fr'm that big clump o' lilacs. Toward th' door o' th' shed. Went right int' th' shed, Ol' Batty claims, *without openin' th' door.*"

"Keep tight hold of your imagination, Joseph."

"That's what Batty said."

"And there's no one up there yet? They're down by the Big Rock?"

"Yep, they said they'd wait."

"ALL right. You go back and tell them to take the Hebron highroad. Tell them to come up from the house at the front. If anyone tries to escape that way they'll see him, or meet him—"

"They's two, Batty holds."

"All right, suppose there are. Mrs. Cravenside and I will go up through the mowing. That'll cover the rear. We'll meet on the hilltop. But be sure you light no lights!"

"Don't worry. No one will."

"All right. Get going. I don't suppose anyone at the store has a gun?"

"Not as I know on."

"Well, whatever happens, don't allow any shooting. We're going on the basis that live human beings are raising all this upset. Besides, you might mistake one another. Now, hurry along. Mrs. Cravenside and I will probably get there first—"

"Why not use my car?" Irene interrupted.

"No, a machine might warn off the intruders. Tell your maid and chauffeur to come up there later—say a half-hour. Get back to the boys, Joe Gleason. And while you're about it, suppose you make sure that LaFlemme youth has no knife. He's too ready to use one and we don't want any blood shed."

"A'right," answered Gleason. With a nod he hurried out.

"What's probably happened," John said to Irene, "whoever is responsible for starting these stories of a phantom, has learned of your arrival and been forced into action—"

"Action!"

"Well, maybe the possibility of your occupying the place has disarranged something or altered unknown plans. You tell your man to wait. If we need him we'll call him."

"It's near enough—the Homestead?"

"On a quiet night like this. Yes," John

How OLD is she..?

SHE has young, smooth, satiny shoulders. She looks young ..... but is she? The shoulders, you see, stay young indefinitely. The face does not.

You see, your face is exposed to all kinds of conditions. It ages. Your shoulders—protected from this constant exposure—stay young.

Sunscorch is weathering in its most violent form

Sunshine in moderation is good. Severe sunburn, however, does more than anything else to age the skin—because it parches from the skin its natural moisture.

When your skin gets sunscorched—smooth in Hinds Honey & Almond Cream. It cools and relieves—instantly. Takes out the heat. Makes the skin soft and dewy fresh again. And to *prevent* that fiery sunscorch in the first place—before going on the beach, smooth on Hinds Cream, and powder over it. It'll keep your skin lovely through long, sunny hours outdoors.

For Hinds Cream protects from all weathering—because it keeps the skin fresh and supple under all conditions. It replaces the natural moisture dried from the skin by sunscorch, wind, dust and all the rest.

Hinds Cream is a fragrant liquid cream. Light, soft and thin—delightful to use. It seeps gently into the skin and is absorbed gratefully

Smooth Hinds Cream into your skin—generously and often

Before going out on the beach, and after you come in—it protects from violent sunscorch. Smooth it on every morning—it protects from the day's weathering; last thing at night—it revives your skin while you sleep; as a powder base—makes the powder cling.

And your hands—Hinds Cream is wonderful for hands! It will keep them soft and white and smooth—lovely to look at and to feel.

Would you like to try Hinds Cream? We'll gladly send you a sample bottle. Just send us your name and address—on the coupon below.

nodded. He yanked open a chest of drawers and took from within a sizable automatic. On their way through the kitchen, he procured a strong flash-lamp.

"How about your dog?"

"I'm locking him in the house here. He'd give us away."

The surveyor called the Airedale. Then he lowered the windows and closed all the doors. Irene gave instructions to the servants in the yard.

"This way," John indicated. "We'll skirt behind the barn."

THE evening was perfect. High molten stars were suspended in clear heavens. The moon was not yet risen, but along the western sky line lay a broad smear of pearl. Their path could be discerned in semi-reality—a faint, light thread winding through growing hayfields and up into dark.

"I'll go ahead," John volunteered. "There's dew on the grass, but not enough to wet you. If anything happens, make a bolt for that light."

"What light?"

"That light shining out of my rear kitchen window. There's nothing but open meadow between the hill and that window. You won't meet with mishap."

Off up through the meadow they wound, away from sheds, gnarled apple trees, farm implements. The night wind was warm on the awn of the fields. Gradually, as they climbed, the Forsythe premises became as a valley. Other trees appeared ahead.

Then a structure loomed above them.

A great ark of a house it was, facing the north. Its roof was high in the front, low in the rear, niggardly of eaves, and generous with chimneys. In the rear it ran out in ell, sheds, and barns. Ragged shrubbery grew everywhere. A nondescript orchard, trees barnacled with suckers, rolled down the slope to the east of the premises. And out toward the front, when the man and woman had skirted some hogpens, Irene saw the arc of a lone, rakish well sweep.

"Tired?" John whispered. He had halted by the silo.

"Not in the least. I'm too excited to be tired."

"Gleason can't even have had time yet to get to the others. Do you want to go in before the boys get here?"

"Supposing we're taken for two ghosts ourselves?"

"I'd soon settle that. Let's try the shed. I think Gleason said its door had been—"

"*Hush!*"

"What's the matter?"

"I hear something!"

Close together they stood in the shadow of the hilltop, the hoary old silo rearing above them. The woman came only to John Forsythe's shoulder. Motionless they waited. . . .

"What did you hear?"

"I thought—it sounded—as though someone were trailing a hand along a wall—an outer wall—over twisted clapboards—listen!—*there it goes again!*"

John heard the sound. An icy fright-feather brushed up along his spine.

"Someone's in this barn above us," he whispered swiftly, softly. "They're pulling something. No, it's in the shed—"

"They're going from the barn into the shed, aren't they?"

"Y-Y-Yes—and if they're human, how the devil are they finding their way in the dark?"

Another spell of waiting. . . .

A cricket cheeped somewhere beneath grass-buried planks. In a farmhouse in the valley toward the north, a dog barked sullenly. As the evening deepened, the piping of frogs grew thinner and thinner. No other sounds. The quiet was eternal.

"Let's steal along the wall," John whispered. "We'll cross along the barn-front and get closer to the ell."

He helped the courageous woman up a mossy embankment, across a yard-space frowsy with chickweed. They got in the gloom of the long connecting ell.

Suddenly, plain, distinct, panic-starting, came a *bump* within the shed! The woman clutched Forsythe. His arm went about her—a masculine instinct. He felt her whole figure, electrically soft.

"Did they drop something or collide with something?" she whispered.

"I'd say, if I was asked, they knocked something over."

John's next impression was a tension of her fingers. But even as he felt them, he heard a long rasp.

A door was opening—a door with rusty hinges. Again the hinges creaked. The door was being closed.

Irene gave a gasp. John's hand pressed her mouth.

They both saw the Thing that had come from the shed.

Most of that hilltop lay eastward. The shed door opened likewise. From the vicinity of that door, eastward into the cleared space moved a vague silhouette—a phantom Shape in starlight—proceeding carefully—heading toward the orchard. A low wall divided the yard from that orchard. In a straight line toward it the silhouette advanced. And then, before it vanished, John Forsythe aimed his flash-light.

DOWN in the mowing he had adjusted its focus. A long, bluish beam now cut through the dark. . . .

"*OH!*" cried Irene.

The light-ray "picked up" the Shape by the wall. Standing motionless an instant, one foot advanced as though feeling for some cue, *paused a bareheaded woman, hair loosened to her waist!*

"Good Lord!" gasped Forsythe.

Tall she appeared, in an old-fashioned frock that fell nearly to her ankles. Both her arms were outstretched as though walking in sleep.

"Who is she? Is she real?"

The figure turned about. She seemed to have heard.

Both hands held before her, she came directly toward them.

Uncanny, it was. Irene squealed in terror. The creature's eyes were closed. Suddenly they opened. Straight into John's light-beam she came on without flinching. . . .

And then, as though to warn her, came another mystery.

From the shadows of the orchard, clear as a bell-note, pure as a chord from a flute in Arcadia, came a strain of sweet music!

Violin music!

It halted the figure. Arms still held before her, puzzled, she listened. . . .

THE YACHT AND MOTOR BOAT GALLERIES AT THE HARVARD-YALE BOAT RACES..NEW LONDON

WHEN stout ash bends to the rhythmic pull of steeled young muscles, then are spirit and stamina weighed for their proper worth! It is significant that here on the Thames, as wherever those of discernment foregather, Studebaker's champion straight eights and sixes should enjoy prestige so deservedly high. Holding *every* official stock car record for speed and endurance, these great motor cars display their mettle in every low-swung line. They bear proudly the look of untiring speed . . . of comfort unequalled . . . of manners urbane and distinguished. Since all this power, beauty and comfort are offered at One-Profit prices, it is not surprising that Studebaker is selling more eight-cylinder cars than any other manufacturer. The car illustrated is The President Eight Brougham for Five, $2350 at the factory, spare tires and bumpers extra. Six wire wheels and trunk standard.

How Big Men Think and Act

(*Continued from page 30*)

then in interpreting what we have observed.

"So important do I regard thorough training in observation that I would make the educational process for all children hinge upon it. I would send school children outdoors to discover how many kinds of trees, birds, and insects they can find. Presently, I would send them back to note the colors, shapes, and other distinguishing characteristics of various species. Children thus taught would come to learn, as we all should do, that accurate observation is one of the most important things in life. Gradually, they could be trained to observe and draw conclusions with reference to more abstract things.

"I REMEMBER the incident which first brought home to me the importance that big men attach to accurate observation. It had been my habit, when taking a vacation, to go to some part of the world where I could learn something. In 1906, I took my vacation in Panama because the Canal was then under construction and I was interested in the big project. The time I had planned to spend there was only half up when I received a cable from my New York office saying that President Cassatt, of the Pennsylvania Railroad, wished me to handle the company's publicity. I was asked to return at once, and to call on Mr. Cassatt on the day of my arrival.

"It was my understanding that President Cassatt had already made inquiries about my work and that at the forthcoming conference I should be expected to lay before him suggestions with reference to a public relations policy for the Pennsylvania. Sailing north I had plenty of time to realize how inadequately I was prepared for anything of this sort. I knew very little about railroading. Aboard ship there were no facilities for getting information. I could think of not a single suggestion directly concerning the Pennsylvania which seemed really worth while.

"Wondering what in the world I should find to say to Mr. Cassatt, I called at his office on the morning of my arrival.

"'How are they getting along down on the Isthmus?' he asked; and in answer I told him some of the things I had seen and heard.

"'What are they doing about malaria?'

"I gave him the details I had on this.

"'What stage is their railroad construction in?' he asked; and I told him. As it happened, I had made quite a study of the Panama railroad situation, going over the line and talking with a number of engineers. Still, back in my head was the thought that my real ordeal, my confession of ignorance, was to come later. Not so!

"At the end of twenty minutes Mr. Cassatt rose as an indication of dismissal. With but a word to the effect that the facts I had given him were interesting, he accompanied me to the door, and said:

"'I understand you are going to take charge of our publicity. I'm glad to know that. I think you are going to like this work. I hope so.'

"'That,' I said to myself when I got outside, 'is the strangest interview I've ever had.' Presently, I came to realize its significance, and I realize it more and more as time goes on. At that time, Mr. Cassatt didn't care in the least about any suggestions I might have offered with reference to the Pennsylvania's publicity policy. He knew that I was unfamiliar with the conditions and had not studied the problem. What he *did* want to know was whether I could convey to him a picture of a situation with which I *was* familiar. With his experience, he knew that a man who is able to grasp the essential facts of one complicated situation, can be relied upon to do the same with almost any other. Also, I believe he must have realized what I, too, have come to realize: *That the man who can really grasp and understand a problem can almost certainly be relied upon for the judgment that will enable him to contribute something toward its solution.*

"Years later I had an experience of a somewhat similar sort with John D. Rockefeller, the elder. It confirmed my impression that men of big affairs are on the alert to test, as to their power of observation, the employees on whom, in one way or another, they must always rely.

"On this occasion I went to Pocantico Hills to lay before Mr. Rockefeller a plan regarding a certain project that had been under consideration for some time. I was full of the subject, and enthusiastic; and I felt, after long study, that I had hit upon just the plan that would meet the situation. Mr. Rockefeller listened attentively for fully half an hour while I presented my views, together with all the facts and conviction at my command. Upon concluding, I felt certain that he was convinced. But Mr. Rockefeller said quietly:

"'Now, will you kindly state all the disadvantages you can think of in connection with the plan you propose.'

"Accommodating myself to that request, I did the best I could, presenting all the objections I knew of. This time, when I finished, Mr. Rockefeller said: 'Very well. I'll think it over.' Then, in his keen way, with a twinkle in his eye, he said: 'Your arguments on the affirmative are slightly better than those on the negative. However, I see that you have given some thought to both sides.'

"FROM my experience I should say that one of the greatest defects that any young man can have is *thinking that he knows a thing when he actually does not know it.* Ask a young man of this type whether he is familiar, for instance, with the organization of the League of Nations, and he will tell you quite positively that he is. But inquire a little deeper as to what he knows about the Council and the fundamentals of its procedure, and you will find that he really is not familiar with it at all. And the vital thing I stress here is *not* his ignorance on this particular subject, but the fact that *he does not know that he doesn't know.* For this shows that his training is sadly lacking in at least one respect, and one on which his whole future depends—thorough and accurate observation."

"A moment ago," I remarked, "you said there were five outstanding characteristics which men of large affairs have in

Do You Make these Mistakes in ENGLISH?

Sherwin Cody's remarkable invention has enabled more than 50,000 people to correct their mistakes in English. Only 15 minutes a day required to improve your speech and writing.

SHERWIN CODY

MANY persons say "Did you hear from him today?" They should say, "Have you heard from him today?" Some spell calendar "calender" or "calander." Still others say "between you and I" instead of "between you and me." It is astonishing how often "who" is used for "whom," and how frequently the simplest words are mispronounced. Few know whether to spell certain words with one or two "c's," or "m's" or "r's," or with "ie" or "ei." Most persons use only common words—colorless, flat, ordinary. Their speech and their letters are lifeless, monotonous, humdrum.

Every time you talk, every time you write, you show what you are. When you use the wrong word, when you mispronounce a word, when you punctuate incorrectly, when you use flat, ordinary words, you handicap yourself enormously. A striking command of English enables you to present your ideas clearly, forcefully, convincingly. If your language is incorrect it hurts you more than you will ever know, for people are too polite to tell you about your mistakes.

Wonderful New Invention

For many years Mr. Cody studied the problem of creating instinctive habits of using good English. After countless experiments he finally invented a simple method by which you can acquire a better command of the English language in only 15 minutes a day. Now you can stop making the mistakes which have been hurting you. Mr. Cody's students have secured more improvement in five weeks than previously had been obtained by other pupils in two years!

Learn by Habit—Not by Rules

Under old methods rules are memorized, but correct habits are not formed. Finally the rules themselves are forgotten. The new Sherwin Cody method provides for the formation of correct habits by calling to your attention constantly only the *mistakes you yourself make*—and then showing you the right way, without asking you to memorize any rules.

One of the wonderful things about Mr. Cody's course is the speed with which these habit-forming practice drills can be carried out. You can write the answers to fifty questions in 15 minutes and correct your work in 5 minutes more. The drudgery and work of copying have been ended by Mr. Cody! You concentrate always on your own mistakes until it becomes "second nature" to speak and write correctly.

FREE BOOK ON ENGLISH

A command of polished and effective English denotes education and culture. It wins friends and makes a favorable impression upon those with whom you come in contact. In business as well as in social life correct English gives you added advantages and better opportunities, while poor English handicaps you more than you now realize. And now, in only 15 minutes a day—in your own home—you can actually see yourself improve by using the 100% self-correcting method.

A new book explaining Mr. Cody's remarkable method is ready. If you are ever embarrassed by mistakes in grammar, spelling, punctuation, pronunciation, or if you can not instantly command the exact words with which to express your ideas, this new free book, "How to Speak and Write Masterly English," will prove a revelation to you. Send the coupon or a letter or postal card for it now. SHERWIN CODY SCHOOL OF ENGLISH, 97 Searle Building, Rochester, N. Y.

common. So far you have named two. What are the other three?"

"*Frankness* is one of them. Straightforward in his own dealings, the man of big responsibilities is quick to sense and to distrust subterfuge. Only the other day I attended a meeting of the directors of an important corporation at which one of the officers read a proposal submitted by a real estate man, concerning a transaction involving the purchase of a site. Having read the report leisurely and having commented upon it fairly, the officer tossed it upon the table with this remark: 'When I got through talking with that man my impression was that I should never believe a word he said unless I could back it up with proof. He isn't frank.'

"In other words, the cleverly compiled report made a much better impression than the real estate man did personally; and as far as his relations with that corporation were concerned, the personal impression he made upon one of its officers was final.

"I REMEMBER the day in 1914 when the younger Mr. Rockefeller summoned me to the first conference I ever had with him. A strike was then in progress among the employees of the Colorado Fuel and Iron Company. The attitude of Mr. Rockefeller and his father, and even their connection with the company, were widely misunderstood. Public disapproval based on this misunderstanding was so intense that it had become a serious matter.

"'I feel that my father and I are much misunderstood by the press and the people of this country,' said Mr. Rockefeller in opening the conversation. 'I should like to know what your advice would be about how to make our position clear.'

"'As I see it,' I answered, 'there is just one thing to do. The coal operators should make their story available to the newspapers, saying whatever they have to say over their own signatures and taking full responsibility for the accuracy.'

"'I have had a good deal of advice on this subject,' returned Mr. Rockefeller after a moment's reflection. 'I have been advised to buy great quantities of newspaper space, and even to start a newspaper of my own. However, such methods do not appeal to me. This is the first advice I have had that does not involve deviousness of one kind or another. The obviousness of the course you recommend *does* appeal.'

"For fourteen years now I have been associated in an advisory capacity with the Rockefellers; and I am as certain as mortal can be that this association would not have come about had I recommended on the occasion I have referred to anything but a course of the utmost frankness.

"Again and again in my experience with the elder Rockefeller this same habit of direct dealing has shown itself in an interesting way. Some years ago, when conditions caused practically everyone to realize that bad times were ahead for business, a certain newspaper publisher desired to obtain from him an optimistic statement to the effect that, with the turn of the year, prosperity would begin. It was my duty to send this request to Mr. Rockefeller. In reply, I received a memorandum in his own handwriting:

"'Always willing to pay the price for my own mistakes; never willing to see the other fellow go broke on my fool guesses.'

"In 1918, I was in London on a mission with the late Henry P. Davison, who had resigned as a partner in the firm of J. P. Morgan and Company to serve for the duration of the war as Chairman of the Red Cross War Council. On one occasion, shortly before we were ready to leave for Paris, Mr. Davison spoke of the difficulty Red Cross workers in France were having in getting cigars that were fit to smoke. Later, he handed me a list, the names of a number of men who were doing extraordinarily fine work for the Red Cross in France. 'I'm going to give each one of those men a box of cigars,' he said. 'What do you think of the list?'

"After looking it over, I named a certain man whose name was not on it. 'He would certainly appreciate receiving a box of cigars from you,' I said.

"For a moment Mr. Davison said nothing—just looked at me in surprise. 'How could I have forgotten him?' he exclaimed suddenly. And the next instant he added: 'I'll tell you what we'll do! We'll send him *two* boxes!'

"'Why two?' I asked.

"'Because,' he answered, '*you* think he ought to have one and *I know* he should.'

"To my mind, this simple incident is a perfect illustration of another trait which I have found to be of vast importance in the careers of big men: *Enthusiasm!* By enthusiasm I do not mean merely self-driving energy, pep, ginger, snap, guts. I mean a kind of enthusiasm that shows itself in a particular way.

"It is an easy thing to dissect and criticize another man's idea, taking out of it its juice and vitality. The lesser man may do that. But the big man—accustomed to looking for new ideas and knowing how the worth-while idea begins with a germ, gathers a nucleus, and later develops its true magnitude—is likely to see in any idea that has merit far more than the originator of that idea.

"Mr. Davison was unquestionably the greatest business man with whom I have ever come in contact. His enthusiasm as well as his vision made him so. When you took any kind of proposal to him, he never began by trying to find its weaknesses, though he might find some later; his *first* concern was always to see if it didn't amount to more than you yet realized. One of his jobs was to pick men for positions in big corporations—the Bankers Trust Company, for instance. Never was a man better fitted for such a task, for he knew how to inspire the men he picked with enthusiasm and confidence.

"SHORTLY after the war began I came in contact for the first time with Charles M. Schwab, and as a result did some work for the Bethlehem Steel Corporation. That first job required plenty of good sense and strenuous activity. Toward the end of the fourth month—I had been so busy with the work itself that it had never occurred to me to send in a bill—Mr. Schwab called me into his office one day and said, 'How do you pay for your groceries?'

"Not realizing at the moment what he was driving at, I answered in an equally light vein, 'Sometimes I solicit contributions from my friends!'

"'I just wanted to say,' went on Mr.

GETTING ALONG SOMEHOW

CERTAINLY they're getting along. One of the youngsters sells papers at the station every night. Another sells its playtime for a few pennies, looking after the more fortunate children of neighbors. Mother addresses envelopes, at fifty cents a thousand, until far into the wee hours of the morning. And, once in a while, when things pinch TOO much, she sells some of the furnishings that beautified the home they ONCE knew.

Certainly they're getting along, but in a way that is one of the big tragedies of American home life. A life of plenty while the head of the family lives — a life of want as soon as he goes.

For procrastination, mind you, is often more than the thief of time. When it tempts a man to put off securing adequate life insurance

protection for his family, it's a thief of futures — of comfort — of lives.

The time to provide adequate life insurance protection for your family is TODAY. Telephone the nearest Provident Mutual representative NOW. Ask him to tell you about Provident

Mutual PLANNED, low net cost insurance. Or, if you don't know his address, write to the company itself. There's always one tomorrow that never comes.

Schwab, 'that you've done a good job for the Bethlehem Steel Corporation. We should like to make it worth your while, and we are ready to pay anything you ask. How much is it?'

"'Putting it that way makes me reluctant to name any figure,' I said. 'I should prefer to have you name it.'

"'But I don't know anything about your business and what you ought to get. I'll have to leave it entirely with you.'

"'Probably you have a figure in mind which you think would be fair,' I said. 'I, too, have such a figure. Write yours on a piece of paper, and I'll write mine. We'll split the difference.'

"Each of us wrote down the sum he had in mind. Comparing them, we found that I had written ten thousand dollars and Mr. Schwab had written twenty thousand. 'All right!' exclaimed Mr. Schwab.' You've lost and I've won five. I owe you fifteen thousand dollars.' And that was the amount of the check.

"I HAVE found that the biggest men are the simplest, the humblest, the most trusting, and they show their *faith* in human nature in notable ways. Once they have come to believe in a man, they are ready to believe implicitly, to trust him to the limit, and hold nothing back.

"Wallace Atterbury, president of the Pennsylvania Railroad, is one of the finest executives I have ever known. His desk is always clear. Everything that comes up he refers immediately to the subordinate who should handle it. He is always ready to receive recommendations from subordinates and always willing, if there is not some valid reason to the contrary, that they should spend immense sums of money in carrying out their own ideas. For an executive to do this requires *faith* and an ability to pick men who are worthy of his faith.

"Another thing: A word much in use nowadays—coöperation—is almost synonymous with the sense in which I am here using the term *faith*. The faith that big executives have in their fellow workers makes for coöperation and the greatness of many of our smooth-running, big business organizations. And I should say that the young man who cannot learn to get along with his associates, trusting them as they deserve to be trusted, appreciating their strong points while not oblivious of their weaker ones, is almost certain to lack that faith in human nature which invites coöperation and makes the true executive.

"I have heard it said that in the past the power to coöperate has been of much less importance in industrial achievements than the power to dominate. In recent decades the size of business enterprises and the scale of their operations have greatly increased. Probably they will continue to grow. Some thinkers on this subject have come to believe that the power of a dominant personality, which was of the utmost importance in the early years of pioneering industrial life, is far less effective in large-scale organizations. Sympathy, unselfishness, a tendency to play for the whole team, those things which enable a man to work effectively with others, are now, I believe, of greater importance to the success of the big executive, and of the young man who is coming on, than ever before."

The Newest and Most Fascinating of All Word Games

Travel Trails

By Arthur Ebenhack and Loren Stout

Take Pleasant Trips Via Travel Trails

THE HONEYMOON TRIP. *Clue Paragraph:* Ideal young man wins most beautiful girl of home-town as his bride! Engaged! Diamond ring! Lovely trousseau! Clear day for the wedding ceremony! After the marriage, the happy couple, showered thrice with old red shoes and rice, escape in a balloon and leave for their honeymoon.

See page 139 for solutions of the June Travel Trails and announcement concerning future trails.

CADET P.H. BROWN, WESTPOINT, N.Y.

WEST POINT to ANNAPOLIS—His renown reflected best the high standing of both institutions.

CHICAGO to DAYTON—Monday on the way to Chicago she was silent about the utensil.

RUTH G. HENDRICKS, DAYTON, OHIO

PATENT APPLIED FOR

GLEN BUTTON, ELDORA, IOWA.

MINNEAPOLIS to ELDORA—Reapmore rice for the morrow before a brown crow reaches the crossroad.

HOW TO FOLLOW A TRAVEL TRAIL

Each word must have exactly the same number of letters as the spaces allotted, and each word must have three consecutive letters that travel straight down (or up) through the same three letters in the word below (or above); and the word before the destination must also have three consecutive letters that travel into the same three letters of the destination, as illustrated by this sample trail solved for you.

The clue sentence with each trail contains a few of the words which can be used as legs of the journey. Proper names are not allowed in solving a trail, unless included in its clue sentence. A word cannot be used twice in the same trail. The solutions of the trails on this page will be published in next month's issue of THE AMERICAN MAGAZINE.

J-M Asphalt Shingles in various shades of red or harmoniously blended, provide colorful variety to choose from.

Use these COLORFUL SHINGLES *to* MODERNIZE *your home*

A ROOF is something more than a means of keeping out the weather. It is the crowning touch on the appearance of the house it covers. To a great degree your pride in your home, and the opinion which others have of it is affected by the roof.

So it is of real importance to every home owner that Johns-Manville Asphalt Shingles are now to be had in a new wealth of color, in new sizes and shapes—in a variety from which you may select a perfect roof for any house.

The very fact that these shingles are made by Johns-Manville is proof positive of their quality, their ability to stand up under years

STANDARD BLUE-BLACK—*no more popular shingle has ever been laid than this attractive J-M Blue-Black.*

of varying weather. For many years Johns-Manville has specialized in the production of roofing materials for every conceivable type of building.

But we have not been satisfied with utility alone. We knew that you could not buy better asphalt shingles than those of J-M make.

The cheerful, new colors of Johns-Manville Asphalt Shingles add charm and value to a house at little cost.

We decided to see to it that their appearance was in accord with their quality. So we called in a committee of architects. The new colors are the choice of these men.

A House Must Be Modern to Be Valuable

No one wants to buy an old-fashioned house. One of the easiest, simplest, most economical means of modernizing the appearance of a house is to cover it with a bright, attractive roof of these modern J-M Asphalt Shingles. You can have them laid directly over your old roofing.

Johns-Manville Rigid *Asbestos* Shingles are

BRITTANY BLEND—*this combination of four rich shingles has been chosen for the roofs of thousands of attractive American homes.*

another famous J-M roofing. They are completely fireproof and will never wear out. J-M Asbestos Shingles never require replacements. You can be certain that the quality of any J-M roofing is the best that expert manufacturing skill can produce.

This is because Johns-Manville Shingles are the product of a great manufacturer who has specialized in roofing for over 50 years. Besides roofing the J-M trade mark is the stamp of authority and quality in many other products—these include insulation for all temperatures and all purposes; refractory cements, packings, industrial flooring, automobile brake lining and scores of other items

TILE RED—*for those who like the warmth of a rich red roof—these brightly toned J-M Tile Red Shingles.*

used by the nation's leading industries.

Not *in the* Headlines

DOWN beneath the big, black headlines which, during the past few weeks, have heralded international heroes, the doings of great society leaders, the shame of men who failed their trust of power, of wealth, or of public position; down beneath all those events in which human beings have played dramatic parts, there has been a vast array of stories in small type, telling of the big little things of life. These have included acts of heroism, demonstrations of character, whimsical human adventures—all submerged by the articles commanding the headlines, yet still remembered and talked about in the communities throughout the United States where they happened, making life more worth living through their simplicity, sincerity, and kindliness

HONORABLE MENTION

That brave and kindly deeds may not be forever lost, honorable mention is accorded by THE AMERICAN MAGAZINE *to a few of these "mute, inglorious Miltons."*

FOR INSTANCE, Dave Carson is the driver of an oil truck in Nyack, New York. Recently, while in the business section of the town, his truck caught fire from overheated brake bands, sparks from which ignited oil and grease under the body of the machine. Thinking only of the danger to the lives of several hundred people in the street and adjoining buildings, Carson stuck to the wheel and raced the truck to the outskirts, where firemen helped put out the blaze before 2,000 gallons of gasoline in the tank were sufficiently overheated to explode.

Rufus Rand, of Minneapolis, recently performed one of the most generous of the acts not heralded in the big headlines. For years he has been building skyscrapers according to the steel-trussed plan which has been in use since tall steel buildings first rose in the Middle West. One day he discovered that L. S. Buffington, now a poor, broken old man of eighty-one, had originated in his youth a system for constructing office buildings with steel-trussed frames and had patented his idea, hoping to make money. The patent made possible the modern skyscraper, but most builders ignored Buffington's rights in the matter, while others innocently violated them. Eventually, so many builders did this that Buffington's patent became worthless to him. When Rand discovered this, he drew a large check covering royalties for all the skyscrapers he had built and sent it to the aged inventor, Buffington, so that in his sunset years he will be far from want.

Merle A. Moltrup, pilot of the Colonial Air Lines, while flying at an altitude of 2,500 feet over Silver Creek, New York, looked down and saw an isolated farmhouse bursting into flames. Swooping down close to the ground, he circled over the house and then back to the village several miles away. The inhabitants were aroused and drove in fast cars to the scene of the fire, reaching there in time to rescue two small boys from the burning house. This was the second time that Moltrup had given warning from the air of fires.

Mrs. Ervine Brown, wife of former Lieutenant Ervine Brown of the United States Navy, now living in Brooklyn, deserves honorable mention for honesty and self-sacrifice. Five years ago her husband misappropriated $124,000 from the Supply Corps fund. Mrs. Brown, learning of it, induced him to return the money he had left, about $85,000. While he went to prison, Mrs. Brown went to work, turning over her diamond ring, a gift before her marriage, and her savings of $2,000 in Liberty Bonds, all the money she had, toward payment of the balance. Mrs. Brown is working in a chain restaurant in Brooklyn, still paying off obligations. Her husband, now released, has joined her and is helping to square the debt.

Mrs. Leonard Lee, of Coleman, Texas, is the driver of one of the volunteer department's fire engines. She has already covered more than fifty fires. The chief complaint about her is that sometimes in the excitement she gets to the fire house and out before the volunteers arrive, which causes some embarrassment to the men. Mrs. Lee's chief complaint is that the truck to which she is assigned can make only fifty-five miles an hour. She has never had an accident.

Cornelius Vanderbilt, Jr., has been holding a meeting out west to arrange to pay off in full all investors in his ill-fated newspaper enterprises. In refusing to take advantage of the bankruptcy law, he follows in the footsteps of the late Reuben R. Donnelley, the great Chicago printer. In 1905 Donnelley's firm failed for a tremendous sum and went through the hands of receivers, but Donnelley spent nearly twenty-four years of his life in devoting his splendid business ability to paying off every creditor at one hundred cents on the dollar. He finished the job six months before he died.

A. W. Stephenson, pioneer air-mail pilot for Montana, may be set down as one of the men who are determined that, crash or no crash, mail must go forward. Caught in a raging blizzard at a temperature of 55 degrees below zero, he was forced down on a lonely ranch between Butte and Helena, partly because his face was so frozen and swollen that he could no longer see. In spite of his injuries, he flagged a train and loaded his mail aboard; and early next morning, when he was able to get another plane, he went on to Salt Lake City to pick up his precious cargo again, without waiting for medical attention for his injuries.

RISING TO THE OCCASION

Newspaper headlines are filled with stories of men and women who went down to defeat in the face of adversity. But in the scattered communities of America there are daily examples of how difficult situations were overcome by the ingenuity that has become the chief characteristic of Americans.

FOR EXAMPLE, E. S. Sholin runs a fox ranch at Elko, Nevada. He discovered that his fancy foxes were mussing up their high-priced furs badly when they dug holes in the frozen ground. So he pondered over ways and means of keeping the fur in good condition. Finally he placed a number of badgers in the fox kennels. As he expected, the badgers promptly began digging their way out to freedom. As soon as they had dug deep enough, Sholin yanked them out and presented the holes to the foxes. Then he set the badgers to a fresh subway job. Sholin hopes to build up a thriving export trade in badger holes for the world's fur market.

A group of New York working girls, whose average wages are thirty dollars a week, found hall bedrooms and cafeterias incompatible with good work and preparation for advancement. Boarding-houses palled upon them, but they did not sit down and bemoan their fate. Instead, the group went to the Bowery Savings Bank and persuaded its officials to underwrite an $850,000 hotel for them. They are going to live in it, pay for it, and eventually own it on a straight business basis.

Old-fashioned paragons whose thirst for education led them to walk ten miles to a country school have little to boast about when Raymond Jaureguy, of Tacoma, Washington, is considered. Raymond commutes one hundred and eighty miles a day to attend the University of Washington. He leaves home in the dark hours of the morning, rides thirty minutes on a street car to the railroad station, where he takes a train for Seattle, and then he takes a street car to the campus, a total trip of ninety miles. "I study on the train," he says. "Nobody disturbs me." Jaureguy's scholastic standing is extremely high.

Our Secret War

(*Continued from page 39*)

A. E. F. units, and also in warnings to the Washington and Chicago police of the race riots that followed their return. After the Armistice the Silent Watchers detected repeated efforts to incite American troops to Bolshevism, in Germany especially, and found Bolshevik messages hidden in a quarter of beef and a loaf of bread.

That other arm of counter-espionage, sometimes even of espionage, the I. P.—what a company was theirs! The Corps of Intelligence Police was probably the most romantic body of men in the A. E. F., suggesting the Foreign Legion or Walker's Filibusters. These picked spy hunters were picturesque from the start, when the first fifty were recruited largely in Old-World New Orleans, by mysteriously worded newspaper advertisements about work for daring men who spoke French and German. Daring men responded!

AS MIGHT have been expected, a few of that first fifty did not make good. But most did, and the Corps grew with the A. E. F., from whose ranks new recruits were picked, given probationary training, and finally made I. P. sergeants, of whom there were as many as four hundred and five, with thirty-four probationary candidates.

The I. P. learned to be just suspicious enough to realize that anyone or anything might be worth questioning or investigating. Often they worked alone, sometimes with the organization of the Silent Watchers, occasionally with the M. P. (Military Police) or the D. C. I. (Department of Criminal Investigation), which was the A. E. F.'s crime detective force.

Broadly, counter-espionage had two hunting grounds: at and near the front, and everywhere else. Contrary perhaps to general belief, the first gave less trouble than the second. Spies do not remain long at the actual front, especially in trench warfare.

The first American sector of the front was in a spies' paradise, north of Toul, facing the St. Mihiel salient. German Lorraine was near enough so that the civil population was somewhat mixed, and many spoke both languages. Crossing No Man's Land was rather safe, since the country was wooded and rough, the front quiet, as successful German desertions frequently showed. No wonder spy stories abounded while the First Division, and later the 26th, served their novitiate there. Dark forms flitted across No Man's Land, mysterious lights flashed, the Germans seemed to have uncanny knowledge of what we were doing, and the answer, of course, was "Spies!"

There were real German spies at the front sometimes, and to thwart them was part of the I. P.'s job. A group of them were attached to each Army and Corps area, to keep up a relentless hunt for strangers, men who could not account for themselves, no matter in what uniform, and to blind the enemy's secret eyes, by preventing among our own men careless talk that might be overheard, by listening

Digitized by Google Original from UNIVERSITY OF IOWA

in on telephone conversations, and by seeing that the secrecy rules about care of important papers and maps were obeyed. They even spread false rumors that G-2 wanted the Germans to hear.

Of course, most front-line Intelligence work was not what is called secret service. The greater part of it came under the other activities, such as observing from ground, airplane, or balloon, intercepting radio, flash and sound ranging, trench raiding, and patrolling No Man's Land at night. The principal object, practically the only one, of those various raids of which you read so much in wartime newspapers, was to gather information; a swift swoop upon a vulnerable point in the line opposite, a quick return with prisoners if possible, or, if not, with shoulder straps and other identifying insignia from the dead, papers, maps, whatever could be found hurriedly in dugouts or trenches.

On the actual front, the only disguise for a German agent was an American or Allied uniform. They tried both, as some doughboys know, especially those of the Second and Twenty-eighth Divisions. The first time the Second ever were in the trenches, near Verdun, a party of Germans in French uniforms, crying *"Français! Français!"* came close, then threw hand grenades, but were routed. The Pennsylvania Guardsmen's experience was more disastrous. The Germans retook Fismettes on the Vesle partly because Germans in American uniforms shouted orders to retreat, even naming an American officer who they said had given the orders. For some time after that there was a standing order in the Twenty-eighth Division that anyone commanding a retreat, no matter who he was, should be shot on the spot.

THERE is no official record of the execution of a spy by the A. E. F. But that does not mean that none who spied on the A. E. F. were executed. Many things happened at the front that never got into official reports. One reason why our records show no German spies killed is that we turned them over to French and Belgians, who usually did not hesitate. In the last few days of the war, the Ninety-first Division, from the Pacific Coast, reached the important town of Audenarde on the Scheldt. Their advance patrols going down to the river were fired on heavily and accurately by German machine guns on the opposite bank, and had to take shelter. Then a little knot of dark-clad Belgian civilians, four years under German domination, came dragging or pushing one of their number.

"Espion! Espion!" they cried. "We have seen him signal the American position to the German machine gunners."

They took him to Captain A. A. Hopkins, chief of the Ninety-first's Silent Watchers, who questioned him, aided by the officer commanding the Belgian gendarmes accompanying the Division for this very purpose. Witnesses and commander (King Albert), all were Belgians, and to them Captain Hopkins turned over the suspect.

If he spied, it was against Americans, but if he was executed, it was by Allies. So with all the enemy agents the A. E. F. caught.

Behind the front, on the Services of Supply, there was less mystery—and

What better proof of quality *than a Surety Bond ?*

Not only built to stand abuse, *but Bonded against abuse*

WE say Dunlop Tires are built so strong they will stand even the severest abuse. How can we prove that statement to your complete satisfaction? You have heard tire claims before. So Dunlop goes further than making claims. Dunlop Tires are *bonded* to make good. A great surety company says to you, *under bond* . . . "if your Dunlop Tires do not fulfill every claim made for them, we will make good."

You know that a Surety Bond is the last word in certainty. And you know that a bonding company is extremely cautious about taking risks. Only the most honest employees, the best products, can be covered by a Surety Bond.

Dunlop tires must be much better tires, to earn such confidence. And Dunlops *are* better. Forty-one years of tire building experience . . . the strongest long-staple Egyptian cotton . . . the toughest tread compound known . . . the finest processed rubber . . . make Dunlops better.

This Surety Bond answers every question you have about a tire

WHAT questions do you ask yourself about a tire? Will it stand rough driving, abuse? Are the side walls strong and sturdy? Will it blow out? How long will it wear?

The Dunlop Surety Bond guarantees Dunlops against blowout, rim-smash, accident, collision, under-inflation, . . . almost every conceivable tire hazard . . . for one full year.

Dunlop is the one tire which can be bonded in this way for one full year, even on heavy hauling trucks. You know what truck service means. You know that a tire good enough to be guaranteed on trucks, must deliver much longer than average wear on a car like yours.

The Surety Bond itself answers every tire question you could have. Mail the coupon for a specimen bond.

Send for Specimen Bond

If you still wonder . . . if you would like to see just how ironclad and how binding this Dunlop Surety Bond has been made . . . send today for a Specimen Bond. We want you to read its provisions for yourself. The coupon makes it easy. Tear it off now . . . your free Specimen Bond will be mailed you at once.

DUNLOP

THE DUNLOP TIRE AND RUBBER COMPANY
Department 703, Buffalo, N. Y.
Please send me free specimen copy of the new Dunlop Surety Bond. It is understood this does not obligate me in any way.

soothing to eyes

Swimming, motoring and other outdoor activities often cause even the strongest eyes to burn and become bloodshot. When this occurs, apply a few drops of soothing, cooling *Murine*. Almost instantly the burning sensation will disappear, and before long your eyes will be clear and bright again.

Millions of bottles of *Murine* are used each year to soothe and beautify eyes. Many persons make a practice of cleansing their eyes with it daily. A month's supply costs but 60c. Learn its benefits!

MURINE FOR YOUR EYES

...and here's a new summer dessert

TRY this new and delicious Marshmallow Date Mousse—notice the delicate and tempting flavor which Mapleine adds. You'll find many summer desserts are enriched by the use of this famous syrup-maker and flavoring.

Marshmallow Date Mousse

Add one teaspoon Mapleine to one cup cream and whip until stiff. Cut up twelve marshmallows and one-half cup dates and add to above. Pour this into a mould and chill thoroughly or pack in ice and salt and freeze.

Alice Bradley's "Mapleine Cookery" sent free upon request.

probably more spies. The area was far greater—all of France but that four-hundred-mile strip from the North Sea to Switzerland so filled with pitfalls for the spy as to be virtually impregnable. Besides, much of the really big information was not at the front, but in the rear; in Paris, the capital; at munition factories, at ports where troops were always landing, at centers such as Tours, headquarters of our Services of Supply, or even the various General Headquarters, Chaumont, Montreuil, Provins.

Every General Headquarters, Allied and German, was watched, and Chaumont must have been watched also, although there is good authority for saying that no German agents were caught there nor any important leak detected. We had no American agent at German G. H. Q. at Spa, but probably we were represented there by loyal Russians who had not deserted to the Revolution. The French, also, were represented at Spa. Guessing that, the Germans had special personal guards for the Kaiser, Hindenburg, and Ludendorff. Though Marshal Foch usually chose small, secluded places for his headquarters, he was watched most of the time, knew it, and joked about it. He even made camouflaged trips to lead his watchers astray.

When General Pershing first reached France, he objected to having anyone assigned to guard him, but Colonel Moreno did it anyway. A former New York newspaper man checked the Commander's goings and comings, and guarded him.

This faithful shadow accompanied the American Commander wherever he went, and once probably prevented an attempt to assassinate him. Whenever General Pershing appeared at public ceremonies, his I. P. guard "covered" the crowd. About twenty feet ahead of the General, he searched for suspicious or unfriendly faces, but especially for men with hands in pockets or women with hands in muffs.

Came an occasion in 1918 when General Pershing passed through a narrow passage in "some place far behind the front," preceded by his guard, whose eyes searched the friendly crowd. Suddenly he pounced upon a woman of rather evil aspect, seized both wrists almost hidden in a brown fur muff. From the muff, he snatched a loaded revolver.

The woman was borne off to local G-2 headquarters. The crowd cheered. General Pershing went on.

Unfortunately, the veil of G-2 still hides the rest of the story—who the woman was, and why the revolver. Hardly for target practice.

ALL told, G-2, S. O. S., commanded by Colonel Cabot Ward, handled 3,706 cases of suspected espionage or disloyalty. The hunt located twenty-six German agents, who were dealt with variously—some allowed to continue sending reports that were intercepted and falsified, some fed false information, some interned, some expelled from the S. O. S., or from France.

In all France there was no greater crossroad of the secret war than Paris. What a place for spying! Full of Government officials, politicians, Ministries of War and Marine, munition factories, thousands of officers and soldiers of every rank from every army and every front, glad to have shaken off the strain and restraint of the front, careless, bibulous, amorous. There were plenty of German agents there, of course. Some were caught—mostly the clumsy ones. Many more undoubtedly worked on, continually sending precious information to Germany by unknown routes. So Paris, more than any one place, worried G-2-B.

That was one reason why, during the fighting, the A. E. F. issued as little Paris leave as possible to our inexperienced and ingenuous young soldiers; why also G-2-B managed to know something about what those did who got there. They were warned, officers especially, to be careful what they said, especially to chance acquaintances, most of all to feminine chance acquaintances. "Most of those little ladies are working for one secret service or another, German or Allied," said the wise ones. "Aw, hell!" said the foolish, and never knew why they were transferred away from important jobs, or, perhaps, just not promoted.

Rather a rigorous crowd, the I. P., guarding the meshes of their web over France. Their password, "*Sairveece!*" took them anywhere, day or night. Sometimes they were in uniform; sometimes not.

AN I. P. was summoned one day to the counter-espionage in Gievres, one of the greatest centers of the Services of Supply, where there was constant fear of enemy spying.

"Do you want a dangerous mission?" asked his chief.

"Yes, sir," replied the I. P., his dark, sharp face lighting, large eyes eager.

"Do you speak good Spanish? Can you pass as a Spaniard among Spaniards—and not get caught?"

"Yes, sir," the I. P. said, still more eagerly. "I lived seven years in Madrid as a boy."

"Good," said his chief. "At a little place called Selles-sur-Cher, near Gievres, we are building the largest refrigeration plant in the A. E. F., the third largest in the world, to store food en route to the front. There is a lot of civilian labor—Maltese, Belgian, Greeks, Swiss, but mostly Spaniards. We have checked up on them, and they're guarded, but there's something wrong. I can't tell you more than that. We'll get you in among them, and you'll have to find out what it is. But we hear they're a tough crowd. Watch yourself."

Pedro Padilla from Madrid came to the Spanish labor camp at Selles-sur-Cher, dirty and ragged, but with a sharp, intelligent face and good recommendations, so he got a job at nine francs a day. He walked through the gate into an atmosphere that, to his sensitive faculties, seemed oppressive with danger.

Immediately he felt himself observed, object of suspicious glances, muttered words, by the polyglot dwellers there, especially the Spaniards whose confidence he was to win. Two or three pointed out his soft, rather small hands and asked one another: "What sort of workman is this?" He was starting wrong, he sensed, so that evening, in the bunk house, he asked in a loud voice what work there was for a painter. "I'm no day laborer," he said. "They told me there was painting to do."

Had it gone over? He could not tell,

Digitized by Google Original from UNIVERSITY OF IOWA

and fell asleep, to dream of threatening swarthy faces, crowding close. He sprang awake, to find a flashlight thrust in his face, behind it the faces of two men he had seen talking, aloof from the rest.

"Get up," said one, "but be quiet. Come with us."

They led him to a dark recess, where they sat down, but kept him standing, with the light full in his face. Then began an ordeal he has never forgotten.

"Padilla," said the first, "you say you are a Spaniard from Madrid. Maybe you are. But you don't look like a workman. We know these Americans think there is something going on here, and blame us for it—thefts, or something, maybe German spying and sabotage. We know they are going to send a secret service man here. You may be that man."

The eyes of both seemed boring into the I. P., whose each particular hair arose and stood on end.

"If you are," the speaker's voice became ferocious, "we'll tear you limb from limb. If you aren't, you have nothing to fear. Now, answer our questions."

THEN began a grilling that was a third degree, conducted by the white-faced leader, aided by the other, who had been all his life in Madrid.

"Where did you live in Madrid?" the leader asked; then: "From that place, how would you get to such and such a school, such a church? What streets would you cross? Who was priest in that church? What kind of house did you live in? Who else lived there? Who lived next door? Across the way?"

Padilla quaked inwardly. But he really had lived in the Calle Zorrilla, Madrid, and most of the questions he could answer, or bluff through. He felt he was succeeding, as he saw, from the corner of his eye, the almost imperceptible nod with which the Madrid man told the leader he was answering correctly. The secret agent was winning the battle of wits. The leader seemed about to admit it, when the man from Madrid lifted heavy-lidded eyes and raised a massive, threatening arm.

"Let me try," he said. The I. P.'s heart sank.

"Who was Garibaldi?" his new inquisitor almost roared.

"Garibaldi?" Padilla exclaimed, cudgeling his brains. "Why, an Italian patriot, I suppose."

"Nobody from Madrid would say that," the Spaniard said ominously. "Who was Garibaldi? Answer me!"

Like a flash of light came a childhood memory.

"That was the nickname for that old half-wit character who went about with the funny uniform and medals—"

"Enough!" the Spaniard interrupted. He pushed the flashlight almost into the I. P.'s eyes. "One more question. If you lived in the Calle Zorrilla in 1898, what happened there? Everyone who lived there would remember."

"Many things happened there," the I. P. protested. "Give me some hint."

The questioner hesitated. "Well," he said, "it concerned a pig."

Concerned a pig, a pig! Another flash, another memory. The I. P. snapped his fingers.

"I know!" he said. "It was the day

IT KEEPS TEETH WHITE

Chew DENTYNE ..and smile!

And here's a tip for *you!* When you smile, it's your teeth that people notice. Never let them grow dull, so you can't be proud to show them in your smile. STERNO CANNED HEAT

Licensed by U. S. Gov't for use only as fuel

war was declared between Spain and the United States. A crowd paraded the Calle Zorrilla, cheering and singing, leading a pig, 'Yankee pig,' dressed in a plug hat and an American flag. In front of the house of General Weyler, they hanged the pig to a lamp-post!"

The Spaniard leaped to his feet and held out his hand.

"You're from Madrid, all right!" he cried.

The secret agent trembled with relief, and cold perspiration started to his forehead. He had passed the test. Eyes and ears open, he began to notice things.

First, he noticed that a few Spaniards played a strange game. When a train went by, all stopped work and watched it until it was out of sight. They made bets on how many trains would pass, in what direction, what sort of trains, supply trains, troop trains, how long the trains were, how many cars. The results were carefully written down and handed to a Belgian who kept the pool—but never returned the lists.

A word to the expert French Commissaire Speciale, M. Bauer, and the Belgian disappeared.

Scattered about piles of lumber, the I. P. noticed what seemed to be round white pills. He picked up a few, which M. Bauer pronounced incendiary tablets of a type the Germans used. Lumber piles were guarded after that.

In a little *buvette* the laborers frequented he saw a Greek hand to the barmaid a folded square of paper. The Spaniards roared.

"Where's your nerve?" they taunted the Greek. "Every day you give her love notes. A Spaniard doesn't make love that way."

The Greek hurried from the place. French agents saw those "love notes" slipped by the barmaid to a railroad man traveling back and forth between Tours and Paris, who handed them there to someone else. Another "grapevine" to Germany was cut.

Through all perils, the I. P. remained undiscovered, and finally, his work done, went elsewhere.

"What was the hardest ordeal of all?" I asked him.

"The hardest?" he repeated angrily. "I'll tell you. One day an American corporal made four of us push him five miles on a hand car, bawling us out for 'Greasers' because we didn't go fast enough. A corporal! And I was a sergeant, and in disguise, and couldn't say a word!"

LAST in this chronicle of defeats and victories of our secret war, comes perhaps the most typical story of all, how three desperate men were caught just as they were about to deal the A. E. F. a serious blow.

In the summer of 1918 picturesque Beaune, of ancient Burgundy, was nearly an American town. Its cobbled, gray-walled streets were thronged with doughboys in olive drab, preparing for the front, or working as part of the Services of Supply for those already gone there, some of whom trickled back now to base hospitals being built just outside town. That made Beaune still busier, livelier, since, to speed up the work, the Americans had brought in laborers varied as they were numerous, who amazed the people of Beaune with speech in many tongues from Spain, Portugal, and the Mediterranean. Rather a turbulent crowd, but we had to have them.

To smooth troubles among themselves, and with Americans or French, the Red Cross had supplied an interpreter, a versatile genius generally called Italian-American, although he spoke also English, French, Portuguese, and Spanish. Pietro was a dark young man, not yet thirty, of winning though not ostentatious manner. By day he was diligently, even ubiquitously useful, in a quiet way, yet in the evenings fond of rather gay company. He liked the rich wine of Beaune and liked to gamble. He would bet on almost anything. Yet he drank and gambled without losing his head. He never quarreled. The Red Cross interpreter was, in short, the ideal secret agent.

Speaking five languages, Pietro had many friends, chief among whom was a Spaniard named Diaz. Like Pietro, he was quick-witted, intelligent; like Pietro, he liked the wine of Beaune, cards and dice; but unlike him, they loosened his tongue, made him voluble, excited. A man of strong passions, the strongest now was a fanatic hatred of the Americans. It had started in the Spanish-American War. He had come to work for the Americans, burning to settle the old score of twenty years before. A thoroughly bad actor, Pietro reported.

THE Spaniard was not bluffing. He wanted to kill, burn, destroy these hated Americans and all their works. With fierce eloquence, he won to him another Spaniard, Ochoa, and a pacifist Frenchman, discharged from the army. Then Pietro began to yield too. They could be real spies, Diaz told him. The chief of the German secret service in northern Spain lived at the home of his parents. Could Pietro steal a censor's stamp and get a letter through for him?

Pietro could, he said, and a day or two later he and his officer read an impassioned offer of the Spaniard's services to the German cause, and an announcement that he had decided his first deed should be to steal and send to the German chief in Spain plans of the hospital the Americans were building at Beaune. Then German airplanes could come and bomb it.

"Nice humane fellow!" they commented, then copied the letter, sealed the original, and sent it on its way. A few nights later, Diaz gave Pietro another letter, this time asking the German chief to send him secret ink and a code, since "my present means of communication is rather risky." Pietro was joining in his plans more enthusiastically. Copies of the hospital plans were left where Diaz could steal them, and then, aflame with success, the three made Pietro one of them.

"We must take an oath!" cried Diaz, "never to desert one another. Death to the Americans! An oath in blood!"

Gathered around a candle-lighted table, they pricked their wrists and signed the oath with the blood they drew. Pietro did not turn a hair.

"Now," said Diaz, "we have stolen the plans and Pietro will send them to Spain. But from there we hear nothing. Let us wait no longer. Let us strike another blow. Not far from here there is a big

Digitized by Google Original from UNIVERSITY OF IOWA

reserve depot of munitions, thousands of shells, powder. Why not blow it up?"

Before the night ended, they agreed that the Frenchman should reconnoiter the ammunition dump.

"They mean business," Pietro told his officer. "We'd better grab 'em."

The next day brought to Beaune a Frenchman high in the counter-espionage service. Quietly and carefully Diaz, Ochoa, and the Frenchman were gobbled up.

"Now," said Pietro, "how about my going to Spain? I know where this German chief is, and I can say I've come from Diaz. Either I can get the goods on him so that we can run him out of Spain, or I can work in with him and his gang and find out a lot about the German secret service."

"Do you know how likely you are to get a knife between your ribs?" his officer asked.

"Sure," said Pietro. "I'll take a chance."

The offer went from Colonel Ward to Colonel Moreno, finally to General Nolan. Then the war ended. That saved the lives of Diaz and the rest, but they got long prison terms after a trial when, for the first time, they found Pietro had betrayed them and swore bitterly in the court-room to kill him when they got out. He is still alive, but no matter where. Pietro was not his name.

For his gallant and valuable service, he was recommended for the Distinguished Service Medal, but did not get it. Still, he got another reward that he valued more highly. Not all his time had been taken in interpreting, plotting, and counter-plotting. He had been courting the daughter of the owner of the café where he ate his meals, a French girl admired and respected by everyone, and like him, quiet. She was astonished when the Red Cross interpreter appeared at the wedding in the uniform of a Sergeant of Intelligence Police. Pietro knew how to fight the secret war.

Lionized

(*Continued from page 29*)

one hundred yards of the critter, while we retire one hundred yards. This'll leave the lion in neutral territory. When both sides are set, I'll fire my pistol an' then you boys close in on him an' do your stuff in five minutes or we keep the thousand dollars.'

"'We'll just reduce that to writin',' says the circus manager, an' he done the same in his notebook. I read it to Mart an' Pete an' we're all three satisfied, so we sign it. Then they retire an' I ride back to the ranch for the boys.

"'Well,' says Pete, when we rejoin him an' Mart some two hours later, 'we've been doin' a lot o' thinkin' on this here problem an' we're free to confess we don't quite see our way clear to cuttin' this here lion loose. We seen him kill that heifer with one little love tap, an' me an' Mart don't quite see how we're goin' to cut him loose an' vamose in time to escape funeral expenses. So we've come to the conclusion we're licked an' had better acknowledge it.'

FAMOUS FEET
how they're kept free from corns

FRANK T. EVERETT . . . *Conductor of the 20th Century Limited*

"Among my friends I'm known as the man who walks from New York to Chicago and back twice a week . . . and that just about describes my job. Up and down the aisles of the train day and night . . . imagine having a corn for excess baggage. Blue-Jay relieves me of that worry."

• • •

Blue-jay ends a corn with gentle ease. The cool, creamy-white pad snuggles down "bulgelessly" over the toe, ending the pain at once. The controlled medication is just enough to remove the corn painlessly, and swiftly. Unskilled corn-paring is dangerous. Blue-jay is safe and sure. At all drug stores. *For calluses and bunions, ask for the larger size Bluejay.*

Blue-jay

THE SAFE AND GENTLE WAY TO END A CORN

1000 HOTEL POSITIONS OPEN!

BE A HOTEL HOSTESS
Hotels, clubs, apartments everywhere are calling for hostesses, managers, etc. Splendid salaries, fine living, luxurious surroundings for *you!*

Hotels, restaurants, clubs, apartments, hospitals, institutions, schools everywhere need trained men and women. Over 70,000 positions paying $2,500 to $10,000 a year open annually in hotels alone. Nearly one and three quarter billions of dollars' worth of NEW HOTELS, CLUBS, and INSTITUTIONS being built this year! Hotels start you at salaries up to $3,500 a year, with living usually included. C. W. Ryder says, "Shortly after completing your course I was appointed Purchasing Agent of a chain of hotels at a 100% increase in salary."

Previous Experience Unnecessary

Totally unacquainted with hotel work before taking the Lewis Course, Mrs. E. L. Davidson is Housekeeper of a beautiful resort hotel. You can do as well. Thru our Simplified Home Study Plan we quickly train you for a well-paid hotel position. Age no obstacle — Lewis training qualified O. O. Miller, 55, for a big pay hotel job. Common school education all you need.

We Put Our Students in Touch With Positions

We train you and put you in touch with big opportunites. All of your training under personal supervision of Clifford Lewis, who has been appointed Managing Consultant by over 300 hotels. Send today for Free Book, "Your Big Opportunity", showing how we quickly train you for a splendid position, and explaining our Money-Back Agreement.

OPPORTUNITY COUPON

Proof!

Our files are crammed with letters like these, which prove that the hotel industry is the field of big opportunity today.

Morris Johnston:—"Now Manager of a family hotel. Your course is essential in hotel work."

Mrs. Kittie E. Hazen:—"October 1st, I started work as inspectress. January 15th, became Assistant Housekeeper. Now Housekeeper of an exclusive club. Your course has been a wonderful help."

Brant R. Jenkins:—"Just made Steward of this hotel. Haven't been in the work a year, yet I fully understand what is required of me, thanks to your training."

New kind of Shorthand

HERE, at last, is the answer to the vital need for an up-to-date, scientific system of shorthand—so simple, so easy, so natural that anyone can learn its fundamentals in one evening. Amazing speed quickly developed.

No need to master a foreign language of signs, symbols, dots and dashes. This new system employs the ordinary letters of the alphabet.

Speedwriting
The NATURAL SHORTHAND

—the only scientific system written with pencil or on typewriter. Adopted by leading business concerns. Originated by Miss E. B. Dearborn, eminent authority on shorthand, who has taught almost all systems for eighteen years in such institutions as Columbia University, Rochester Business Institute, Simmons College and the University of California.

A Speedwriter, Grace O. Moorehouse, states, "After completing only three lessons I took several letters and the work was perfect. I am now employed as a private secretary's understudy at a considerable increase in salary."

Full Details Free

Let us tell you about Speedwriting, the Natural Shorthand, and how you can learn quickly at home. Send Coupon today.

LEARN HOW TO WRITE SHORT STORIES

RECENTLY an American writer was paid $1800 for a single short story. By learning to tell the stories of her dreams this woman has found her way to fame and fortune. You can learn to write, too. A new practical course of instruction will give you the training right in your own home during your spare time. Endorsed by eminent writers, including the late *Jack London*.

Write Today for new booklet, "The Art of Story Writing." No obligation—booklet is free. Also special course in English. Write Today—NOW! HOOSIER INSTITUTE, Short Story Dept., Dept. 1067, Ft. Wayne, Indiana.

HELP WANTED

We require an ambitious person to do special advertising work right in your own locality. Pay is exceptionally large. Work is pleasant and dignified. No previous experience necessary. You simply carry out our instructions. Your full time brings you a handsome income —spare time pays you well. If you are making less than $150 a month write at once for full particulars. Costs you nothing to investigate. I will give you all the facts so you can decide for yourself.
ALBERT MILLS, Gen. Manager Employment Dept.
1426 Monmouth Ave., Cincinnati, Ohio.

You can be quickly cured, if you
STAMMER

Send 10 cents for 288-page book on Stammering and Stuttering, "Its Cause and Cure." It tells how I cured myself after stammering 20 yrs. B. N. Bogue, 11767 Bogue Bldg., 1147 N. Illinois St., Indianapolis.

BABY'S SKIN
is easily hurt. Many mothers protect it by bathing with no other soap than

Dept. 11 Springfield, Mass.

"'We'll throw ourselves on the mercy o' that circus manager,' says Mart, 'tell him we've just been havin' our little joke, an' if he gives us each a ten-year pass, includin' the side-shows, he can have his danged old lion, with our compliments.'

"'We've signed a contract,' says I firmly, 'an' we got to go through with it. I admit I'm kind o' old an' have to gum my grub, but nobody ever accused me o' layin' down on a contract.' An' with that I produce my credentials in the shape of a large surgical cone and a can of ether I've had the forethought to telephone to Tucson for, instructin' the druggist to send both by automobile an' break all speed records gettin' out with it. This messenger I'd met on the road as we jogged back to the lion. 'Now, then, boys,' I says, 'who gives this here king of beasts the anesthetic?'

"Pete was game, the lion bein' gagged, so Mart breaks a large limb off a cottonwood, strips it with his knife an' lays it crosswise over the unfortunate lion's throat. Then I kneel on one side of it, Mart kneels on the other, an' Pete holds the handful of ether-soaked waste to the lion's nose with one hand an' pours with the other the way I told him.

"AS YOU probably know, mister, if you've ever been in an operatin'-room, there's a period, just before the patient begins to go under the ether, when he fights it somethin' awful. It's what doctors call the hi-sterical period, an' the lion sure was hi-sterical. But we stay with him, an' pretty soon he relaxes an' we get off'n him. Pete rolls him over a couple of times, but he's as limp as a dishrag, so we signal the circus people to approach. When they're a hundred yards off I halt 'em. Then our boys retire a hundred yards, Pete an' Mart untie the lion, an' we all three mount up an' jine our friends.

"Immediately all them circus people fade back a couple of hundred yards more, with the exception of some fellers with rifles an' one little feller, who now proceeds to strip off his clothes an' change into a fancy suit, which the britches are red silk, knee length, an' he's wearing socks like a gal. His coat is bright blue with brass buttons an' he wears a plug hat. . . . Then, with a whip in one hand an' a pistol in the other, he stands beside a red an' yaller wagon, with a steel cage on it, which has druv up an' swung into position, with the rear end toward the lion. The lion tamer opens the back door of this cage an' awaits our signal.

"Pretty soon I see the lion quiver. Presently he rolls over an' for a couple minutes lies on his belly an' thinks things over. Evidently, arrivin' at a decision, he gets up on his feet, stretches, an' let's out a roar that echoes through the cañons for fifty mile.

"'He's hungry,' says Pete. 'We never did give him no chance at that heifer, an' now he's wilder'n a prairie fire. He'll eat the first thing he can jump on, an' I hope I may never see the back o' my neck if that feller in the trick suit ain't a-goin' to offer himself for the banquet.'

"It was all too true. That star-spangled eediot walks up nice an' ca'm to the lion, hits him a crack on the rump with the whip, an' yells: 'Alley opp.' The lion prances around like a flash, lets out another roar, an' bares his teeth, whereupon the man in the fancy-dress suit fires a couple of shots in his face an' gives him another flick o' the whip.

"'Back into your cage, Duke,' he yells, 'or these bad cowboys'll eat you alive!'

"WELL, sir, that dog-gone lion took his advice in the speerit in which it was offered. Although still groggy on his pins an' achin' in every j'int, he ain't so blind he can't see that wagon cage with the back door open. He's had enough man-handlin' for the day, an', as far as he knows, it's the only refuge in all that country; so he staggers over to it, an' hops inside, whereupon a feller on the front seat casts loose a rope an' the door closes. The feller in the trick suit bows low an' kisses both hands to us; the circus manager crooks his finger to me an' I ride over an' hand him back his thousand dollars. All is over—almost.

"He bows low. 'As one crook to another,' he says kindly, 'I'd advise you boys to stick to the business you know.'

"'Mister,' I says, doffin' my sombrero an' bendin' low in the saddle, 'what us three know about lion-tamin' now would fill a book. You sure took us into camp, an' I congratulate you. Am I correct in my assumption that your naturally sunny disposition inclines you to give me an' Pete an' Mart each a free pass to your circus, includin' the side-shows?'

"'Considerin' the high price of yearlin's an' the fact that I can get real American money for the space you three outlaws would occupy, I must state, with real regret, that the application's denied.'

"Saying the which him an' his satellites move off with the lion in the general direction of Tucson. Pete an' Mart stare after their dust an' Pete says: 'Well, if that city slicker thinks I'm goin' to pay out good money to see his rotten circus, he's got another think comin'.'

"'Same here,' says Mart.

"'HAVE you two,' I says, 'by any chance, unloaded to our fellow employees of the Lazy Z the intimate details of our deal with this bandit?'

"'Thank Heaven, NO!' says both in chorus, for they was always close-mouthed in money matters an' I never was no calliope myself. So we're not entirely devoid o' comfort.

"'Well,' says I, 'seein' as how all is lost save honor, let's go home an' see what the boss has to say about it.' Which we done the same, an' the boss complimented us highly on our business perception an' loyalty to the payroll, after which he tucks the check in the safe an' tells us if we ain't got nothin' better to do we might take a few staples, some hammers an' wire stretchers, an' mend the fence in the horse pasture."

The old gentleman with the tufts of hair in his ears sighed. "Son," he concluded, "this is sure one Ethiopian world for a white man to dwell in!"

"HENRY FORD TALKS to Young Men!" He talks to them frankly and amazingly. He suggests obvious problems awaiting solution. He tells how industrial leadership may be achieved. A remarkable interview, as you will agree after reading it next month!

Travel Trails Solutions

PRIZES: THE AMERICAN MAGAZINE offers a prize of ten dollars for every original Travel Trail accepted for publication. Send the solution with your trail. Art work not essential. A Travel Trail, to be eligible for the contest, must not be longer than twenty words, including the starting point and destination. Also, it must have the home-town of the contestant as its starting point or destination.

Other suggestions are: Keep all cities and towns of your Travel Trail in the relative positions they occupy on a map. Clue sentence, if included, should carry interesting local facts and contain a few of the words required for traveling the trail.

Strive for an interesting, trail-like design. Limit the letters overlapping between any two words to a number as little in excess of three as possible. This helps to make your trail admit of only one solution. As far as you can, use well-known and appropriate words. You can make your trail sufficiently difficult by traveling from one word to another through unusual three-letter combinations.

Contestants are not limited in number of trails submitted. This month's contest limited to trips to points of historical interest. Send in yours to "Travel Trail" Editor, THE AMERICAN MAGAZINE, 250 Park Avenue, New York City. Manuscripts not accepted for publication will not be returned.

SOLUTIONS OF JUNE TRAILS:

CHILLICOTHE, the, weather, here, rather, carat, Arabian, viands, and, land, Atlantic, Antipodes, desert, certain, Saint Johns Newfoundland, four, journey, our, tourist, isthmus, musically, all, gallon, London, pardon, Paris, arise, visé, cruise, écru, crude, rudder, derrick, ticket, arctic, arc, search, sea, seasoned, one, alone, Ceylon, lone, atone, equator, tort, port, northern, her, farther, far, wayfarers, gateway, communicate, come, hometown, welcome, farewell, are, area, oread, before, forgive, live, natives, sonata, person, corners, Melbourne, camel, surname, sure, picture, tropics, rope, open, slope, orlop, world, words, border, labor, aboard, lard, polar, lariat, arid, ride, torrid, torn, Capricorn, escape, scan, Cancer, American, rich, ostrich, lost, Los Angeles, less, circles, clean, Mediterranean, oceans, KansasC'y, pans, panther, there, CHILLICOTHE.

Sh-h-h----------!

(a secret!)

Not a soul will know just *what* you have done to make your hair so lovely! Certainly nobody would *dream* that a single shampooing could add such beauty —such delightful lustre—such exquisite soft tones!

A secret indeed—a beauty specialist's secret! But you may share it, too! Just *one* Golden Glint Shampoo* will show you the way! At your dealers', 25c, or send for free sample!

**(Note: Do not confuse this with other shampoos that merely cleanse. Golden Glint Shampoo in addition to cleansing, gives your hair a "tiny-tint" —a wee little bit—not much—hardly perceptible. But how it does bring out the true beauty of your own individual shade of hair!)*

Corns go

after this amazing liquid

ONE drop of this new formula and you can wear tight shoes, dance, walk in comfort. Then soon the corn or callus shrivels up and loosens.

You peel it off with your fingers like dead skin. No more dangerous paring.

Professional dancers by the score use this remarkable method. Acts instantly, like a local anaesthetic. Doctors approve it. Removes the whole corn, besides stopping pain at once.

Ask your druggist for "Gets-It." **Satisfaction guaranteed.** Works alike on any corn or callus—old or new, hard or soft.

"GETS-IT" *World's Fastest Way*

Salt Without Savor

(*Continued from page 67*)

for his sin? But nobody did more than nod in acceptance when he spoke it. They told him to make the station his visiting place whenever he could.

So he spent much time with the life-savers. He fished less often now, for he had less idle time to kill. When he had a good haul, he took as much fish as he could carry and trudged off with it to the station cook. And later, when the weather was thick or dirty, he shared watches with the young lookouts.

They were glad to have him; he was keen to be the first to spot a vessel too near shore. He knew ships so well. Steamers they knew well enough. When a steamer came up to a certain bearing and hauled off on her new course, the lads knew she was safe; but sailing craft were different. Old Keith knew instinctively when a sailing vessel was too near, or when she had sea room enough; his tide and wind lore amazed those alert young men of a steam and radio age.

WHEN he had been down there two years, and had become as much a part of the station equipment as the rocket apparatus, a gale of rare violence struck down in a zero spell. Just before the first full blast leveled a gnarled cedar on the cliff that had stood a landmark for a century, Keith had made out against the gathering murk to windward the glint of a full-rigged ship's shortened canvas.

Then the gale and the darkness came, and with both a blizzard of snow so thick that, as he fought his way along to the station, he barely saw the beam of the lighthouse. He stumbled into the boat-house all wind-blown and ice-clad, like a frozen gnome.

"A ship! Too close in!" he panted, licking his lips thirstily. The lads grinned. He was always like that, impatient to battle the storm. The wind rattled the shutters; the surf thudded on the broad beach and shook the station itself. Snow whirled across the night like a blanket, almost opaque. The patrol went out, armored in wool and rubber against the fiendish cold. And Keith went too. He was at the lookout's side when, through a momentary clearing space, the ship came in sight, too near, perilously too near.

"She can't have seen the light!" the patrol shouted.

"She's seen it now, too late! She's jammed on a lee shore!" yelled Keith. There was a shrill note in his voice. The patrol took it to indicate excitement. Keith knew it for triumph. That ship was the Circe. This time there would be no escape. He'd be right there when Talley rolled ashore.

"There's work for you this night!" he shrieked.

That was a night to remember. The fog signal at the lighthouse was set going, though there was no fog, only snow more deadly than fog, since it blinded the sight and made men cover their ears. The patrol from down the beach ran in, reporting the same ship. The crew stood by to the last man, every one dressed for the boat. And the boat was run down to the tide edge, just clear of the creaming sur that survived the hellbroth breaking or the ledge a hundred fathoms out.

The men clustered around the boat ready to run her out. At her bow, mid knee deep in freezing water, Keith crouched, peering into the blinding storm Once the men pulled him back, with kindly humor, praising his ardor. He wa in the sea again as soon as they let go o him. Then came the far-carrying soun of a sailing vessel under stress; and voices raised in shrill alarm.

The boat was started, yet held back The officer was sure the ship would wi clear. Keith muttered between grinnin teeth that she could not, and wade deeper. Half an hour they stood by, peer ing, listening. The clashing of gea sounded awfully near; yet the ship di not strike. And in another clearing flurr they caught a glimpse of the ship, safel on the offshore tack, standing clear of th ledge.

They pulled Keith out of the sea, ha frozen, his lips set in a grin that was no nice to see. Yet they took him to th boathouse and warmed him, thumpin him on the back in fellowship, telling eac other that they didn't make men like tha these days. The officer looked him ov keenly before sending him home to h shack, aroused out of his customary i difference by the example of an old ma so intent on saving life that he riske death by freezing in order to be the first t launch the lifeboat.

"If they gave medals for courageou idiocy, old man, you'd be right in line f the biggest one," he said. Keith tottere along to his shack, grinning still.

He fell ill. Small wonder that he di After the gale passed, the lads, missin him for a few days, went to see what w wrong. They found him delirious, b still pottering about, refusing to give in lie down. They hustled him into blanket built up a roaring fire of driftwood an brought in a huge heap of dry wood, the made him a pot of soup and fed him.

The reaction crumpled him up. He la down and submitted to their nursin Perhaps they saved his life. Anyhow, was kept on the windward side of a ba illness; and they never left him for a wee At the end of that time, he was able to g about again; but he was sorry to see the go. It was a long time since he had felt touch so human.

"Look after yourself, Cap, and l some of the youngsters get wet next tim there's lives to save," they laughed.

HE RESUMED his lonely life, glad whe one of the lads dropped in on him. H watched for spring, and when he had h garden ready for new planting he adde flowers. He scratched his ear awkwardl when he asked the life-saver's messeng to bring him seeds from town. But n body laughed at him for wanting flower Nor did they grin when, on the next tri he asked for more lettuce seed and a pa of rabbits.

When he gazed out to sea, his teet still shone in a grimace. But somehow

Digitized by Google
Original from UNIVERSITY OF IOWA

felt that the sea had defeated him. Soon after the gale the station had heard all about that narrow escape of the Circe. It was the Circe, to be sure; but manned by poor sailors indeed. She had been under a foreign flag for more than a year; a flag never noted for fostering sailors. And how near she had come to crushing him for the second time! For just as wrong a reason as the first.

He went about his little business, finding a new interest in the abounding life of his rabbits. Before summer was well upon him he found himself as keen as a boy for rabbitry. He almost felt glad that Talley had not been in the Circe, and that the Circe had not been wrecked in that bitter gale. By summer's end he knew he was glad.

He changed his habits; rather, he returned to his own natural ways. He kept clean, and fed himself well. And in the end he took to shaving again. The lads at the station had a good time over that. But he was established now. They regarded him as one of themselves. The officer in charge spent hours in his company, astonished at the number of things he could learn.

THEN came a fog which lasted a week. The weather was warm, the sea calm; but the fog was so dense that the light could not be seen a hundred fathoms away. The fog signal was never silent the whole week, until the last day, when it broke down during daylight hours. It broke down just two seconds after a steamer's siren had sounded, groping toward the land. It blared part of an answering note, then broke off and stopped. The steamer's anxious navigator would have a sore problem guessing just what that choked-off note could mean.

Keith was at the boathouse ten minutes after the siren blast. The boat was already manned. The officer and crew were getting ready the gun, to explode a warning if the lighthouse fog signal had failed entirely.

A rumble of thunder vibrated the heavy air, and the sea gave forth a sound as of breathing. A chill air blew the fog into whirls, and the steamer's siren sounded again, impatiently. The breeze freshened, the thunder rolled nearer, attaining that sharp detonation which precedes a fast-traveling thunder squall. The gun exploded with a crash; the fog whirled upward like a curtain before a strong gust, the thunder crashed, and great raindrops fell. Then they saw the steamer.

Just for an instant they saw her turning before the rain came in a sheet with a terrific volley of thunder, and the fog vanished only to give place to a veil of rain as impenetrable.

"Fire the gun again!" the officer said. "I think she's gone clear, but give her a chance."

The steady swish and boom of the rain were raggedly torn by the simultaneous roar of the gun and another duller, heavier crash out there by the ledge.

"She's struck! Run the boats down! Both of them!" the officer shouted, and the beach was deserted in a moment. The roar of escaping steam out there in the hissing rain made grim harmony with the sullen murmur of a rising sea. Keith was left standing knee-deep in the water.

Nonspi . . . Keeps Your Armpits Dry and Odorless

AN ANTISEPTIC LIQUID

DRY and odorless armpits are an absolute necessity to all well-groomed men and women. No one can be at ease or comfortable who is a victim of armpit perspiration and its disagreeable odor.

Dry and odorless armpits are easily and quickly available. A few drops of NONSPI (an antiseptic liquid) applied to the underarms will keep them dry, odorless and sweet.

NONSPI will also save you many dollars by protecting your clothing from those ruinous, discoloring, destructive perspiration stains.

NONSPI destroys the odor and diverts the underarm perspiration to parts of the body where there is better evaporation—and need be used on an average of but two nights each week.

NONSPI, an old, tried and proven, dependable preparation, endorsed and recommended by physicians and nurses, is used the year around—spring, summer, fall, and winter—by more than a million men and women.

Get a bottle of NONSPI today. Use it tonight. Your Toilet Goods Dealer and Druggist has it at 50c (several months' supply) or if you prefer

Accept our 10c Trial offer (several weeks' supply).

The Nonspi Company

alone. He was not of the crew. The boats were fully manned. And to his eager ears came the uproar of panic. That steamer was setting no example of calm heroism, whatever she was.

Keith ranged the shore until a boat appeared, loaded to the gunnels with frightened passengers.

"She's filling, and listing so that only one side of boats can be launched. And those are painted fast to the chocks!" the coxswain of the lifeboat said. The other boat appeared through the driving rain. Small surf curdling on the sand now.

Keith turned and trotted along to his own boat. From the runway he put out to sea, rowing sturdily towards the ledge. The steamer was visible now in the clearing rain, the wind blew hard, and there were wicked breakers all about the stranded vessel. He only turned from time to time to straighten his course; but he made the steamer out to be a moderate-sized cargo-passenger vessel of four thousand tons or so, and he saw the confusion that was making her decks a horror.

When a quarter of a mile away, he rowed in among swimming men. Panicky because of the failure of the boats, they had chosen the sea, and had underestimated the distance to shore. He stopped rowing, dragging men into the boat. And they would have capsized it, drowning him with them. But he was wise.

"Let go!" he warned a frenzied fat man. The man was beyond caring. Keith thumped him over the head with an oar and dragged him in. He did the same to others, until he had the boat full. Then he started rowing, bidding others hang on to the boat's gunnels. So he bore his first freight to safety, left them by the station, and put forth again, keeping out of the way of the other boats.

IN RISING wind and churning sea the boats passed and repassed. Darkness came, with storm. Still the boats sought the living. Only one ship's boat had been safely brought away from the stranded steamer; the rest were broken, or swamped. The life-savers' crew were worn out with long hours of fierce labor. The station was crowded with shivering survivors.

Keith's boat was out there, still seeking, long after younger men had begun to flinch. The old sailor worked his boat almost instinctively; his muscles and limbs were leaden with weariness. Once, in putting off again, his boat was rolled over by the surf. They tried to keep him ashore. He stumbled stubbornly into the righted boat, and vanished in the gathering gloom.

They were calling a muster among the rescued when next the dark blur of his boat was seen.

"Only the captain and the lookout man left, and we couldn't find them," the coxswain announced.

"Keith'll find 'em if they're to be found," the officer returned, watching the blur. "That old man's a nut on life-saving. Look. Is there somebody in his boat?"

The blur was flung up and over as they watched. It rolled in on the growling seas. Beaten under by it, a knot that might be men was churned in the surf. Men dashed into the sea, reaching. Keith gripped by the collar a stout man, who in turn gripped by the throat a taller man.

The sea separated them. Keith was hurled to the sand. He flung off helping hands, plunging back. When he staggered out again he had another hold on the two tangled men. He pitched headlong to the sand when hauled clear of the water. The stout man, keeping hold of the taller man, spouted water like a whale and punched furiously at the other's swollen face. Then both fell across Keith's body.

TWO days passed.

Once more young men bustled about the little shack, caring for Keith, bringing him back to life out of what had seemed to be a hopeless unconsciousness. He opened his eyes.

"Hello, old whale! Beat the old devil sea again, hey?" A young life-saver stepped to his bedside, grinning. "That was some stunt you pulled off, my lad."

"Were all those people saved?" Keith whispered hoarsely.

"Every last one! Even the last two, who tried to kill each other!" The young fellow gave all the details, crisply. It was a rotten old steamer, full of the poorest immigrants. She was a wreck, a total loss. But all her people were alive.

"They're all gone overland. Queer about that chap you dragged out along with the captain, though. He was the lookout. The captain beat him up. We brought 'em in to look at you. The captain wanted to thank you. The lookout—fellow named Talley—took one look at you and beat it for the woods. Never saw him since. Hullo! What's the matter?"

Keith's eyes closed again. For several minutes he lay silent, but over his face stole a gentle smile. When he looked up at the young man again there was a softness in his old eyes which puzzled the youth.

"I knew Talley," he said. "But he need not have run away from me! I'll get up now. I'm all right."

Keith was pottering about in his little garden once more. The sun was bright, the air balmy. Only that rusty and ragged hulk on the ledge reminded him of the evil the sea might do. Then, in the evening, one of his young friends came running along with a letter, all excitement.

"Say, Captain Keith, you've been fooling us all! Now we know you!" Keith took the letter, and for a moment the old fear entered his eyes. The lad rattled on, while the letter was slowly, fearfully opened. "The captain of that steamer reported to his owners, and our officer heard all about you. Oh, 'scuse me, Cap, read your letter."

Keith read the letter. His face was stony. Then it changed to a softer aspect. The letter was from the owners for whom he had sailed the Circe. It told of learning the truth about that fatal collision off Cape Stiff. It related how Talley's cronies, presuming on their knowledge about him, had irritated him to drunken reprisal; and they had told the owners all they knew.

"We have sold our sailing ships," the letter concluded, "and gone in for steamers. We would like to make amends. We have no doubt that the Board will re-establish you. And if you will permit us to offer it, we shall feel most happy to give you command of the new Circe.

We shall await your favorable reply."

"Good news?" the young life-saver grinned. Keith could only answer with a gentle smile.

But the story was known down at the station. News like that flies. The next day, Keith appeared at the station, dressed in his poor best, with a letter in his hand. He asked permission to ride to town in the station car. And when he had gone his friends discussed his future. Of course, he would go captain of a fine steamer, and they would lose a good comrade.

"We'll give him a farewell dinner here on the shore," the officer decided. "Let me know when he comes back. He's only gone to mail his acceptance. That was too precious to trust you lads with."

Somehow, they missed his return. It was next morning when they saw him down at his shack. They hurried along. And as they drew near they wondered. The old fellow was dressed in new overalls. He moved among his little garden plants. He was singing, softly. And from a big heap of rose bushes on the ground he was planting a screen which would, by flowering time, cover his shack's sunny side with riotous bloom.

A new net hung over some sticks. His boat was upturned, and new cans of paint stood near. Through the open door the sharp young eyes of the life-savers spotted a new picture frame, and in it was a letter with a ship owner's heading.

"Morning, boys!" he hailed them, as they rounded the shack. It was a new voice. It was a new man who greeted them. A vindicated man, and a man content. "Just in time to lend a hand with the boat! And soon I'll be bringing you flowers as well as fish."

They helped him paint his boat, and they returned to the station, wondering at the queer ways of an old man who had found peace after stress, and meant to hold on to it.

The Four Great Immoralities of Christianity

(*Continued from page 48*)

that stand, worry and fear have dropped away. I have gone all over India and have everywhere received the most cordial reception. I have even been invited to preach in the compounds of Hindu temples, and have had Moslem and Hindu chairmen preside at my meetings and introduce me to the non-Christian audiences.

"The keen-minded Indians see a distinction between Christ and Christianity. They are open to the one, but hesitant about the other."

"But what is the distinction?" I asked. "Is not Christianity the religion of Christ?"

"Some of it may be, and some of it may not be—it all depends on whether it reflects His mind and His spirit," answered Doctor Jones. "A Hindu said to me recently, 'If you call me a Christian, I resent it—for it is an insult. But if you call me a Christian man, it is a compliment.'

"Do you get his meaning? A 'Christian' is a member of the church system which India looks on as alien, bound up with foreign prejudices and superiority com-

Corns
new way ends pain

Gives instant relief

The healing power of Dr. Scholl's Zino-pads is amazing. One minute after you apply them you would never know you had a corn. Pain stops instantly. The healing starts immediately.

Removing shoe pressure and the soothing medication is the reason.

Be done with risky methods, such as cutting your corns, or exposing your toes to acid burn from harsh liquids and plasters. Zino-pads are thin, protective, cushioning—guaranteed safe and sure.

Bunions and Callouses

Dr. Scholl's Zino-pads are also made in sizes for Bunions and Callouses. At all drug, shoe and dept. stores —35¢ box.

For free sample (mention size wanted), and booklet, address The Scholl Mfg. Co., Chicago.

plexes, a prop to imperialism. But a 'Christian man' means a man of Christlike character—and in all India today there is no figure that stands so high as Jesus.

"One of the major developments of the last decade there is the widespread adoption of Christ as the highest type of character. When the Mohammedan leader of India wanted to praise Gandhi, he called him 'that Christlike man.' A Brahman asked me, 'Don't you think Mahatma Gandhi is like Jesus?' And the leader of the bitterly anti-Christian organization, the Arya Samaj, extolled their hero Gandhi as 'this modern Christ.'

"BUT hundreds of thousands in India who reverence Christ will not go into a Christian church to hear about Him. A prominent Hindu said to me, 'A Christ cult is growing up in India entirely separate from the Christian church.' Jesus has become naturalized in India. He is part of their heritage now. They are proud that He was born of Asia, that He too came from a subject people, and there is even a local movement which claims that Jesus lived His hidden years in India. They are accepting Christ but drawing a very sharp line as to what they accept of the Church.

"And why shouldn't they? Two years ago a great Christian conference was held at Lausanne, Switzerland. All the leading denominations but one were there, and the purpose was to consider the possibility of reunion of the churches. But they were so far apart that the delegates could not even join together in the Lord's Supper. There were too many questions of validity and rights, too many requirements as to who had the apostolic authority to officiate and who the qualifications to participate in the communion."

In New York recently, the rector of a well-known parish invited a certain eminent Baptist minister to assist in a marriage ceremony in his church. There were personal reasons why the groom wished this outside clergyman to take part, and the rector gladly and freely extended the invitation. But the bride desired that a certain bishop also officiate. When the diocesan bishop learned that a Baptist was to stand up in a Protestant Episcopal church and have part in the ceremony, he sent his ultimatum: If the Baptist participated, the bishop would not. And he called the rector's attention to Canon 23 as forbidding such promiscuity.

"In India," said Doctor Jones, "prominent Roman Catholics have joined in our round-table conferences, where we meet, not to argue, but simply to share our experience of Christ. It is remarkable how close we find ourselves—Catholics, Protestants, High, Low, and Evangelical—when we simply ignore our denominational labels and all that they imply, and think in terms of Christ's standards only. It is the *what* of our religion that divides us; we are all united in the *Whom*.

"Arguments over the mode of baptism, controversies as to who is or is not 'ordained' to do this or that, insistence upon particular rites or ceremonies—these dwindle when you are faced by the appalling problem of sixty million outcastes, the 'untouchables,' who are now awake after centuries of lethargy and are on the move, God knows where!

"Then, there is the remarkable sensitiveness of the high castes to the personality of Jesus. My work in recent years has been almost entirely among these people, the leaders of India's thought and life, the very ones to whom the name of Christ was an affront a few years ago. Do you suppose I could get anywhere with them if Methodism were in the forefront?

"I travel all over India in this work, but I will not hold a meeting in a city unless the missionaries there unite. My itinerary is managed by a Congregationalist, my two active colleagues are a Presbyterian and a Church of England minister, and, I might add, the chairman of the meeting is frequently a devout Moslem, a pious Parsee, or a high-caste Hindu.

"But do not think that all is sweetness and light. As I have said before, we are in a state of *Almost* in India. *Never would united spiritual backing from America and Europe count so much as now—but the mother churches are preoccupied with divisions, differences, petty squabbles for position, power, and prestige, fundamentalism, modernism, the fear of the Pope. Oh, for a cleansing down to relevancy, to worth-whileness, to reality—a clearing of the way for Christ.*

"FOUR great hindrances stand in the way:

"*First* is this religious snobbery that we have been discussing, the ugly side of denominationalism.

"*Second* is the appalling dearth of reality in the religious life of great numbers of professed Christians.

"*Third* is race prejudice.

"*Fourth* is economic exploitation.

"Four great immoralities of Christianity—that is the way the East regards them."

Enough has been said of denominational exclusiveness to make the first "immorality" clear. I went on to ask Doctor Jones about the others.

"Everywhere," he said, "the modern world is demanding of religion that it be lived and not merely talked. This is true of India as of America.

"A woman was speaking on religion to a group gathered in a zenana. She had reached the crucial point in her talk, when one of the listeners got up and walked out. Presently she came back and listened more intently than before. But the interruption had aroused the speaker's curiosity, and after the meeting she asked, 'Why did you go out?—Weren't you interested?'

"The Hindu woman replied, 'Yes, I was so interested that I went to ask your carriage driver whether you really meant these things—whether you lived them in your home. He said you did, so I came back to hear more.'

"The greatest Hindu teacher of modern times, Swami Shraddanand, was at the point of accepting Christianity. He had made up his mind, after a long struggle, to be baptized, and he went to the home of a Christian priest for that purpose. But he saw something there that shocked his moral sense, so he turned back and dedicated himself to Hinduism.

"It is not only the grosser hypocrisies that give the lie to religion. The smugness, the complacency, the dullness, the mechanical routine that passes for religion and is only religious respectability—these things smother the soul.

"Gandhi tells how he was affected by

this religious respectability at a decisive moment in his life. It was when he was a young man, still in his twenties, and had gone to South Africa to look after the legal rights of Indians there. He became acquainted with a Christian family, and at their invitation attended the Wesleyan church every Sunday. But 'the sermons were uninspiring,' said Gandhi. 'The congregation did not strike me as being particularly religious; they appeared to be rather wordly-minded people going to church for recreation or in conformity to custom.' Gandhi found himself occasionally dozing, and was ashamed, but then he saw good 'Christians' doing it too. 'I could not go on like this,' he said, 'and soon gave up attending.'

"India's millions follow Gandhi as they have never followed any other leader. They almost worship him; I have seen crowds standing before his windows with their hands folded in an attitude of prayer, and he has had to ask them to go away. His influence is almost unbelievable. What might it have meant for India—and for Christianity—if that Wesleyan minister and his people had been warm and vital with the religion they professed? Instead, they were worldly, dull, and drowsy at the moment when one of the greatest men of the century was making his life decision. And though Gandhi has made Jesus his great exemplar, he has definitely announced that for himself the way must lie through Hinduism.

"In his youth the leader of the anti-Christian movement in China was a student in an American university. He told me that while there he decided to become a Christian, and went to a revival meeting to seal his decision. But the preacher was a sensationalist and the thoughtful Chinese decided to wait. He went back to the revival a second night and found that the evangelist was trying to whip up results by the same empty phrases and showy tactics. The student revolted from the shallowness and unreality, and on his return to China became the bitter opponent of Christianity.

"Would it be unfair to say that the shallow preacher in America was blocking the way of Christ in China?

"BUT it isn't only the occasional foreign student who is revolted by smugness and artificiality. Our own students, the boys and girls in our colleges, the young people who are entering business, who are at the formative and decisive periods of their lives, are not fooled.

"Reality is the deepest demand of this age, in spite of the prevalent materialism and cynicism. A student chaplain was recently quoted by the New York Times as saying that there are a million college students in the United States, but practically no religion in the colleges. On this point I can speak only from experience in two large universities, one in the United States and the other in Canada. I visited them by invitation in 1928.

"And as I talked to those students I forgot all formality, and they forgot it. Never have I had closer and more sympathetic attention from an audience. At the close of the addresses I asked for a show of hands, and more than half of the students asked for prayer.

"The groping for reality is not confined to the young people A big business man,

WORLD'S FASTEST "TWIN" BOAT MOTOR

DAD, give your *championship* boy a *championship* motor — a genuine Evinrude, world's fastest twin. On rowboat or racing hull, he'll be up in front—and for fun, not even flying compares with "Evinruding". Digitized by Google Original from UNIVERSITY OF IOWA

formerly member of the President's Cabinet, asked me to have lunch with a group. He had read my book and wanted me to talk on those things to his friends. It was a very exclusive club to which he took me, and I found that the group consisted of several millionaires. As we talked together after eating, that luncheon gathering gradually changed. These were no longer millionaires—they were men wanting God. A business man took me in his car to my next appointment, and as we rode along he said, 'I didn't propose this trip for nothing. I want you to pray for me, please. I have money, possessions, everything but the real thing—I haven't got what you've been talking about today. And I want it.'"

In another American city a wealthy society woman asked Doctor Jones to dine at her home. "As we sat at the table and she talked, I wondered why she had invited me," he said, "for she talked a language I hardly knew, sophisticated society idioms I scarcely understood."

But at the close of the dinner, she said, "I have read your book. Somebody inveigled me into reading it. I wasn't interested and dipped into it only to keep a promise. After I started I had to read it through. Then I sat down by the fire here to think it over, and a warm, healing presence came into my heart. Since then I've been straightening up my life.

"I used to be snobbish and use people to my purposes, and throw them over when I was through. But since reading that book I feel differently—more charitable. I had been asked to be president of one of the musical societies, but I said, no, there were too many Jews in it, and I didn't want to mix. But now I think I'll take the office. I'd like to meet them. And I'm ashamed of my snobbery, my selfishness, my hatreds. I feel this very deeply. Now—what do you think has happened to me?"

Doctor Jones said, "I think you've been converted."

"And note," said Doctor Jones to me, "that its first fruit was the recognition of brotherhood. A person cannot pattern his life after Christ's and at the same time snub or lord it over other people. And that brings us to the third in our list of hindrances—race prejudice.

"RECENTLY, on the train, I noticed a Pullman porter reading a book on Bahaism. I asked why it interested him, and he said, 'Because it teaches me brotherhood.' 'Doesn't Christianity?' I asked him. 'No,' he answered, 'not this kind of brotherhood—this is apart from race.'

"Is our Christian brotherhood limited to the white race? It is even more limited in practice.

"Jesus was born in Asia. Therefore He could not get into that Christian church in South Africa of which Gandhi tells, for a sign on the church door reads, 'Asiatics and Hottentots not allowed.' A friend of mine had said in an address that Jesus was probably not a white man; and a woman came up to him trembling from head to foot—the bottom had dropped out of her religion because of the suggestion that Jesus may have been not so white as we are today.

"When we think of the Jew we picture the Jew of today, who has been in northern lands and under cover, out of the deserts

Professional

A special technical school with concise but comprehensive course in Electrical Engineering designed to be completed in **ONE COLLEGE YEAR.** Non-essentials eliminated. Thorough knowledge of underlying principles emphasized. Theory and practice are closely interwoven in class-room and laboratory.

ELECTRICAL ENGINEERING

The course is designed for earnest, ambitious young men of limited time and means. Curriculum includes mathematics, mechanical drawing and intensive shop work. Students construct motors, install wiring, test electrical machines. Graduates are qualified to enter the electrical field at once.

Bliss men hold responsible positions throughout the world. Thoroughly equipped fireproof dormitories, dining hall, laboratories and shops. **Prepare for your profession in the most interesting city in the world.** School established 1893. Catalog on request. Address

BLISS ELECTRICAL SCHOOL 27 Takoma Avenue Washington, D. C.

NEW MEXICO SCHOOL of MINES

Offers 4-year college courses in Mining, Metallurgical, Geological, and Chemical Engineering, and General Science. New Buildings. Excellent Equipment. Strong Faculty. Required preparatory subjects offered. Near metal and coal mining districts. Summer attendance not required. Tuition, dormitory rates and other expenses unusually low. Delightfully mild and healthful climate. Catalog on request.

REGISTRAR, Box P-1, SOCORRO, NEW MEXICO

CHIROPODY

AN UNCROWDED PROFESSIONAL FIELD

Thoroughly trained Foot Specialists needed everywhere. Growing, remunerative branch of medicine. World's largest school offers 2 year course. Degree: Doctor of Surgical Chiropody. 17th successful year. Nationally known staff of chiropodists, physicians, surgeons, orthopedists, chemists. 18,000 treated annually in clinic. Finest scientific equipment. Requirements to enter: High School diploma or equivalent. Chicago offers many opportunities for employment while attending school. Write for catalog. Dept. 2102,

"Which Man Shall I Promote?"

WILL your employer think of you when the next good position is open? Will he say, *"There's a man who is training himself to handle bigger work,"* or will he pass you by as just an ordinary routine worker?

Your employer is watching you more closely than you may think. He's constantly checking up on your work, your abilities, your ideals, your aspirations. He knows the kind of man you *are* and the kind of man you *want to be.*

He's willing and anxious to pay you more money the minute you prove that you are worth more money. But he can't take chances. When he promotes a man, he wants to be sure he will make good.

Decide now—*today*—that you are going to be ready when your chance comes. Choose the position you want in the work you like best—then train for it. You can do it in your own home through the International Correspondence Schools. Write today for an interesting descriptive booklet which tells the full story. It won't cost you a penny, but it may be the means of changing your entire life.

INTERNATIONAL CORRESPONDENCE SCHOOLS
"The Universal University"
Box 7463-F, Scranton, Penna.

Without cost or obligation on my part, please send me a copy of your 48-page booklet, **"Who Wins and Why,"** and tell me how I can qualify for the position, or in the subject, *before* which I have marked an X:

and pastures, for nearly two thousand years. The Arabs of today look as the Jews probably did in the first century—and the Arab is brown.

"We proud Nordics were Asiatics originally," added Doctor Jones. "The Aryan race originated in Asia; part poured over the mountains into Europe and across the sea to America, but some migrated down into India, and the tropic sun burned them brown. Our long northern winters bleached us white. The Portuguese came to India five hundred years ago, and their descendants now are as dark as the Indian."

"But there are racial differences?" I asked.

"Each individual should have his chance," answered Doctor Jones. "*The test should be personal, not racial.* The only truly Christian society is one in which every child born in society can have an equal opportunity with every other child to rise to the top if its inherent powers will allow it to do so. And this apart from race and birth and color."

DOCTOR JONES says there is never a lynching or race riot in the United States that the news is not headlined next morning in the Indian papers. "Everything that touches on racial animosities, color prejudice, exploitation of weaker people, is broadcast," he said. "Several years ago I was speaking to a large non-Christian audience in the Punjab when a man at the back of the crowd blurted out, 'What do you think of the K. K. K?' I had hardly heard of the revival of the Ku Klux Klan then, yet the Indians knew of it.

"At another time, I was in the midst of my address when a Hindu suddenly interrupted. 'Just a minute, sir. Before you go on, will you please tell me what you are doing in regard to the rights of Indians in America?' And another, stung to fury, sent up this written question: 'After the passage of the immigration law in America, aren't you ashamed to desecrate the platforms of India with your convulsive dancing falsely called gestures?'"

Doctor Jones said he has often laughed at the "convulsive dancing falsely called gestures," but the amusement soon hardens into seriousness as he ponders the justice of the question.

"For I do feel ashamed when I think of our immigration law," he went on. "Asia's grievance is not against our right to limit or exclude immigration, but against our discrimination. If India, China, and Japan were put on the same quota basis as the rest of the world, only two hundred and fifty people from these countries would have to be admitted. It is estimated that many times that number are being smuggled into the United States annually, and the subject is such a sore point with the Asiatic nations that it is impossible for our government to get their coöperation to stop smuggling.

"Tagore was right when he pointed out that 'Jesus could not get into America under the present immigration law because, first of all, He would not have the necessary money, and, second, He would be an Asiatic.' There is a third count on which He might be excluded—that He was a revolutionary."

Doctor Jones told of a native Indian preacher and his associate who made a missionary trip into a country district. They hired a coolie to carry their baggage. The load they piled on him was so heavy that it shamed them, and to ease their consciences they began to preach Christianity to the burden-bearer. After a few minutes of this the coolie suddenly stopped and threw down the pack. "You pile such a load on me, and then preach such things to me!" he exclaimed in disgust.

"Religion will not salve injustice," Doctor Jones went on. "Gifts to pious and philanthropic causes will not excuse starvation wages to your own employees. Church attendance and Bible reading will not make up for inhuman treatment of servants. You cannot exploit a person and expect him to respect your religion.

"One of the long-standing hindrances in India is the idea that Christianity is the spearhead of foreign domination. 'First religion, then trade, then empire—is not this the order?' asked a Hindu. And a statesman of India said, 'Your Jesus is hopelessly handicapped with the West.'

"In a meeting where these ideas were being discussed with utter frankness, a pompous bishop arose and said, 'Yes, I think the speaker is right; we must be kinder to people.' But people do not want patronizing kindness. They don't want condescension. That day has passed. They want Justice.

"'Jesus is ideal and wonderful,' said Bara Dada, the kindly old philosopher of India, one evening, as we talked for long hours in the dark, 'but you Christians—you are not like Him.'

"WHAT is the answer to all these challenges? I can see none," said Doctor Jones, "unless organized Christianity renounces and gives up these immoralities. When Christian peoples cease to exploit weaker peoples—when they quit discriminating solely because of race and color—when they adopt religion as a life to be lived rather than a lot of things to do—when the denominations begin to practice genuine good will among themselves and also toward the non-Christian world—then, and then only, will the road be cleared for Christ through the highways of the earth.

"There are, according to the last census report, more than fifty million adherents of the Christian church in the United States.

"Suppose Gandhi's suggestion—that 'you Christians practice your religion without adulteration or toning it down'—became the guiding rule of the fifty millions in America! Suppose the fifty millions began to practice the one principle of brotherhood, which underlies the whole program of Christ. What would happen?"

And then Doctor Jones told this story: A Brahman felt rather challenged by the testimony of some Christians at a religious meeting which he was attending, so he got up and said: "You people say you are saved. So am I. As Christ has saved you, so Krishna has saved me." The man in charge of the meeting said, "I am glad to hear that—very glad indeed. Now we are going down to the outcaste quarters to see what we can do down there to help. Will you join us?" The Brahman was silent a moment, and then said, "Well, sahib, I am saved, but I am not saved that far."

"What of the fifty million in America?" said Doctor Jones. "The church rolls have them down as 'saved.' But are they saved that far?"

We Were Happy Till Golf Got Us

(*Continued from page 53*)

night has never been one with which I have had practical experience, but I have actually caught Mrs. Phillips going through my pockets for golf balls and wooden tees!

There is something about a golf ball, new or old, that destroys a person's moral sense.

I buy the wife a quota of golf balls of one make, and buy myself a quota of another make, but I am finding it a big job to keep her supplied. The minute I lay a golf ball down anywhere about the house, it disappears. A man has enough trouble these days to keep strangers from picking up his golf balls without having to watch members of his immediate family.

THIS golf craze came into our lives most abruptly. Less than a year ago a golf club, as far as we were concerned, was a place where men were men and women were strangers. Mrs. Phillips was a golf widow. She knew so little about the game that once when I started forth to the links with three golf balls she said, "What do you want all those for? Have you got to supply the other players too?"

"How you men, grown up and supposedly intelligent, can spend whole afternoons walking across lots in the hot sun is more than I can understand," she often complained. "It can't be good for you. Did you read where that man dropped dead yesterday on a golf course just when he was about to hit a ball?"

Well, up to the summer of 1928 I couldn't give her any satisfactory answer. It looked to me, too, like a pretty goofy pastime. I enjoyed it in a way, though my companions didn't, as I later realized. I was one of those golfers Tad calls the Civil War type—"out in 63 and back in 65." Or perhaps more of a Spanish-American War golfer—out in 98 and back in the same.

Two summers ago I decided to take lessons in the interest of innocent bystanders. Everybody conceded it was about time. Summering in Milford, Connecticut, I placed myself under the guidance of Jimmy Norval, at the Racebrook Country Club. Jimmy is a Scot with a lot of patience and determination, but he has never been the same man since.

It took weeks to get me out of my bad golfing habits. Finally I began to get the general idea.

That was a big mistake. I regret it. Golf has never been the same enjoyable, diverting game since. Before a man takes it seriously and gets the idea he can master it, golf is an amusing outdoor sport. When he surrenders to the obsession that he can make the little white ball go specific places and do specific things, it becomes a responsibility, an ordeal, a worry, and a general nuisance.

Lessons were my undoing. After a man takes golf lessons he generally practices at home. It was my home work that aroused my wife's curiosity. Watching me rehearsing my drive, chip shot and putt intrigued her. She couldn't see how any

IN your neighborhood there are many prospective readers of The American Magazine, Woman's Home Companion and Collier's, The National Weekly. We need boys to deliver these well-known magazines to these prospects. For this spare time work you will be rewarded with cash commissions and such dandy prizes as baseball, football and camping equipment. It takes no experience as we will teach you how to do it.

With your pen and ink write your name and address on the coupon below and mail it TODAY. You will have then started speeding down the home stretch toward money and prizes.

The Money You'll Need For A *Happy Summer*

HAVE you enough? Pin Money Club checks bring so much happiness, not only to its members, but to their families, also.

Mrs. J. W. Parker, a Georgia member, tells us that she always wanted to start a Savings Account. A check she earned in this Club of ours made it possible for her to make her first deposit. You can imagine her happiness.

Marie Smith, living out in Ohio, was happy when her Interest Check amounting to $7.36 came to her. It went into her Church Fund. That must have given her real pleasure, too.

"Five lovely grandchildren to buy pretty things for" is one of the reasons Mrs. Rose L. Porter, California, gives for the joy a recent check earned in spare moments in our Club brought her.

"P. M. C. has changed my outlook on life. Where once I sat and wished and dreamed—now I know that there is a way for those dreams to come true." Mrs. E. J. Gardiner of Utah wrote this letter.

DOLLARS AND DOLLARS FOR YOU

IF YOU are cherishing some pet dream for yourself—a dream that will cost you more money than you feel you can afford to spend, you'd better write to me today so that I can get you started earning money at once. Yes, you can make $25 or more before a month ends. Others have done it and you can, too. Write to me today and I'll send you our beautiful new booklet "The Girls of The Pin Money Club".

Address your letter to:

Margaret Clarke

Secretary, Pin Money Club
The American Magazine
Department F
250 Park Avenue New York City

game could be so difficult as I made golf out to be. One day I found her on the lawn swinging at one of those practice balls with parachute attached. When the ball was hit, the parachute opened and checked the distance. Of course, the short flight always left her with the impression she had driven faultlessly. A little later she had a putting green built on the lawn. It was perfectly plain that she was making the First Big Mistake.

It began to look serious. I hid my clubs, but she bought her own. I tried to avoid the subject of golf at home. I even professed to have lost interest in the game and to have practically abandoned it. But all in vain. One day last summer she informed me that she had taken a lesson that afternoon and that the instructor had told her she showed a natural instinct for the game. I knew then she had crossed the Rubicon.

There was no discouraging her. She stuck to her lessons. One evening I came home for dinner to an abandoned house and found a note reading:

"Am playing in a foursome. Be home late. Get yourself something in the ice box."

Now that the tables were turned that way, it seemed most unfair. Many a time I had conveyed a similar message, but now it appeared a different matter. I realized that golf had entered my home in a big way and that married life would never be quite the same again unless the club imposed an exorbitant assessment, barred ladies from the links, put in bigger water hazards, or suspended members for getting into the wrong fairway.

WITH Mrs. Phillips a golfer and a club member, I began to feel restricted. It meant less freedom of the tees. It meant caution and even censorship. Should I give up golf on the theory one golfer to a home was enough? Should I try to discourage the wife? Should I go on as if nothing had happened? Or should I welcome her to the links and be her little playmate?

Could husband and wife continue in the same mutual respect after one had seen the other swing ferociously at a ball and drive it six or seven yards? Could love survive a score of 138 on a 68 par course?

These were questions for no hasty decision. They took a lot of thought. Mrs. Phillips could have solved everything by deciding the game was too difficult, the fairways too narrow, the water holes too wide, or the golf balls too small. Jimmy Norval could have solved it by telling her she would never make a good golfer. I had hopes in that direction, but he failed me. He told her, in fact, I would never make a good golfer!

Jimmy continued to give Mrs. Phillips the right directions at so much per hour. Her game showed rapid improvement. Then one day she beat me on several holes.

And the worst of it was that it was no accident. She did it again the next time we played. Then came a day when I felt the shame that comes once in a lifetime. We were visiting another club. It so happened that when we came out to play we found a tournament on. The porch was crowded with spectators. Many people stood about the tee. I was most apprehensive about my wife's nerves under such conditions.

"Now don't mind the audience," I whispered. "Just drive as if no one were around."

"I'm all right," she assured me, as she addressed her ball.

"Don't be nervous," I whispered again, forcing a smile in the hope it might give her confidence. "Take your time. Nobody's paying any attention to you."

It seemed hours before she got her stance. Finally she swung perfectly and sent the ball straight down the alley for one hundred and sixty yards.

"Fine!" I said, as I put my ball on the tee, feeling greatly relieved that she had not embarrassed me in front of people.

Whereupon I took a few waggles and a mighty swing, topped the ball, and sent it about fifteen feet! I chuckled feebly in a strained attempt to be nonchalant, and announced that I would shoot another. I did so, worse luck! The second ball went buckety-buckety off into the rough. I couldn't find it at once and had to wave a foursome through. When I did locate it, I took three strokes to get onto the fairway. Meanwhile Mrs. Phillips had been doing her watchful waiting. She was quite disgusted with the man she had promised to love, honor, and obey. And as for me, I was a nervous wreck. Now a golf partner not related to a player would, under those circumstances, make no criticism. But wives are something else again.

"For goodness' sake, what are you trying to do?" asked Mrs. Phillips impatiently.

I ignored the thrust.

"You're just terrible today, aren't you?" she added.

"That must be the whole trouble," I admitted, finally getting a good shot in sheer desperation.

A WIFE is like that as a golf partner. It's inevitable. She feels it her prerogative to be frank. And not until some wives get out on the links and see their husbands struggle with the game do they realize how much frankness is demanded. Every criticism my wife has made of me in any other endeavor has been lenient compared to what she has said about my golf.

And, if you must know it, I haven't always been any too gracious toward her game. It is her contention that I should be a silent partner or dumb opponent, attending to my own game, letting her attend to hers.

But I can't resist the impulse to offer helpful hints whenever she dubs one. In the kindliest spirit I suggest, "Ah, you are lifting your head, my dear!" "Don't get your body into it. Let the clubhead do the work," or "But you forgot to follow through." She doesn't like this. In fact, she says that even if my advice were good, she wouldn't like it. It leads to much feeling. We play a somewhat wordy game. Thirty per cent golf and seventy per cent debate. And what hurts is that she nearly always wins the hole and the argument.

"You and Mrs. Phillips were on the links today, weren't you?" asked a golfing friend recently.

"Yes," I replied. "Did you see us?"

"No," was the answer. "I HEARD you."

Digitized by Google Original from UNIVERSITY OF IOWA

"That must have been on the first nine," I replied. "You should have heard us on the last nine!"

A man makes a mistake when he goes in for golf with his own wife. He should keep his game from his family and, most always, from his best friends. There is no game like it for showing up flaws in character and temperament. A woman can love a man and regard him as her lord and master until she sees him miss the ball and sink the divot. A man can look upon a woman as a great character until he sees how she acts after she takes three swings without hitting anything but buttercups.

Off a golf course Mrs. Phillips is tolerant, patient, philosophical, and good-natured. Time and again I have seen her face great crises with a smile. But when she tops her drive, misses her mashie shot, or takes seven putts, you'd be surprised. She goes all to pieces. I have seen her so broken up and distressed after playing three bad holes that I have collapsed in sympathy.

The same is true of me. I am a fairly good-natured man at home and not easily upset or troubled. My eggs can be burned without causing a riot; I can receive the sad news on a zero morning that the furnace fire is out and not threaten to murder anybody; and I can go out to the garage and find the car stolen without staging hysterics. But when my old "slice" comes back, or I take eleven strokes in a sand-trap, or my ball plops into the lake on the short water hole, nobody would think me the same person.

Golf, I am about convinced, is doing neither of us any good. We should either give up our home or give up our golf. Our home life certainly isn't so cheery and untroubled as it was before we both started going places with golf bags.

WELL, why don't we quit the game? We should, and we decide to do so about once a week. But then we read an article by Bobby Jones or listen to a radio golf lesson and decide to try once more. That's the terrible thing about golf—it won't be shaken off. In almost any other sport, if a player shows no skill, he has little difficulty quitting. But in golf a man whose best score is 180 goes on and on, thinking that some day there will be a miracle performed and he will go around in 70. The game is almost as unfathomable to me today as it was the first day I picked up a club.

Only a few weeks ago Mrs. Phillips and I talked it all over and decided the game was too much of a strain. We admitted we were happy till we met it.

"I think it's hurting my disposition, don't you?" she asked sweetly.

"Possibly," I agreed.

"And there's no denying that it makes a different man of you," she continued. "Sometimes when I see how you act on the golf links I'm really alarmed about you. Let's give it up."

"Let's," I assented.

But it was cold weather then. Today it is balmy and springlike. Mrs. Phillips phoned me at the office. "It's a beautiful day. Let's play a little golf," she urged.

"Let's," I replied, and dropped everything.

The Great Tomorrow

By WALTER B. PITKIN

Professor of Journalism, Columbia University; Formerly Associate Editor of the Encylopædia Britannica

Less and Still Less Brain-Racking

IN THE Great Tomorrow will people work less with their hands and more with their heads? Most people agree with Charles M. Schwab in this belief. But scientists doubt it. They think that we shall work less with both hands and heads. Labor-saving machines first came to the rescue of our big muscles because they were the easiest to invent and aided the largest number of people. But now they are being made for brain-saving. Look at the newest mathematical machines. The most marvelous is the "Continuous Integraph." In a few hours it solves problems in higher mathematics which the world's greatest mathematicians spend weeks in mastering. The day is near when nine tenths of all calculating will be done by machine operators. There will be perhaps one trained mathematician needed for every thousand machines, in case a novel problem, not yet thought of by inventors, arises which they cannot handle.

Mechanical Voice, Man's New Menace

NOW and then we find a wild invention which we fervently hope will never be put to work while we linger on this orb. One such is that monster which delivered a speech to the Massachusetts Institute of Technology alumni in New York a little while ago. It was a combination of two independent inventions. Years ago Dr. John E. MacKenty, the eminent surgeon, made an artificial larynx to be fitted into the throats of his patients who had been deprived of their homemade voice boxes. Then came another genius and made an artificial lung which can croon a mammy-lullaby or bellow like a stump speaker. Now some fiend in human form has hooked these two together and created a mechanical after-dinner speaker.

Great Promise of Tomorrow's Art

EXTRA fancy art critics say that machinists and engineers can never equal the "True Artist's" creations. But now come the Czechoslovak glassworkers with overwhelming proof to the contrary. For centuries Czechoslovakia has bred wonderful glassworkers, and now she is going in for mass production of art glass with such scientific skill that the keenest art experts cannot, even with microscopes, distinguish the imitations from the originals. Prague turns out every variety, even the queer old American types, with all their unevenness and imperfections! And the world's shrewdest collectors of art glass have already stopped buying, because they are helpless in the face of this new flood. As with glass, so with all other beautiful things. American-made rugs in the Persian and Chinese types are finer, by far, than most of the antiques from which they have been copied. Show any disinterested jury the old and the new rugs side by side, without identifying marks, and ask which are lovelier; nine times out of ten, they will pick the American factory product. More beauty has been brought into the world with machinery than by all the patient, inspired hand drudgery of artists since time began. The Great Tomorrow will shine with fairer things than all the great art creators in Greece and Florence and Paris ever dreamed of.

Living Light is Now Reality

EVERY year physiological chemists come nearer to the secret of the firefly. Already, some of them, notably Professor Harvey of Princeton, believe that it is only a matter of a few years before they will be manufacturing this odd protein called luciferin. Odd? Rather! For it can be burned over and over without being used up! How so? In one process it can be oxidized, and in the very next it can be reduced to itself again. Probably no man now alive will ever see houses illumined with this cold glow of the myriad living lanterns of nature; but the Great Tomorrow will, as surely as fireflies flicker.

"Poor Man!" Sigh Wealthy Women

AROUND the spring or early summer of 2025 A. D. all the wealth of the U. S. A. will be in the hands of women. That is, it will—

If they go on grabbing it off in the future as fast as they have been in the past few years. Thus declares a Wall Street prophet who is also a statistician of no mean figure. Women now possess 41% of America's individual wealth. They are beneficiaries of $76,000,000,000 of life insurance now in force here. Women millionaires are almost as numerous as men. Women get 70% of all estates left by men and 64% of those left by women. More than 8,500,000 weaker sisters work for mere money. More than half the stockholders of our billion-dollar corporations are women; and so too are the Federal income-tax payers.

The Japanese City of Tomorrow

TO MAKE large buildings safer in earthquake regions, Japanese architects are now planning an 80-story building for Tokio which, instead of being a skyscraper, will be 80 stories deep! It will drive down into the earth 1,100 feet. And it will hang more or less free in a steel-concrete shaft, so that no earthquake wave can give it more than a tiny quiver.

Will the architects of the Great Tomorrow take a tip from this and build American edifices 80 stories downward and also 80 stories upward? Will they put the offices and warehouses in the lower floors, leaving all the upper stories for people to live in and enjoy the light and air of heaven? Or will they use the Japanese idea only in earthquake regions where many disasters have occurred? Nobody knows.

Rather Hard on Poor Old Metals

A FEW months ago the American Society for Heat Treating watched a man hold a tiny stick of odd metal against an emery wheel. As the wheel spun, the stick went through it like a hot knife through butter. The emery was soon a memory. The stick was a new alloy, now christened carboloy. It scratches a sapphire as easily as a diamond scratches glass. And no metal made can stand up against it.

The machinist who uses it for the cutting edge of his tools can finish about as much metal work in ten minutes as he used to in an hour. More than a million machinists cut away at metals every day in America's factories. Before long they'll be doubling and trebling their output with no more effort than now. Yes, a mere trifle, this carboloy! It can't add more than ten or twenty billion dollars to the world's wealth. And maybe not five, but human labor will get that.

Let That Skyscraper Have Some Yeast!

TO CONSTRUCT office buildings much higher, they must first be made lighter. One Chicago genius has lately tried mixing cement and sand with yeast into a nice, warm dough such as Mother used to make. The result is a fluffy concrete full of bubbles and weighing less than half as much as the common sort. A 100-story building whose walls and floors are made of this will not weigh as much as a 50-story one does now. Eminent architects now testing the queer blend report that buildings using it stand up as solidly as the bride's first biscuits.

Just 15 Minutes *a Day*

What it will mean to you is told in the FREE BOOKLET below

HERE are two men of equal position and business income. Which of them represents you?

They read about the same number of hours each week. But one has no plan for his reading; at the end of the year he has little or nothing to show.

The other talks like a man who has traveled widely, though he has never been outside of the United States.

He knows something of science, though he had to stop school at fifteen. He is at home with history, and the best biographies, and the really great dramas and essays. Older men like to talk to him because he has somehow gained the rare gift of thinking clearly and talking interestingly.

What's the secret of his mental growth? How can a man in a few minutes of pleasant reading each day gain so much?

Dr. Charles W. Eliot, from his lifetime of reading, study, and teaching, forty years of it as President of Harvard University, answered that question in a free booklet that you can have for the asking.

"For me," wrote one man who had sent in the coupon, "your little free book meant a big step forward, and it showed me, besides, the way to a vast new world of pleasure." This free booklet describes the contents, plan and purpose of

DR. ELIOT'S FIVE-FOOT SHELF OF BOOKS

Every well-informed man and woman should at least know something about this famous library.

The free booklet tells about it—how Dr. Eliot put into his Five-Foot Shelf "the essentials of a liberal education," how he so arranged it that even "fifteen minutes a day" are enough, how in pleasant moments of spare time, by using the reading courses Dr. Eliot provided for you, you can get the knowledge of literature and life, the culture, the broad viewpoint that every university strives to give.

Every reader of this magazine is invited to have a copy of this entertaining book. It is free, will be sent by mail, and involves no obligation of any sort. Merely clip the coupon and mail it to-day.

This Free Booklet gives Dr. Eliot's own plan of reading

P. F. COLLIER & SON COMPANY
250 Park Avenue, New York City

By mail, free, send me the booklet that tells all about the most famous library in the world, describing Dr. Eliot's Five-Foot Shelf of Books (The Harvard Classics), and containing the plan of reading recommended by Dr. Eliot. Also, please advise how I may secure the books by small monthly payments.

The Thinker

(*Continued from page 47*)

W-al, I got rousted out by these here fellers. Their car come down with an ailin' engine or suthin', and seems like they couldn't do nothin' but wake me up to git 'em some spark plugs. Things allus go wrong when my wife's away. Jest seems like the house goes to rack and ruin when my wife, Lizzy, hain't to home."

Pliny blinked. "When who—" he commenced; but Scattergood cut him short.

"You better be gittin' to bed, Pliny, or you won't never wake up in time to take that there train of yourn out at seven o'clock."

Pliny Pickett was conductor of the passenger train which plied back and forth over Scattergood's twenty-four miles of railroad.

"Say," he said; but again Scattergood stopped him:

"Seven o'clock won't be so long comin'. G'night, Pliny."

"G'night, Scattergood."

The old fellow stood batting his eyes after the car as it drove on to Scattergood's store and stopped, for it was necessary now to carry out the pretense of securing the spark plugs. He watched the three men enter, and then walked up the street waggling his head and muttering.

"His wife Lizzy—and train leavin' at seven. Crazier'n a coot. Train hain't never left before eight, and *Mandy's* his wife."

THE trio remained in the store sufficiently long to make plausible their errand; then the leader stepped out on the street to reconnoiter. Coldriver was still and silent; no human figure moved on its streets; Pliny Pickett had disappeared in quest of his bed.

"Fetch him out," said the robber, "and we'll git to whizzin'."

One man drove the car around the corner and stopped it before the tinsmith's shop at the rear of the bank; the other marched Scattergood along the sidewalk to the back door.

"Open her up," he said, "and don't waste no time over it."

Scattergood produced his keys and unlocked the door, through which he entered with the robber. The second man remained outside to keep watch.

"You'n' me'll be able to carry out the stuff," said the leader with grim humor. "You, bein' a banker, 'll be more used to handlin' money than I am."

"I calc'late I'd git more enj'yment out of carryin' cash into the bank than I will from carryin' it out," said Scattergood. . . . "Dog-gone! I like to barked all the skin off'm my shin ag'in' that chair. Hain't ye got no light nor nothin'?"

"This ain't a Fourth of July fireworks display," said the robber. "I'll see you git plenty light to work by."

"I hain't worked this here combination myself fer a long stretch," said Scattergood. "Mostly the cashier does it. I hope it don't give me no trouble."

"That's what you better hope," said the robber.

"These here things is kind of delicate, and my old fingers is clumsy," Scattergood said. "But I'll do the best I kin. I hain't feelin' so good, mister, and my hands is kind of tremblin'."

"Mebbe this here'll stiddy 'em up," said the man, nudging Scattergood with the muzzle of his revolver.

"It's sure got a powerful effect," Scattergood said. "I dunno when anythin's made me feel more agile. Hot, hain't it? I'm a-sweatin' so 's I'll be standin' in a puddle in a minute."

"Dry up and git to work."

"Jest a minute," said Scattergood. "Let a body ketch his breath. I hain't so young as I once was, mister. You don't want to fetch on one of my spells, do ye?"

"What spells?" asked the robber harshly.

"FUNNY about them spells," Scattergood said. "They kind of come on when I git excited or hustle around too much and git short of breath. Nothin' dangerous, you understand. But kind of upsettin'. If I should git one don't you worry a mite, but jest lay me out as comfortable as ye kin and leave me be."

"I'll lay you out comfortable if you don't get to work on that combination!"

Scattergood moved toward the door of the vault. "It's jest like a body faintin' away," he said, "only I can't be fetched to. No, sir. I jest lay there sometimes as much as two hours 'thout even twitchin'. But when I wake up, I feel jest as well as if nothin' had happened a-tall."

He was fiddling now with the knob on the big iron door while the robber held the beam of his light upon the spot.

"Lemme see," said Scattergood. "Ye turn her fust to twenty-eight, and then, if I hain't clean forgot, ye give her a twirl to the left till ye git to forty—like that—and then ye come back ag'in to fifteen. That's where she ought to open up. Hold your hosses and we'll see."

As he moved the dial, he continued to talk: "This here kind of a mess is perty tryin' to an old feller like me. I bet ye it brings on one of them spells of mine tomorrer. 'Tain't no pleasure gittin' waked in the middle of the night and bein' dragged out to rob your own bank. . . . There!"

He turned the handle and tugged at the massive door.

"It's all-fired heavy," he complained. "Huh. . . . What's the good of spendin' all the money fer sich a contraption if robbers come along and make a body open it up fer 'em?"

"You talk too much," said the robber. "Git out of the way. . . . No; you git in there first, so I kin see what you're doin'. You're goin' to help carry the stuff out to the car."

"Folks'll criticize me fer that," said Scattergood; but he obeyed the command and squeezed through into the vault.

"Gold in them little bags," he said, "and silver in them others, and there's the currency stacked up like it was kindlin' wood. Which d'ye aim to carry off fust?"

"We'll jest pile the whole caboodle on the floor outside," said the robber, "and then we'll take it to the car."

They made a couple of trips, piling the bank funds conveniently outside the vault door. Suddenly Scattergood stopped and caught at the counter.

"Kind of dizzy-like," he said. "Head's a-goin' around. Jest hold your hosses a minute. The' hain't—no—tarnal—rush." His voice trailed off into a mumble, and he sank to his knees with head wabbling on his shoulders. Then he sagged over sidewise and lay at full length on the floor before the door of the vault. The robber cursed under his breath, and stirred the old man with his foot. Then he bent over him and threw his light on the old hardware merchant's face. It was very peaceful, as of one who slept gently.

"Kin you beat that!" exclaimed the robber. "Lucky he got it open before he passed out." With another unsympathetic glance at the prone figure, he reëntered the vault for another armful of currency.

Scattergood had toppled over with his feet diagonally toward the vault door, which stood less than half open. His head was toward the street. Hardly had the robber passed inside, when the old man drew up his massive legs, swung the soles of his big shoes against the door and shoved. The door closed. Then, with amazing agility for one of his bulk, Scattergood was on his feet, his weight against the door, while he turned the handle with one hand and twirled the combination with the other. One robber was locked inside.

"H'm," grunted the old fellow, panting a little from his sudden exertion. "He didn't investigate thorough, seems as though. Ought to 'a' learned if the president of the bank was subject to spells. Fust thing any robber ought to find out. Spells in a bank president is fatal to a robber. Um. . . ."

HE STOOD gazing down at the pile of money on the floor and shook his head. "Ain't out of the woods yit," he said to himself. "Tother feller could come in and make me let this one out ag'in. And then what 'ud happen?"

He considered this point, crouching behind the counter, where he could not be seen if the robber on guard outside should prove curious.

He did his crouching at the left of the door which opened from that part of the bank used by the public into the enclosure behind the counters, and waited.

"If a feller that's wife's name was Mandy was to call her Elizabeth," he said, "it wouldn't take me no half an hour to figger out he'd made a mistake."

He looked at his watch. It was twenty minutes since they had encountered Pliny Pickett out there on the street, and all of ten minutes since they entered the bank itself.

"Wonder when tother feller's a-goin' to git dissatisfied," he muttered, and reached around behind him for the high stool on which the bookkeeper sat when he worked at his ledgers. Another five minutes passed in silence and then Scattergood heard the side door of the bank open stealthily.

"Hey, Martin," called a cautious voice; "what's keepin' ye so long?"

To this there was no reply. After an appreciable pause the door opened farther and the second robber stepped inside. Scattergood could hear the soft pad of his feet as they approached the gateway near which he lurked.

"Martin," whispered the second robber urgently, and then impatiently thrust open the connecting door and took one step into the banking enclosure. That step was sufficient. Scattergood, crouching expectantly, swept the bookkeeper's stool in a wide, forceful arc close to the floor. The robber was moving forward as it crashed against his shins and kneecaps with appalling unexpectedness. He uttered a strangled yelp and stumbled forward on hands and knees.

Instantly a tremendous weight—it was hard upon three hundred pounds—descended on the small of his back, crushing his face against the worn wooden floor, and Scattergood jounced up and down once for emphasis. The breath was driven quite from the man's body.

SCATTERGOOD'S mind was on the revolver which the man undoubtedly grasped in his right hand, and he bent over to wrest it away; but the gun had escaped from those surprised fingers and slid across the floor out of reach.

"Huh," said Scattergood conversationally, if a bit puffily, "calc'late I got to perch here then."

The robber squirmed, but Scattergood lifted himself a little and dropped suddenly; the robber grunted in anguish.

"Quit that jouncin'," he said.

"Quit your wigglin' then," said Scattergood. "If ye don't behave I'll nigh pile-drive ye into the boards. Jest lay still and behave. I dunno how long we got to stay here 'fore somebuddy comes along; but looks like you was a-goin' to be more uncomfortable 'n what I be."

"Where's—Martin?"

"I put him in the vault, where he'd keep," said Scattergood.

"You're bustin' my spine!"

"Huh. . . . That's a swap. You calc'lated to bust my bank. Seems as though I got it figgered out why bank robbers don't git rich. Fust off, I was kind of s'prised to hear you boys wa'n't millionaires, what with so many banks to rob, and you sich able-bodied robbers. But I'm commencin' to view it in another light."

"Aw, shut up!" snarled the robber.

"I don't hold much with silence," said Scattergood. "I git a sight of good out of talkin'. Be you fellers fust-class bank robbers, or jest kind of second-class?"

"If I could git up out of here I'd show you," said the man.

"Off and on," said Scattergood, "I've kind of studied over how I could lose flesh. Glad I never done it. The heavier I be the quieter you lie. Did ye say ye was a fust-class bank robber? I hope ye hain't, 'cause it'll destroy my admiration fer your perfession."

To this the man made no reply, and Scattergood shifted to a more comfortable position.

"Folks is slow-thinkin'," he said. "They use their laigs and their hands and their stummicks; but all their heads is useful fer is to grow hair on. Most folks 'ud be better off if they could use it to grow garden truck. Now, take Pliny Pickett. You met him a spell back. Lucky I don't hire him fer his intellect. Hirin' Pliny's intellect 'ud be like hitchin' a yoke of oxen to a automobile. Take ye a long time to git places. . . . Lay still there, mister."

A brief silence followed. "I wisht I could git home to bed. Huh. . . . If I was a harsh man I'd bat ye over the head with suthin' so as you'd lose int'rest in events. But I'm dog-gone mild. So I calc'late I got to sit here like a bump on a log and not git no sleep a-tall. Now, you'd think Pliny'd have more sense 'n that, wouldn't ye? If I'd 'a' depended on him this here bank 'ud 'a' been robbed and you boys 'ud be on your way to Canady. But I didn't, so you'n' me is gittin' acquainted and havin' a nice talk, and your friend's like to smother in the vault. Looks like you got all the luck. Married, be ye?"

"None of your business!"

"'Tain't exactly, fer a fact. I was jest wonderin'. Anyhow, I don't see why we shouldn't kind of talk pleasant to while away the time. Folks gits up early in this taown. Likely be somebuddy along in three-four hours."

But then, suddenly, the night silence was violated by the clamor of an excited bell. It clanged and jangled through the cool air startlingly, and men throughout the village reared up in their beds to listen.

Scattergood looked at his watch. "Forty minutes," he said with marked disapproval. "I never tested out Pliny before; but now I got the facts. It takes forty minutes fer a kind of a difficult idee to permeate into his brains. Hear that bell?"

"Yes."

"Fire bell," said Scattergood, "and Pliny's hangin' to the rope. Rings it fine, don't he? He kin do perty well anythin' he kin lay hands onto, but it takes him a tarnation long spell to think of where to lay his hands. Ye kin be patient a few minutes more, can't ye? Um. . . ."

THE street resounded with running feet hastening toward the Town Hall, above which hung the fire bell—running feet, and shouting voices excitedly demanding to be told where the fire was at work.

A few minutes more and the citizenry of Coldriver descended upon the bank, battering on the door and calling Scattergood's name.

"Hush your bellerin'," called Scattergood, "and come in the side door."

The bank filled with half-dressed men, bearing lanterns—with Pliny Pickett much in the foreground. "I done it," he boasted. "I got to thinkin', and here I be in the nick of time."

Scattergood regarded him saturninely. "Kind of yank this here feller from under me," he said. "I'm all wore out settin' on his back. Gimme a hand, somebuddy." He looked about him. "Pliny's a hero," he said dryly. "Got here in the nick of time, like he said. Pliny wants to git him a dictionary. Forty minutes is his idea of a nick."

"I got to thinkin'," said Pliny, "after I seen you and them men. I figgered it all out by myself."

"You done good," said Scattergood.

"Yes, sir, I kind of sauntered off home, mullin' it over in my mind, and I got into bed. But I couldn't doze off on account of figgerin' over it. 'Yes, sir,' says I to myself, 'either he's went crazy or he means suthin'.' And not havin' seen no signs of your goin' crazy I come to the conclusion you meant suthin' or other."

"Pliny, the' hain't a Philadelphy lawyer could do better."

"So I put on my pants ag'in and figgered some more."

"He figgers better with his pants on," explained Scattergood.

"I set and went over it all ag'in, and I says to myself that you named your wife out of her name and said the train time wrong because you wanted me to git some idee. I got to worryin' about the train fust off, but I couldn't see no connection, and then I took up thinkin' about Mandy; but I couldn't see no connection neither."

"That was slick reasonin'," said Scattergood.

"SO THEN I says to myself, 'I better git help,' and I got on my shoes and I run to the Taown Hall and give the bell rope a jerk. Yes, sir, and whilst I was jerkin' it I says to myself that them two fellers with you wa'n't up to no good."

"Right," said Scattergood. "And, feller citizens, he done all that thinkin' in forty minutes. . . . Um. . . . Got this feller tight?"

"You bet you," said Marvin Towne.

"Then we got to rescue tother one out of the vault. He's got him a pistol in there."

"We got some shotguns out here," declared a citizen.

"I don't want him sp'iled," said Scattergood. "I'll turn the combination and we'll kind of parley with him."

So Scattergood opened the door for the second time that night—opened it a bare crack.

"How's the air in there?" he asked.

"You lemme out of here!"

"Calc'late to," said Scattergood. "Got a hull lot of folks want to meet ye, and some's come with shotguns. Ever see a feller shot with number eight out of a twelve-gauge at clost range? W-al, it don't leave him sightly. Ye better hand your pistol through this crack, handle first."

After some brief hesitation the revolver came into view, and Scattergood thrust it in his pocket.

"Ready, fellers," he said; "I'm swingin' open the door."

The robber emerged into a half-circle of grim men suitably armed for the occasion. The deputy performed his office with handcuffs, Scattergood directed the return of the money to the vault and relocked the door.

"However'd ye git the best of 'em?" demanded Marvin Towne. "Two armed robbers, and you alone without no weapon a-tall!"

"I didn't do nothin'," said Scattergood. "'Twas Pliny. All I done was have a spell and set on a feller's back—but Pliny, he's the feller. He done forty minutes' thinkin'. I didn't use nothin' but my weight; but Pliny he used his brains. Fer forty minutes. I calc'late that's a record heat. . . . G'night, boys. I got to git me some sleep. Somebuddy drive me home."

Pliny looked after his employer proudly. "One thing you got to say for him," he exclaimed, "he's allus a feller to give a body credit for what he done!"

WHY FAMOUS MEN OF THE DAY USE BARBASOL

FLORENZ ZIEGFELD
. . . Glorifier of feminine pulchritude, creator of superb musical productions.

"I insist on shaving quickly, in comfort."

"Without the old-fashioned props, brush, lather and rubbing, Barbasol gives a perfect shaving performance quickly and leaves the skin feeling soft and refreshed."

FLORENZ ZIEGFELD

Women like their men

young looking, bright and keenly fresh looking. Men like to be this way too. New Barbasol Skin Freshener cools, revives, freshens. Douse it on the face—after shaving—whenever tired. Nothing better . . . you'll agree!

BARBASOL does for shaving what brushing, lathering and rubbing never could do. That's why prideful, comfort-loving men use this modern shaving cream.

There's nothing like it

No time-wasting mess. You just squeeze a bit of Barbasol from the man-size tube and lightly spread it on the face as your barber spreads a massage cream. Then shave. From the first smooth sweep of the razor to the last, it's a succession of pleasant surprises.

There's no razor pull, no scratching, no nicking. Barbasol does away with that. As it smooths the razor's path, it softens the skin, soothes it, cools it. You get a clean, close shave so easily. And when you've finished, the face looks as refreshed as it feels.

Barbasol

For Modern Shaving

No brushing—No lathering—No rubbing

Here's how it's done: 1: Wash the face (leave it wet.) 2: Spread on Barbasol (don't rub.) 3: Shave—dry the face. That's all! In a mere fraction of the usual time . . . you have the cleanest, smoothest and by far the most comfortable shave you ever had!

Today, get a tube of Barbasol from your druggist. Two sizes, 35c and 65c. And tomorrow morning, step into the bathroom and treat yourself to this "who's who" shave. Your face will enjoy it and so will you. The Barbasol Company, Indianapolis, Indiana.

3 PEOPLE *who need* SOUND INVESTMENT COUNSEL

....more than ever before

THIS man has profited by prosperity. He wants to "salt away" in good, sound securities, the money he has accumulated. Safety is primary — but marketability, taxes, diversification — all enter into his requirements. Where can *he* get the help he needs?

THIS man has a solid foundation of good bonds. He does not believe in market "tips," "hunches," or the like. But he *would* like to add some high grade investment stocks—which have good prospects of substantial increase in value over a reasonable period. Where can he get calm, seasoned judgment—to aid *him?*

HERE is a woman whose sole income will now come from securities purchased with the proceeds of her husband's life insurance policies. Unqualified safety of her principal—and certainty of regular income—are her basic needs. Out of the thousands of securities, which shall *she* choose?

WE submit here the qualifications of this institution to serve these people and others who face broadly similar—but *individual*—investment problems.

The institution was founded, back in 1885, to select investments for a group of British, Scottish and Dutch *trust funds*. Today, serving thousands of investors, this house continues to be distinguished for safeguarding investment funds.

This background of experience and judgment is reinforced by nation-wide sources of authentic financial information, with a complete Statistical Department as an important auxiliary. These broad facilities are at the command of the banks and individual investors whom this institution serves.

Choice of the *right* securities for the individual is made possible by offerings which are broadly diversified as to type, maturity, and geographical location.

As the first step toward contact with our institution, mail the coupon for literature describing attractive current offerings.

GEORGE M. FORMAN & COMPANY

Investment Securities Since 1885

112 West Adams Street Chicago — 120 Broadway New York

Dept. 77: Please send me, without obligation, descriptive literature on attractive current offerings.

THE FAMILY'S PROBLEMS

I Got an Interpreter to Help Me Understand My Husband

ONE of the most exasperating problems around my family is to understand the various languages that are spoken. When my boys get home from school, we have a discussion which includes such things as "double steals," "deep center," the "old apple," "socking the pill," "Texas Leaguers." When my daughter's chums assemble, it's all about Brahms, fugues, nuances, berceuses, andantes, and what not. Now my husband has introduced a new and even stranger tongue into our domestic Babel.

About three months ago someone induced him to buy 100 shares of International Lock and Joint Company stock. I think he put about $3,000 into his spec. Since this plunge, he and his friends sit around the front room after dinner and discuss Old Glory Copper and International Lock and Joint and the rest of the market in a language that has baffled me up to recently. And I learn that many another woman sits around with high curiosity while her lord discusses bulls and bears and shorts and squeezes and call money and the curb and other mysterious Wall Street goings-on. I, for one, decided to know what it was all about, and I have asked questions of broker friends until now I think I know and can tell my bewildered fellow sufferers in the home so that they can understand when the husband looks learnedly over his financial page and announces that:

He has "a nice profit today because a new pool appeared on the floor and supported International Lock and Joint and that as the shorts ran to cover the insiders were able to squeeze them good."

First, I wanted to know what a bull is. I asked my husband. He said a bull is a speculator who thinks prices will go up and invests accordingly. Then, drawing himself up to the full stature of his $3,000 fling in the market, he said: "I am a bull." Then he volunteered that J. P. Morgan once said he was a "bull on America." I asked a stock broker neighbor the same question. He confirmed my husband's definition. And he too added: "J. P. Morgan once said he was a bull on America." I concluded, therefore, that this epigram appears in some book which beginners read and that it is Wall Street's favorite bit of patriot wisdom. This seemed to be all my husband knew, so I turned to friends who work in "The Street" for the definitions that follow.

A *bear* is one who thinks prices will go down.

A *lamb* is—well, we are the lambs. And my husband—who so proudly pronounces himself a bull—I think he is a lamb. Professional bears and bulls feed on lambs.

I thought an *operator* was one who ran one of those little ticker machines. Or perhaps he might be a broker. But it appears an operator is a professional—a man who makes a business of speculating.

An *insider* is a corporation official who trades in the stock of his corporation and who therefore has all sorts of special private information.

A *short* is a man who has sold stock he doesn't own in the hope that the price of the stock will go down before he has to make good. When the price doesn't go down, but instead goes up and gives promise of going higher, the shorts are said "*to run to cover.*" That is, they rush into the market to buy stock to make their deliveries before the price gets too high. Sometimes holders of stock see the shorts in this predicament and then they put the price up on them. This is called "*squeezing the shorts.*"

A *pool* is a group of traders and speculators who select a certain stock to invest in, combining their resources and putting the management of them into the hands of a single broker. They manipulate that stock thereafter by means of clever buying and selling and propaganda until they get the price down, buy up great quantities of stock, and then manipulate it until it goes up, when they unload at a profit.

An *odd lot* puzzled me. That is what my father, who was an ardent Democrat, called the Republicans. On the stock market it means a purchase or sale of stocks in less than 100 shares.

WE HEAR an immense amount of talk about the *rails* and *industrials*, and the *grangers* and *coalers* and the *oils*. The rails refer to the railroad stocks. The industrials are the stocks of large producing and manufacturing companies. A granger is a railroad which serves the grain country. A coaler is one which serves the coal country. Groups of stocks are known by the industries they represent—the *oils*, the *motors*, the *sugars*.

A stock is "off a point" or "off two points" when it is down a dollar or two dollars below the price at which we bought it. A point is a dollar.

Of late I have been listening to a good deal about "call money." "Call money up 20 today," observes my husband, and shakes his head dubiously. Call money is money loaned to brokers to be used to finance the operations of their clients. It is known as call money because it is loaned for no definite time and can be "called in" at a moment's notice.

Now, this is not a full vocabulary of Wall Street. At least, I do not think so. But it is sufficiently complete for me to understand all the talk which goes on in my living-room between my husband, with his fortune of $3,000 in the market, and my neighbors. L. B. F.

Real cleanliness is the greatest beauty secret!

What is it that puts high-lights in your hair... glints of gold or copper? What is it gives your skin the vivid pinkness that even great painters find difficult to get on canvas? What is it that transforms the simplest summer frock ... makes it *charming?*

The answer, of course, is *real cleanliness.*

It isn't that we do not know these things. The question is, do we make *use* of this great aid to beauty as much as we might and should?

What doctors say about shampooing

The dryest hair is oily enough to catch the dirt that flies everywhere. As this grime kills hair luster, why let it accumulate?

Authorities advise a thorough shampoo every two weeks . . . and *oftener* when a hair dressing is used, when you perspire freely, when your hair is naturally oily, when in work or play your head is exposed to more dust and dirt than is usual. And remember, any good toilet soap is a good shampoo soap. Don't fail, either, to wash your comb and brush thoroughly every few days.

Wash your face the only "best" way

The skin, also, is invisibly oily and dirt-catching . . . and water alone will not remove this film. Soap, the real cleanser, is needed.

Skin specialists say that creams and powders, when used as a *substitute* for soap and water, increase rather than lessen the possibility of blackheads and "shiny nose". They call soap and water "the most valuable agent we have for keeping the skin of the face normal and healthy".

Elbows, underwear and finger nails

Are your elbows dark and roughened? Then *brush* them every night with warm soapy water and see this unloveliness gradually disappear.

If you aren't able to manage as many professional manicures as you would like, soap-scrub your nails once a day with a stiff brush, and push the cuticle back with the towel while drying. You'll find that except for occasional shaping and polishing, little else is needed.

From stockings and underwear to dresses, scarfs, gloves, etc., there's only one safe rule about your clothing: anything that is *doubtful* is definitely *too soiled to wear.*

The kind of beauty called "elusive"

Other people know when we do and do not take baths. Other people notice when the attention we give to cleanliness is the 100% and constant kind.

Isn't "daintiness" just another name for being *clean?* . . . and "elusive" beauty, probably mostly *extra* cleanliness? . . . of body, face, hands, hair, clothing, and all the many little details?

Every day you have a different face to shave

THERE'S the dismal morning when the hot-water faucet runs cold—and the dark brown morning after the party when your face is taut and sensitive from lack of sleep—and the hurry-up morning when you have to make the 7:45—all kinds of mornings, all kinds of shaving conditions, but only one kind of Gillette Blade—the one constant factor in your daily shave.

Eight out of ten Americans count on that blade to deliver a satisfactory, comfortable shave 365 mornings in the year, and it *does*, regardless of conditions. Machines adjusted to one ten-thousandth of an inch hone and strop the finely tempered steel far more accurately and delicately than human hands could do it.

Tomorrow morning may be fair or rainy, wintry or mild—slip a *fresh* Gillette Blade in your razor and get a smooth, comfortable shave anyway. Gillette Safety Razor Co., Boston, U. S. A.

★ **Gillette** ★

THE NEW FIFTY BOX—Fifty fresh double-edged Gillette Blades (10 packets of fives) in a colorful chest that will serve you afterward as a sturdy button box, cigarette box or jewel case . . . Ideal as a gift, too. Five dollars at your dealer's.

"I taught this Sunday School Class how wise investing helps young men succeed"

Joseph H. Hasbrouck, president of the Penn National Bank and Trust Co., Reading, Pa., tells a human story of twenty boys . . . and what happened.

"ABOUT ten years ago," said Mr. Hasbrouck, "I was persuaded to take on, for special instruction, a Sunday School class of about twenty boys, to teach them the principles of safe investing. A fine bunch of boys, they were.

"The purpose of this class was not to make money—although they did make it—but to teach these boys how to invest intelligently and wisely. Each boy put in a certain sum—what he could afford—each week. Every fourth or fifth week we bought another $100 bond. When dividends were declared, each boy was entitled to his pro-rata share.

"I taught them what underlies a bond. I taught them what the various types of bonds are,—real estate bonds, railroad, municipal, public utility—and I taught these boys to read the actual words that are printed on each kind of bond, to know what they really mean.

"But the interesting thing about this class," added Mr. Hasbrouck, "was that while half of these boys were the usual happy-go-lucky fellows, the *other* half were actually interested enough to go on studying the principles I had taught them, and have gone on investing regularly, to this day.

"And most gratifying of all, to me—*two* of these boys—who met in this Sunday School class ten years ago—had each saved and invested so consistently that just recently they were able to start in business for themselves, as partners, on the capital they had amassed.

"This experience was so satisfying," Mr. Hasbrouck concluded, "that I only regret my business affairs no longer permit my doing the same work with other groups of boys."

Joseph H. Hasbrouck, president of the Penn National Bank and Trust Company, Reading, Pa., is an influential member of the banking profession in Pennsylvania and has taken a prominent part in the industrial and civic development of Reading.

"I taught these boys to read the actual words that are printed on each kind of bond, to know what they really mean."

THE VALUABLE LESSONS Mr. Hasbrouck's Sunday School class was fortunate enough to learn at so early an age, include what every investor should know. Mr. Hasbrouck impressed upon these boys that the *first* principle in investing is *safety*, and that any program of investing, to be sound, must be founded on this principle.

The average investor, in setting up a plan to win a competence for himself, should consult a banker, or a high grade investment house before he buys. Here he will learn how much he can reasonably expect to get, in income, without jeopardizing safety. He will learn how any program of investing should be spread over bonds of various sorts—how the principle of diversification establishes another fundamental safeguard for his money. From the banker, or high grade investment house, too, the average investor can expect an understanding and intelligent diagnosis of his own individual needs.

In all sections of the country, in widely differing types of communities, bankers know Straus bonds. Year in and year out, these bankers choose from the offerings of S. W. Straus & Co. for recommendation to their customers and for their own investment needs. In the bonds S. W. Straus & Co. offers are every type of seasoned security—railroad, municipal, real estate, public service, and foreign bonds.

As a help to all who are interested in studying the principles of sound investment, S. W. Straus & Co. has prepared an interesting, easy-to-understand booklet, "How To Invest Money." Every person seriously concerned in safeguarding his future should own a copy of this booklet. It will be sent without charge. Write for booklet G-1021.

Washable Skrip—blue, green, violet, red and black and Permanent Royal Blue Skrip—in 25-cent and larger bottles

De Luxe Black and Pearl Lifetime° Pen, **$10**

Skrip, successor to ink, makes all pens write better and Lifetime° pens write best

If you believe that all writing fluids are alike, you don't know Skrip. Think—Skrip cannot clog your pen! Because of its guarded formula, Skrip remains forever fluid in pens, yet, dries quicker on paper. Skrip-filled pens write instantly and without stutter or blot. A joy to use! Buy two bottles—Washable Skrip, smooth, and brilliant, for school and home (washes easily out of clothing) and fast-color Permanent Royal Blue Skrip for business. In a Sheaffer's Lifetime° pen, peer of writing instruments, Skrip forms the finest alliance of all. Try them, you'll wish you'd met them sooner!

Identify the Lifetime° pen by this white dot

Lifetime° pens are guaranteed unconditionally for your life against everything except loss. Other Sheaffer products are forever guaranteed against defect. Green and black Lifetime° pens, $8.75; Ladies', $7.50 and $8.25. Black and pearl De Luxe pens, $10; Ladies', $8.50 and $9.50. Pencils, $5. Others lower.

The American Magazine

MORE THAN 2,200,000 CIRCULATION

In this article Mr. Coolidge gives you an intimate look at the Presidency—and at the political mind

DRAWING BY B. J. ROSENMEYER

The President Lives Under a Multitude of Eyes

By Calvin Coolidge

EVERYTHING that the President does, potentially at least, is of such great importance that he must be constantly on guard. This applies not only to himself, but to everybody about him. Not only in all his official actions, but in all his social intercourse, and even in his recreation and repose, he is constantly watched by a multitude of eyes to determine if there is anything unusual, extraordinary, or irregular, which can be set down in praise or in blame. Oftentimes trifling incidents, some insignificant action, an unfortunate phrase in an address, an injudicious letter, a lack of patience towards someone who presents an impossible proposition, too much attention to one person, or too little courtesy towards another, become magnified into the sensation of the hour. While such events finally sink into their proper place in history as too small for consideration, if they occur frequently they create an atmosphere of distraction that might seriously interfere with the conduct of public business which is really important.

It was my desire to maintain about the White House as far as possible an attitude of simplicity and not engage in anything that had an air of pretentious display. That was my conception of the great office. It carries sufficient power within itself, so that it does not require any of the outward trappings of pomp and splendor for the purpose of creating an impression. It has

a dignity of its own which makes it self-sufficient. Of course, there should be proper formality, and personal relations should be conducted at all times with decorum and dignity, and in accordance with the best traditions of polite society. But there is no need of theatricals.

HOWEVER much he may deplore it, the President ceases to be an ordinary citizen. In order to function at all, he has to be surrounded with many safeguards. If these were removed for only a short time, he would be overwhelmed by the people who would surge in upon him. In traveling it would have been agreeable to me to use the regular trains which are open to the public. I did so once or twice. But I found it made great difficulty for the railroads. They reported that it was unsafe, because they could not take the necessary precautions. It therefore seemed best to run a second section, following a regular train, for the exclusive use of the President and his party. While the facilities of a private car were always offered, I think they were used only once, when one was needed for the better comfort of Mrs. Coolidge during her illness.

Although I was not given to much travel during my term of office, it was sufficient to convince me that the Government should own a private car for the use of the President when he leaves Washington. The pressure on him is so great, the responsibilities are so heavy, that it is wise public policy, in order to secure his best services, to provide him with such ample facilities that he will be relieved as far as possible from all physical inconveniences.

It is not generally understood how much detail is involved in any journey of the President. One or two secret service men must go to the destination several days in advance. His line of travel and every street and location which he is to visit are carefully examined. The order of ceremonies has to be submitted for approval. Oftentimes the local police are inadequate, so that it is necessary to use some of the military or naval forces to assist them. Not only his aides and his personal physician, but also secret service men, some of his office force, and house servants, have to be in attendance. Quarters must also be provided for a large retinue of newspaper reporters and camera men who follow him upon all occasions. Every switch that he goes over is spiked down. Every freight train that he passes is stopped and every passenger train slowed down to ten miles per hour. While all of this proceeds smoothly, it requires careful attention to a great variety of details.

It was never my practice to speak from rear platforms. The confusion is so great that few people could have heard, and it does not seem to me very dignified. When the President speaks it ought to be an event. The excuse for such appearances which formerly existed has been eliminated by the coming of the radio. It is so often that the President is on the air that almost anyone who wishes has ample opportunity to hear his voice. It seemed more appropriate for Mrs. Coolidge and me to appear at the rear of the train where the people could see us. About the only time that I spoke was at Bennington in September of 1928, where I expressed my affection and respect for the people of the state of Vermont, as I was passing through that town on my way back to Washington. I found that the love I had for the hills where I was born touched a responsive chord in the hearts of the whole nation.

One of the most appalling trials which confronts a President is the perpetual clamor for public utterances. Invitations are constant and pressing. They come by wire, by mail, and by delegations. No event of importance is celebrated by any group anywhere in the United States without their inviting him to come to deliver an oration. When others are enjoying a holiday, he is expected to make a public appearance in order to entertain and instruct by a formal address. There are a few public statements that he does not deliver in person, like proclamations and messages, which go to the Congress, either reporting his views on the state of the Union in his Annual Message or giving his reasons for rejecting legislation in a veto. These productions vary in length. My Annual Message would be about 12,000 words. My speeches would average a little over 3,000 words. In the course of a year the entire number reaches about twenty, which probably represents an output of at least 75,000 words.

Drawing by
JOSEPH SIMONT

This kind of work is very exacting. It requires the most laborious and extended research and study, and the most careful and painstaking thought. Each word has to be weighed, in the realization that it is a Presidential utterance which will be dissected at home and abroad to discover its outward meaning and any possible hidden implications. Before each address was finished it was thoroughly examined by one or two of my staff, and oftentimes by a member of the Cabinet. It was not difficult for me to deliver an address. The difficulty lay in its preparation. This is an important part of the work of a President which he cannot escape. It is inherent in the office.

A GREAT many presents come to the White House, which are all cherished, not so much for their intrinsic value as because they are tokens of esteem and affection. Almost everything that can be eaten comes. We always knew what to do with that. But some of the pets that were offered us were more of a problem I had a beautiful black-haired bear that was brought all the way from Mexico in a truck, and a pair of lion cubs now grown up, and a small species of hippopotamus which came from South Africa. These and other animals and birds have been placed in the zoölogical quarters in Rock Creek Park. We always had more dogs than we could take care of. My favorites were the white collies, which became so much associated with me that they are enshrined in my bookplate, where they will

live as long as our country endures. One of them, Prudence Prim, was especially attached to Mrs. Coolidge. We lost her in the Black Hills. She lies out there in the shadow of Bear Butte, where the Indians told me the Great Spirit came to commune with his children One was my companion, Rob Roy. He was a stately gentleman of great courage and fidelity. He loved to bark from the second-story windows and around the south grounds. Nights he remained in my room and afternoons went with me to the office. His especial delight was to ride with me in the boats when I went fishing. So, although I knew he would bark for joy as the grim boatman ferried him across the dark waters of the Styx, yet his going left me lonely on the hither shore.

As I left office I realized that the more I had seen of the workings of the Federal Government, the more respect I came to have for it. It is (*Continued on page 145*)

Hello, Hello,

Drawings by
WILLIAM OBERHARDT

By CHARLES J. V. MURPHY

CERTAINLY the scene was enough to stagger the wits of any man—let alone a frantic reporter, thousands of miles from the home scene, with serious work to do. A hundred thousand spectators, children even, stimulated by a collective impulse, streamed in a great, clamant flood of voice and body across the military reservation. And out of the soggy twilight lowered the bulking shape of the Graf Zeppelin, about to settle at Lakehurst, New Jersey, after its spectacular flight from Germany.

It was one of the most exciting moments, journalistically, in 1928. To reporters such a moment is one where seconds count. It is imperative that lines of communication be kept open—the flash transmitted to city editorial rooms instantaneously, else a rival newspaper may give you a fearful beating. So, when the Zeppelin hove into sight, there was a clattering surge for telegraph instruments, a surge that the marines, whose passion for order is not always compromisable with reasonableness, strove to resist with short clubs.

But there was one man who broke through—Wilhelm Schulze, correspondent for the Ullstein Agency, the big news syndicate in Germany. As fast as his short legs would carry him, he rushed to a hot-dog stand at the edge of the reservation, dived into the lone telephone booth, and wrenched at the receiver.

"Get me the Verlag Ullstein, Berlin S. W. 68," he shouted. "Ach! Long Distance—all the way to Germany, yes, right now."

Crushing his body into the cramped spaces of the booth, he thanked heaven that he spoke English. He leaned backwards, nervously rustling his notes, choking down a rising doubt as the clamor outside grew greater. Taking a long chance to save seconds, he ran the risk of losing all.

Over the wire there came strange noises . . . the strong resonant hum of distant mechanisms. He studied his watch . . . was central bridging the Atlantic? . . . Just six minutes later the operator announced briskly: "Here is your party in Berlin."

And Herr Schulze, momentarily astounded to hear the voice of an old colleague speak to him across the Atlantic, almost forgot to reply. Then he settled down to the business at hand, dictating the story of the arrival of the Zeppelin, giving the details as he saw them through the windows of the booth. Within thirty minutes after he had begun to speak, a dozen newspapers served by his agency were spilling "extras" into the streets of as many Ge man cities, carrying the story word-for-word as he had dictated it from his telephone booth nearly 5,000 miles away. Needless to say, he scored a clean beat over the opposition.

Unique though it is, this incident is but one of the same thrilling sort of stuff that makes up the log of the American Telephone and Telegraph Company's new transatlantic telephone system, now in the third year of commercial operation. Bits of love, it seems, ride through the hushed susurrus of radio waves. And daily there is a great trafficking in the world's wealth, in the upper reaches of the ether, with brokers in the world's marts keeping abreast of tickers thousands of miles away, and diplomats casually exchanging momentous ideas between scattered chancelleries with a personal directness that never before was possible.

"IT WAS in January, 1927, that the transatlantic telephone system was formally established and opened to the public," declared Theodore G. Miller, general manager of the Long Lines Department of the American Telephone and Telegraph Company. "At that time, there were not a few people who were prone to believe that radio telephony of this sort was just a freak. Naturally, we did not share these doubts. What we did expect—and subsequent developments corroborated the prediction—was, that the very novelty of the service would stimulate a great demand at first, and then we must settle back to await a sane, gradual development.

"This is precisely what took place. By the end of 1927, some 2,900 persons had used the transatlantic telephone, the great bulk of these during the early part of the year. Then the curve began to rise upwards. In 1928, approximately 7,500 individual users were recorded. The increase was important enough to justify a drastic reduction in the rates. Where it cost, at first, seventy-five dollars to talk to London for three minutes, we later reduced the rate to forty-five dollars for the same conversation, with proportionate reductions to all connecting points.

"Meanwhile, we rapidly extended our service. We included Paris, Berlin, Madrid, Vienna, Copenhagen, Brussels—indeed, nearly all the major cities on the Continent, besides linking Canada, Mexico, and Cuba to the New York terminal. Outwardly, this tremendous development may be isolated in the single fact that the 19,000,000 telephones in the United States have been linked—potentially, at least—with the telephones of the Old World—28,000,000 telephones, in all, hooked up into one great, cohesive circuit.

LONDON

An article about the transatlantic telephone and the gentle vagaries of the human voice when it strays a long way from home

"We have only recently added the northern coast of Africa to this system, and before long we hope to include some South American cities. I do not think that it requires a great deal of imagination to envisage what all this means. It means that a large part of the world is now at your elbow—that your hello, spoken casually in Los Angeles, can command a listener in Stockholm, 8,500 mi'es away. Without stirring from your library or your business desk, you can project your true. living vo'ce and personality into inaccessible corne.s of the world."

THE story about the little British boy that Mr. Miller told me is illustrative of the magic of modern communication. The lad lived in a suburb of London. Somehow or other, he acquired a copy of the catalog of a Chicago mail-order house and within its voluminous content he found some very appealing photographs of rifles. It stirred him strangely; the impulse, once provoked, emerged all the stronger because the circumstances were propitious. His dad was at his office, his mother shopping, and his nurse out walking.

With infinite resourcefulness, he went to the telephone and requested "American Service, please." Then he put through a call for the glamorous store in Chicago, 4,000 miles away. The call was completed within ten minutes. Casually he asked for more information about various rifles, and finally ordered one (which was valued at a very few dollars), replaced the receiver, and then retreated into a disarming secretivene s. Nor did the father discover his son's adventure until the first of the month, when his telephone bill arrived, embodying a mysterious charge of twenty pounds for a call to Chicago. The rifle came by post, C. O. D., the same day. Being a wise father, he proceeded to an inescapable deduction, and it seems reliably reported that he lived up to the best traditions of parenthood.

"But that, too, is just an isolated incident, one of the many that we hear about, either directly from the people who used the service, or from newspaper items relating their experiences," said Mr. Miller. "Telephoning through the air over thousands of miles stirs everyone's imagination and the public is intensely interested in all features connected with the service. The press learned early in the game that it had definite news value, and daily we receive clippings from all over the country, telling of new and unusual uses being made of this international voice highway."

W. C. Durant, the automobile man, kept the traffic moving over this highway during a trip abroad last summer. At that time, the great bull market was bowling along, and Mr. Durant, who is one of the biggest market operators, didn't let a few degrees of longitude prevent him from keeping abreast of the moment's developments on Wall Street. Wherever he was—in London, Paris, or Berlin, or even in scattered suburbs of these cities—he kept in daily communication with his brokers via the telephone. During a period of a few weeks his telephone bill amounted to approximately $25,000. He talked as long as an hour at a time, and on one occasion, during a feverish moment in the market, he had two brokers in New York alternating on the wire, in the pressure of executing his orders.

Once, while in a London hotel, and being too fatigued to get out of bed, he instructed the waiter who brought his luncheon to call up his broker. The astounded servant put through the call.

"Tell them to buy, in my name, 5,000 shares of General Motors," Mr. Durant ordered. The waiter did so, reporting the price. "Fine," said Mr. Durant, "tell them to buy 10,000 more."

The waiter, perspiring slightly because of this extraordinary responsibility, transmitted the order and was about to hang up the receiver, weakly, and return to the less exciting occupation of gathering up soiled dishes.

"Wait," commanded the millionaire, reaching for a second lump of sugar. "Order 15,000 shares more."

That's life! A Piccadilly waiter, with tuppence in his pocket, riotously spending $6,000,000 over the phone with a man he had never seen!

"YOU must remember," Mr. Miller said, "that all calls put through our transatlantic service are confidential, just as are the calls transmitted over the local circuit People, however, are so gratified with the results, and the novelty, that they either tell us about them or else tell the newspapers. You see, the shock of hearing a voice come in so clearly over a great distance seems to excite them."

Suppose you live in, say, Chicago, and desire to talk with somebody at the Savoy Hotel, London. You lift the receiver and ask the local operator for "Long Distance." Then you give Long Distance the name of the hotel and that of your friend. The call is put through, and your voice, following it, scampers along the long-distance cable from Chicago to the New York long-distance office, the (*Continued on page 84*)

A story in which it is shown that Romance is Romance, no matter where you find it

By LYNN MONTROSS

Illustrated by JOHN H. CROSMAN

"Nothing is ever *all over* with YOU"

THE day after Reed Sherrard's graduation from high school his grandfather called him into the ancient, musty study. The old gentleman, having retired from the bench at the age of seventy-eight, had little left him for diversion except his own eccentricities.

"Reed," he began, in a tone he had used for two decades when sentencing criminals, "how long is it you have spent in high school?"

Of course, he knew to the day. He only wanted to see his grandson squirm. . . . The boy stared a long time at the calf-bound legal volumes and then at Judge Sherrard's square face and thin, folded hands.

"Five and a half years," he said.

"Ah," said the judge. "Don't like to study?"

"No, sir."

"Like the girls, eh? Like your roadster? Your parties? . . . All those things?"

"Yes, sir."

"Well, well!"

The old gentleman lit a rope-like stogie and surveyed the tawny-headed youngster from head to foot as if in astonishment. Age was enjoying itself heartily. . . . "Now what? Your parents are unable to do anything for you, and since I'm footing the bills, I'm naturally a bit curious. It has cost me to date a trifle under two thousand to put you through high school—$1,879.65, to be exact," he added, glancing at a notebook on his desk.

"Sorry, sir."

Original from UNIVERSITY OF IOWA

Pointing to Reed, she shouted in the officer's ear, "Just a few minutes. . . . He's my cousin. He's my brother. He's—"

"No, you're not! Nobody has ever been sorry for spending somebody else's money."

"Well—in a way, I am."

"You ought to be. . . . You are going to the State University. That's settled. What courses have you decided to take?"

"Engineering. Mathematics. I don't know exactly—anything that will lead up to navigation. Only I'd a lot rather start right out on a ship and learn it there . . . a freighter—"

"Ship! Freighter! *Tosh!*" From under his overhanging gray brows the old man stared out at the mid-Western prairies—twelve hundred miles from the sea. He turned the cannonade of his judicial glance on the youth of nineteen years who faced him. "Bah!"

Reed leaned forward eagerly.

"You think, because—well, put it this way: Did any of the best sailors ever come from seaport towns? How about Dewey from Vermont, and—"

"He should have stayed there. . . . All young men are fools, and you are no exception. Only tramps become sailors, just as no gentleman ever became a painter or a novelist. There are only two professions in the world—law and diplomacy. (The ministry is merely a trade, and a very poor one these days.) Could you be ready, Reed, to leave tomorrow for the State University? I shall wire Dean Travis of the College of Law that you are about to register, and request him to give you all supervision consistent with his office. . . . Your income, I may add, will be adjusted to the increased expenses of college. There is nothing like living as a gentleman. . . . Good day! Good day! You might interrupt me just long enough tomorrow to tell me good-by before your departure."

JUDGE SHERRARD tucked a new stogie into his square beard and turned abruptly to his desk. After three decades on the bench he still loved the drama of dismissal.

Reed walked out on the back porch with Solo, the Gordon setter. He didn't want to take law. He didn't want to be a county attorney in some inland village, devoting his life to the winning of cases. He wasn't made for it. Within his heart beat the ebb and flow of the sea, bequeathed to him by some remote and rebellious ancestor. He dreamed of steel decks, derricks, blunt funnels, smoke, the pound and tear of eager engines. . . .

Digitized by Google
Original from UNIVERSITY OF IOWA

At seven o'clock that evening he was sure he was strong enough to stand up against the old tyrant. No, he would do even better—he would run away and seek his freighter. . . . At nine o'clock he was not so sure. After all, the roadster was running like a top; it would be wonderful to have it at the University. And the girls on Fraternity Row would be so much more glittering than high school girls.

His imagination painted glowing pictures of the campus—even taking anything so odious as law—with the eccentrically generous income his grandfather would give him. Gradually the hedonist in him overcame the adventurer; by midnight he was saying to himself: "The old gentleman has taken care of me for eight years now, sent me to school when my parents only hoped that I might be a capable shipping clerk . . . it's only right to think of his wishes—"

Much as he loved the old man, Reed knew that he was lying to himself. He knew it next day when he said good-by . . . all the time he stared bitterly at the long rows of calf-bound volumes in the study. They were the judge's most vehement pride. He had bullied his grandson into taking law in order that the precious library might somehow remain in the family. Whims such as this changed people's lives. . . .

Reed had scarcely registered as a pre-law at the State University before he was rushed by three fraternities. His shock of tawny, rumpled hair, his ruddy skin, slim height, and one-sided grin marked him at once as a potential brother to almost any combination of Greek letters. The roadster was an added merit, not to mention the two hundred dollars a month which the judge wryly designated "pocket money."

After the mid-semester examinations Reed had a reputation which extended from Fraternity Row to the executive dean's office. He had wrecked the roadster on a wild drive to Chicago; he had cut every class at least six times; he had flunked every course, not even excepting military drill. The seniors in his fraternity were relieved when it was sure that he was to be suspended. . . . "After all, he isn't quite the proper material for our house."

Dean Abrams looked almost admiring as he said, "I don't see how you could possibly have done so badly in so short a time. It shows talent. I hope, Sherrard, that next year you'll get some sense in your head and try again. You could do a lot if you wanted to."

Reed stood a moment on the steps of the Administration Building. He could go home, tell his grandfather, and ask for another chance. . . . Only he *couldn't*. He really couldn't.

IT WAS three years later when Lou Reynolds first saw Reed Sherrard, and she could never have guessed that he had been a freshman in this university once before. He was twenty-two now, two inches taller, with the hard-bitten look of a young man who has tried all kinds of rude labor. That first year after his suspension he had merely drifted. Then a slow, smoldering resolution had begun to form, and for months he had saved every cent in order to return to the campus . . . even though his grandfather had died of apoplexy at the age of eighty and, legal-minded to the end, had willed his library and his fortune to the College of Law.

Lou Reynolds noticed only that beside her in English History 1 sat a very serious young man, who was astoundingly correct in all his answers.

"Magna Charta?" she whispered during a moment in the lecture when she had been thinking of a new gown instead of listening to old Professor Jones's droning voice.

Without looking up, Reed whispered back, "It would take too long to explain it to you." She was not sure but that he emphasized the "you" a bit. "Better get it from Jonesy after class."

"Anybody would think," she said, "that you'd invented the Magna Charta!"

His fountain pen, an ancient, scratchy one, ground on relentlessly. . . . On Friday there was a quiz, and Lou's paper was returned with a "D." His received an "A plus," she did not fail to note.

"Grind!" she thought.

DURING the next month her dates kept her too busy to consider the young man who sat next to her in English History 1. Lou Reynolds was one of the most popular freshmen on the campus; that was compensation enough for the fact that she would probably flunk the course.

At the end of the semester she might have forgotten Reed altogether except for reading an obscure item in the campus newspaper saying that he had earned the highest average in the freshman class. His record had been surpassed only once within the last five years.

That afternoon, in obedience to a printed request from the Administration Building, she called on the Dean of Women to explain why she had been conditioned in English History. On her way back across the campus her clicking footsteps brought her behind Reed Sherrard. He was walking slowly, his hands shoved deep into the pockets of a blue serge suit. . . . His slow walk, the blue serge, the fact that he had received higher grades than any freshman during the first semester—all these things irritated her. She wanted to shake him out of his smugness.

"Magna Charta?" she said provocatively, falling into step with him.

His blue eyes were wide and puzzled. The two words did not bring any response.

"You don't remember me!" she accused, as if it were the worst crime in the world. "And I sat beside you all last semester."

"I know now," he said awkwardly. "In rhetoric, wasn't it?"

Lou Reynolds began to be interested in Reed. Nobody else on the campus had ever been next to her three times a week for a semester and entirely forgotten her.

He grinned his one-sided grin, and for the first time he really looked at her. He saw a small girl who was very slim, very alive, very tantalizing. From under her absurd little hat one dark eye snapped with a zest which no dean of women could ever comprehend. She had sensitive lips, an upturned nose, and rather humorous eyebrows. . . . Reed Sherrard's gaze slowly widened. He stared at her like a young man suddenly stricken with indigestion.

"For heaven's sake!" he exclaimed.

While the ebb and tide of the campus flowed past them, they stood at the curb and continued to stare. He felt sick at heart—he wished that he had never come back to the University. "Let's go to the You'll Come Inn and have a coke," he said. "I want to talk to you."

She noted that his outdoor color of a few months ago had disappeared; in the same mysterious way, his shoulders seemed to have shrunk. "You ought to quit that studying," she said. "It'll kill you. . . . Or . . . Why are you a grind? You'd be so terribly nice if you weren't."

His eyes became very gentle. He could not explain to her that he had been working for three years in flour mills, construction camps, lumber outfits, and paint factories in order to save enough money to save his pride. It had somehow been necessary to return to the University and wipe out that defeat. That was why he had grubbed so fanatically all the first semester. Not even his grandfather would have understood. . . . Reed had been in San Francisco working on the docks when he learned of the old gentleman's death. And, thinking of that, he said, "I try to make good grades to please my grandfather."

"Very dutiful," she commented. "Why don't you ever ask me to go out with you?"

"I will. Tonight."

"I have a date—with Porky Hazelton."

"That ass!" He was worried a moment, thinking she might guess that he had been a student here before. But she had been only a little girl in high school at that time. The few undergraduates on the campus who remembered him he had carefully avoided.

He turned to Lou and said curtly "Cut your date."

"I never cut dates—but—I might just postpone it!"

Underneath the slanting turban the one dark eye was all at once very gentle. "You're nicer than I thought you were."

"Even if I am a grind?"

"No fear! I'll reform you."

THAT night they went to a road house on the edge of town. The place was not expensive, judged by New York standards but to Reed it meant a dissipation which would shatter a week's allotment in his carefully planned budget. For that reason he was the more reckless. After dinner he ordered weak highballs at a dollar apiece which the waiter brought in teacups. . . . A dollar. That was almost the sum of his allowance for meals every day—hastily gulped proteins in cheap restaurants.

"Have another," he said brusquely when Lou had finished. He overruled her mild protest and called the waiter.

She said, "So you're not going to be a professor after all?"

"My darling imbecile," murmured Reed as he gulped next Wednesday's dinner in two swallows, "you don't know a darn thing about it!"

His tone was rude but his eyes were admiring. She was an exquisite plaything, appealingly frivolous . . . earnest only in her childishly egotistical notions of making over to her own silly pattern every man that she liked. For that reason Reed knew that this would be his last evening with her.

Her eyes half closed, she said dreamily "What are you going to do next summer? Play with me in Paris? Going over on the

When he hurried up the steps of the Pi Omega house, Roy Fullerton was sitting with Lou in the porch swing. The two youths nodded guardedly and Fullerton went on with his conversation

same boat with me? . . . Why don't you?"

"Me?" He snorted in disgust. "I'm going to work. Work—did you understand that?"

"Work. . . . *Work!*" She laughed. "What a funny word when you say it over! Try it. Do try it."

"Um. I have."

"OH, DON'T be solemn. A person would think you were talking over English history with me. Honestly, you make me furious, Reed, when you're so Puritan and all that. You're certainly a trial to me!" She leaned toward him and drew fantastic designs on the back of his hand with her glittering finger-tip. "I like you. Awfully. But I wish you'd play a little more. All you think about is study. You've broken all records already—Can't you relax a little?"

Without a word, he called the waiter and paid the check. He added to his extravagance of the evening by calling for a cab . . . but a gesture like that could never touch Lou. To her notion, taxis were merely a convenience, like the air you breathed. Somebody always paid for them.

"Take Roy Fullerton," she said. "Look at *him*. Why, he went student third-class to Europe last summer, and he's got tons of money. He's going next summer, too. *He* believes in having adventure and a good time. He lost four hundred francs at Monte Carlo he told me."

"Ninth-rate Peter Pan!"

"Oh, all right . . . if you look at it that way . . ."

Their faces averted, they did not speak again all the way to the Pi Omega house. While he paid the driver, she ran up the steps, then stopped with one hand on the doorknob. Reed marched up the walk and stood beside her. "This is the last time," he said angrily, "that we're going to see each other—"

With both hands on her shoulders, he stared down at her. The whole campus, all of Fraternity Row, seemed to recede far out into space among the glittering stars, leaving them alone together. Their eyes met, first in antagonism, then in wonder and longing.

"——next Saturday night?" he finished lamely. "Will you give me a date then?"

She nodded. "*Oh!*" she exclaimed in an awed whisper, and ran into the house.

WITH his fists closed tight and his chin outthrust, Reed walked rapidly around the block four times before he went up to his room. He tried to study, but it was impossible. He tried to sleep, with no better success. . . . At two o'clock he was sitting by the (*Continued on page 137*)

"If a thing is worth doing, it's worth doing right. I'm going out to beat the world's record!"

There's No Stopping a WOMAN *with* Courage *Like This!*

By
CHARLES LANE CALLEN

IT WAS the opening day of the Fourth National Air Tour for the Edsel Ford Trophy and a huge crowd was assembled at Ford Airport, Dearborn, to witness the start of the great race.

Twenty-four planes were in line awaiting the starter's flag, which was to send them away over more than 6,300 miles of difficult air travel, embracing thirty-two cities in fifteen states. It was to be a test of plane reliability, this 1928 tour. Famous pilots sat in the cockpits—Stinson, Wood, Haldeman, Brock, Schlee, Hawks, and others.

Some of the finest machines and men of the commercial air service were there, primed, earnest, eager to win.

Edsel Ford flashed the signal, "Go!"

A cheer went up, and with it a gasp of surprise, as the first plane left the line and sped into the runway for the take-off. Out of that array of resplendent eagles of the air had come, not an eagle, but a wren—a tiny orange and black monoplane not much bigger than a toy ship, and at its controls was a young woman!

A woman, and she rode alone! No mechanic or co-pilot was there to assist her. The little five-cylinder, air-cooled motor which whirred spunkily on the plane's nose was of only 45 horsepower. The wings were but 30 feet from tip to tip. The whole machine, pilot and baggage included, did not weigh 1,300 pounds, and its cost was less than $2,700.

Small wonder the crowd gasped and then cheered anew at the audacity of the tiny ship and its pilot—the first small plane and the first woman pilot to contest in a National Air Derby. Ahead, on the scheduled route to be covered by the plane, were the deserts of the Southwest, the canyons and peaks of the Rockies, the treacherous air currents of the Pacific Coast. No pleasure jaunt was this, but stern business, 6,300 miles of it, day on day for a month.

"She'll never finish!" said the crowd.

"The plane is too small, a mere flivver."

"Not enough power."

"Winds will toss her like a leaf when she gets over the mountains—if she gets that far."

"No job for a woman!"

"She should have taken a mechanic!"

Such were the comments.

Veteran pilots who knew the route, who themselves were taking mechanics, had pleaded with her in vain.

"A mechanic?" the woman had retorted. "If I take a mechanic, they'll say that *he* flew the ship over the bad spots. No, I'll be my own mechanic and I'll fly my plane myself!"

The little orange and black monoplane left the ground and soared into a cloudless sky. In a few moments it was but a speck in the distance, the smallest of twenty-four specks winging southward.

ALMOST a month went by. Day by day, reports appeared in the newspapers: The flyers had reached St. Louis, San Antonio; they were above the Rockies, where a slip by man or motor meant death; they had passed the Mohave Desert, with the temperature reaching 110 degrees . . . were headed toward Seattle . . . now Chicago.

And each day somewhere in the newspaper reports appeared the line, "Woman Pilot and Tiny Monoplane Still in Race!"

This woman—Mrs. Phœbe Fairgrave Omlie, of Memphis, Tennessee—was bringing the little plane through!

At San Antonio, with some of the most

Phœbe Omlie beside her tiny plane. (On opposite page) Mrs. Omlie and her husband

dangerous flying of the tour ahead, the men pilots had held a conference. They felt responsible, in a way, for this plucky woman. They liked her, liked her grit. So Stinson, veteran of them all, was delegated to talk to her, to try to make her see reason.

"Going on, Phœbe?" he had asked that night.

"I sure am, Eddie," was the cool answer.

"Then, for Pete's sake, take a mechanic," Stinson had begged. "We don't want any funerals. There's rotten flying ahead."

"Sorry, Eddie, but your wife is riding with me tomorrow," had come the smiling reply. "There's no room for a mechanic."

At Marfa, Texas, there was an accident. Mrs. Omlie brought her plane to the ground safely enough, but turned too soon for the hangar. In the strong wind the little ship was overturned and a wheel broken in its landing gear.

It wasn't a serious accident. Nobody was hurt. But it was the kind of thing that saps a pilot's nerve, that would have caused many a pilot under similar strain to quit. The Rockies were only a day or two away.

"Quitting, Phœbe?" asked the men pilots.

"Not on your life!" came the answer. "I'm going through!"

Nobody said "quit" to Phœbe Omlie after that.

ON JULY 28th the race ended at its starting point. Again a crowd was assembled at the Ford Airport, and again the cheers of thousands rang over the field as a tiny orange and black monoplane sped down the runway. The little plane came to a stop and a small, girlish figure in white knickers and white silk shirt stepped jauntily out.

"Hello!" was her greeting. "Fooled you, didn't we?"

The crowd which had said "She'll never finish" closed in. The small pilot was lifted to men's shoulders. The governor of the state was there, the leaders of commercial aviation. The wren of the eagle fleet, the hundred-to-one shot of the Air Tour, had come through! Not the winner, but that doesn't matter. She had finished the race, and that is the big thing.

WOMEN of wealth and position have gone into aviation for the thrill of it, while others have seized on it as a short cut to fame and Hollywood. Phœbe Fairgrave Omlie belongs to neither of these classes. She is in aviation for exactly the same reason that men build houses and dig ditches—to make a living.

At eighteen years of age, which was in 1920, when she was Miss Phœbe Fairgrave, she joined a flying circus as a parachute jumper. It was the only way, she says, that a girl with her living to earn could get into aviation at that time. She soon became one of the finest aërial performers in the country. She was the first woman to execute a double parachute jump, and by leaping from a plane at the dizzy altitude of 15,200 feet, she established a world record for her sex in parachute jumping.

At the age of twenty, she was the owner and star performer of the Phœbe Fairgrave Flying Circus, in which I believe she set up another "first" for women in aviation.

Then, at twenty-three, came more serious work. She had married Captain Vernon C. Omlie, a former army flyer and her initial mentor in the air. Together they leased a field near Memphis and formed the Mid-South Air Ways, Inc., the first commercial air venture in the mid-South. Mrs. Omlie became an official and one of the regular pilots at the Mid-South field.

During the terrible days of the Mississippi floods, when the whole countryside about Memphis was flooded, the Mid-South pilots performed heroic service—and Mrs. Omlie was one of them.

The most coveted license in commercial aviation is that of transport pilot. Every holder of such a license must undergo rigid tests and must have had a minimum of 200 hours of "solo" flying. He must have a practical knowledge of planes and motors. Such pilots are the experts of our commercial air services and they alone are permitted by law to carry passengers, as well as freight, for hire in interstate travel.

At the Department of Commerce in Washington, which has charge of all such matters, they will tell you that Phœbe Fairgrave Omlie was the first woman to hold the license of a transport pilot. She is also licensed by France and by the International Federation to fly anywhere in the world with paying passengers.

IN VIEW of all the things I had heard about her, I expected, when I went down to Memphis to get the details of her story, to find Mrs. Omlie a rather formidable person. A dare-devil, I thought, and probably hard-boiled. I was never more badly mistaken. In fact, a modern girl would call her old-fashioned.

Her bobbed hair is brown—she confessed that she had had quite a debate before bobbing it. There is a merry twinkle in her brown eyes, which suddenly can become infinitely serious and earnest as she talks. There is little of the business woman air about her but she goes straight to the heart of a subject.

For instance, I asked, "What place have women in aviation?"

"Women can make it or break it," she replied. "As long as women are afraid of the air they will exert every effort to keep the men out of it. Every time a man who has become enthusiastic about aviation suddenly loses his interest in it, you can make up your mind that his mother or his wife or his sweetheart is responsible. We have the motors and the planes. Now we've got to win over the women.

"As a matter of fact," Mrs. Omlie continued, "any woman who can drive a car can learn to drive a plane. It isn't hard and it requires no more skill than it does to operate a car in city traffic. But, while I have a transport pilot's license, I don't fool myself. The pilots on our air lines are and will continue to be men. We don't (*Continued on page 141*)

Boy-about-town

The "Junior Set" of Pequot goes in for "Culture" —with dire results!

Illustrated by GEORGE BREHM

THE Deale family of Pequot was observing the quaint old custom of spending the evening at home. Father had his pipe and paper, Mother her mending, and Harriette a big, black book. The early June night was still cool enough for such indoor sports. Suddenly the domestic peace was shattered by the following blow:

"Father, what is the population of Balooshistan?"

The startled Samuel Deale looked over at the couch whence had come this unnecessary noise. Ordinarily Harriette reclined upon the back of her neck with her feet as high as Nature permitted, but now she was tied up in a curious knot, with bony knees and sharp elbows growing out at unexpected places and a toe showing up unreasonably near her chin. It struck Mr. Deale as queer that the daughter of a fire insurance agent should have turned out a contortionist.

"Well, Hattie," he said, "I used to know, but it has slipped my mind."

Harriette Stanford Deale told the bitter truth about Baluchistan and flipped the pages of the book which lay heavily on her stomach. Mr. Deale now recognized the volume which was wrapped up in his daughter's anatomy. It was "Forty Thousand Fascinating Facts," and he felt that Catherine had shown little sales resistance when she bought that mine of information. He turned back to his newspaper, only to be pestered by this query:

"When was Praxedes Mateo Sagasta born?"

The victim looked beseechingly at his devoted wife, who, however, was enjoying his sufferings.

"I pass." Mr. Deale had been so engrossed in his own troubles that he had never heard that P. M. Sagasta had been born at all.

The information addict gave him the answer and one more chance.

"Who wrote Gulliver's Travels?"

"Defoe," said Father promptly.

"Wrong! Swift."

Mother made an umpire's motion with her thumb.

"You're out!" she cried.

"Why are we doing this, anyhow?" Mr. Deale looked at his offspring in that solemn, inquiring way which meant that he was highly amused.

"I love to spend a quiet evening at home curled up with a good book. I think a person should improve your mind while they are young, and not waste my hours of youth in idle flippering."

"There's something in that," admitted Father.

"I expect to culture myself a good deal this summer. School is over now and I'll have time to improve my intelleck and not be like most girls whom all they think of is clothes, flippering from flower to flower like a butterfly."

When Father recovered from this he asked: "What branch of culture were you thinking of taking up?"

"All branches."

Mr. Deale said that seemed fair enough, though some found it wiser, and a bit less confusing, to master one subject at a time.

"Botany is a nice summer study," suggested Mrs. Deale. "You collect wild flowers and learn their names and press them in books." Poor Mother had an obsession that an underweight child of thirteen should spend the summer in open-air pursuits, flippering from flower to flower like a butterfly. Harriette did not feel drawn to this science; it suggested working in the garden. Mental culture, not horticulture, was her aim in life.

"Perhaps later I will master botany. But first I will curl up with all these good books." She waved her hand at the Deale library.

"No, first you will curl up in bed," said Mother. "Come."

THIS reactionary measure was carried by a vote of two to one, but the knowledge fiend got permission to take her book along so that she could master five or six fascinating facts before breakfast. Kissing her devoted but ignorant father good night, she took her intelleck upstairs.

In making this good exit, she forgot that she had been sitting upon a magazine called "Movie Makers." Mr. Deale now examined this curious publication and when his wife returned from above he had a treat for her.

"Look where your eccentric daughter got bit by the higher life."

He displayed a picture of the screen favorite, Dottie Darling. This famous flapper, so the caption certified, loved to spend her Hollywood evenings curled up with a good book.

"I bet," said cynical Samuel, "Dottie would curl up if she ever *saw* a book!" He now wanted news from the cultural front. "Is our intellectual light out for the night?"

"We are not amused," said Catherine, in Queen Victoria's formula. "This means that she is going to be some other kind of person for a while, and hard to live with. You will go

By HOWARD BRUBAKER

Jim-Jams made no effort to conceal his disgust at the horrible sight he saw

to the city every day and leave me in this trouble. It is the woman who pays!"

Mrs. Deale was silent for ten stitches.

"She seems to think her father has not cultured himself much. And I must say, Sam, you didn't cover yourself with glory in that questionnaire."

Her husband laughed, and unskillfully changed the subject.

"By the way, I met Mr. Lawrence Hardwick today on the train. He seems to be a pleasant fellow"

"Oh, yes, they've taken the Reynolds house for the summer."

"He is the Hardwick of the famous law firm of Chelsworth, O'Connor, Rothstein and Hardwick."

"He sounds like the caboose. Well, I never heard of that famous firm before."

"Neither," admitted Samuel, "did I."

HARRIETTE'S mother was right, as was her charming custom. If these parents could have known what the coming weeks held in store they would have stamped out culture the instant it raised its hideous head.

The little highbrow spent much of the following day in the veranda swing, curled up with literature. Only under protest did she perform any lowly acts of helpfulness, and then she always hurried back to her newly beloved books. Hattie was not, however, so constant a reader as an ignorant observer might think. She was clothing herself with a new personality, a thing of shreds and patches, pieced together out of bits remembered from books, from motion pictures, from the words of teachers—lovely phrases that had appealed to her.

A delicate and interesting bookworm was what she would be from now on, forever holding a volume in her pale, cultured hands. Even when out walking she would do this, and the general public would say to each other: "Harriette Stanford Deale is always culturing herself."

Soon she would fall into the bad habit of keeping late hours, because she had never heard of a mind that got improved much in the daytime. "Far, far into the silent night while ignorant Pequot sleeps," she would be cultivating her gray matter. She would ruin her eyes and have to wear horn-rimmed glasses like Miss Sillby, who ran the White Elephant Tea Room. Her brow would be wrinkled in thought, and she would speak always in high-grade language.

It was further decided that the heroine would be irregular at meals, absent-minded about dull household tasks, and careless in her person, not squandering the precious hours of youth in silly washing and combing. She would waste no time hog-nogging with social butterflies like Gerry McIntyre. As for the Jameson boy next door—the so-called Jim-Jams—and the rough characters who consorted with him, she would never speak to them at all. "Those low class of hoodlumps have gone out of my life forever."

Thus far Harriette had arranged her future, when she observed the fat little Tillie Rickhill turning into the yard.

"Oh, my goodness!" she thought; "can't a person ever have a minute to culture themself?" She wrapped her small person about the ponderous volume she was reading.

TILLIE came upon the veranda, bringing with her a round, good-natured face and part of a banana. In her amazement she stopped this edible halfway to her mouth. On the swinging couch she saw her friend twisted badly, her lips moving slightly, her face distorted by pain.

"Wha's the matter of you, Harriette?" she asked with deep concern. "Have you got the stummick ache or what?"

"Oh, hello, Tillie; are you here? When I am curled up with a good book, I am prackly—obliverous of everything."

Tillie poked around and found that what Harriette had in

Digitized by Google
Original from UNIVERSITY OF IOWA

her midst was not an ache but "The Decline and Fall of the Roman Empire."

Everything had to be explained to her in easy terms, with illustrations by that intellectual giantess, Dottie Darling. The fat child now decided that she, too, would go in for the new sport of curling up. She chose a comic supplement which Harriette had enjoyed in her lighter moments and tried to curl up with that. Nature had not cast her for such work; she curled up about as easily as a rain-barrel. Tillie Rickhill may possibly have been the poorest curler-up in all Pequot.

But her rowdy laugh fell pleasantly upon the ears of Mrs. Deale, who was glad to see some recreation coming into the life of her pale, bookish daughter. She knew by experience that prohibitions did not cure Harriette's perversities. One had to employ strategy. Accordingly, she now called up the McIntyre home on Oak Street and talked with Gerry's mother.

"Geraldine is coming over," Mrs. Deale told the reading circle. "I could make some lemonade and you could have a little picnic down under the maple tree."

"Oo! Fine!" cried Tillie, who had not had a bite of food for ten minutes.

"All right, Mother," said Harriette. "I wish to talk to Gerry about a certain preposition."

"Preposition, preposition," muttered Tillie Rickhill, who always loved the sound of Harriette's big words.

"Strategy—that's what it was," Mrs. Deale told her husband ruefully that night. "If I'm a strategist, you're a human encyclopedia!"

THE truth was that Harriette had already grown tired of solitary refinement. She had dazzled Tillie, and she could do the same to Gerry; she might find still other girls who were easily dazzled. The great-hearted thinker decided to share her learning with the less fortunate; she would form a club with which to beat knowledge into submission. Hattie was of little comfort to her roly-poly guest during the ensuing half-hour of hard thinking, but when Geraldine McIntyre came, both young ladies were invited to join the Junior Culture Circle, Harriette Stanford Deale, President.

The preposition was launched under the maple tree amid sweet sounds of cookie-crunching and the gentle gurgle of lemonade. Tillie accepted the new movement without a moment's hesitation.

"When we meet at our house," she said, "I'll ask my mother if we can have cocoa and macaroons and marshmallows and—"

"Sh—," said Hattie. "It's not just for eating!"

"My goodness, no!" exclaimed Gerry. "It's to improve your mind and everything. When we meet at our house, I'll wear my new dress."

THAT was Gerry's weakness now. Nature, science, and art had done well by Miss McIntyre in recent months. To her native gift of large blue eyes, time had added certain happy touches upon nose and cheeks and hair, and the dentist had cunningly straightened her teeth. Geraldine was not unaware of her modern improvements and felt it her duty to decorate herself as well as circumstances and Mother would permit.

Tillie catered to her interior and Gerry to her exterior. It was of such sorry stuff that the Junior Culture Circle had to be built. Gerry was chosen secretary because she wrote a good hand and Tillie vice president because the office had no duties.

"Prehaps later," announced President Harriette, "we will have a constitution and bywords. Gerry, don't pay any attention to them. Pretend we don't see them."

The reference was to certain low characters in the Jameson yard—Jim-Jams and his dog and Allan Landsford and his. This male quartette had drawn near to the Deale fence, and the two-legged members were demanding refreshments in unmannerly voices. For this audience Tillie Rickhill ate and drank with gusto, smacking her lips and wiping her mouth, she was highly insulting and amused.

"It wouldn't do to have boys belong." Gerry's tone was tinged with regret.

"No, they'd gobble up everything." Obviously this was from Tillie.

President Harriette vetoed boys on higher grounds. It was impossible to culture them. All they thought about was their muscles. Boys were hoodlumps and ruffraffs. Even when grown up they did not get cultured. She revealed her own father's pitiful failure last night. Gerry's father, it appeared, had no culture, either. Tillie was not sure about hers but would ask Mother.

"You'll find out he hasn't got any," said Harriette. "Now I'm going to read you something out of this poetry book."

So the charter members sat on the sunny June lawn and enjoyed themselves highly. Hattie reveled in the sound of her own voice; Tillie nibbled the last cookie slow'y so as to make it live through the exercises; Gerry stealthily watched the boys physical-culturing themselves. The Junior Culture Circle had started with a bang!

For a week Pequot moved perceptibly toward the higher life. Maidens named Genevieve, Dorothea, and Annabelle, nice daughters of ignorant fathers, embraced the cause. President Harriette was the heart and soul of the order—and the free street parade. For she was not one to hide her light under a bushel. She carried erudition into the highways, walking sedately down the street with eyes upon a handy pocket edition of this or that and her brow furrowed with thought. Thus she passed the Jameson gateway where Jim-Jams hognogged with his dog, Admiral. Jim-Jams had once fastened upon his neighbor the epithet, "High Hattie." He now issued a revised edition.

"Lookee!" he called to Admiral. "There goes Highbrow Hattie."

Without lifting her eyes from her classic, Harriette said distinctly: "Ignoramious!"

Poor Jim-Jams could not think of the answer to this at once and victory rested with Harriette. Unluckily, old Mr. Jennings, notably nearsighted, chose this time to come around a corner and collide with the constant reader. No harm was done, but Jim-Jams seemed to think this accident amusing and reported it to Click Smedlay and his ilk. Every day Hattie had to sneer at these ignorant masses, and she was even abler as a sneerer than as a

"Lookee!" called Jim-Jams. "There goes High-brow Hattie," and without lifting her eyes from her classic, Harriette said distinctly: "Ignoramious!"

curler-up, because she had been at it longer.

A better press agent for the J. C. C. was Miss Jessica Krum of The Pequoter. Miss Krum was bookkeeper, typist, and society reporter for that twice-a-week journal, and she duly recorded the birth of the society at the Deale home. In the Tuesday issue the paper said: "The Junior Culture Circle met yesterday at the home of Tillie Rickhill. Reading and music were indulged in and delicious refreshments were served."

President Harriette had told the journalist far more than this, but probably the ignoramious lady could not understand high-grade language.

NOW it was Friday afternoon and the girls were taking up all branches of knowledge upon the veranda of Gerry's Oak Street home. The secretary, gayly embellished, was a sight to please the most exacting. Inside the house the radio was rendering a current cultural triumph, "That's My Weakness Now." To this reason-feast the president brought three medium-weight books and the vice president fifteen cents' worth of caramels to sustain the inner girl until refreshments, if any. The three privates, Genevieve, Dorothea, and Annabelle, brought only fresh, vacant young minds to be filled.

They had given culture scarcely a half-dozen whacks when a glittering limousine driven by a chauffeur purred down Oak Street. This form of conveyance was rare in Pequot and appealed to every girl who loved nice things. In this costly caravan sat a costly woman and a costly boy. The lady was obliverous of everything, but not so the gilded youth. He looked with interest at the beauty and intelligence gathered on the McIntyres' front porch—waved, in fact, a sociable hand. The kind-hearted Geraldine returned the salute.

"Who," asked Harriette, stopping in the middle of a sentence, "is that?"

They were those rich New York people, the Hardwicks, now summering here, and the hand-waver was their son, Junior.

"Do you know him?"

"Not," answered Gerry, "yet."

"He looked kinda fat to me," said Tillie, neither in praise nor blame.

Harriette resumed her reading, but every time a car passed, five maiden necks were craned toward the street—and sometimes six. Now the telephone rang and the booklovers could hear Mrs. McIntyre speaking in polite tones. She came out upon the veranda bearing impressive news.

"That was Mrs. Hardwick—they have moved to Pequot for the summer and I believe they are important people. Mrs. Hardwick would like to have her son, Junior, meet some nice girls, because he has been away to a preparatory school and needs girls' society. He wants to invite you all to a Dottie Darling picture tomorrow afternoon and take you in the car. How would you like that?"

"I think that would be lovely, Mother!"

"Let Harriette answer, dear. She's the president of the club."

The chief executive wrinkled her lofty brow and signed the bill.

"Yes, Mrs. McIntyre. Perhaps it would be good for us to have some restreation."

Tillie agreed, as did also the Greek chorus, Genevieve Dorothea, and Annabelle.

"Then I will tell Mrs. Hardwick that Junior may run in this afternoon and meet everybody."

IT WAS twenty-two minutes by a reliable watch from the time that Lawrence Hardwick, 2nd, first gazed upon the fair sextette to the moment when the limousine stopped in front of the McIntyre home. That is what might reasonably be called pretty fast work. The chauffeur opened the car door, also the front gate, but Junior came up the walk by boy power.

The serious thinkers pretended that nobody had come, but they missed no detail while Mrs. McIntyre welcomed the youth and accepted the card of introduction from his lady mother. Nothing like Lawrence Hardwick, the Younger, had come into any girlish life here present. Junior wore no hat, and his flaxen hair was, by local standards, overlong. He was not fat, as Tillie had so crudely charged, but perhaps a little farther around than normal for one of his height. He was richly clad in a light gray suit, and his golf stockings were twin blazes of glory. Neither his clothes nor his deferential manner to Mrs. McIntyre had ever been equaled by any Pequot youth. He acted as if being presented to six strange girls was practically a pleasure. In such an ordeal a local ruffraff would have died in horrible agony.

Mrs. McIntyre went to the kitchen to divide the impending eatables by seven instead of six. The radio had gone into a new phase, so now an entirely different set of artists was rendering "That's My Weakness Now."

WITH the departure of his hostess, a change came over Junior's manner. His feet jiggled and he did interesting things with his knees.

"Pretty hot tune, all right." He turned to Gerry. "How about a little dance?"

He fox-trotted with the fair Geraldine, and likewise with the intellectual Hattie. "You're a pretty hot dancer all right," he told the president in confidence. This confirmed a belief of hers which nobody else had ever shared. Junior galloped with the Greek chorus, and even with Tillie Rickhill, though some might have thought that a wrestling match. Junior enjoyed himself hugely, flippering from flower to flower like a heavyweight butterfly. Being the only boy at a dance was his ideal sport.

"This is my dish," he said, pushing the hair out of his eyes. "That's a pretty hot dress, all right," he told Geraldine—a thing no Pequot boy had ever said to anybody since the dawn of history.

Hattie's father had suggested that it was best to pursue one topic at a time, and the Junior Culture Circle now did this very thing. It made an exhaustive study of the subject of Junior Hardwick. From the moment he appeared, no books were read, there was no gossip about the population of Baluchistan. The paramount issue was Junior, and he gave the seminary all the fascinating facts. If it was autobiography they wanted, Junior's motto was, "Give till it hurts."

Lawrence Hardwick, the Second, fourteen years old, was born in New York, which was a pretty hot town all right. His pater belonged to the rich and famous firm of Chelsworth, O'Connor, Rothstein and Hardwick; in fact, he was the Hardwick of that firm. The limousine standing idle at the McIntyre curb had cost twelve thousand smackers. The chauffeur was always at his beck and call, answering to the name of Joe. Here all took a good look at Joe, who was curled up with a pink picture paper. It thrilled Geraldine to have a costly (*Continued on page 111*)

What do Trees MEAN to YOU?

By NICHOLAS ROOSEVELT

Drawings by Charles S. Chapman

TREES were the greatest enemies of our pioneer forefathers. It took the early settlers and their descendants two centuries to hew their way through a thousand miles of virgin forest before they broke out into the prairie country of the Middle West. The battle was resumed as they chopped into the heavily timbered districts of the Pacific Coast, where today the last of America's primeval forests are making their stand against mankind.

It was a struggle for the strong of limb and sturdy of heart, for men fought, not against mere saplings, but against monster trees such as are seen today only in the remoter mountain regions and in a few specimens here and there that our ancestors permitted to survive. Nor did the work end with ax and fire. The stumps remained to hamper plowing. Often these were so huge that men and oxen could not remove them. In such cases rain and years helped the pioneers. The stumps that one generation left, another pulled.

In remote corners of America this struggle with the trees is still being carried on. But everywhere man has been the victor. When the colonists landed at Jamestown in 1607, about half of the present territory of the United States was covered with forests. Since then, half of this forested area has been stripped. Much of what remains is second growth. The rest is being rapidly destroyed. About twelve million acres of forests have been burned yearly since 1914. Large additional areas are annually destroyed by disease, partly because of man's carelessness in introducing foreign plant pests which have flourished here because free from the natural "control" which kept them in check in their original homes. Only a little more than one and a half million acres are being replanted each year—about one half of one per cent of the acreage already denuded. At the present rate of consumption and destruction, our American forests will soon be stripped of all their marketable timber.

The danger was recognized in the beginning of the present century, and steps were taken by the creation of national and state forests to save a portion, at least, of our wooded lands. But of the total remaining forest area of four hundred and sixty-nine million acres, only one hundred and sixty-two millions are within the boundaries of the national forests and eleven millions in state, county, and municipal forests. Half of the area officially known as "national forests" is nothing but brush and desert land, and otherwise non-forest-bearing. Twenty-five million acres within the boundaries of the national forests do not belong to Uncle Sam. The owners may do with them as they like. Even on the government-owned lands, the policy of the forest service has been to facilitate the cutting of marketable timber in order to obtain increased revenues for the forest service itself and for the counties which are entitled to their share of the forest's earnings.

THE tragedy lies in the fact that while a forest may be cut or burned in a day, it takes decades to reproduce it. Even the fastest-growing trees, like the southern pines and some of the poplar family, including cottonwoods and quaking asps, require from fifteen to twenty years to attain a sufficient size to be used for posts, firewood, and pulp. The white pine, Douglas spruce, redwoods, firs, and other trees on which we have come to depend for our lumber require from forty to one hundred years of growth to be economically marketable. Some of the finest of our trees, like the elms, oaks, and redwoods, are at their best when they are several hundred years old. The giant sequoias, or

"big trees," of the California Sierras include in their numbers trees two to four thousand years old. But neither the age nor the magnificence of these tree monsters has saved them from man's vandalism. Unable to bring in machinery powerful enough to cut them, the lumbermen have blasted them with dynamite, often wasting three quarters of the marketable timber in them—all for the sake of grape stakes and shingles.

There are signs, however, that the old idea that trees are man's enemies, to be destroyed as rapidly and completely as possible, is passing. We are beginning to realize that this crop which we have so shamefully abused during the last three centuries is in reality one which we should cherish, not only for its future utility, but because of its present beauty.

The joy of tramping through the woods alone or with dogs or human friends on soft, hazy spring days, or in the brilliant, sparkling autumn air, is part of the birth-

Quaking Asps, New Mexico

right of every American. Our Indian predecessors knew it before us. They loved the woods and looked on trees as living beings, like animals or people. Fortunately, some have shared the Indians' sense of the individuality of trees, and have known in childhood trees that seemed to be special friends.

I remember, as a small boy, lying on my back in the tall, ripening grass of early summer, looking up at the veined lacework of the leaves and the branches of the locust trees shaking softly in the warm air. All about me was the steady hum of bees and insects busy gathering honey from the clover and buttercups. The small oval leaves of the locust trees allowed the sun to break through as they fluttered, thus adding to the illusion of lace—green lace with dark-brown veins—a comfortable and drowsy sight for a small boy on a summer afternoon on Long Island.

Today the locusts are sick—many of

Redwoods in the Muir Woods, California

them dead. Throughout infected sections of our eastern states may be seen tall locust skeletons, with deeply ribbed, rough, brown bark, and only a few live branches remaining. In early summer the air is still sweet with the rich perfume of the locust blossoms. But the leaves turn brown in July, and each summer the trees look "sorrier." Fortunately, there is still a little life left in them. Locust logs, when cut fresh, will still sprout, and locust posts will grow. They may in time develop resistance to the pest that is slowly exterminating them.

If they do so they will be more fortunate than the chestnuts. Here and there in the Middle West these splendid old black trees have as yet escaped the blight that has swept the great chestnut forests of the East like a plague. Only a few gray, barkless trunks remain, and many stumps. No more may barefoot boys cool their toes in the yellowish "kittens" of the chestnut blossoms, nor in the autumn need they

Digitized by Google

Cypress Trees, California

fear the sudden prickling of the chestnut burrs, sharp enough to pierce even the leather hide of a foot that has been shoeless all summer. Nor may they gather the nuts, and, looking first for the little white worms that spoil their taste, cross the good ones with a sharp knife and roast them over the early fires of autumn.

The elms, also long threatened, appear to have been saved—but not without a costly fight. Today these sturdy giants, with their large crowns and fan-shaped branches, have become inseparably associated with the older, longer-settled regions. Outside each neat little white-painted farmhouse of New England the two traditional elms stand guard. In the villages the "commons," now often turned into fleet motor highways, have their single or double rows of magnificent old elms, arching over the roadway and shading the houses. Here and there a specially splendid elm has been left in a pasture, to give the cattle shade. Most shapely of the

Digitized by Google

UNIVERSITY OF IOWA

eastern trees, the elm also takes most kindly to cultivation and glories in the spaciousness which permits it to shoot forth its branches to the four winds and to develop its thick crown under the summer sun.

Less common in cultivation, but in their way as magnificent, are the old, gnarled, gray-barked beeches that have been spared in the process of deforestation because they have no special lumber value. I know of one such on Long Island, hidden in a wood of second growth. Nearly five feet in diameter, with large, irregular branches, twisted and grown together, we looked on this old beech more as a friend than as a place to play. We straddled its thick limbs and sat in its crotches, and scratched our names on its tough, smooth bark. To us it seemed the guardian of our forest—a kind guardian, always reliable and always glad to have us around. As the years have passed, the tree seems to have shrunk a little—things have an uncomfortable way of growing small as one grows up—but I still visit it occasionally and find it as serene and sure as ever, untouched by the changes about us.

THEN there are the tulip trees—tall, strong, thick, with their crowns towering far above the second-growth forests—trees so large and powerful that apparently the axmen were glad to spare them. They are among the most magnificent of our eastern hardwoods, and have the additional distinction of large and handsome flowers, not unlike the tulips from which they get their name.

Often associated with the tulip trees are the oaks of various sorts. They are a large family, widespread throughout the country. In the southern states and in California the generous live oaks are best known—dark-green, full-bodied trees that keep their leaves all year and give an air of age to the landscape. In the northern states there are red, white, black, scarlet, chestnut, pin, and other oaks—all of them sturdy trees. The tradition exists that the white oak is more resilient than the red oak, and that in a heavy wind it will bow its head, whereas the red oak will stand straight until it is uprooted. Of the northern members, the white oak is the most distinctive in appearance, having a whitish-gray, rugged bark that sometimes looks as if it might shred. Its leaves are smaller than those of the red and black oaks, and are more rounded on their edges. But when autumn comes, the white oaks are eclipsed by their scarlet cousins, which, with the maples, make the landscapes crimson.

The swamp maples and the sugar maples are the most decorative. Their glory comes after the first cold nights, when a few branches flame in contrast to those which are untouched. Less spectacular, and in many regions a more common sight, is the Norway maple, which, although a foreigner, has taken so kindly to our country that it is almost a tree-weed. Its large, ball-like shape and dense foliage make it a favorite on lawns and roads in suburban districts. But, like the other maples, it is a fast grower and lacks the stanch qualities of the oaks.

Faster growing even than the maples are the various cottonwoods which are to be found in so many states of the union. In the Mississippi basin and on the plains the cottonwoods lined the rivers and gulches, rarely straying away from water except when carried by man. The Dakota Indians used the cottonwood in their ceremonies, impressed by its vitality and activity. As in the case of its cousin, the quaking asp, the cottonwood is rarely still, no matter how quiet the air. Always its leaves are rustling—conveying secret messages, so the Indians say. It takes its name from the fine, cottonlike down attached to the seeds, which are so light that they are carried on the wind for miles.

While many of the cottonwoods are strong but ungainly, with scraggly bark and thick, bent trunks and branches, the quaking asps tend to be slender and delicate. Their bark is smoother, except at the base, and their limbs are straighter and more inclined to reach skyward than to spread out to cast shade. When the first frosts come, they turn golden overnight. Thus, whole mountain sides in New Mexico will be green during an October sunset and flaming yellow at the next sunrise. But, true to the nervous, quivering character of the aspens—they take their name from their quaking leaves—they drop their foliage almost immediately after the frost and become stark sentinels of gray, awaiting the winter snows.

WINTER is the season when the evergreens come into their own. This is the time when they seem most friendly and when their shelter is most welcome. Their number is legion—the hemlock of our northern woods, the spruces and firs that cover the mountains East and West, the many members of the pine family, the sequoias of California, which include the coast redwoods and the "big trees" of the Sierras, the cedars, the cypresses—trees familiar to people of all the states.

To the Indians of the plains, the cedar symbolized strength and long life. They were impressed with its indifference to cold and heat. Dr. Melvin R. Gilmore, in his collection of Indian lore called "Prairie Smoke," tells us that to them the cedar "appeared to be withdrawn, solitary and silent, standing dark and still, like an Indian standing upon a hill in prayer and meditation with his robe drawn over his head. Thus it gave the suggestion and had the appearance of being in communion with the High Powers."

To Easterners, lacking the reverence for all (*Continued on page 150*)

Dark HAPPINESS

Irene held Katrina from plunging down the stairs. The maid was in her nightdress. Irene was disheveled

ON a day in May lovely Irene Cravenside drove into the Vermont hamlet of Lotusville upon a strange quest. Eight months before, while she waited outside in a cab, her husband, Donald Cravenside, had gone into their house in Philadelphia to turn off lights that had been left burning—and he never came out again. Search revealed the house completely empty—even of servants, who had that night off—and every door and window locked from the inside. From that day it had been a mystery, utterly without clues—except for the rumor Irene had recently heard about a "phantom" which was haunting the old Homestead of the Cravensides, closed these many years.

And Irene's first contact in Lotusville was a confirmation of the rumors she had heard. "Hives" LaFlemme, a half-wit boy, directed her chauffeur to the home of John Forsythe government topographer and caretaker of the old place—meanwhile grumbling about a grudge against John and muttering threats to "kill him some day when I get a good knife." Irene found Forsythe a virile young bachelor, living in a house on a back road, with an Airedale named Tripe. To him she confided her mission, explained her wealthy husband's absorption in experiments he was carrying on in the nature of light, and declared her intention of sleeping in the Homestead that night.

An excited old native broke into this conference to report a new sight of Donald's "ghost" up on the hilltop, and the formation of a posse to investigate. John sent the old man back with instructions to the posse to approach from the highroad, while he and Irene went up from the rear mowing. Arriving at the barn on the hilltop, they were startled by weird noises from within its dark interior. While they listened, the door opened and a tall woman's figure came through the doorway into the yard, as if sleep-walking. John trained his flash-light upon her, but she came on, directly toward them, with hands held out before her. Then—up from the near-by orchard—came an eerie strain of sweet violin music, and the figure halted—stood there, poised, listening.

PART II

THE strange music played and as strangely died away. Soft, mystic, elusive, it had seemed—a dozen bars from *Traumerei*. Persons down along the roads could never have heard it. On this old Vermont hilltop in depths of May evening it conveyed the essence of "a moonlit garden spread in dreams where angel wings beat softly.". . .

Yet played as a love call. Could those auditors doubt it?

The figure of no player could be seen down that orchard. The gnarled, unkempt trees, budding sparsely in senility, were veiled by kind night and fused in illusion. Down three or four acres this illusion persisted. Then came meadow-marsh that stretched to the side road. Anything conceivable could be haunting such a vista, yet the music seemed to come from just over the wall.

The "phantom" woman turned and moved back toward that wall.

"Jessie!" called Forsythe. He snapped off the flash-light.

"Who—is it?" asked the "specter," pausing a third time and seeming to be frightened. Mrs. Cravenside gasped, that her companion knew the trespasser.

"John Forsythe, Jessie. You needn't run away."

The surveyor moved out from the shadow of the ell. He strode toward the woman in the center of the yard. The city woman waited. . . .

"But there's—somebody with you, John!"

WILLIAM DUDLEY PELLEY'S *remarkable story of the strange happenings in the* House *of* Cravenside

Illustrated by
OSCAR F. SCHMIDT

"Yes. It's Mrs. Cravenside."

"Ah—I thought so!"

"What made you think so?"

"I don't know as I could say. Yet I felt she was coming. I hoped to get away—"

"Why do we find you up here on this hilltop? What have you been doing?"

"I—I haven't damaged anything."

"No, probably not. All the same, you're trespassing and it needs an explanation. Who's down in that orchard? *Who just played that music?*"

The woman in the shawl debated in distress. Then hoarsely she replied:

"Your guess—is as good—as mine, John Forsythe."

"You mean you don't know?"

"I said—your guess is as good as mine, John Forsythe!"

"Come, come, Jessie—this won't do at all. You've had mighty good reasons for getting up here tonight ahead of Mrs. Cravenside. They've got something to do with that orchard musician—"

"Maybe I ran up to do a neighborly act—make sure, for instance, that nothing happens at this house between now and morning to scare Mrs. Cravenside."

Irene approached the pair. They stood, three figures in starlight, the woman from the city wide-eyed at John's shoulder, the one they confronted plucking at her shawl. John said in explanation:

Digitized by Google

UNIVERSITY OF IOWA

"Miss Barnes's eyesight is faulty, Mrs. Cravenside. Jessie, Mrs. Cravenside is right here at my elbow."

Jessie nodded stiffly.

"I suppose I should say I'm glad to meet you, Mrs. Cravenside. But there's nothing personal in the fact that I'm not."

"I'm sorry we're distressing you, by discovering you so."

"Oh, 'tisn't *that!*"

"See here," growled Forsythe, "you answer me, Jessie—how do you know anything might happen, between now and morning, to scare Mrs. Cravenside?"

"This homestead's said to be haunted, isn't it? P'raps I figgered she should know it, not stay and be frightened by what she sees or hears."

"You spoke just now as though you might prevent her 'seeing or hearing' anything. You'd better come clean. There's a mystery here we mean to run down."

Again the blind girl considered. Finally she announced:

"*If Mrs. Cravenside don't want to see something that'll bring her sorrow all the rest of her days, she'd better turn 'round and go back where she came from!*"

THERE was nothing bitter in this warning, neither impudent nor hostile. It was even solicitous, in a grim, impersonal way, for the city woman's welfare. But it frightened Irene more than all else to the moment. She paled in the dark and shrank against Forsythe. Cordy and competent beside her, bareheaded as she had first encountered him in his yard, he reached out a hand and gripped Jessie's elbow.

"Explain that, Jessie Barnes! Explain it darned quick!"

"'Tisn't for me to explain. All I'm saying is, she'd better not stay here."

"Jessie, you listen. There's half a dozen men heading up here from the village. They'll get here any moment and they mean to search this property. If we turn you loose—for bagging—they won't be so considerate as Mrs. Cravenside and I. But there's more to it than that. Don Cravenside's behavior is *his* business—and his wife's—but if men like Baldwin and Austin get hold of him, he'll have to explain, not only to his wife, but to half of Vermont. That might mean a scandal his wife shouldn't suffer—"

"COULDN'T we go into the house and settle this?" Irene questioned nervously. "When those busybodies come we can send them away by telling them we've found out whom Mr. Baldwin saw—some friends who were up here awaiting my arrival."

John had to agree. Lamps in the homestead would attract the men at once. Such reasonable explanation, offered with frankness, would deflate the petty mystery and return them to the village—provided Don Cravenside—or his spirit—or whoever was wandering the orchard in the starlight—was not so indiscreet as to offer more music.

"All right," he announced. "You come with us, Jessie. We'll talk about this in the house."

The blind girl seemed rueful. Then she suddenly straightened.

"I'm not afraid," she said. "When you try to help folks out, and they fight you, I guess you just can't help it!"

They started toward the ell, John drawing out his keys.

The house took on size as they stood on the doorstone. A hoary dignity it had, built on the highest eminence in Lotusville, where it watched the years pass over the mountains. A weather-warped lattice encircled the doorframe—even the side

UNIVERSITY OF IOWA

"You can't leave this room, Jessie Barnes," said John, "till you've given us a truthful 'yes' or 'no' to one vital question"

doorframe into the kitchen—with vines of small roses newly budding upon it. The door lintel had a fan of shutters. Plantain and chickweed grew close to the step. The panels of the door were cracked; its latch was of iron—heavy—slightly rusted.

The door, when pushed inward, snapped sharply upon its hinges. Into a low-studded, time-mellowed interior they stepped—a long-unused kitchen, fetid with the odor of bricks, old mortar, much chimney creosote. John's flash-beam picked out lamps on the shelf above the sink. He crossed over and took them down, three of them, lighting their wicks from the same flaring match.

Irene saw a kitchen typical of New England, a place of rigorous charm but giving no thought to a tired woman's footsteps—twenty feet in distance from range to pantry, another twenty feet from pantry to sink. Great iron hooks thrust down from its ceiling—hooks to hold poles for the drying of herbs—and knots and square nailheads thrust up from its flooring. She took note of these features later, however. The three tall hand-lamps, with obese, flowered chimneys, were lighting the "spook" they had caught in the yard.

MRS. CRAVENSIDE was startled. The strange feminine trespasser was dynamic with character, not at all the peasant she had seemed in the starlight.

"Blind Jessie" Barnes was a woman in her thirties—her late thirties—with a flood of brown hair and strong lines down her mouth. Her body belied its handicap of sightlessness, being big-boned and capable, and possessing a suppleness her frock could not hide. Her bosom was ample; her figure had grace. Dressed in modern mode she might have been comely. But her hair had come down on the small, rusty shawl. Her printed challis dress was rumpled. She was wearing a pair of male congress boots—from cruel lack of more suitable outdoor footgear, Irene learned later.

But the city woman's scrutiny came back to Jessie's face.

It had Dantesque strength, that face. The forehead was high, the nose and chin prominent. And the mouth—where had Irene seen such a mouth? No, not on Dante. Rather on Lincoln. That was it—Lincoln! Lincoln's death mask!—it might have been Jessie's whole countenance. . . .

"Mrs. Cravenside has never been up here to Lotusville before," the surveyor said gruffly.

"It's a house out of Louisa M. Alcott!" Irene commented.

"Suppose we go into the sitting-room. We'll leave one lamp and take the others with us."

IRENE'S chief concern might have been her missing husband, whether or not he was down in that orchard, yet she had to admit the inveiglement which the stark old homestead offered as she guided blind Jessie in John Forsythe's wake. Through a spacious dining-room they passed, where a castor was the only adornment on a plateau of walnut table, and into a room that smelled acridly of plaster.

The body of the house downstairs was divided into four equal-sized rooms, Irene discovered. Dining-room and sitting-room opened along the east; a parlor and bedroom had windows toward the west. Between these closed apartments cut a narrow slice of hall. The stairs to upper chambers were but three feet in width; the stair-flight was steep; a thin handrail, painted, did service as a banister.

The northeast-quarter sitting-room, where John set the lamps on a marble-topped table, epitomized the home of a prosperous Vermonter—as prosperity was reckoned thirty years bygone. Its three main appointments—a (*Continued on page 118*)

HENRY

Henry Ford, with his old friend, Thomas Edison, looking at some of the machinery in a Ford plant. "Our country needs a great many boys who can trace their intellectual ancestry to Thomas A. Edison," says Mr. Ford

By M. K. WISEHART

BACK of the engineering laboratories of the Ford Motor Company is an extensive tract of land that has been set apart for a museum. The main building, which will be six hundred by eight hundred feet in size and will cost in the neighborhood of five million dollars, is now under construction. There will be many other buildings, perhaps fifty in all, representing the evolution of American homes, from the first hut of the Jamestown settlers down to the present. Two buildings which will form part of the great historical pageant have already been erected, or rather, *reërected.*

One of these is a modest, one-story, wooden structure—the laboratory in which Thomas A. Edison worked, on his annual sojourns in Florida during the years from 1887 to June, 1928. It was taken down piece by piece and brought from Fort Myers. The other, a building of the same general type, but larger, and two stories in height, is the laboratory in which Mr. Edison worked for many years at Menlo Park, New Jersey, when he was perfecting divers inventions that have now become commonplaces in our everyday life. In this building the incandescent lamp was perfected.

RECENTLY, when I went with a group of men to look at the reconstructed Edison laboratories, we found Mr. Ford there inspecting progress of the work.

"What is the primary purpose of this museum?" I asked him.

"Our hope is that it will help inspire in boys the same ideal that has inspired Mr. Edison—to do things, not for money, but because the work is worth while. That is *part* of the idea. Our country needs a great many boys who can trace their intellectual ancestry to Thomas A. Edison."

"That makes me wonder," I remarked, "what you would have to say about the problems confronting young Americans today. If you were talking to young men who are now just starting out on their careers, what ideas would you try to drive home?"

FORD *Talks to* Young Men

Drawing by J. Henry from photograph by Underwood & Underwood

"It's worth thinking about," returned Mr. Ford; and on a later occasion, when I renewed my questions on this topic, he said:

"Here"—and he made a gesture that took in the entire Ford enterprise—"we are interested primarily in two things: First, in the car, because that gives us money with which to do things; second, in young men. And young men of a certain type: Those who have it in them to become leaders! We don't care whether they become leaders in our plant, or go out to work for our competitors, or seek entirely new fields—so long as they take with them such powers of leadership as they may have. There must be more and more industrial leaders—creators of employment."

"WHAT is it that makes a leader?" I asked.

"There is one sure way to become a leader," was the answer. "Make something that people want. When you first make it, the price will probably be too high, and people cannot, or will not, buy it. The next thing is to set about making it *right*. Make it right with the use of machinery; develop the machines that will help you make it right; keep the waste processes out; then you can get the price down so people will buy it.

"We always keep our eye on a young man who shows signs of being dissatisfied, especially if he thinks he has anything to offer by way of improving things. The chance that a boy or a young man who is content with the way things are done now will develop into a leader is pretty slim. The restless boy, the one who wants to know *why* things are as they are, and why they can't be done better, shows signs of possible leadership. At times he may be a nuisance. But no boy ever became a leader without making himself a nuisance to somebody—at some time.

"If I were a young man starting in today and had a job that seemed too hard for me, I would set to work to find out how to make it easy. A serious attempt to take the drudgery out of a job will develop the brains of any young man and start him to creating something. He may build his future around what he finds out.

"In general, there are *three* things that are necessary for industrial leadership in a big way. A man must know enough about finance to be able to balance accounts. He must know a whole lot about mechanical things. Also, he must know enough about human beings to understand their wants, desires, and motives, and so be able to balance *them* up as well as his accounts."

"Assume that a boy is trying to fit himself for this kind of leadership," I suggested. "How should he go at it? What are the important things for him to know?"

"There are five things which I believe are fundamental. I'm willing to tell any boy what they are. They have to do with *cleanliness, investigation, putting to use that which you already have, belief in your ability to accomplish that which you set out to do, and knowing how to spend money.*

"NOW, for a minute, let's talk about these things in the order in which I have mentioned them. First, the matter of cleanliness: The first advice I would give to any boy starting in today would be that he should learn to keep himself and everything around him clean. If he is able to do this, he is one in a thousand.

"Neatness—cleanliness—orderliness—the importance of these things is due to the fact that they have a great effect on the way a man's mind works. The man who keeps himself and all his tools clean is apt to do things well. Every move he makes is likely to be in the right direction, along the line of creation.

"At one time, in our plant, we used to figure out how to use the waste material that resulted from certain processes. We thought we were doing something, and prided ourselves on it. But now we have come to realize that the proper thing is to arrange our processes in such a way that there is no waste. We get more out of the material and save money. We found this out by trying to keep clean and by eliminating as much dirt as we could.

"Dirt is always evidence of waste, either of material or of mental and physical energy, or both."

In his personal appearance Mr. Ford is immaculate. All the offices of the company are flawlessly clean. The corners of the shop are painted white and are kept lighted.

Mr. Ford was once asked what he would do if he were called upon to take charge of a business that had failed. "No business I know of ever went to the wall without accumulating a vast pile of dirt," he answered. "The dirt and all that goes with it—untidy thinking and untidy methods—helped to cause the failure. The first thing I would do with a business like that would be to *clean it up!*"

Some years ago, a man who had acquired his industrial training under Mr. Ford and had come to realize the significance of his employer's principles of cleanliness, was made president of a manufacturing concern which had gone bankrupt. After studying the conditions of the business, the new president went before his board of directors and asked for a large sum of money—many thousands of dollars—to be used in cleaning up the débris, in washing and painting and lighting the offices and shops. The directors protested. "We're already broke!" they said. "All this money for fancy work?" But the new president fought for the appropriation. "The first thing this business needs," he declared, "is a liberal application of brooms and brushes and soap and water. We must clean up before we can tell where we're at." Finally he got the money and he spent it in the way indicated. This was not the only thing he did, of course, but it was the *first*. Today that business is going strong, and its product has a nation-wide reputation.

"Some years ago, in the Pittsburgh district," continued Mr. Ford, still with reference to this matter of cleanliness, "I was watching them work iron. They first (*Continued on page 158*)

How much do you *know* about WALL

A view of the famous New York "street" that runs through your town

HERE is a scrap of doggerel, and after you have read it I want to ask you a question:

On Monday I bought share on share,
On Tuesday I was a millionaire;
On Wednesday I took a grand abode,
On Thursday in my carriage rode;
On Friday went to the opera ball;
On Saturday came to the pauper's hall.

Now, when do you suppose that was written? Save for a little quaintness in the language, it might have been turned out last March. As a matter of fact, it was written two hundred years ago. From which we may see that the contagious disease called speculation is not by any means a modern infection. When that bit of verse was penned, the notorious Mississippi Bubble had broken in France and the frenzied stock buyers were rushing madly into a little lane in Paris called Quincampoix Street, where the stock sharpers carried on their trade in the open air. The municipal authorities, in order to check this crazed speculation, boarded up the street to keep the foolish victims out. There are lots of people who think something like that ought to be done in Wall Street today. But I am willing to wager that if a dozen persons, picked at random anywhere in the country, were to be authorized to build a fence around Wall Street, not more than one in a dozen would know where to locate the fence.

Wall Street has come to be a name which designates the financial district of New York. It is a neighborhood. If you were to look down from an airplane at the island of Manhattan, you would see it sticking like a tongue out of the throat of the Hudson River into the gorgeous bay of New York. The tip of that tongue is the financial district. At the very point of the island is the famous Battery and the Barge Office, through which millions of immigrants have streamed into America. Then comes the Wall Street district. Almost the first step an immigrant takes in America is into Wall Street. A few of them have never gotten beyond it.

MANY people think of Wall Street as a trim little thoroughfare, with the Stock Exchange in the center, filled with noisy, frenzied brokers, with brokers' offices and money lenders lining both sides of the street, a few smug bankers' offices among them, and on the inside a group of powerful, sinister old gentlemen with side whiskers—the keepers of the Money Devil—pulling the strings that make prices go up and down.

In fact, the financial district comprises about eighteen city squares. It runs from the Custom House, at Bowling Green, up to Liberty Street. At this point the island is three-quarters of a mile wide. It is a half mile from Liberty Street to the Custom House. The core of this section is the financial district known as Wall Street. The center of it in importance is the Stock Exchange. But there are other exchanges—the Curb

Street?

Market in Trinity Place, behind old Trinity Church; the Produce Exchange, at Beaver Street; the Cotton Exchange, at Hanover Square; the Metals Exchange; the Sugar Exchange; the Maritime Exchange; and others.

There are ninety banks, the greatest in America. There are twenty-five trust companies and the fiscal offices of one hundred and thirty railroads. There are fifty-seven life insurance companies, two hundred and nine fire and maritime insurance companies, and over one hundred other insurance companies. It has fifteen safe deposit companies, twenty cable and telegraph companies, one hundred and ninety steamship companies, one hundred and fifty coal and iron companies, and hundreds of powerful industrial corporations, such as the Standard Oil Company, at 26 Broadway, and the United States Steel Corporation almost across the street. And, in addition to all this, the district has, for the convenience of those who lose their fortunes in speculation, several churches, one jail, two rivers, and a graveyard. The last is the historic churchyard of Trinity Church, whose dark, Gothic spire rises like a hitching post in the canyon between the soaring skyscrapers of Broadway.

WALL STREET is the one district of New York which is found today right where it started. The shopping district has traveled steadily uptown—to Chambers Street, to 8th Street, to 14th, to 34th, to 42d Street, and is still tending northward. The theatrical district has moved up—from Union Square to 42d Street, and now towards Columbus Circle. The silk district has shifted. The garment center has changed. Indeed, all the various trade centers of the metropolis have moved about. But the financial district is still in the same place. It has gotten a little wider and a bit longer and very much higher in the air. But it still swirls around Wall Street. There it started about one hundred and forty years ago.

WALL STREET was then the city's most fashionable residence street. There the government of the United States was domiciled. Congress met in Federal Hall, at Broad and Wall. Washington was inaugurated at that corner. Hamilton and Jefferson and other members of the Cabinet lived in the neighborhood. There were no brokers and no stock exchange. But Congress, after the Revolution, assumed the debts of the states and put out an issue of eighty millions in bonds for that purpose. Then, down in Philadelphia, which was the business capital of the country, the merchants organized a bank—the Bank of North America. The New York merchants got busy, and under the guidance of Alexander Hamilton organized the Bank of New York. Aaron Burr, Hamilton's arch enemy, who was later to take his life in a duel, had to have his bank, so he brought into existence the Bank of the Manhattan Company. The two powerful foes who founded them have slept for more than a hundred years (Hamilton in Trinity churchyard at the

The wire room of a broker's main office. Orders to buy and sell stocks are pouring in from all over the country. Behind is the "board" on which the prices of stocks are kept up to the minute

© NEW YORK STOCK EXCHANGE.

A corner of the floor of the New York Stock Exchange during the trading hours. In the front is seen a "post" around which certain stocks are bought and sold. The "floor" is just a group of these posts

head of Wall Street), but the great banks are still flourishing close to the spots at which they were begun.

It was all this which gave Wall Street its start. Men began to buy and sell the bonds of the United States and the stocks of these three banks. There was no established exchange. Just in front of what is now 68 Wall Street stood a large buttonwood tree. Here, under its pleasant shade, about a dozen gentlemen used to sit at various hours during the day and deal in this small list of three bank stocks and one bond issue. On rainy days they would adjourn to the old Tontine Coffee House, which stood nearer the river on the site now occupied by the Tontine Building. These were the first brokers. The very first of them was Leonard Bleeker. He was the first man to devote himself exclusively to dealing in securities. And it was he who, in 1792, got all the brokers together in a compact that they would not buy or sell a share for less than one-quarter per cent commission and that they would treat only with one another. This was the beginning of the Stock Exchange. As time moved on, they grew in numbers and ultimately rented quarters which they called their board room.

Then came the era of development, and the day of the machine. Men began moving west, opening up new country. Corporations were formed to dig canals, to start textile mills, to build and run steamboats, and finally to develop the railroads. The promoters of all these corporations made their way to Wall Street for money. The shares of them flowed into Wall Street for a market. For that is what Wall Street is—a market place for stocks and bonds and money.

IN THE old days, stores and factories and stagecoaches belonged to individuals. And if, for any reason, a man wanted to sell his shop or his factory, he looked about for a buyer and sold his whole enterprise to a single purchaser in one transaction. But now men no longer own stores or factories or stagecoaches. These things belong to corporations. It is the stock of these corporations which belongs to men. And the man who owns a share of stock would never have bought it if there were not some place where he could go to sell it when he wishes to change his investment.

If you will reflect a moment, you will realize that in this day there are but few other ways for a man to invest his money. In an older day a thrifty worker who had saved a little pile invested it in a house to rent; or he threw up his job and started a little store; or put some money into a little business with a friend. But this is no longer so. Few now wish to put their savings into a little business. Whether for good or bad, the day of the little business is past. Like it or not, we are all employees now, from the humblest apprentice boy right up to the president of the great corporation. And so, when we have a few dollars to invest, we are likely to buy stocks and bonds. There must be some way in which these shares can be readily bought and sold. That is what the Stock Exchange is—an open market place to which a man can send his stock for sale.

Suppose you own a share of United States Steel stock. You wish to sell it. There are several hundred thousand owners of United States Steel stock and some five million shares. These owners are scattered all over the world. You wish to sell your stock today; but there are many other men who wish to do the same thing. They are in your town, in California, in New York, up in Canada, down in the Argentine, over in Germany or Holland or Russia, or maybe in China. On the floor of the Stock Exchange is a trading post where United States Steel is traded in. A broker with your share of stock for sale will stand today at that post. Other brokers will be there with shares of United States Steel stock for sale. Still other brokers will be there who have orders to *buy* United States Steel. These orders will come from men in your town, in New York and New Mexico, in Canada, in Europe, in Asia, everywhere. Thus, around that one post on this day when you wish to sell, will be collected the entire supply of United States Steel stock for sale and the entire demand from every quarter of the globe. The same is true of every other stock listed on the New York Stock Exchange.

Whatever else you may think of the Stock Exchange, this must be conceded: That the institution which can produce this result is a miracle of organization.

BUT why the Exchange, you ask? If a man wants to buy a car or a radio or a house, or if he wishes to sell any of these things, he goes to a dealer in these articles. Why could he not do this in the case of stocks and thus have them dealt in without all this gambling and manipulation which goes on at present? Well, this very thing is done now. All securities are not listed on the Stock Exchange. There are thousands which are listed nowhere. Many stocks cannot meet the requirements of the Exchange. Many stocks are so limited in supply that listing would be futile. Many corporations keep their shares from being listed. If you wish to buy or sell such stocks you must go into what is called the "Over-the-Counter" market. Shares are bought and sold there literally "over the counter," like soap or eggs, or anything else. There are over-the-counter dealers who specialize in such stocks. Let us suppose you want to buy one hundred shares of Hercules Powder stock. You go to an over-the-counter broker and tell him so. You ask him how much you must pay. He has none, but knows a broker who deals in this stock. He calls that broker on the phone.

"Can you let me have 100 shares of Hercules Powder?—and for how much?" he asks.

Of course, the second broker owns none, but he keeps in touch with a supply. He has a client who is willing to sell for $103 a share. So he tacks on two points for himself and informs the first broker that he will let him have 100 shares for $105 a share. Your broker now turns to you and tells you he can get you 100 shares at $108 a share. He adds on three points for himself. He may add more or less according to the circumstances. Now, don't you see what has happened? The owner has sold for $103 a share. But you have bought for $108 a share. Five points have been consumed in the offices of the brokers in this cumbersome method of trading. The seller always gets the lowest price and the buyer always pays the highest price. You do not know what the owner got and he never knows what you paid.

Had this transaction taken place on the Stock Exchange, it would have been open. The prices would have been known,

A busy moment around a post. Here the whole world-wide supply and world-wide demand of a given stock is focused. These brokers are bidding during a moderately busy session

Closing a trade. Whether it involves but a hundred shares or millions of dollars worth, it is done this way—each broker makes a memorandum on a pad—that is all. The cash and stocks pass next day

not only to the parties, but to everyone, and immediately. The stock would have been bought on the floor, with other brokers around offering stock for sale and still others ready to buy. Free competition would have prevailed on both sides. If the sale had been made for $108, you would have paid that sum and the seller would have received all of it. You would have paid your broker fifteen cents commission on each share, and the seller would have paid his broker fifteen cents commission on each share.

IN MODERN business there has been a marvelous reduction in the cost of making things. But the cost of selling remains high. We have perfected mass production. But as yet we have only scratched the surface of mass distribution. The only place where mass distribution has been brought to perfection is on the floor of the Stock Exchange. You can sell $100,000 worth of automobile stock for $125 selling cost. But if you were to sell $100,000 worth of automobiles, it probably couldn't be done for one hundred times that much.

Now, then, how does this extraordinary trading machine work? Let us suppose you live in Tulsa, Oklahoma. You wish to buy some General Motors stock. You go to your New York broker who has his branch office in Tulsa. There are eighteen branch brokerage offices in Oklahoma, in nine cities. You go, first thing in the morning, and place your order for 100 shares to be bought at 80—$80 a share. You hand your broker a check for $8,000. Now what happens?

If you could be suddenly transported to the visitors' gallery of the Stock Exchange in New York, you would see what happens. Let us say it is ten minutes to ten o'clock. You are in the broad balcony reserved for visitors. You look down on the floor of the Exchange. It is an immense arena, as large as a good-sized armory. The ceiling is high, as in a theater. All is of marble. The first thing you are aware of is that the floor is crowded with men. There must be six hundred brokers there. Next, you observe that they are grouped around certain fixed points. These points are called posts. Each stock is assigned to some post—trading in that stock must be done there. There is a buzz of low conversation, but it is plain that they are doing no trading. They are relatively quiet. The trading hour has not yet arrived.

At the sides of the vast chamber are hundreds of telephone booths. In these booths are telephone clerks with the receivers strapped to their heads. They never leave the booths. They are excessively busy writing out slips of paper and handing them to messengers. Telephone bells are ringing, telegraph instruments are clicking. Somewhere in one of those telephone booths a ring will come and the clerk will be told to buy 100 shares of General Motors at 80. That is your order. The broker in Tulsa has wired the order to the New York office. The New York office has telephoned it to the Exchange telephone clerk. The clerk writes the order, gives it to a messenger, who puts it into a pneumatic tube which shoots it to the trading post where General Motors stock is dealt in and where the floor broker of the office is stationed. Thus, the floor man has your order now, perhaps five or ten minutes after you had placed it in Oklahoma. Thousands of other orders like yours are pouring into the Exchange from all parts of the world.

The hand on the big clock is moving slowly toward ten. There are but a few minutes left. The opening hour of the Exchange is at hand. It is always a busy hour. Orders from the afternoon before and from that morning have been accumulating. At several points on the floor you see uniformed men tinkering with some sort of mechanism. These are the sending stations of the tickers. They must keep the world informed about prices and trades. They must begin working in a few minutes—and *they must work*. They are the eyes and ears of the financial world. Mechanics are inspecting them, testing them, and they add their nervous ticking to the clatter and murmur and ringing and clicking which is now rising in intensity as the clerk of the governors of the Exchange ascends the big rostrum. This rostrum—the seat of the president of the Exchange—has a great gong behind it. The clerk lifts a hammer. For an instant there is a hush. All faces are turned toward the rostrum. In your gallery perch you feel, without being told, that things are about to happen. The clerk's hammer descends on the great bell. Instantly a roar goes up. Men shout and gesticulate. They seem a little crazed. But that is not so. Each man is behaving in a very orderly manner. It is the conglomeration of sounds and gestures which makes the place seem mad.

Now, if you have kept your eyes on that man who has the little slip bearing your order, you will notice that almost the moment the gong rang he put up his hands. He was crying your order. Instantly a man on the other side shot up his hand and said "sold." Your order is placed. Your 100 shares of General Motors are bought. You are in for it now. Each broker writes a hasty memorandum on a little pad, tucks the slip in his pocket, and plunges back into the fray. At the same moment a clerk writes down a memorandum of that trade and sends it to one of those floor ticker-sending machines. In a few seconds men standing around tickers out in Tulsa, traders in Wall Street, in State Street, Boston, in LaSalle Street, Chicago, away up in Oregon, and around thousands of tickers all over the land, read on the tape that 100 shares of General Motors stock were sold for $80 a share.

THE brokers at whom you have been looking are part of a total New York Stock Exchange membership of 1,100. But the Exchange has recently authorized an increase to 1,375. There are, however, seldom more than eight hundred men engaged in actual trading on the floor. There are Exchange members who never go near the floor. The elder John D. Rockefeller still owns a seat, though he has never traded. The present J. P. Morgan owns a seat, but never enters the Exchange. The elder Morgan, the most powerful figure in its operation, never owned an Exchange seat. Today, men like the Fisher brothers, Arthur Cutten, William C. Durant, the biggest operators in the street, are not members and seldom go near Wall Street.

The work of these brokers is a grueling one. It is a job for young men. Yet there are twenty-five men who have been members for forty years and six who have traded for fifty years. There are two who have been on the floor since 1869. When they joined, they paid around $7,000 apiece for the seats. Today they could sell them for $500,000 each. (*Continued on page 131*)

The Pace that Bores

By FANNIE KILBOURNE

Illustrated by T. K. HANNA

"There is nothing that makes you feel so much like a woman of the world as to know you are the subject of a secret passion—"

Suddenly, like a blow in the solar plexus, the truth dawned upon me. Under my very eyes, that girl was flirting with my husband!

THEY talk about people hiding their vices from all eyes, but it's been my experience that most people are a great deal more afraid of having their virtues leak out. Corinne, for instance, just can't bear being called "good-natured," though her best friend can't deny that she is.

"When anybody calls you good-natured," Corinne always laughs, "what they really mean is that you're a kind of fat, easy-going sap who hasn't got spunk enough to resent it when somebody steps on your face."

Howard Merton, who has four children and is the most devoted husband and father, shows as plain as can be that he can hardly stand it when somebody speaks of him as a "good, steady, family man." Miss Asbury, the librarian, who is a Phi Beta Kappa, doesn't like to be called brilliant or highly educated.

For my part, what I hate, of all things, to be called is "wholesome." It's only older people, of course, who don't know any better, who ever would call anybody that. People your own age would come right out frankly and say *slow*.

And just as it's always the virtue you can't deny that makes you the maddest, there are times when I've suspected that our whole young married crowd is a little bit wholesome.

It's just like what dear old Doctor Weldon said once when somebody asked him if he thought a young man could live decently on fifteen dollars a week. Doctor Weldon was always loads of fun, even if he was a minister, and he answered very seriously that he didn't see how a young man could be anything but decent on that salary.

That's been the way it's been with our crowd. We all come from good old Montrose families, but none of the boys are making any great amount of money and we all have anywhere from one to four babies apiece. For wholesomeness, you can't beat that combination.

Not that we ever considered ourselves slow, though. We keep our houses right up to date—Dulcie has just taken down all the ruffled net curtains in her upstairs and put up ruffled organdie—and we dress as smartly as we can see our way clear to. We have good parties and we've practically all begun playing contract instead of auction bridge. Why, there's one club of old married girls in Verblen that's still playing five hundred! That's what I consider slow.

ON THE other hand, I know that there must be crowds in Chicago and New York and London and Paris that would put ours in the shade. For that matter, there's the rich Harvester bunch right in Montrose. Of course, I don't believe they really do half the things they're said to—they couldn't and keep their health—but they don't count, anyway. They're not real Montrose people. The J. C. Harvester Company is a Chicago firm—it's just the plant that's here, and the officials come and go.

But Billee and Carter Randolph came right into our own crowd. For one reason, Carter is Roger Lane's second cousin. Then, too, Billee's mother lived here in town when she was a girl, and all our mothers used to know her. So, when the Randolphs came to live in Montrose and it got around that Mrs. Randolph was Maude Saunders's daughter, all our mothers got after us and made us call right away. They wanted us to take Billee right in. Honestly, if they'd dreamed what they were wishing on us!

It was a very queer sensation for Will and me to call on the Randolphs, because they'd taken our old house, the story-and-a-half bungalow right next door to Roger and Dulcie. It gives you a very odd feeling to ring your own front doorbell and have to wait till somebody else comes to open your own door.

Carter Randolph let us in. He seemed to be awfully pleased to see us; ushered us into the living-room and said his wife would be right down. The living-room didn't look anywhere near as nice as it had

UNIVERSITY OF IOWA

and be relieved when his wife came and took me off his hands so that he and Will could talk about real estate and stocks and bonds and business conditions and whatever it is men seem so crazy to get rid of women in order to talk about.

Such, however, appeared not to be the case. There was something about Carter Randolph's look that said more plainly than words that if he could choose which one of us he'd like to have off his hands, it would be Will.

It was a perfectly proper look he was giving me, but in some mysterious way it made me think of New York stories where a young married woman meets a man and says casually, "Have tea with me some afternoon, won't you? Shall we say Thursday?" If you said anything like that to a Montrose man he'd either think it was a joke and laugh raucously, or he'd say could you make it Sunday—that was the only time he had in the daytime—and should they bring the kiddies?

WILL started right in talking politics to Carter Randolph, feeling that, Carter being another man, the social responsibility was naturally up to him. Carter talked to Will and didn't even make any effort to draw me into the conversation. But every now and then he would glance at me and I'd be glad I'd worn my new figured transparent velvet dress and think what an addition the Randolphs were going to be to our little group.

In a few minutes, Billee came down. She was one of those girls that everybody just naturally calls "cute." With a short upper lip and French heels. She didn't sit down on the davenport beside me and ask me if I had any babies and how old they were, which is likely to be the opening line in a new acquaintance. Instead, she went clear across the room from

I could scarcely believe my own ears. Carter was saying exactly the same thing in exactly the same tone as he had to me!

when we had it, if I do say it myself. The Randolphs' rug was too small, and they didn't have any glass curtains. There wasn't any color scheme at all; the sofa cushions swore at the lamp shade. The pictures weren't hung evenly, there was a lot of rubbish in the fireplace, and whoever had used the dry mop hadn't gone under the radiators. I'm not the kind of fussy housekeeper who notices what's wrong in another girl's house, so there were doubtless dozens of other things I didn't even see.

WE HAD been there for ten minutes or so, and Billee hadn't come down yet, when suddenly I noticed something very peculiar. Carter Randolph was looking at me.

That probably doesn't sound as odd as it felt. When you've been married seven years and have twins and go mostly with the same crowd, you get pretty well out of the way of having a man look at you. If you've been married some time, you know what I mean. I expected, naturally, that Carter Randolph would make a few polite remarks to me from a sense of duty,

Each new arrival was greeted with hysterics and catcalls

me and took a chair not far from Will's.

For a while the conversation was general, and I had time to notice that Billee was really very pretty. The soft, cuddly kind of pretty, with big brown eyes and yellow hair. Her dress could have stood pressing—it was leaf-brown chiffon—but it was very becoming. She had the thinnest stockings I ever saw in my life and the shiniest fingernails. Having her so cute and pretty made it all the more flattering, in a way, her husband paying so much attention to me.

There was no point in being modest and pretending that he wasn't paying attention to me, because he very soon made it unmistakable. Just as soon as he could, without its being too conspicuous, he made the excuse of showing me the picture we'd all been talking about, and sat down on the divan beside me where I'd naturally expected his wife would sit.

"HOW has it happened," he asked in a much lower and more confidential tone than he'd been using, "that I've been in this town for three weeks and haven't met you till now?"

I opened my lips to explain that Jill had been having a bronchial cold and, though we'd meant to call before, we'd been kept from it. That is the sort of answer you get used to making after you've been married long enough. But there was something about the way Carter Randolph was looking at me that peeled off seven years of married life as easy as the skin off an onion.

"Are you sure you haven't met me—and forgotten all about it?" I heard myself asking.

Carter looked straight at me.

"I scarcely think that possible," he said.

Now, plenty of the boys in our crowd might have said that. They're not slow on repartee. But they'd have said it as though it was a joke that they were trying to pretend to mean. Carter Randolph said it as though he really meant it and was trying to pretend it was a joke. That may sound like a rather slight difference, but in reality there's all the difference in the world between those two ways.

And with that, we were off. There was the same sense of exhilarating surprise that I had the first time I got on a bicycle after I was grown up and found that I could ride right off, just as I'd used to. Carter glanced at me sideways now, and to my pleased surprise I found that I still seemed to know just what to do. As every woman knows, that is a very reassuring and uplifting discovery.

It was the shortest evening I'd spent in years. When Will suddenly announced that it was after eleven, I could scarcely believe my ears. We had meant to pay only a very short, formal call, it being our first. I couldn't have told what Carter and I had been talking about there on the davenport, but I half rose, feeling guilty at the late hour and pretty and gay and excited and happy, all in a glorious jumble.

THERE was one blot on the otherwise perfect evening. From time to time, while we had been talking in low tones, I had wondered, with a slight uneasiness, how Will was taking it. You can't always tell about a husband. But whenever I had glanced up he had been talking politely to Billee and hadn't seemed to be paying any attention to us at all. And after a few such apprehensive glances, I forgot all about him. It did flit through my mind that it was unusually broad-minded and tactful of Billee to distract Will's attention like that.

But as we started to go, while Carter was out getting my coat from the hall closet and I was free for a moment to notice what was going (*Continued on page 77*)

What *to do at* Your Age *to* Protect Your Health

By
WILLIAM S.
SADLER
M. D.

Dr. William S. Sadler is one of the most widely known writers and lecturers on health subjects in America. He lives in Chicago, where he is connected with several leading hospitals

I'VE often heard people say—and so have you—"If I'm going to be a misery to myself and a nuisance to others, I hope I'll never live to be old."

It is the purpose of this article to try to prevent you from being a misery to yourself and a nuisance to others at *any* time, but particularly as you get older. I will briefly outline to you how you should live and what symptoms you should watch out for, so that you may slide into middle age and not know that you have reached it, and may greet old age with a smile instead of with a wry face caused by the numerous aches and pains sometimes associated with that period of life.

In order to simplify things, I am going to divide age into seven arbitrary divisions. You may register disagreement with me as to the points of division (I expect a kick from some middle-aged people who are feeling just as young as they ever did); nevertheless, in order to talk about health and age, I must draw the lines somewhere.

Here are my divisions:

1. Infancy and childhood—extending, let us say, to 13 or thereabouts.
2. Youth—13 or thereabouts up to 21. (A very trying period of adjustment for both boys and girls.)
3. The prime of life—from 21 to 35; when you feel ready to take on the whole world—the most robust and virile decade and a half (or it should be).
4. Middle age—from 35 to 50. (How some people in the late thirties will resent being called middle-aged!)
5. Advancing age—from 50 to 65.
6. Old age—from 65 to 80.
7. Advanced age—80 and upward.

Now, I want to forestall any criticism that may arise and cause you to begin to argue about these divisions.

There are, I know, hundreds of you who will not fall definitely within these age limits. Many of you, for instance, carry your "prime of life" well into the forties. In fact, you may overlap all the divisions, except, perhaps, "advanced age." I don't think you'll quarrel with me there.

I haven't space to talk about the first two divisions, childhood and youth. But if you've inherited a sound constitution, or have been blessed with sensible parents who, when you were growing up, gave you plenty of fresh air and the right food, and taught you to control your emotions and nerves, you've reached the "prime of life" fit and fightin'.

And that's exactly as it should be. If you are not feeling that way, you had better have a thorough medical overhauling at once. By this I don't mean a mere analysis of your blood and urine, and a cursory heart and lung examination, but an investigation from top to toe, inside and out. Then, when you know what the trouble is, you can get right to work to bring yourself up to 100%.

My first advice to you "prime-of-lifers" is that you should get married around twenty-five. You are young; you are full of vitality and are beginning to carve your positions in the world. Carve your positions together and link yourselves closer by means of several children. Responsibilities don't hurt you people in your prime—they steady you and develop you mentally and morally.

Now for the physical aspect of this period.

Some of you who are reading this article have a tendency to "fly off the handle" when things go the wrong way. Stop doing it. You can and *must* if you wish to enjoy middle life. Temperamental explosions, which are usually the outcome of a badly controlled nervous system during childhood and youth, are extremely harmful to you later on. Who wants to be a neurotic man or woman? Who wants to be a nervous dyspeptic? Anyway, "flying off the handle" is bad for you socially—it affects your business and professional contacts. And in the "prime of life" it is necessary that you build, and build substantially, for business and friendship.

BUT over-repression is just as bad for the health as emotional sprees. Indulge in all *normal* and natural modes of expression. In brief, be yourself—only, see that it's your best self that you're being.

In my medical work I notice that a good many "prime of life" people curtail their physical activities too rapidly for their good. At school and college, or up to about twenty-three or so, they play pretty actively—get a (*Continued on page 106*)

Watch Me Get Fired!

ON ONE side of the great mahogany table sat young Sam Hobson, whom his father had planned, since the boy's birth, to make a full-fledged partner in the Hobson Engineering Company.

And opposite Sam sat his father—known to his employees and to members of the profession as "Old Man Hobson."

He had been Old Man Hobson since he was forty years of age—cold-blooded in his business dealings, shrewd as a Yankee trader, and relentless in his methods of attaining his ends.

Old Man Hobson's mouth was a straight, grim line. His eyes were steely and cold, peering out appraisingly from under beetling brows. His jaw was the kind of jaw successful professional fighters have—the kind which, according to the sports writers, indicates possession of the "killer instinct."

Young Sam looked much like his father—except that the corners of his mouth turned up instead of down and his eyes were invitingly friendly. But he had that same solidly set jaw.

"Now, I'll tell you why I'm going away," the Old Man informed his son. "I want to teach you your lesson."

Sam looked keenly interested.

"What lesson?" he wanted to know.

The Old Man waved aside the question.

"A lesson that'll hit you right between the eyes," he replied. "That's the kind that does the most good—the kind that hits you right between the eyes."

Sam grinned.

"Well, do I get some warning it's coming?" he inquired. "Or does it sneak up behind me?"

The Old Man's eyes gleamed.

"That's exactly the point," he snapped. "That's part of the lesson."

"All right," replied Sam. "Turn it loose any time."

Hobson grunted, rose from the table, and put on his hat.

"It's just three months from today that I'll be back," he announced. "Now, I want you to remember what I've said; and I want you to make the most of your opportunities—remember that: Make the most of your opportunities!"

"I'll try to."

"And one more thing that you, of all people, have got to watch out for: Be ab-so-lutely cold-blooded! Never mind the other fellow's grief. If somebody else's grief can be useful to you, then produce the grief! But never let it get in your way."

"Sure," chuckled Sam. "If the victim gives up his money politely, that's fine. But if he struggles, rock him to sleep with an old-fashioned hay-maker."

Hobson paused on the threshold to offer one more piece of advice.

"You watch out that the hay-maker doesn't land on *your* chin," he said, with a twinkle in his eye.

And then he was gone.

THREE months from that day he was back again. He felt actually jovial after his long pleasure cruise. He beamed as he entered the big outer office. He even stopped to shake hands with one or two of the men, and chuckled with satisfaction at the doglike gratitude that shone in their eyes at his unexpected show of comradeship.

He approved of men like that—men who did exactly as they were told; who never questioned his judgment, but carried out

Old Man Hobson merely glared. "So you're hoisting the white flag, eh?" he said tartly

A Story By E. Waldo Long

Illustrated by PAUL MEYLAN

his commands without a thought as to the consequences. "Yes men," his enemies called them.

All the men in his organization were of that type—all "well broken," as he sometimes explained. And that explanation was always accompanied by the Old Man's personal opinion of men.

"There are two kinds of men," he would explain. "The kind you can teach, and the kind you have to break. The ones you break, work out best; because they never argue, but just worry their heads for fear they can't carry out orders fast enough."

PASSING through the outer office, Hobson bestowed smiles right and left upon his minions.

But he paused with a start at the door of his private office. The place was literally filled with flowers.

"Who's dead?" he demanded jocularly of Miss Pierce, his emotionless secretary.

Then he began to examine the cards that had come with the flowers. He chuckled to himself. They were from men who detested him and feared him—but who wanted mightily to sell him goods.

On his desk Miss Pierce had placed a neat stack of papers, and into that stack Old Man Hobson proceeded to delve, firing a staccato question at her from time to time and receiving her immediate, even replies.

Near the bottom of the stack he came upon a sheaf of papers that brought a grunt of interest from him. He read intently. As he read, his face darkened.

"Well, I'll be darned!" he commented suddenly, flushing with anger.

Miss Pierce looked up inquiringly. He glared at her and began tapping the papers with his finger in angry rhythm.

"That was the deal I wanted to see him swing," he growled. "The Cordingly deal—and get the sentimental nonsense out of his system. . . . And look what he did to it!"

Miss Pierce had long since learned the value of silence.

"Didn't I tell him exactly how to handle Cordingly?" Hobson inquired.

"I reminded him of that," Miss Pierce replied.

"You did, eh? And in spite of that he deliberately let Cordingly out of the trap, eh?"

He leaned back in his chair, his mouth a-tremble with wrath.

"When you reminded him, what did he have to say?" he demanded.

"He said, 'Thanks. I hadn't forgotten.'"

"Where is he?" the Old Man roared. "He was outside when I came in. . . . Hunt him up! . . . Get him in here!"

THE roaring voice penetrated the partitions easily and caused the word to pass up and down the office that the Old Man was on the warpath.

Miss Pierce was back in a moment.

"He has a customer he's been working on all summer," she explained. "He'll be in just as soon as he can."

The Hobson fist smashed down on the great table.

"You tell that fellow that when I say 'Come,' I mean come! You tell him to get in here quick!"

And in a moment Sam had come in, his eyes blazing.

"Do you know that I have Mr. Wescott of the Wescott Manufacturing Company out there?" he demanded.

"I don't care if you have all the royalty in Europe out

Digitized by Google
Original from UNIVERSITY OF IOWA

there!" roared the Old Man. "Let 'em wait. Sit down here!"

"Why can't this interview wait?" demanded Sam. "That deal with Wescott is worth—"

"The interview can't wait because I don't want it to wait! Sit down there!"

"I'll have to explain to Mr. Wescott."

"You'll explain to nobody."

Sam eyed his father a moment. Then he quietly turned and left the office, leaving the Old Man choking with rage. Two minutes later he came back again, his face flushed.

"Why did you go out there when I told you to sit down?" demanded the Old Man, determined to exact discipline at all costs.

"Because you were too hot to be reasonable," came the prompt retort. "Do you think I'm going to insult a man just because you happen to be up in the air about something?"

Hobson opened his mouth as if to hurl a broadside of vocabulary. Then he closed it again, as if at an utter loss for words to express his rage.

"If I had done the right thing," Sam persisted, "I'd have let you holler, and I'd have gone ahead with Mr. Wescott."

"All right!" stormed the Old Man. "All right! Forget it! . . . Now, what I want to know is, how did you handle the Cordingly deal?"

"Haven't you looked over the records right there on your desk?" countered Sam.

"I'm asking you a question!" roared Hobson. "Answer it!"

"It's all answered right there in plain black and white English!" snapped Sam.

THE Old Man rose from his chair, stalked the length of the room, and came back again. It was plain to be seen that Sam was not the type that could be "taught"; he would have to be "broken."

So the Old Man went methodically about the task.

"Now, Sam, you cut out arguing, and you answer questions!" His voice was lower, but just as determined as ever. "I left you that Cordingly deal to handle—it was a *good* deal for you to handle, to help you get rid of one of your many weaknesses! And you bungled it!"

"How so?"

"How so?" echoed Hobson. "Before I went away, I told you in detail how I'd handle it, didn't I?"

"Yes. The way *you'd* handle it."

"And I showed you how I had walked Cordingly right into a trap, so that he couldn't get away. I pointed that out. Remember?"

"Yes. I remember."

"And I showed you what a corking chance there was to close down on him, squeeze him, and take his business away from him—a seven-hundred-thousand-dollar business! . . . Remember that?"

"Yes."

"In other words, I gave you a complete plan."

"But I found a better plan," Sam said. "My plan made money for you, will make Cordingly a steady customer—and it enabled him to avoid absolute ruin."

"Enabled *him* to avoid ruin!" echoed the Old Man. "Whose interests were you paid to look out for—his or mine?"

"I was paid to look after yours; and I looked after them!"

"You did, eh?" Old Man Hobson's eyes were aflame. "You threw away seven hundred thousand dollars—deliberately took it out of my grasp. And that's looking after my interests, is it?"

"You made money on the deal, didn't you?" inquired Sam, trying to drive his father into a corner. "So why wasn't it satisfactory?"

"Why? . . . Because you didn't do what you were told to do!"

"But I tell you that after you'd gone, I got a better plan!"

"It wasn't *my* plan!" Hobson shouted. "That's exactly the point."

"BUT why on earth should I blindly follow your plan, when I got hold of an even better one?"

"Why?" Hobson leaned forward in his chair and pounded the table with his fist. "Because I told you to. That's all the why you need."

"Even though following your plan meant ruining Mr. Cordingly?"

"I told you never to let another man's grief spoil your plans, didn't I?" Hobson demanded. "Didn't I tell you positively to close down on Cordingly?"

"Right-o!" came the crackling retort. "In effect, you said, 'Here's a man down. Kick him in the stomach and take his wallet away from him. It's a great chance to make some quick money.' . . . You're right—I didn't do it!"

With a snort of disgust, the Old Man pushed back his chair and began pacing again.

"'Here's a man down!'" he mocked. "Great Cæsar's ghost! . . . That's the very weakness I wanted you to get out of your system. 'Here's a man down!' What about doctors? Dentists? What about the fellows who operate hospitals? What about the fellows who manufacture crutches and glass eyes? . . . Those are all pretty respectable occupations, aren't they? . . . But every one of those fellows makes his money from somebody's hard luck—from somebody that's down, as you put it. Didn't you ever stop to think long enough to figure that out? . . . It's always the fellow that's down who pays the freight. And he's got no excuse to crybaby. . . . That's life. 'From him that hath not, it shall be taken away.' . . . But you in your wisdom pooh-pooh all human experience out of the way and throw overboard an opportunity of a lifetime!"

"Was that the big lesson I was supposed to learn?" Sam asked irreverently.

"That was part of it," came the tart rejoinder. "You're right in the middle of the rest of it now."

"I don't believe I care about the rest of it, Dad," Sam said quietly.

"Eh?"

"You see, you can never make a 'yes man' out of me. And, besides, this isn't the sort of outfit I want to tie up with. There isn't anything here but a well-broken team and a driver—and if the driver should ever take a sudden wild notion to drive right off the side of a cliff, that fool team would go over without a murmur. Well, when that happens, I don't want to be part of the team. . . . So count me out. I'm going down and get a job with Mr. Cordingly. This isn't a safe bet up here."

Old Man Hobson was too much astonished even to attempt to conceal his astonishment. The mask which he habitually wore fell from his face. He stared wide-eyed at his son for a full minute. Then he wet his lips, took hold of himself again; and his astonishment was somewhat tempered by anger.

But Sam spoke again before the Old Man had decided how to meet this sudden turn of events.

"Mr. Wescott heard you shout that you didn't care who was out there with me—that he could wait your royal pleasure. Believe me, I felt pretty cheap when I tried to apologize for that sort of treatment. But he merely smiled and said, 'That's perfectly all right, son. That was nothing you could control!' . . . So good-by to that contract! . . . You raise the roof because I didn't steal the Cordingly business. And here, without any excuse at all, you throw away an honorable deal that would have amounted to four times the Cordingly deal. . . . No, sir! I wouldn't stay here on a bet. . . . Why, anything's liable to happen under that sort of management!"

Old Man Hobson merely glared.

"So you're hoisting the white flag, eh?" he said tartly.

"Not a bit of it! That's what all these 'yes men' in here have done—hoisted the white flag! But not for mine! A fellow's self-respect is worth something. Why, you would kill every bit of hope a fellow has! And if the hope is taken out of a job—what's left?"

Old Man Hobson had no reply for that. Everything that he had said seemed to have come back at him like a boomerang. He fell back upon his practiced custom of maintaining strict silence when he was being bested.

"Well," said Sam, "this isn't getting anybody anything. I'm on my way down to Cordingly's."

THE Old Man sat silent as Sam went out and closed the door. He did not move for minutes.

Accustomed as she was to his moods, Miss Pierce could read Hobson's face. He seemed lost, befogged, utterly confused.

He looked as any other normal human being might have looked had a cherished hope of twenty-five years been destroyed like a burst bubble. Soon he looked up at her.

"Do you suppose he meant that?" he asked. There was a note of pathetic fear in his voice. "Do you suppose he's really—gone?"

Miss Pierce nodded.

"You think so, eh?"

"Yes, Mr. Hobson, I honestly do. . . . Oh, I'm so sorry!"

Hobson stared at her, unseeing. "I think so too," he said.

"I built this business to give to my boy," he commented. "But *now* what am I going to do with it?"

Miss Pierce felt a flame of murderous resentment at young Sam.

The coldness had fled from the Old Man's eyes. Fright shone there. The cruelty of his mouth's straight, grim line had sagged into helplessness; and the iron jaw had lost every suggestion of fight. Hobson had suddenly become an old man.

"What am I going to do with it now?" he asked again, as if he were asking himself.

Miss Pierce's (*Continued on page 100*)

IF YOU ASK ME:

A wise man knows when to repeal his opinions

I USED to know a man whose opinions were as permanent as the ledges that ribbed his eighty-acre farm. He was "sot in his ways," folks declared. In politics, he never split his ticket. In religion, he never darkened the doors of a church outside his own denomination. While still in his twenties, he finished finding out what was wrong with the world—and *that* was settled for all time. "Once a scoundrel, always a scoundrel," he would say of anyone to whom he had taken a dislike. To the end of his days he wore old-fashioned cowhide boots, which he pulled off every night with a bootjack that had been his grandfather's. His scorn for "newfangled contraptions" was devastating, and he liked to boast that he never changed his mind.

I couldn't understand why the Petrified Man, that famous hoax, should have been a national nine-day wonder. Didn't we have one in our own community?

LATELY I met a woman who prides herself on being Responsive. She laughs with those who laugh and weeps with those who weep. Among freethinkers she likes to be a rebel. Among conformists she prates propriety by the yard. When she reads Bertrand Russell she feels that death is the last chapter in life. But a radio sermon by Doctor Cadman fills her with fresh faith.

Never had I heard her express an opinion that was counter to the general current of talk. And never, never does she take sides. Her ideas have to be placid and predigested or she finds no comfort in them.

Somehow, she always suggests to me that passage from Shakespeare's "Antony and Cleopatra":

> Like to a vagabond flag upon the stream,
> Goes to and back, lackeying the varying tide,
> To rot itself with motion.

You might read those lines over. They are not often quoted. . . . "Lackeying the varying tide." What a phrase! And what a lackey to the varying tide is our Responsive Lady! How she "rots with motion" as she drifts back and forth! Moved by every ripple, she has never made a ripple of her own. And when she passes into that Great Beyond about which she holds no fixed opinion she will not leave a ripple behind.

THE two cases I have just cited are "prize examples." Few minds are quite so shut or quite so open. There are plenty of people, however, who belong in the same categories. Of these, I have found that the opinionated are in the big majority. Let's look over our shoulder at *them* as we feel our way toward the Happy Medium.

I have often thought that we human beings should occasionally put our ideas, our convictions, on the witness stand and cross-question them. Instead of saying, "I have believed such and such a thing all these years, and so it must be true," let us say:

"I have believed such and such a thing all these years—but *is* it true? Let me reason it out again in the light of what I know today. Let me talk with other men, or read what other men have written, and find out how my puny pot of wisdom stands up with the mass wisdom of the race. If my convictions cannot stand this test, they are not worth having. If they do stand it, they shall be all the more precious to me."

It is human to have pride in our own opinions. It is natural to coddle our own prejudices. But reason should be the court of last appeal. St. Paul had the right idea when he wrote: "Prove all things; *hold fast that which is good.*"

The italics are mine.

Maybe you'll make them yours, too.

Matthew Stirling's

Adventures in the Land that God Forgot

By WILLIAM S. DUTTON

The smiling gentleman above is Matthew Stirling, outward bound to the land of untamed men. At the top of the page you see one of his parties paddling a canoe through the jungle in New Guinea; and at the left a Dyak porter is having trouble to keep his pack dry

ONE spring night, four years ago, a chance after-dinner conversation began one of the strangest and most daring expeditions that has ever sailed from American shores to lift the veil from the unknown.

On this occasion, three men—not one of them more than a year past thirty—sat around a restaurant table in St. Petersburg, Florida. They sat, and smoked, and talked.

One was a Chicago reporter. His name was Stanley Hedberg.

The second was an aviator, an expert in aërial photography. He also was from Chicago. His name was Richard Peck.

The third was Matthew W. Stirling, a young Californian, who had taken up ethnology—that is to say, a study of the races of mankind. His lean face was still copper-colored from recent exposure in the South American tropics.

The Californian had been recounting to the others his hair-raising experiences among certain obscure Indian tribes of the jungle interior.

"Matt," demanded Hedberg after a moment of silence, "what is the least known, least civilized, most dangerous and God-forsaken spot on this round earth?"

"Southwestern New Guinea," said Stirling promptly.

"WHAT'S kept the explorer out?" drawled Peck.

"Mountains," said Stirling, and his voice was suddenly sober. "Behind the snow-capped Nassau Mountains which

form a wall about that section of New Guinea, rumor says there is a lost tribe of pygmy men who are still living in the Stone Age. Both the British and the Dutch have sent out expeditions, but, thus far, nobody has been able to break through that mountain barrier."

"What about an airplane?" interrupted Dick Peck eagerly. "It would clear those mountains in a hop, Matt, and go farther in thirty minutes than an ordinary expedition could go in six months! A good pilot could come down on some lake or river and make camp right in Pygmy-Land itself. They'd probably take him for a god!"

"That's an idea!" exclaimed Hedberg, pushing forward over the table in sudden excitement. "A hydroplane could do it, sure as we're alive! Good Lord, what an adventure—to *fly* back into the Stone Age and live with those pygmies!"

AND before another year had passed, these three, led by Stirling, actually went back into the Stone Age of mankind. They lived with a people who were ten thousand years behind civilization. And they did this in the company of Dyak head-hunters from Borneo and convicted murderers picked for the task from Dutch Colonial prisons—as bizarre a company as explorer ever got together.

Stirling told me the story.

Five hundred men and three ships had been recruited, and a European nation had been Stirling's partner. Many of his men had died, or had been killed, while half of them had become invalided by disease; moreover, their airplane had been wrecked. This adventure, so casually begun in a Florida restaurant, had cost in ships, materials, men, and guns the equivalent of half a million dollars. And, as yet, nothing of consequence had been printed about it; the story was still to be told!

"Where, how, did you raise the money for this thing?" was the first question I put to young Stirling.

"It was a tough job, the getting of that money," he confessed, smiling. "The fact is, sheer nerve got us by."

HEDBERG had no money. Between them, Peck and Stirling had about $30,000. This sum represented every cent that they owned, but without a qualm they tossed it into the common pot.

They bought a hydroplane, built to order, and Peck persuaded two aviator friends, Hans Hoyte and Prince Hamer, to join the party. As the crowning touch, the proposed expedition was sponsored by the Smithsonian Institution, whose officials gave all possible assistance.

A Papuan in his Sunday clothes

Then Stirling, aided and abetted by Hedberg, who recalled the example of Columbus, boldly began negotiations with the Government of Her Majesty, Queen Wilhelmina of the Netherlands. Western New Guinea is Dutch crown property. However, these Americans didn't stop with asking the queen's permission to go in; they asked also for her coöperation and aid, both military and scientific—*and they got it!*

THEY didn't win this royal partnership in a day, however, nor was it granted without conditions. There were months of diplomatic palaver through our State Department. The Dutch Indian Commission for Scientific Research at Batavia, Java, had to pass upon the proposal, which took time. And the Americans had to raise as their contribution to expenses the sum of $100,000.

They had $30,000, as you know, which meant that $70,000 had to be found somewhere, somehow. Our own scientific agencies had no such sum to spare, and Congress has no interest in New Guinea, of course. So Stirling did the one thing left: He borrowed the money—borrowed it from banks on personal notes secured by the indorsements of relatives. Incidentally, he confessed to me that he is still paying on those notes, and will be doing so for some years to come.

Not a doctor hunting for sinus trouble, but Mr. Stirling making scientific measurements of a pygmy woman

Without a tail of leaves, such as this Papuan is wearing, the natives of the Van Rees Mountains consider themselves embarrassingly undressed

What about the remaining $400,000 expended?

HATS off to the Dutch! Early in 1926, after having been weeks at sea, the five Americans arrived at Batavia, Java, with their hydroplane in crates. Plans were already under way for the coming adventure, now officially designated the Netherlands-American Expedition. Holland had given her word, and she kept it without stint.

"The British attempt at exploration had been made from the south coast," Stirling explained, "and it had failed in the snowcapped mountains. We planned to avoid the great mountains by going in from the north coast, starting at the mouth of the Mamberano River. This course would lead us southward for about two hundred miles into the interior, where we planned to turn directly west up the Van der Willigen River to the Rouffaer River and follow the latter to its source. This route, we believed would bring us to the very edge of the hidden district which was our objective."

So, at Batavia, at Surabaya, at Macassar, and in Central Borneo, ships and men and supplies were assembled. The Dutch provided three ships of the coast guard, manned by Malay crews. Foods, sufficient to ration five hundred men for a year, were laid in.

A military force of eighty native soldiers, commanded by Dutch officers, was made a part of the expedition. To act as canoe men and carriers, seventy Dyaks, every one a picked man, were recruited in Borneo. Many of the Dyaks had never before seen a white man. They were fighters, skilled in the jungle, and probably the most daring and expert canoe men in the world. Stirling was proud of these Dyaks.

THEN one hundred and forty convicts were picked from the prisons to act as burden carriers, laborers, and servants. With one or two exceptions these convicts were murderers, mostly from the island of Madura, where men are noted for their hot tempers and the keen blades of their knives.

"Great guns! Why did you deliberately pick murderers?" I asked Stirling.

He laughed.

"Petty criminals and sneak thieves invariably are cowards, quitters, riff-raff," he said. "Murderers are much more likely to be men of courage and character. We simply made the crime the index of our man, and, besides, these Madurese were skilled boatmen and handy fighters with their knives."

This made a total of two hundred and ninety men, exclusive of the ships' crews and the whites. The latter, additional to the five Americans, were Van Leeuwen, botanist and leader of the Dutch forces; Le Roux, an ethnologist and topographer; Doctor Hoffman, a physician; Captain Posthumus and Lieutenant Jordans, in command of the troops, and three Dutch noncommissioned officers. This original force, however, before the expedition's end, was to be supplemented by more than two hundred replacements needed to fill gaps caused by disease, accident, and Papuan arrows.

On April 7, 1926, the expedition was ready, and on that day the first ship sailed out of Batavia, with the second ship scheduled to leave in two weeks, followed shortly by the third.

"We were loaded to the Plimsoll," described Stirling. "We had almost fifty tons of food aboard, two cows, a dozen chickens, Dyaks in loin cloths, soldiers, convicts, even some women and children belonging to the Malay crew. Ten big Dyak canoes were lashed to our rail, making odd contrast with our 400-horsepower

A makeshift airdrome in New Guinea

hydroplane, which was roped securely to the after deck."

It was a colorful company. The brown, naked convicts were a hardy, muscular lot, loyal to death if treated right, but unforgiving killers if angered. The short, stocky, Indian-like Dyaks carried, in their belts, their big "mandows," or head knives, with elaborately carved wood or bone handles ornamented with tufts of hair—these knives were two feet long. They had the native axes, invaluable in the jungle, huge, painted war shields, and long, slender blowguns. There was no servility in the bearing of these Dyak warriors; they looked you eye to eye and held their heads up as befitted fighters and men.

Twenty-three days after leaving Batavia the first camp of the expedition was pitched on the banks of the Mamberano in New Guinea, ninety-five miles inland from the river's mouth, this being as far as the ship could go. Cockatoos, parrots, hornbills, and parrakeets made bedlam in the dense jungle at this intrusion. Great flocks of nocturnal bat-like creatures known as kalongs, or flying foxes, hung by uncounted thousands in the profusion of trees, slowly and ceaselessly fanning their wings. The great river, swollen and angry, muddy and filled with driftwood, roared a sullen challenge to the white man and his strange machine with wings.

"WE PASSED about a dozen Papuan villages as we came up the river," said Stirling, "but all but two or three were deserted. Ahead we would see smoke rising from houses, but before we had reached them the smoke would be gone and the inhabitants vanished. Some bolder Papuans, however, did watch us from the river bank—jet-black, glistening-skinned fellows with great heads of fuzzy hair, armed with bows and arrows. However, we didn't see a woman or a child. That meant that the Papuans were prepared for war, if war it was to be."

At once Dyaks, convicts, and soldiers began clearing the jungle for the site of the base camp, named "Camp Albatross," after the ship. Giant trees were felled by the Dyaks. Cabins took form, tables and bunks were built, all with those expertly wielded Dyak "mandows." Dyak "ghost-scarers" were set up to frighten away evil spirits, and a huge god, twenty feet high, was carved from a forked tree to keep away illness.

INSECTS were everywhere. All of the insects of the earth, it seemed, were holding convention in New Guinea. Ants, varying in size from mere mites to savage creatures an inch in length, swarmed by billions over the ground. The air was thick with tormenting, biting flies of every conceivable color and size. Leeches and microscopic chiggers added their relentless attack, and hordes of mosquitoes droned the dread song of malaria.

One of the intrepid Dyaks who helped Stirling and his companions to penetrate jungles and mountains hitherto unvisited by white men

"The insects were worse than the snakes, and snakes were as common as the chipmunks in the woods at home," Stirling recounted, with a grimace.

"What was your first big thrill in New Guinea?" I asked Stirling.

He answered quickly, "Our first exploration by hydroplane, made on May 15th by Hoyte and myself. Our base camp had been established, our supplies, men, and equipment unloaded," he went on, "so it was time to begin the business we had come to do. The plan was to locate a series of camps along the Mamberano, the Van der Willigen, and the Rouffaer Rivers.

"It was no easy task to take off with our heavy load in the turbulent river. On either side were hills that formed a narrow gorge into which we rose slowly. It was thirty-five minutes before we emerged from the gorge into a vast plain dotted with lakes, old river courses still partly filled with water, and numerous tributaries to the Mamberano. With this confusion of waterways below us, it was the most difficult kind of work to keep to our course.

"A hundred and fifty miles we followed the Rouffaer, until suddenly it turned sharply south towards the great mountains and vanished in a ragged gap in the hills. 'Go on!' I signaled Hoyte. I was now certain that (*Continued on page 86*)

Then the brush crashed. "Hands up!" came in

THE Drift Fence

LITTLE Molly Dunn of the Cibeque—the loveliest girl in all that valley—was the daughter of a crippled, more or less worthless homesteader father and a nagging mother. With them she lived, near West Fork—with them and with "Slinger" Dunn, her brother, notorious for his lawlessness through all the Cibeque country.

It was Molly with whom Jim Traft fell in love at a rodeo dance in Flagerstown—tenderfoot Jim, who had come on from Missouri to take charge of his uncle's outfit, the Diamond, and to build for old Jim Traft the hundred-mile drift fence which Slinger Dunn and the Haverlys and the rest of the Cibeque gang had sworn to cut as fast as it was built.

Long weeks of misery followed that dance—misery for Molly because of hopeless love for the nephew of rich Jim Traft; for Jim because he had found out who Molly was and had to listen to endless insinuations against her from Hack Jocelyn and others of his cowboys. Finally, in desperation, he fought it out with them, established himself as boss of the outfit in fact as well as in name—and fired Jocelyn.

By this time the drift fence was close to West Fork, and Molly learned from Andy Stoneham that Slinger had broken with the Cibeque gang, that Jocelyn was plotting with them to cut the fence, to kidnap Jim and hold him for ransom, and to lay it all on Slinger Dunn. Molly went at once to her brother with this news, only to have him force from her a confession of her love for Jim, and then ride furiously away toward the Diamond camp. On her own pony Molly trailed him for miles through the forest. Then suddenly, up the trail, a rifle shot rang, clear and sharp, and a wild cry followed.

PART V

VIOLENT collision with ground or tree ended Jim's acute consciousness. His first sensations afterward were the chill of water on his face and a burning pain in his breast. Then he felt hands on his forehead.

He forced his weighted eyelids open, to see bright sunshine and spread of foliage over him.

He lay half sitting up against a log. Be-

a cool, sharp voice that made Jim's blood leap

ZANE GREY'S *smashing New Serial*

Illustrated by W. H. D. KOERNER

side him knelt a girl. She uttered a broken cry.

"Molly Dunn!" Jim's voice was not very strong. She straightened up a little so that the light struck her face. It appeared pale and convulsed, with big, dark eyes dilated with horror. Both her little hands were red with blood. This fully clarified Jim's stunned faculties. "Am I badly hurt?"

"Oh—I don't know—I—I'm afraid," she cried.

"Show me where I'm shot."

"Your breast . . . heah!"

Jim's shirt was open. It took nerve to feel for the wound. His whole breast burned. A wet scarf lay pressed tight over his heart. Blood had saturated his clothes. It was flowing freely. Then his fingers located a hole in his flesh that seemed on fire.

DESPITE the shock to his wits, Jim knew he had not been shot through or near the heart. The bullet hole ranged upwards. Had it missed his lungs? The moment was fraught with terror. He localized the sharpest pain higher up. The bullet had come out on top of his left shoulder. From here the blood flowed. Something cold and ghastly released its clutch upon Jim.

"Bullet—glanced," he muttered. Then he asked if there was any other wound.

"You hit on your haid," replied the girl.

"Molly, I'll not die," he said.

"Thank God! I—I was so terribly frightened. What can I do?"

"You had water here?"

"I filled your hat at the brook."

"Tear this scarf in strips," directed Jim. "You'll find a clean one in my pocket. . . . Inside. . . . Now tear that—and fold into pads. You've only to wash off the blood—and bind the pads on tight."

She complied with his instructions without hesitation, though her hands shook.

"But this top hole! You're bleedin' so!"

"Put one of the pads over it. Press

Digitized by Google
Original from
UNIVERSITY OF IOWA

tight. Now I'll hold it there. . . . Knot the strips. . . . Slip under my arm—over my shoulder. Now the other pad . . . and tie tight."

The difficult task was at length accomplished. Molly sat back on her heels, plainly weak. Tiny drops like dew stood out upon her forehead. Her hair was wet. She made a move to brush it back from her face, then, aware of her bloody hands, she essayed to do it with her elbow, holding them out so as to avoid contact.

"Molly Dunn, you've got blood on your hands all right," said Jim, with significance.

But it escaped her. "I shore have—and it sickens me," she whispered. Then, pouring water from his sombrero, she washed them and wiped them upon the grass.

Jim felt faint and he was suffering severe pain, both of which circumstances, in the thrilling agitation of the moment, seemed nothing to be concerned about.

"I must get you back off the trail heah," she spoke up suddenly.

"Yes. If you help me I can manage," he replied. With her assistance he labored to his feet and walked, leaning on her. For a little girl, she certainly was strong. They seemed to go far. Jim grew dizzy. He heard running water, but could not see it. Blurred spruce trees stood up all around. His head swam, and when the girl stopped to let him down it was none too soon for Jim. He spoke, but apparently she did not hear. Then his sight cleared. She was coming with water in his sombrero.

"You aboot fainted that time, Mr. Jim," she said, lifting his head so he could drink.

"I—should—smile," whispered Jim, as he lay back. Presently he had recovered again, not only to the mounting pains but to a thrilling sense of this extraordinary situation.

"What—happened?" he asked. "Do you know who shot me?"

She hung her head.

"You needn't tell me. I know. It was your brother, Slinger Dunn. . . . He stepped out from behind a tree . . . didn't seem in any hurry. But I was paralyzed. I forgot I had a gun."

JIM felt the lump over his breast where the lower pad had been bound. It was right under his shirt pocket over his heart. His fingers located the bullet hole in his shirt, and at the same instant his watch.

"See here, Molly," he said curiously. "Take my watch out."

She complied. The watch was of heavy silver and had been long in the Traft family. Evidence was not wanting that it had served its day. The bullet had struck the case, making a heavy dent, and then had glanced upward.

"That accounts," whispered Molly. "I wondered aboot it. Slinger doesn't often miss what he shoots at."

"Saved my life!—Well, I'll be jiggered," exclaimed Jim, fondling the watch. "And I came very close to not fetching it!"

"Oh, such luck! Thank Heaven! . . . But, Mr. Traft, what'll we *do?* You'll have fever. An' maybe blood poisonin'. We got to have medicine!"

"It won't do to send you to my camp."

"Why not? My horse is heah, tied over there."

"The boys would know your brother shot me. I don't want . . ."

"Mr. Jim, you needn't let Slinger off on my account," she interrupted.

"I'll have something to say to him when I'm all right again," declared Jim grimly. "What'd the—why did he shoot me? On account of this drift fence?"

"No. Reckon it was aboot me."

"You!"

"Shore. It's gone all over the country—what you did—what *we* did that night of the dance . . . out on the porch."

"Bud Chalfack!" ejaculated Jim, stiringly aware of Molly's scarlet blush. "He told it. . . . Oh, I'm sorry, Molly. That was such a—a crazy thing for me to do."

"RECKON I was just aboot as crazy," she replied generously, and smiled just a little wistfully. "But Slinger didn't heah what *I* did . . . an' he shore wouldn't believe me. I was scared he'd choke it out of me."

"What does he think, Molly?"

"It couldn't be no worse, Mr. Jim."

"The blockhead! Some of these Arizona fellows make me see red. . . . I'll make it my business to hunt Mr. Slinger up."

"Oh, don't do that. I beg you!" she implored. "Arch is the most awfullest man when he's mad."

"I didn't know whether he was mad or not, but he sure looked awful," replied Jim, forcing a laugh. "Molly Dunn, how'd you happen to come along here and find me?"

"Slinger just the same as told me he'd kill you," she replied, grave, dark eyes on him. "I waited this mawnin' till he was gone. Then I trailed him. My plan was to keep behind him till we were up on top; then I'd ride off the trail an' go round to your camp. I wanted to warn you aboot Slinger. An' that you was in most as much danger from the Cibeque outfit."

"Molly Dunn!" he cried incredulously. "Then it wasn't an accident? You actually came to save me?"

The distance to the little brown hand on her knee was not far, and his quickly bridged it. She seemed neither shy nor cold.

"It shore wasn't no accident, Mr. Jim," she said.

"You must have risked a good deal, Molly."

"I didn't think aboot it. But if they find it out down in the brakes—well, the Cibeque wouldn't be no place for me. An' Slinger will aboot kill me."

"Oh, I'm sorry. And grateful! Molly Dunn, I've got to think up some way to prove it. . . . But you must not let Slinger or anyone see you. How far is it to your home?"

"Reckon aboot five miles, down through the woods. I can keep off the trail."

"How'd you happen to find me?"

"I trailed Slinger to where his tracks went off into the woods. Then I stopped. Pretty soon I heahed a shot—then a cry—then a horse comin' my way fast. I hid behind a spruce. An' I seen Slinger ride by. I didn't know what had happened. But I tied my horse an' slipped up the trail. First I saw your horse. He was makin' off, draggin' his bridle. Then I found you lyin' by a tree. You'd fallen off an' hit your haid."

She released her hand from his and gently touched Jim's head above his temple, where even a slight pressure caused him pain.

"I'd better fetch your horse," she added, rising.

"Don't go far or stay long," said Jim.

THE slight, buckskin-clad form vanished in the green. And only then did Jim take note of his surroundings. He lay in a sort of lean-to made of spruce boughs, dead and brown. He could see one small bit of blue sky; all the rest was green. He heard a low murmur of running water. The place was secluded, and redolent of dry, sweet pine needles.

Soft thuds on the ground made Jim aware that Molly was returning with his horse. They ceased. Then he heard a rustling sound and the soft flop of leather. Next she appeared with his saddle blankets, his coat, and his gun, which she deposited by his side. How pretty, slim, and graceful she looked in buckskin! He told her so. She just gazed at him with great, reproachful, melancholy eyes.

"Have you worn the lovely white dress since?" he added.

"No . . . I'm savin' that to be buried in."

"Molly! . . . You should have said married. How sweet—"

"Mr. Jim, you're shore talkin' too much—not to say too wild. Your face is hot. An' time is flyin'. What'll we do? I've hobbled your horse."

"You must go home at once. Don't let anybody see you. . . . Will you come back tomorrow?"

"Yes," she replied, with gravity, as if only she knew what that promise implied.

"Thank you. Better bring some medicine. I'm going to be pretty sick. . . . And some clean linen to bandage my bullet holes."

"There's a canteen on your saddle," she said, and stepped outside the shack to procure it.

Upon returning, she placed it beside his rifle. Then, on her knees, she scraped up a soft pile of pine needles, spread his saddle blankets upon them, and folded his coat for a pillow.

"There's a bed for you. I reckon you won't get cold. If you do, use one of the blankets. . . . An' now I'll go."

Without the slightest hesitation, Slinger unbuckled his belt, containing the heavy gun, and handed it shakily over to someone

Jim gazed up at her as she knelt there.

"Molly . . . kiss me," he importuned, quite beside himself. "I'll be here alone, unable to move. . . . Slinger might come back and kill me. . . . Kiss me, Molly!"

"You ask that of *me*—Molly Dunn?"

"I don't care who or what you are!"

Twice he reached for her, but she was just a little too far away.

"You mustn't move," she said, in alarm, edging close on her knees. Then he could reach her. How large and dark her eyes appeared in her pale face!

"Kiss me, and go."

She bent over his forehead as if impelled, yet earnestly.

"No!" he cried, seeing her intent, and moving impatiently.

Then, blushing duskily scarlet, she bent lower, closing her eyes, and laid cool, sweet lips on his. Before he could catch his breath to speak again she had fled. For long after that Jim lay in a dream, the pleasure of which made him almost unconscious of pain. Then he fell into a fitful slumber.

WHEN he awoke, the light had shaded and rays of gold slanted through the forest. He was uncomfortably hot and thirsty, but the pain had somewhat dulled. It hurt him, however, to move over onto the bed of pine needles, and he was glad to stretch out. Common sense told him that his situation was pretty serious, if his condition was not, but he could hardly dwell on anything else save Molly Dunn's return the next day.

He watched the gold fade from the tips of the spruces. The sky turned gray. Twilight enveloped the green surroundings in obscurity. Soon all was black except a small space of sky overhead where pale stars blinked and grew clear and white. The stillness was something that Jim soon felt he could not endure. But it did not last. A sigh breathed through the tree tops. The night wind had begun its dominance of the forest. Soon from all around came rustlings and stealthy sounds. (*Continued on page 94*)

The Something that's in

By MILDRED HARRINGTON

Illustrated by C. R. CHICKERING

THIS is the story of a man who, while he was yet a boy, had the good fortune to discover within himself a power that could work miracles. He calls this power "the something that's in a man's heart." At some time or other all of us have heard the urging of an inner voice. But, mostly, we have disregarded it because we were afraid to listen.

Ray Eldridge was not afraid to listen. . . .

A sixteen-year-old boy lay on an upstairs bed in a Vermont farmhouse. He hadn't closed his eyes in sleep for five nights. His pain-racked body was drenched with perspiration; every nerve was taut, on edge.

His mother had just gone down to the door with the doctor. He knew that when she came back, he would have to fight the biggest battle of his life—a battle against the combined odds of his mother's love and the imperious demands of his own tortured body.

Presently, he heard his mother's footsteps on the stair. She opened the door. In one hand, she held a small pasteboard box such as druggists use in putting up their wares. She approached the boy's bedside and stood looking down at him. When she spoke, her voice was shaken with love and pity:

"The doctor said to take it, Ray."

"No, Mother."

"But he says it will make you worse to fight the pain—and this, too."

"No, Mother."

The woman's face worked convulsively, the tears rolled down her weather-roughened cheeks.

"Then for *my* sake," she pleaded. "I can't bear to see you suffer like this."

Again that stubborn whisper: "No, Mother."

The woman laid the little box on the table at the boy's side.

"I'll leave it here," she said. "Maybe you'll change your mind." And she went out and closed the door behind her.

All day and all night it lay there within sight and within reach—relief from the fiendish agony that was twisting the boy's joints into unsightly knots. But when morning and the doctor came, the little box of morphine still lay on the table untouched.

For four weeks the battle raged. Then one night, after a particularly hard day, the boy fell into a deep, sound slumber from which he did not awaken for twelve hours. When he regained consciousness, the desire for morphia was gone forever. A few more weeks and the pain was gone—as suddenly and as inexplicably as it had come.

But the double ordeal had left Ray Eldridge cruelly crippled. He was destined never to walk again without assistance, never again to have the free use of his hands. For many years, he was to know the pressure of poverty and debt. He was never to know what it is to be free from the need to fight with every ounce of his strength. But in his victory over the morphine habit, he had determined to his own satisfaction that, no matter what the odds, a man—even though he is only a boy—can still be the captain of his soul!

A few weeks ago—which is to say, thirty years after the incident I have just reconstructed for you—in the office of his big handkerchief factory in Charlotte, North Carolina, I faced Ray Eldridge across the desk over which he does a business of nearly a million dollars annually. He had just told me what I have told you—and a good deal more which I shall tell you presently.

I knew that at the age of fourteen he had had an attack of scarlet fever, followed a year later by rheumatic fever, one of the most painful of all diseases. I knew that he had recovered from this attack, only to suffer a more severe recurrence the next year.

It was during this second siege that the doctor had prescribed morphine to assuage the almost intolerable pain. During one of the rare intervals when he was comparatively free of pain, the boy found that he had become a slave to the drug. Young though he was, Ray Eldridge knew what this meant, and he made up his mind to be free from the habit, if he died in the attempt.

But this was easier said than done.

In the first place, when the pain pounced upon him again, the battle was doubly hard. In the second place, both his mother and the doctor opposed a sudden breaking off from morphine—his mother because she could not bear to see her child tortured by pain; the doctor because he was pretty sure that the boy could not live long anyway, and, therefore, anything that eased him would make things easier all around. But, as you already know, the lad found somewhere the courage to rid himself of the morphine habit, and to go on living.

"WHEN you found that things were so bad, how did you have the courage to fight?" I asked.

There is a gentle gayety in Ray Eldridge's eyes and in the smile that hovers about his firmly cut mouth. But for the moment his face was set in grim lines.

"I didn't have the courage *not* to fight," he told me gravely. "Unless you are totally without imagination, fighting is the easiest thing you can do when you are up against something big. Fighting gives you something to get your teeth into—something to take your mind off yourself.

"In one sense, of course, I *had* to sit still and let things take their own way. But I didn't have to let my body be the pacemaker for my mind. There were a thousand reasons why I couldn't just wait for things to get better—or worse. For one thing, my parents were poor, and my long illness had put them terribly in debt. And I was the oldest boy, the one they had counted on to help them out.

"But there was more to it than that"—and Ray Eldridge's face softened and his voice deepened. "I'm not what you would call religious," he went on a little apologetically, "but I believe that if a man will only listen to it, there's something deep down inside him that will urge him on to fight against what looks like overpowering odds. I don't know what it is, unless it's the little bit of God we all start off life with. I call it 'the something that's in a man's heart.'

"Whatever it is, it gave me the courage to build up, bit by bit, a viewpoint that enabled me to discount my handicaps. At first I was keenly sensitive about my physical shortcomings. But I fought it out with myself until I came to believe that people

A MAN'S Heart

It works miracles when given a chance—as it did in the life of Ray Eldridge

soon forget how a man looks, that they are much more likely to remember what he does.

"The next step was to set about doing something. That wasn't hard. When you hit rock bottom, you can't go any lower, so you sort of sit up and look around. At least, that's what I did. There I was, bound to a wheel chair, my legs useless, my hands not much good. As I have already said, we were head over heels in debt. I saw that the only way I *could* travel was upward, and that I might as well be about it.

"THE first thing I tried my hand at was selling subscriptions to magazines. I did this mostly by correspondence. I had to; few visitors find their way to a lonely Vermont farm, ten miles from the nearest village. I built up my list of prospects through information obtained from the doctor, the preacher, the county newspapers, and whatever neighbors and other acquaintances happened to drop in at our place.

"In asking for subscriptions, I never mentioned that I was a cripple. I sold my proposition strictly on the assumption that the purchaser would get his money's worth, never on the ground that by subscribing he would help me pay my doctor's bill, or meet an installment on my wheel chair.

"Gradually, I built up quite a good-sized list of customers for my magazines. Of course, I kept hot on the trail of renewals. As soon as I had acquired a little capital, I added novelties—pencils, calendars, gift cards, stationery, and the like—to my line. These things went well, too; my father declared that I had the true Yankee flair for trading.

"At the end of two years, I decided to concentrate on a single staple, rather than fritter away my time and energy on so many odds and ends. In looking around for some small, inexpensive article that everybody uses, I hit upon the handkerchief as the answer to my problem.

"At once I began to buy from the manufacturers in job lots and to build up a canvassing force of sales agents. Of course, my margin of profit on each handkerchief was small, so it was up to me to hustle and expand my business as fast as possible. By the time I was twenty-one, I had put by five hundred dollars. I was now ready to move into the near-by town of Orleans, Vermont, and start my own handkerchief factory. I wanted to be my own manufacturer and middleman. In this way, I could give my customers better prices and at the same time make more myself. I began with six machines; now I operate more than two hundred and fifty, and I have from three hundred to three hundred and fifty employees on my payroll, depending upon the season."

IN FOUR or five years the young man had saved up enough to go to Boston and be treated by a fine specialist. Time after time he went on the operating table. As fast as he regained his strength after one ordeal, he would be recalled for another operation.

The total result was that his legs were straightened out so that he could use crutches. The surgeons were unable to relieve the cramped joints of his hands and feet. When he left the hospital, he was again head over heels in debt. But he was not discouraged. On the contrary, he was jubilant, for at last he was free of the wheel chair!

For fifteen years, he moved steadily forward, adding to his factory until it was one of the largest of its kind in the country. Then, four years ago, in order to escape the rigors of the Vermont climate and to find a more convenient center of distribution, he began to look around for another location for his plant. He finally settled upon Charlotte, North Carolina. Here, in addition to a mild climate and excellent shipping facilities, he found himself in the cotton-growing section which furnishes his raw materials.

From the first, the new factory prospered. The output of the second year doubled that of the first. Last year's business showed an increase of sixty per cent over that of the preceding year. Two hundred and fifty-odd machines turn out more than 100,000 handkerchiefs a day; the total volume of business runs into nearly a million dollars annually.

Ray Eldridge, who knows roses as intimately as other men know their pals

Mr. Eldridge had made the story of the development of his business sound so simple and so easy that I could not refrain from asking a question:

"But didn't you ever get discouraged?" I demanded. "Surely, things didn't always go just the way you wanted them to."

"No, things didn't always go right," he admitted, "and there were times when I was tempted to get downhearted. But I never quite let go. You remember, I told you a few minutes ago that I worked out my particular philosophy of life pretty early. So you see, when business troubles and rebuffs came, I had something to tie to.

"It is my belief that every human being has to work out a philosophy of life to suit his own circumstances. I can't always use your life line, and you can't always use mine. In my case, I soon figured out that no matter how unequally things seem to be divided in this world, they are likely to get evened up in the long run.

"The child who is early deprived of the protection of parents gains self-reliance in pitting his own puny strength against the world. If a man loses one eye, nature immediately sets about making the remaining eye strong enough (*Continued on page 148*)

The Mystery at the Mill

Illustrated by
W. H. D.
KOERNER

MELVILLE DAVISSON POST'S *great story of the inscrutable justice that moves behind the deeds of men*

THERE was something sinister in the first act of this tragic drama. And there was something appalling in its last act.

Something that put one down and chilled one's bones with fear. I do not mean any little human terror. I mean the fear of God. The vast, inscrutable justice of God was in it. The human mind withdrew and covered its face before that immensity. There was no escape when the avenging agencies of God followed on one's track. One slew with the sword, and the sword in his hand turned on him. The very thing that the criminal agent used for the destruction of his victim was the very thing that these agencies of God used for his own destruction. It staggered the human mind. . . .

It was five o'clock of an autumn morning.

The world, emerging from darkness, was making ready for the day. The farmer was in his fields. A low fog lay on the land, but it was beginning now to lift. It was the frontier of Virginia. Simple men were about the simple acts of their primitive vocations.

Old Simon Betts, the miller, had got out early on this morning. His mill sat on the edge of the river—one of the rivers tributary to the Ohio—that rose in the foothills of the mountain and descended through the long valley. It ran deep and steady and undisturbed, except when the great rains flooded it and spread it out like a vast smear of yellow over the bottom lands.

The people depended on old Simon Betts and his grist mill for their bread.

Winter was on its way, behind this haze of autumn. The wheat fields had been reaped and the grain threshed. The wheat was ready for the mill. The urchin on the farm horse would come in with his grist, and the farmer with his sacked load in his wagon. The mill must be made ready for its work. Betts had been at this work himself, for one in such a trade must add to his skill, in a new land, something of the skill of the trades upon which his own depended. But there was a work on one of the stone burrs that he could not do, and he had sent for Lance, a millwright of the neighborhood, who possessed the skill he lacked. Lance had promised to come early, and so old Betts was about his mill at daybreak.

LANCE did not arrive, and Betts, with his big silver watch open in his hand, stood in his mill door looking up the valley along the path by the river. But it was not Lance he saw.

It was something that floated in the river.

His eye instantly fastened on the thing. A log or the dead limb of a tree was a peril to his paddle wheel. He had to look out that it did not turn into the sluice. He stood thus with his watch in his hand, looking at the floating object. . . . It seemed, Betts said, to hesitate in the slow current above the dam and then enter the sluice. He went down the steps of the mill with his log hook in his hand. But it was not a log that had come in.

The body of a dead man had entered the mill from the river.

It moved slowly along the plank sides of the sluice and stopped against the paddle wheel. The body floated face down—a little man dressed in the kind of clothing that one wore about the cities.

Lance arrived then; and the two of them took the dead man out of the water and laid him on the floor of the mill. They did not know him. He was a stranger in this region. The miller knew the people far and wide through this county of Virginia. The mill was a central point for meeting and for gossip; all of the community gathered at this point. If one traveled out of the valley or entered in it, the miller knew. Therefore, a larger mystery lay about this unknown dead man who had come floating in the current of the river.

And they did not know what to do.

The county seat was at a distance.

It would take a long time to get the authorities of the state here. There was no swift means of communication. There were only the country roads, and the highway of the Ohio, a few miles farther down at the mouth of the river. There was a tavern there and a steamboat landing. One could go north or south on the Ohio; but one could not travel inland except slowly with a saddle horse, or more slowly with a carriage.

BETTS and the millwright, Lance, talked together in the door. They were bewildered by this tragedy. But they were practical men and they must do something. What should they do?

And while they hesitated, the authority behind the world, moving to its inscrutable adjustments, brought a third person to old Simon's mill.

Colonel Braxton, arriving on a river boat, had got a sort of carriage of the country inn at the steamboat landing, and on his way the negro driver stopped

UNIVERSITY OF IOWA

for a direction, in the road beside the mill. And so the lawyer came into the thing at its crucial moment.

It seemed the mere hazard of chance that brought him to this place, the hazard of chance in more than one direction. But was it chance? An event occurs, and we call it accident; and we reject a design behind it, for we will believe that a design must strangely violate the order of events, as though the will of God were a thing apart that must break in with its disturbing finger. And so, when an ultimate object appears in a chance event, we are moved to attribute the happening of that chance event to the pressure of some supernatural insistence. One had a premonition, or a feeling that one could not resist, or some vague direction of a dream, or voices.

These are the absurdities of the human mind.

Why should the Ruler of Events require this supernatural pressure in order to move them to His will!

Old Simon Betts came out to the carriage. He knew the eccentric lawyer, for he had seen him in the court-rooms and his fame had traveled through Virginia. He hailed him, as a vexed corporal in action might hail the arrival of a general. And he began to explain what had happened, and his perplexity.

The dead man lay on the mill floor, dripping, as Betts and Lance had brought him from the river. They had not disturbed what they had found in any manner. They knew only that he was a stranger and that his body had come floating into the mill sluice.

Colonel Braxton got out of the carriage and went up the steps into the mill.

The door opened and a big, ox-shouldered man appeared with a candle

THE dead man lay as the miller and Lance had placed him, on his back with his arms extended along his body. Colonel Braxton did not know him. But he set about an examination of the body to discover what it might reveal. There was no wound or mark of violence on the man nor any evidence of a struggle. The clothing was intact and there had been no robbery, for here was the man's watch in his waistcoat pocket, and there was a sum of money in his leather purse. But there was nothing to give his name or to explain his presence in this portion of Virginia.

It was certain that he had met his death in the river, and that no violence had preceded it. He had not been murdered and thrown into the water. It was the water that had killed him.

It was clear, also, that the body had floated for some distance in the water, for there were stains on the clothing where the current had carried it against the clay banks of the meadow lands. These stains were clearly visible; a dirty, gray smear on the right sleeve and shoulder, and elsewhere yellow smears.

Colonel Braxton called the attention of old Betts to these stains. They were clay stains, the miller said, where the body had been carried against the river banks on its journey. These banks were mostly yellow clay; but there would be also, now and then, a white soapstone stratum in them. The body would gather such evidences on its way. Colonel Braxton examined the man's clothing carefully about these stains, and under his fingernails bits of the yellow clay appeared. These things apparently gave no light.

But the man's watch gave a clear direction.

It had stopped at a quarter past eleven o'clock. If it had stopped at once upon immersion in the water, that was the hour at which the man had gone into the river.

THE lawyer undertook an experiment to determine this: He caused a bucket of water to be brought and, unhooking the chain, he submerged his own watch in it. It was a gold watch with a tight-fitting hunting case. It stopped in a few minutes. He then took the stranger's watch, opened it, emptied it of water, dried it over a candle, wound it with its key, and placed it in the water. It stopped in a dozen seconds. It was clear, then, that the dead man had gone into the water at fifteen minutes after eleven o'clock.

But how rapidly had the body traveled in the river?

The miller and Lance disputed about that; a log in the river would float a mile

Digitized by Google
Original from
UNIVERSITY OF IOWA

in perhaps half an hour. But they were uncertain. They had lived a lifetime on this river, and yet they had no definite idea of its current.

This was presently clear to the lawyer, and he set about an experiment to get at some workable conception of the current.

He weighed the body on the miller's scales. Then, with the aid of Betts, he filled a wheat sack with hay and sand until he had a like weight and something of the long bulk of a human body. They took this sack in the carriage to a point a half-mile up the river and placed it in the water, noting the precise time. They returned to the mill.

The sack arrived in some thirty minutes. It seemed, then, that one could estimate the journey of the body in the river at about an hour to the mile. This would mean that the dead man had entered the river some six miles farther up.

But this estimate could not be accurate. It could be only approximately correct. The body would be occasionally delayed. Colonel Braxton thought he might deduct a mile, and come a little closer in his estimate. He asked Betts about the river at this distance above them. The miller said that there was a ford in the river at this point, where an old road crossed. But it was a deep ford, and for this reason the state had changed the road here and put a wooden bridge across the river some quarter of a mile above, where the channel was narrow. But this bridge was not yet open to travel.

IT WAS now noon, and Colonel Braxton went in to dinner with old Simon. The miller's wife had assembled her best service for the distinguished guest. The three men sat down at the table and the miller's wife, going about her duties, talked.

"The ford's dangerous," she said, "an' the county needed that bridge. But I reckon we wouldn't 'a' got it if Rickman hadn't 'a' lived there. I don't see how the state come to give him the contract for these bridges, he's as crooked as a dog's hind leg . . . he'd steal pennies out of a hat in a meetin'-house. They say the state's after him now for stealin'."

Betts tried to silence her.

"Don't talk like that, Melissa," he said; "you mustn't talk like that."

"It's the truth," continued the woman; "everybody knows it. He's as mean as garbroth. His wife's left him, an' he's up there by himself. It would be a good thing for everybody if God Almighty would take him."

The millwright, Lance, looked up with a quizzical smile.

"Now, Melissa," he said, "what would God Almighty do with him?"

But the woman was the better at this banter. The mild atheism of the millwright was well known to her, and she countered on it.

"That's it," she said; "some folks say there's no hell, but if there ain't, what *is* God Almighty goin' to do with Rickman?"

IN THIS fashion the midday meal passed in the miller's house.

Colonel Braxton said little, except the simple courtesies common to the guest. They did not talk of the dead man or the mystery about him. It was of the weather and the crops. Nor did the miller inquire into the lawyer's mission. He had the instinctive courtesy of simple men. The guest was not to be cross-examined in one's house.

And after dinner they went out of the house and down the highway to the mill.

Colonel Braxton went in and looked carefully at the dead man. But there were few distinguishing features in that face; pale, reddish hair, thinning at the temples, a short, closely-trimmed mustache. From the general aspect the man was clearly of the cities. The hands showed that. They were not calloused by any tool that felled the forest or tilled the earth. The dead man might have been a scrivener or a lawyer's clerk.

Colonel Braxton made some inquiries of the miller.

It was seven miles to the ford, if one followed the country roads; but there was a path along the river and one could cut down the distance if one walked. With this information, Colonel Braxton turned the driver back and set out along the river path. But first he gave directions to old Betts to leave the dead man on the mill floor until the morning. He would return then.

And also he took a little package out of the carriage. It was no article of mystery, connected with this devious affair. It was a bit of lunch put up at the inn when he had set out from the Ohio on this morning. The river ran for these five miles very nearly straight through the meadow lands, as though the channel had been digged out on a line.

The lawyer followed the path along it. He walked (*Continued on page 151*)

CULVER SERVICE

Major Segrave, who has moved between two points over the earth's surface faster than any other man, receiving congratulations after his last race at Miami

He's Off—He's There!

MAJOR Henry O'Neal de Hane Segrave, British sportsman, crack automobile driver, can discuss speed in its highest form—spiritual and mechanical—from scorching experience. For he has moved between two points over the earth's surface faster than any other man.

Cocked in three tons of streamlined chassis, he recently rocketed first north, then south, along a one-mile course of Beach at Daytona, Florida, at a speed of 231 miles an hour. His machine, the "Golden Arrow," made each mile trip, into and with the wind, within fifteen and a fraction seconds.

"If you had skidded at that speed?" I asked him.

"The tires would have burned up on the spot."

"And if the tires had burned up; or if one of them had let go . . . ?"

"Is it necessary to answer that question?" he countered.

Major Segrave had calmly risked his life upon a manufacturer's promise that the tires would last—at that high speed—approximately twenty-five seconds. It was the fourth time he had exceeded 200 miles an hour; only two other men have reached that speed, and lived. Frank Keech had, up to Segrave's last try, held the record of 206 miles an hour.

"Frankly, I don't like these high speeds," Major Segrave observed. "Please don't think that I am afraid of them, although there is reason enough, at times, to fear. But once a driver gets into the higher velocities, the real excitement of speed—the sharp, knifelike consciousness of surpassing motion—is lost.

"The impression of everything becomes blurred. You are moving too fast to take in anything. You must keep your eyes glued to the course; if you took your eyes off the markers, for the barest fraction of a second, to enjoy the landscape flitting past at 350 feet a second, your chances of keeping control of your machine would be frightfully thin.

"Once the machine approaches maximum—and a four-mile run is required to bring the machine to that pitch—the driver's attention is fixed upon his course; the deflection of a single degree might mean disaster."

Major Segrave is unquestionably the true British sportsman. Being well-to-do in his own right, socially established, he races for the sheer joy of it and—so he explained these last record-breaking trips—the desire "to capture at least one record from the Americans." He is one of the prodigies of racing, for he has been a racer less than seven years and in that time has captured, at one time or another, every important speed trophy offered on the Continent.

But he brought to the driver's cockpit a mind and body schooled in danger, at once nervously flexible and perfectly controlled. He stands six feet three inches tall, weighs one hundred and sixty-five pounds; his shoulders are high and braced, his hips narrow; he is even symmetrically streamlined himself. Nor is one conscious of the slight limp in his walk, the heritage of his war experiences.

He was at Eton when the war broke out, and though only seventeen, he obtained an assignment to Sandhurst, where he was rushed through instruction in infantry and artillery tactics, gazetted a lieutenant in the infantry, and sent to the front. There, he was put in charge of machine gunners.

One day he was ordered to set up machine gun placements in a supposedly abandoned trench. With his sergeant, Lieutenant Segrave started across the field, carrying only a crop. He saw the sergeant drop into the trench, and followed him. But as he dropped, he saw his sergeant prostrate, bayoneted; saw, too, a German infantryman lunging at him with a bloody bayonet, and behind that German about forty more.

As his feet hit earth, Segrave whirled, and the searching blade slid past his jacket. Then he got the German by the throat. He held on inexorably because behind that German was an officer with a revolver trying to edge in for the "kill."

The trench was too narrow for the officer to pass and get him from behind; so Segrave always propelled the soldier in between, hoping that he could hold out until his own men came up. But the grip he had on the other's throat was too strong. Choking, the German fell, and as Segrave crashed down with him, the officer fired. Flame spurted through Segrave's body.

Still, the shot warned his men. What had started out to be an ambush of Britishers became an annihilation of Germans, and Segrave, believed to be dying, was carried back to the British lines.

Yet his recovery was quick, and he returned to action, now a full-fledged pilot in the Royal Flying Corps. Within a short time, he brought down four enemy ships. But one morning he was in turn brought down by an enemy. It was night-

Digitized by Google Original from UNIVERSITY OF IOWA

fall before he was found, sagged in the splintered cockpit hanging in a tree.

Shortly after the war he joined the Sunbeam Company, manufacturers of a famous make of cars. Within two years, he became captain of the Sunbeam racing team, one of the greatest teams in its day in Europe.

Automobile racing is not always a fine, heady dash toward a goal; there are times when dogged courage is needed; when a driver must have the patience of the tortoise that set out after the hare. In one of Segrave's first attempts to capture the French Grand Prix—a 525-mile run, with hair-pin turns, steep hills, and gravel roads—he had fourteen blowouts, the oil lines broke, the radiator clogged, and the chassis frame was knocked out of alignment when the machine hit a bump at 110 miles an hour.

But he kept going and finished fifth. In 1923, he won the race, averaging 78 miles an hour for the whole run and 115 miles an hour for 277 miles. Of the seventeen machines that started from scratch with him, only five crossed the finish line.

Segrave insists that he is through with speed. "I think my record is secure for the time being," he said, "and even if it is exceeded, I don't imagine that it will be to any great extent. For there is a limit to the speed at which it is possible for man to travel on land. Mathematicians and scientists agree on that.

"And, besides, a young man should begin to think of settling down and all that sort of thing, you know."

CHARLES J. V. MURPHY

Where Washington Prayed Thousands Now Will Pray

The Reverend W. Herbert Burk, who is making Valley Forge a great historic shrine

PHOTO BY MARCEAU

THE reading of Revolutionary history inspired the Reverend W. Herbert Burk with a great purpose. It led him to exchange a growing church in Norristown, Pennsylvania, for a bit of lonely woods located upon what had been the edge of the famous encampment at Valley Forge. There he proceeded to erect the Washington Memorial Chapel, now completed and pronounced by architects to be one of the finest Gothic structures in the New World.

What, however, did it matter that when he built the first temporary wooden structure he had but fifteen dollars and a pledge of a further hundred from his Norristown Sunday school?

"I wanted to build a church," said he, "commemorative of what I regard as the most significant incident of the War for Independence—Washington upon his knees praying for his army. Moreover, I was profoundly impressed by the deeply religious character of so many of the Revolutionary leaders. Coupled with that was a great faith in the future of Valley Forge as a patriotic shrine."

The corner stone of the chapel was laid in June, 1903, upon the one hundred and twenty-fifth anniversary of the evacuation of Valley Forge; although it was four years later, when enough money had been obtained to raise several walls and cover a temporary roof with tar paper, that the Reverend Mr. Burk said farewell to the congregation of All Saints in Norristown and came to Valley Forge to live.

None but the pastor himself will ever fully comprehend the extent of the labor of the intervening years. Funds were sought from individuals and patriotic societies in every state in the Union. Even today seven correspondents are still busied with this task. A dozen times the work of building ceased, only to be resumed later.

Conditions, however, changed for the better. The automobile brought ever-increasing popularity to Valley Forge. Thousands of visitors came where only ten had come before, and these left contributions of quarters and fifty-cent pieces and dollar bills. That is why the chapel stands completed today. "Generally speaking," said Mr. Burk, "ten dollars is a large gift even now."

The Reverend Mr. Burk, however, does not mean that the chapel shall be the full measure of his life's achievements. Last June he laid the corner stone of a great edifice that will seat five thousand people and cost ten millions of dollars. It will be English Gothic, four hundred and fifty feet long and a hundred and fifty wide. It is to be known as the Washington Memorial Church and it will stand beside the chapel.

I asked Mr. Burk how much money had been raised towards the new project.

"Ninety thousand dollars," was the reply, "but the rest will be raised. You can count on a million dollars in quarters and fifty-cent pieces from the people. Moreover, I expect to inaugurate a nation-wide campaign, and hope to have a part of the church ready for dedication in 1932. Several of the wealthiest men in the country are interested."

Great as is his plan to build so monumental an edifice, he has yet another interest. It is a Museum of American History. Thousands of objects are already upon display in a wing of the chapel, and thousands of others await the completion of additional units. "My collection," said Mr. Burk, "is worth fifty thousand dollars and comprises such diverse objects as the check tendered Lafayette for his services and a Conestoga wagon. In reality they are the property of the Valley Forge Historical Society, which now has three thousand members and of which I am the founder."

The names upon the church roll number but a hundred and ten, and as the Reverend Mr. Burk is the first to point

Digitized by Google

out, his communicants actually consist of the thousands of visitors who come there. Last year nearly three hundred couples were married in the Valley Forge chapel. Go there on any Sunday and see the hundreds of automobiles and busses and the thronging crowds, and you will more readily comprehend the kind of people who are embraced within his ministry.

"I put absolutely no stress upon denomination. Washington didn't when he was here," Mr. Burk explained. "None learn that the chapel is Episcopal unless the question is directly asked."

The Memorial Church is for these people, for there is now at Valley Forge no meeting place but the chapel, which seats only a hundred and fifty individuals.

I could not help thinking that here is a man who is supremely happy because he has found an enthralling work. Born in Philadelphia, he is a graduate of the University of Pennsylvania, of which his father was so long secretary, and of the Philadelphia Divinity School.

Long recognized as an authority on everything pertaining to the famous encampment, he received just last year an outstanding token of recognition, being the recipient of the Bok award given annually to a citizen of Philadelphia for distinguished public service. The ten thousand dollars, however, were never deposited to the pastor's personal account—he divided it equally between the chapel and the museum. Thought of self is not a predominant trait with the man Burk of Valley Forge. J. LEROY MILLER

Haircut an' Shave, Sir? Yes, Ma'am

Miss Hilma Koivula, master barber, who believes that silence is golden and works by the "talkless" method

I HAD overslept that morning and hadn't had time to shave, so when, around noon, I found myself near a barber's shop at 125th Street and Fifth Avenue, I decided to get freshened up.

Imagine my surprise when I found myself confronted by a pretty, slender blond woman who asked me what I wished done.

"Good heavens," I said to myself, "I've wandered into a women's beauty parlor by mistake." But I hadn't. I had simply wandered into the one and only barber shop in New York, or probably in the country, owned by a woman and manned by women barbers.

Naturally, I wasn't going to play the coward's part. "Come what may," said I, "I'll go through with it." Yes, sir, I was as brave as that. And I want to tell the world at large that I was given one of the best shaves and haircuts that I've ever had, and all done by the "talkless" method.

I learned later that Miss Hilma Koivula, the master barber proprietor, is a native of Finland; so also are the three women and one man who assist her.

"In Finland," she told me, "ninety per cent of the barbers are women. So it isn't strange that I took up barbering when I came over here.

"I learned my business in my home town of Tampere, Finland, and although I did very well over there, I wanted to see more of the world. Friends who had crossed the Atlantic told me there were no women barbers here. Whereupon, I was fired with the ambition to be the first woman barber in the New World.

"I knew no English when I first came over, so I settled in the Finnish colony at Waukegan, Illinois, and ran a barber shop for four years. But I got homesick and returned to Tampere.

"I determined after a year to try my fortunes again in America; so I came back this time to the largest city in the country, New York.

"I opened this place with three chairs. But Americans, particularly the men, seemed to relish the novelty of being barbered by women, and my business grew so rapidly that I soon added two more chairs.

"For a year I employed only women, then I decided to cater to the trade which prefers male barbers, so I added Mr. Simila to my staff.

"Curiously enough, with the addition of Mr. Simila, I noticed an increase in the number of girl customers."

Miss Koivula's shop is only a barber shop. She does not even have a bootblack or a beauty parlor, although she is planning to add the latter.

"Yes," said Miss Koivula, "I'm going to stay in this country for keeps. I like the people here, and I figure if America is good enough to earn a living in, it's good enough for citizenship."

"You're not married?" I ventured timidly.

The barberette shook her head.

"Too busy; maybe some day, maybe never. I have men friends, but I don't often see them."

"But most of your customers are men," I remarked.

"Naturally," she replied. "I have to smile," she went on, "when I see the surprised look on the men's faces when they first come here. But not one of them has ever backed out of the shop. For one thing, they appreciate that we don't chatter with them."

It was evident by the way the girl barbers stuck to their business and worked silently and efficiently that the jokes about the loquacious barber do not apply to his tonsorial sister. Haircuts, shaves, tonics, massages, and shampoos were given with a minimum of conversation, and the girls wielded the razors more deftly than do most men.

"Do your masculine customers ever try to flirt with your girls?" I asked Miss Koivula. She seemed somewhat indignant at this question.

"Certainly not," she replied, and then added, "At least, they never try to make dates, so far as I know."

Never! Well, personally, I should say that it would have to be a very brave and daring man who would attempt to squeeze the hand that wields a razor with so much skill. FREEMAN H. HUBBARD

Soups give delightful variety and invigoration to cold meals!

WHY has soup become such a popular summer-time food? In countless homes it is now served as regularly in summer as in winter. It's because people realize how much real enjoyment and benefit hot soup adds to the cold meats, salads and ices!

Soup brings to the stomach a healthful, invigorating warmth. This gives new life and strength to a digestion required, day after day, to assimilate so many cold foods.

And it's so easy for you to serve delicious soups — almost without lifting a finger! For not only Campbell's Tomato Soup, but also twenty other delightful Campbell's choices are *already cooked for your table.* They make your meal-planning easier, kitchen work less. And how everybody enjoys these famous soups! 12 cents a can.

A choice for every day in the week

Asparagus	Mock Turtle
Bean	Mulligatawny
Beef	Mutton
Bouillon	Ox Tail
Celery	Pea
Chicken	Pepper Pot
Chicken-Gumbo (Okra)	Printanier
Clam Chowder	Tomato
Consommé	Tomato-Okra
Julienne	Vegetable
	Vegetable-Beef

Twenty-one Campbell's
Soups—oh, boy!
Every one filling
Me with joy!

WITH THE MEAL OR AS A MEAL SOUP BELONGS IN THE DAILY DIET

Among prominent persons and institutions served by Davey Tree Surgeons are the following:

LORADO TAFT
GROSVENOR ATTERBURY
LOUISE du PONT CROWNINSHIELD
WILLIAM & MARY COLLEGE
STANLEY RESOR
ANDORRA NURSERIES, INC.
BAPTIST BIBLE INSTITUTE
HAMMERMILL PAPER COMPANY
FRANK VANDERLIP
OMAHA COUNTRY CLUB
INDIANA PORTLAND CEMENT COMPANY

There is no half-good in Tree Surgery

You would not employ a blacksmith to treat your teeth nor a carpenter to operate on your body. However expert they may be, they deal with inanimate objects and have no technical knowledge or skill with reference to the problems of living things.

You must buy Tree Surgery service on faith. Living trees of any reasonable size are almost priceless. If they require attention you cannot take any chances. This is a highly specialized profession, requiring adequate scientific knowledge and high personal skill that can come only from thorough training under master Tree Surgeons.

The Davey Company says to you with all possible emphasis that there is no half-good in the treatment of trees. This statement is made after more than half a century of experience by a national institution now doing a business of nearly $3,000,000 a year, and having in its employ more than a thousand real experts.

And yet this reliable service costs less than any professional work in America. 76% of Davey clients pay less than $100 each. 21,608 clients were served last year —between Boston and Kansas City and from Canada to the Gulf.

Furthermore, Davey Tree Surgeons are actually local to you. They are not sent to you from Ohio for your individual work: they are trained in Ohio and are carefully supervised regularly, but they live and work in your vicinity.

The Davey Company guarantees satisfactory service. You pay only for actual working time, plus the necessary materials and expressage. Your trees are certainly worth this reliable service.

Write or wire Kent, Ohio, for address of nearest representative, who will examine your trees without cost or obligation.

JOHN DAVEY

The Pace That Bores

(*Continued from page 52*)

on about me, what I noticed was not so good. Billee kept glancing up at Will with a look that was neither broad-mindedness nor tact. And suddenly, like a blow in the solar plexus, the truth dawned upon me. Under my very eyes, that girl was flirting with my husband!

The utter brazenness of it fairly took my breath away. How she had dared, with me sitting right there in the room! We were scarcely off the porch when Will began about what a little peach Billee was. Didn't I think she was cute and pretty? And there was really a lot more to her than you'd think at first glance.

I admitted that she was pretty, if you liked that sloppy type. I'm much too sophisticated to run down a girl just because my husband praises her. In fact, that's just when I can't say nice enough things about her. So I said that Billee's dress was awfully becoming, even if it hadn't been pressed for six months, and that, for my part, I didn't see anything vulgar about such bright red, varnished fingernails. And I said that her dark eyes and yellow hair made a very striking combination, and that people who said that that color hair was practically always touched up, were just being catty. As far as I was concerned, it was pretty, and what difference did it make? And so on. I just put aside all personal feeling and couldn't say nice enough things about the girl.

I DRESSED for the first Dancing Club party the next Saturday night with more of that half glorious, half apprehensive sort of excitement than I'd felt about a dance since I was married. I had a new scarlet evening dress that was simply annihilating, if I do say it myself.

We came into the Masonic Hall at the same moment as the Randolphs. There were several others arriving, too, and in the crowd Carter said to me in a low voice, "It isn't right for any human being to look as devastating as you do tonight."

You can't beat that to start out a dance with. Then I heard Will say, "Hello, there, Billee Randolph, how about the second dance with me?"

Billee has lashes about an inch long, and she lifted them in a glance so obviously flirtatious that I should think Will would have seen through her, then and there.

"Why, I've sort of half promised Mr. Pierce," she said.

"Tom Pierce is out of luck then," said Will, in what I suppose he flattered himself was a masterful, cave-man sort of voice. The whole thing was simply disgusting.

We all danced the first dance with our own husbands, and when first Howard and then Roger asked me for the second, I turned them down. I didn't want to disappoint Carter Randolph. And then Carter didn't ask me. He was dancing with Dulcie. He didn't ask me for the third, or the fourth, either. I always have plenty of partners at Dancing Club, so it didn't make any difference to me. But I'm afraid I was a bit absent-minded with them. I simply couldn't understand it.

The fifth dance I had with Carter. We hadn't taken ten steps before I knew why he hadn't asked me before. He had been afraid to. Of course, he didn't come right out and say this. He was very subtle about it. But I'm no fool—I can get subtlety as well as the next one. He was so much interested in me that he was afraid of doing something that might attract attention. So he was just bending over backward, being circumspect. That put an entirely different light on it, of course. When he only danced with me once the rest of the evening, I understood perfectly.

Some girls are so gullible. He danced three times with Dulcie and she mentioned it to Mrs. Kirsted as casually as though she didn't realize that it didn't mean anything. He had the supper dance with Corinne, and Corinne acted so silly and fussed that I actually believe she thought he was interested in her.

UNDERSTANDING how Carter felt gave me a very sophisticated sense. There is nothing that makes you feel so much like a woman of the world as to know that you are the subject of a secret passion. I felt very suave and experienced as I danced with the boys in our old crowd and tactfully kept them from realizing that, while once I had really enjoyed dancing with them, all was different now. It made the way Will was carrying on with Billee—cutting in on her dances and pretending to fight over taking her to supper—seem too schoolboyish for words.

But there was no making Will see this. When I tried, he kept pretending that he thought I was jealous.

"Oh, Will," I begged, "don't be absurd! It's nothing to me what you do, only I've a little natural pride. I hate to see you making yourself ridiculous!"

It's very hard for a wife to see her husband being taken in. I don't suppose it would ever have occurred to Will that he hadn't made any special hit with Billee, that she simply made a practice of stringing every man along. In fact, I had noticed that she wasn't dancing for several dances during the middle of the evening, and Monday morning I found out why. I happened to run into Mrs. Frank Kirsted at the Busy Bee grocery and she told me.

Billee had slipped away from the party and had gone for a little drive with Roger Lane in his car.

"Little drive, your grandmother!" Mrs. Kirsted sniffed. "They went 'way out past Winneposocket."

Mrs. Kirsted and Dulcie Lane, having been the two prettiest girls in the crowd, have always been a little edgy at each other, and from Mrs. Kirsted's voice, it was plain that she thought that this was a good one on Dulcie.

"Billee Randolph thinks our married crowd is slow," Mrs. Kirsted went on. "She says the crowd they went with in Chicago didn't act as though getting married was the same thing as going into a nunnery."

"Of all things for her to say! And after everybody has been so perfectly lovely to her! So she thinks we're *slow*, does she?"

But after a few moments of righteous indignation I suddenly had to giggle.

"Well, if Billee finds the crowd slow," I said, "she's picked a dead sure way of getting all the excitement she wants. Flirting with Dulcie Lane's husband!"

Billee, of course, hadn't known Dulcie all her life the way the rest of us had. Before Dulcie was married, she was nothing short of a menace. She couldn't look at any man, even if he was engaged to somebody else, without wanting to try her hand on him. The trouble that that girl caused! For years she kept every other girl in town from knowing one peaceful moment. Everybody said it was amazing, the way she had settled down and made such a good wife to Roger. Nobody would have believed it. And since little Dulcie had been born, people had almost forgotten the way Dulcie had used to do.

But I remembered, and the more I recalled, the more I had to giggle. If Billee Randolph was suffering from lack of excitement, she was certainly twisting the right lion's tail.

When Dulcie swept into the dressing-room at the next Dancing Club party, it was evident that she was on the warpath. She had on a new dress, the most beautiful thing I've ever seen. White tulle and silver, a period thing with a tight, slim little bodice and a foamy, billowy skirt. Silver slippers with twinkling rhinestone buckles. With her snowy skin and silvery blond hair, she looked like a fairy off the top branch of the Christmas tree.

There was a polite murmur of praise all over the dressing-room. And you could fairly feel the atmosphere tensing up. Girls glanced veiledly at each other, and you knew that all-but-forgotten memories were suddenly coming to life.

"DOESN'T Dulcie look stunning!" I exclaimed to Carter as we danced the second dance.

He glanced at her indifferently.

"I imagine so," he said, "to anyone who happens to admire the ash-blond type."

"Don't you?" I couldn't resist asking.

He looked down at me and smiled, a sad smile, as one who is hiding an aching heart.

"There's no use your trying to distract me with other girls, Dorothy," he said quietly. And added, after a moment or two, "Though I wish to heaven I could *be* distracted."

With anyone feeling that solemn, hopeless way about you, ordinary flirting does seem awfully childish and undignified I suppose I should have been above even being irritated at seeing Will dance four times running with Billee. As far as that goes, I wasn't irritated at all, but you hate to have everybody seeing your husband make a monkey of himself.

There was a slight diversion along late in the evening when Mrs. Kirsted hissed in my ear, "Where's Dulcie?"

I looked around the room—Dulcie had unquestionably disappeared. It was a

Digitized by Google
Original from UNIVERSITY OF IOWA

gorgeous Indian summer moonlight night, and the same thought occurred to us both at once. She had copied Billee and slipped away for a little drive. But who with? The floor was crowded. Like people after a casualty, calling the roll to see who is missing, Mrs. Frank Kirsted and I ran a calculating eye over the survivors.

The only husband we couldn't account for was Frank Kirsted.

I shall never forget Mrs. Kirsted's face, watching it change from sheer incredulity to outrage, to angry decision.

Well, that was the beginning. I don't believe Billee Randolph or anybody in the Harvester crowd—or anybody in the swiftest crowd in New York or Paris, for that matter—could have called our bunch slow that fall. Billee Randolph had certainly started something. Not since we were all in high school have I seen such a mix-up of flirting.

IN ORDER to get back at Dulcie, Mrs. Frank Kirsted began flirting with Scott, which, of course, set Corinne off, and Corinne made a dead set for Howard Merton. It became almost overnight all mixed up and complicated. Instead of going to the movies with your own husband, it became the correct thing to say, "Tom Pierce asked me to go to the Palace with him tonight. You don't mind, do you, Will?"

And Will would say, "Of course not," and call up Billee and ask her how she'd like to take in a movie. There aren't so many places you can go in Montrose and we were all likely to round up together at the Oasis, later in the evening. But instead of pulling two or three tables together, as we used to do, we'd sit at little tables, two by two, and talk in low tones.

If I could always have gone with Carter, it would have been all right. But on account of his being really hopelessly in love with me, he felt he had to be extra discreet, and he took all the girls in turn. This left me to go with some man I'd known ever since he wore a bib, and there were times when I'd have really been almost bored if it hadn't been for the satisfaction of knowing that we weren't being slow. Indeed, as a crowd, we were so far from slow that to eat a chocolate marshmallow sundae with your own wife or husband was as good as confessing that you couldn't get anybody else.

Married couples—married, that is, but not to each other—were always slipping away from the dances. If there happened to be another dance going on in town, they'd slip away and go there, or they would go to the Oasis or over to Verblen to drop in for a minute on a basketball game or the movies there. Or just to take a ride. It didn't make much difference where you went, but you felt you were an awful social failure if you didn't go somewhere sometime during the evening.

Our life was really becoming terribly expensive. We were all spending money like sailors on shore leave. Girls who had decided to make the old evening dress do through another winter, kept getting one new one after another. Ye Faire Ladye Beauty Shoppe had to put in another girl to take care of so many waves and facials. Tom Pierce sent Corinne a dozen roses on her birthday, and of course that gave the other men something to live up to.

And there were times, though I wouldn't have admitted this to a soul, when part of it seemed to me to be just a little bit tiresome. Except for my perfectly natural satisfaction in having Carter Randolph so unhappy about me, I felt occasionally that there wasn't much in it. Men are all very well, but girls are nice, too, and our crowd, which had always been so trusting and friendly, was becoming catty and suspicious of each other. Our Lodge Night Bridge Club that I had always looked forward to more than almost any mixed affair became a mere armed truce.

And then there was Billee Randolph. To be perfectly frank, it gave me an odd, almost scary feeling of uneasiness whenever I'd think of Will and Billee. Suppose he was really falling in love with her. Such things do happen. I'd start to think of what life would be with Will in love with somebody else, not always thinking first of me and the twins, maybe feeling we were just in the way—but I never went very far with this thought. I pushed it away with a shudder and went on flirting like the rest of the crowd.

And then came the benefit dance for the Community Chest. I had decided to wear my scarlet dress again, when Will came home and mentioned casually how cute Billee Randolph looked in her new fur coat. I went right down to Ye Violette Shoppe and bought the yellow chiffon petal dress I'd decided I couldn't possibly afford.

I was glad I had when I glanced about the dressing-room and saw that practically everybody had on something new. Dulcie was in black tulle, Mrs. Frank Kirsted in cream lace, Billee Randolph in apple blossom pink. We were all very complimentary about each others' looks, but there were an awful lot of sideways appraising glances, and every girl there knew that every other girl had her knife in her teeth.

AS I sauntered out to the hall, I saw Carter Randolph standing there. There were others coming, so he spoke hastily.

"I've a rotten headache," he said in a thrilling undertone, "but I came just the same—because I knew I'd see you."

The first dance was beginning and I danced away with Will, feeling sorry for Carter but thrilled and glad I had my new yellow dress.

There was a dance going on in Verblen that night, too. Not nearly as good a dance as ours, but half through the evening our crowd began to thin out. Howard Merton asked me if I wanted to drive over for a couple of dances but I turned him down, feeling that it wouldn't be fair to Carter. Howard left me in front of some palms while he went over to get me some punch. And suddenly, while I was waiting, from somewhere just the other side of the palms, I heard a familiar voice.

"I've a rotten headache," it said, "but I came just the same—because I knew I'd see you."

I turned eagerly and peered through the palms. I couldn't see Carter, but there was no failing to recognize that yearning voice. I was about to speak when I heard a girl's voice answer. I could scarcely believe my own ears. Carter was saying exactly the same thing in exactly the same tone as he had to me!

The truth broke over me like a splash of cold water. Carter wasn't hopelessly in love with me. He was probably saying the same thing in the same yearning voice to every girl he danced with. And probably told every one of them that he didn't dare dance with her alone—they must be circumspect. It didn't mean a thing. It was just his line.

I saw Howard coming back with the punch and tried to pull myself together. I laughed merrily and chatted as though nothing had happened. That, I knew, was what a cynical young matron in a society story would do. I told Howard I'd changed my mind—let's drive to Verblen.

I regretted I'd said this before we'd gone a mile. Howard's car is an old open flivver and the night was bitter. The wind whistled around that front seat sixty miles an hour, and a million robes wouldn't keep you warm.

I knew that, to save my self-respect, I ought to start a flirtation with Howard. But I looked sideways at him and remembered how we'd used to play Run Sheep Run, and the Hallowe'en he and Will took the doors off Father's garage, and the morning after his last baby was born when he stopped at our house, looking like a ghost, and I made him a cup of strong, black coffee. I suddenly realized that I loved Howard like a brother but that, even to save my self-respect, I couldn't work up enough romantic feeling about him to keep warm on a night like that.

IT WAS an actual relief when, out of the cold stillness, we suddenly heard the fire siren blowing. Of course, Montrose has a paid fire department, but there is a Volunteer Auxiliary besides, and all the boys belong to it. Without so much as a word of apology, Howard turned right around and drove back to the party. Dumped me there and went rattling off as fast as he could go to the fire.

I went upstairs feeling horribly left out and lonesome. And there was nothing left of that dance to cheer up a body. Practically all our crowd had trickled out in couples. I looked around for Will, but he wasn't there. And neither was Billee.

I went out to the dressing-room and sat down alone. And slowly, sick at heart, I took out that thought that I'd been shuddering away from for weeks. The thought of Will really in love with Billee. I wanted to put my head down on the dressing-room table and cry in sheer forlornness.

Just then I heard steps outside the dressing-room and hastily put on a smile. Dulcie and Mrs. Kirsted came in together, both of them half mad, half laughing. But, for once, they weren't mad at each other. They were both mad at the men. It seems that at the first sound of the fire siren both girls had been brought back to the hall and dumped like so many sacks of sand.

"It wasn't even a good fire," Dulcie said indignantly. "The regular department could have taken care of it perfectly. But Scott pretended it was his duty to go. Duty fiddlesticks! He wanted to go."

"And your husband," Mrs. Kirsted looked at Dulcie accusingly, "was all for leaving me to stand on a street corner and freeze to death in my silver slippers. When I said that the least he could do was to bring me back here, he said he'd thought I'd want to see the fire. That was just an excuse. From the instant he heard

It's a Gift..

Men, it's yours for the asking. Mail the coupon for generous 7-day sample. It will prove a revelation in shaving comfort.

GENTLEMEN: Our success is based on the approval, *each morning,* of a million men. If we fail to please them, if our quality is relaxed ever so little, we lose friends. And friends, we have found, are our best asset.

We gain these friends by a unique offer. Before we ask you to buy our remarkable shaving cream, we first offer it to you for a week's test free. Men who customarily never mail coupons, send this one in.

And 86% of those who try Palmolive Shaving Cream become staunch supporters for it. They make claims that we would hesitate to print. Their enthusiasm is supreme. Won't you let us send you a sample now that you may have seven delightful shaves at our expense? That will prove our case one way or the other. You be the judge. Just mail the coupon.

These 5 superiorities

Palmolive Shaving Cream came as the result of years of experiment. 129 formulas were rejected before we embodied, all in one preparation, the things 1000 men had said that others failed in.

1. Multiplies itself in lather 250 times.
2. Softens the beard in one minute.
3. Maintains its creamy fullness for ten minutes on the face.
4. Strong bubbles hold the hairs erect for cutting.
5. Fine after-effects due to palm and olive oil content.

Perhaps your present shaving method satisfies, and yet there may be a better way. In fairness to yourself—and to us who undertake to please you in one week—won't you mail the coupon now for the test we offer?

PALMOLIVE RADIO HOUR—Broadcast every Wednesday night—from 8:30 to 9:30 p. m., eastern time; 7:30 to 8:30 p. m., central time; 6:30 to 7:30 p. m., mountain time; 5:30 to 6:30 p. m., Pacific Coast time—over station WEAF and 39 stations associated with The National Broadcasting Company.

To add the final touch to shaving luxury, we have created Palmolive After Shaving Talc—especially for men. Try the sample we are sending free with the tube of Shaving Cream.

7 SHAVES FREE

and a can of Palmolive After Shaving Talc

Simply insert your name and address and mail to Palmolive, Dept. B-3086, 595 Fifth Avenue, New York City.
In Canada, address: Palmolive, Toronto, 8, Ont.

the first toot of that whistle, he didn't know I was in the world."

And she and Dulcie laughed in a half-real, half-pretended indignation that was almost comradely.

Just then Rosie and Corinne and Mrs. Tom Pierce came in. They'd been dumped, too, like so much excess ballast, at the first sound of the siren. And they were all kind of miffed about it, too, half angry, half amused. So were Girlie Hinkel and Mrs. Carstairs and Mrs. Freddie Hupp and Portia Deland.

AND suddenly, the whole crowd seemed to decide at once to take it as a joke. To be cut out like that, by a second-rate fire! By the time Mrs. Vance and Peggy Sinclair arrived, the dressing-room was in hysterics. Each new arrival was greeted with whoops. Each distant sound of the siren fanned the blaze.

Suspicion, guardedness, cattiness, all the qualities we'd been developing in the last few months, seemed actually to be laughed away. I felt more lonely and left out than ever. For I knew Will had started over for Verblen with Billee, and she was the only girl who hadn't come back. It was all right for all the rest to decide suddenly that this playing with fire was just an absurd joke. They could afford to laugh and kid each other. None of them had got burned.

And yet, when they all got together and decided on a trick to pay the boys back, I couldn't very well stay out of it. And if I could only have entered into it with a really free heart, I could see what a lark it would be. All the rest were in stitches over it. We'd pay the boys back, they said. We'd show 'em they couldn't play fast and loose with our young affections like that. We'd pay 'em back.

The plans were made in giggling whispers.

"Don't let's take Billee Randolph in," somebody suggested.

And, mercy, no! everybody agreed. We couldn't be sure about Billee, and if anybody gave it away, the whole joke would be spoiled. Just our own crowd. We decided on the Dewdrop Inn, the country place where we'd had our high school parties, a million years ago.

Dulcie wrote all our husbands' names on slips of paper and we all drew. I drew Roger Lane.

Will came back from the fire with the other boys. It seemed that he had taken Billee home instead of back to the dance. That made me feel a little better about it, but only a little.

The joke we were playing was the kind that would be pretty deadly if it didn't go just right. Still, having started it, we had to go through. And I wanted to be a good sport. So I wrote the most clandestine, mysterious note I could:

Dear Roger: Can you meet me at the Dewdrop Inn at seven o'clock Saturday evening? There's something very confidential I want to talk to you about. Please don't mention this to a soul. Especially not to Will or Dulcie. Don't even answer—it wouldn't be safe. But come. Yours, Dot.

Will's note came in the afternoon mail. I recognized Mrs. Frank Kirsted's smart-looking angular writing. It was funny to watch Will's face. It registered one tenth curiosity and interest, but nine tenths disapproval and apprehension. It was obvious that he thought Mrs. Kirsted was going too far.

The Women's Club was going to have a pot-luck supper Saturday night, I told Will, and mother would keep the children. We had all agreed to tell the same story. It wouldn't be necessary for the men to make any slick excuses to get away.

It was bitter cold Saturday. We girls all went out to the Corners in the bus together and walked the remaining half mile. Naturally, we didn't wear evening clothes. There would be twelve couples—at least we hoped there would be—and Mr. Fleck had given us a huge, round table. We bustled around, arranging chrysanthemums in the center and putting out place cards, as we'd done for birthday parties and high school banquets and church suppers and club affairs ever since we were all kids together.

We laughed and joked constantly. If I could only have felt sure that Will would take it right, I'd have been happier than I'd been for months. The girls were all friendly and jolly and together again, the way we'd used to be before Billee Randolph came to town. But I wasn't sure—uneasy. If I could only feel as care-free and confident about it as the rest all seemed.

Suddenly, somebody saw Scott Forest's blue coupé drive under the gate light. Breathlessly, we all crowded into the little cloakroom right off the reception-room. We kept perfectly still; nobody even whispered. But some way—I don't know how I got it, but I did—I realized that the other girls weren't feeling any surer or more care-free than I was. We were all suddenly afraid of what we'd done.

In the dead silence, Scott came in and sat down.

WE took turns peeking through the crack in the door. It wasn't two minutes before the big Kirsted car drove up and Frank Kirsted came in. We were still as mice in the dark cloakroom—we heard the two men greet each other and got all the concealed consternation in both voices. Neither apparently knew what to do or say, so they sat there together, making strained conversation. In the midst of it, Roger Lane and Freddie Hupp came in together. They had discovered each other outside parking their cars.

I was away from the crack in the door, but suddenly my heart seemed to stand still. I heard Will's voice.

There were several moments of awkward stiffness—we girls not making a sound in the dressing-room. Then, "Say, what's the idea? What are you out here for, anyhow?" Scott demanded.

"Well, what are *you?*" Frank Kirsted countered.

There was a moment of dead silence—we fairly held our breath. Then suddenly, in the stillness, everybody heard a clatter. It was unmistakable, the chug of Howard Merton's flivver engine. All five men seemed to realize at once that there was something up. At the first sound of Scott's guffaw, we girls came tumbling out of the dressing-room.

By the time Tom Pierce and Sidney Hinkel and Harry Burris arrived, one at a time, the party was in full swing and they walked right into everybody they knew, all at once. Each new arrival was greeted with hysterics and catcalls.

And every last man went through the same series of looks. First scared, then mad. And then relieved. They had all come out on this secret tryst like the sad-faced farmer in the old story who said, "I'm going to town to get drunk and, gosh, how I dread it!"

It was such a cold night that no other diners arrived and we had the big dining-room all to ourselves. There was a fire in the fireplace, and a turkey dinner, and nothing to keep us from being as hilarious as we liked. It was so much like old high school days before any of us were married or had babies or any other responsibilities that we acted like a bunch of kids. Even gave the old football yell—"One a-zicka, two a-zicka, three a-zicka, zi. Rah, rah, rah, rah, Montrose High!"

I suppose it wasn't like a cynical matron in a society story, but I couldn't seem to help myself. Under the cover of the noise I whispered to Will, "Do you mind Billee not being here?"

I fairly held my breath waiting for his answer.

"Naw," he said indifferently. "It's kind of a relief."

OH, FROM that moment, it was a party for me! I looked around the table at the familiar faces and felt a glorious lump in my throat at sheer heavenly joy of being back home again.

After supper we turned on the radio and danced. And we all *stayed* and danced, too. No slipping away in twos. Suddenly, in the midst of the dancing a new couple came in from outside, and as they came into the light, we recognized Carter and Billee Randolph. They were taken aback to see all of us. And before they had a chance to be hurt, some tactful soul said, "But why didn't you get here in time for supper?"

They said they hadn't heard anything about the party; they'd been driving home from Dawson and dropped in for a hot drink. We all looked regretful and said: Didn't you get the invitation? Oh, what a shame! Isn't the post office getting to be the limit! And all the kindly lies you tell rather than hurt somebody's feelings.

Someway, tonight, not one of us wanted to hurt anybody's feelings, not even the Randolphs'. The Randolphs seemed ridiculously harmless tonight. Billee could cast her big brown eyes about, and Carter could murmur yearningly in as many ears as he liked. We'd take it for about what it was worth.

And if we weren't quite as snappy as the bunch the Randolphs had gone with in Chicago, they seemed pleased enough to take off their wraps and swing into the Paul Jones with us. In fact, they seemed tickled to death to find that they hadn't been left out.

The wind whistled outside and the fire crackled and the radio sang. And we circled to the right and left, danced with the gentleman on your right, grinned at our wives and husbands as we happened to brush past them. And I don't believe a soul minded its being wholesome!

One and all, we were frankly enjoying all the pleasures of a good, slow crowd

For Halcyon Days

For golden vacation days there is no better companion than this golden box of BONNYBROOK MILK CHOCOLATES. Food and pleasure for active sportsmen and equally competent sportswomen. A delightful aid, also, to those who merely rest in "the rocking-chair fleet."

Because of the pure milk chocolate, sugar, vanilla, nuts, fruits and other pure ingredients, and the manner of their mixing, BONNYBROOK MILK CHOCOLATES withstand the heat to an unusual degree.

Because of these same merits they appeal to every taste. Eye and palate alike are pleased and their fragrance becomes a sweet memory.

Whitman's BONNYBROOK MILK CHOCOLATES

follow the vacationist wherever he goes. Almost every remote summer resort has a Whitman agent who gets his stocks of Whitman's direct and always fresh and perfect. © S. F. W. & Son, Inc.

All branches on the same tree; all growing out of the Chrysler root principle of standardized quality

MAKING A SCIENCE OF FINE CRAFTSMANSHIP

CHRYSLER MOTORS, with all of its great properties united under one management, has placed every phase of its tremendous manufacturing activities on the basis of an exact science. Nothing in modern industrial practice could be more exacting, or more scientific, than the precautions which Chrysler Motors takes to make sure of flawless quality and fine precision through every step from the blueprint to the finished product.

The Chrysler Motors system of inspections and tests is at once extensive and *intensive*. There are metallurgical tests, chemical tests and mechanical tests. Every bar of steel, every pane of glass, every yard of upholstery — everything that goes into Chrysler Motors products — must prove up exactly as specified.

Chrysler Motors engineers put all makes of batteries to exhaustive tests before they are selected

In the great Chrysler Motors engineering laboratories, ultra-scientific devices accurately gauge the strength, efficiency and wearing quality of every part under the most aggravated, abnormal conditions. Delicate instruments check dimensions and measurements to split-hair fractions. Scales sensitive to a pencil mark on a piece of paper determine weight standards. The natural, inevitable outcome of all this care and precision is that every Chrysler Motors product — from the highest priced to the lowest priced — is a finer and more valuable product in every phase of performance, safety and long life.

All of which is borne out and reflected in the ever-increasing prestige and popularity of Chrysler Motors products *in each and every price field.*

STOOD ALONE FIVE YEARS AGO ✢ STANDS ALONE TODAY

DEC 6 1924

"Chrysler came into a seemingly crowded market and almost immediately swept its way into unprecedented acceptance as a quality product. That which ordinarily takes years to achieve was won almost overnight. ✢ Why? Because Chrysler brushed aside outworn traditions in engineering, in design, and in performance. ✢ It brought to bear both scientific exactness and artistry. ✢ That is why Chrysler has taken the country by storm—why it still stands and will long stand alone—why, if you want what Chrysler gives, Chrysler alone can satisfy you."

Advertisement, Literary Digest, December 6, 1924

CHRYSLER "75" ROYAL SEDAN

CHRYSLER'S PLACE IN THE SUN

PRIOR to five years ago there were no Chrysler motor cars. In five years, Chrysler, from a standing start, has overtaken leading cars of three, four and five times its age.

The spectacle of a newcomer so swiftly becoming a leader can bring the logical mind to but one conclusion: There must be something remarkable, something altogether different and superior, in the cars that Chrysler builds.

Hundreds of thousands of motorists the world over today acclaim Chrysler leadership in performance, beauty and value.

There is, in Chrysler performance, a thrilling sense of endless power, a swift eagerness of life and spirit, a feeling of perfect balance and safety that cannot be experienced except in a Chrysler.

Artistic freshness and modern charm in Chrysler design distinguish Chrysler.

There is a smoothness and buoyant ease in Chrysler comfort quite without counterpart in present-day motoring.

Drive a Chrysler car today and realize, why Chrysler has won so glittering a place in the sun—and why Chrysler goes on and on to ever-increasing popularity.

Hello, Hello, London

(*Continued from page 23*)

clearing house for all transatlantic telephone conversation in the Western Hemisphere, at 24 Walker Street, in the center of the financial district in downtown New York. Here the operator at the eastern end of the Chicago channel reroutes your call and later your voice to the operator stationed at the London board.

Although you might expect, because of its importance, that the transatlantic operator would be accorded an eminent position, the eastern terminal of this important service is just a technical position—they call it No. 104—in the long array of boards in long-distance headquarters. The board is flanked by other boards connecting distant cities. Its only distinction is that at its top is the legend "London," in chaste, and inconspicuous, Cheltenham.

Well, the transatlantic operator redirects your voice, still via land wire, to the huge transmitting station at Rockypoint, Long Island, 75 miles away. Here it is prepared for its 3,350-mile trip across the Atlantic. Great banks of thermionic vacuum tubes build up its strength, magnify its powers 300,000,000 times. Tremendously energized, almost irrecognizably changed in appearance (as to the form of its original wave), it is hoisted to the two-mile-long antennæ and then hurled across the seaway.

At a speed of 186,000 miles a second, it weaves across the Atlantic; static, atmospheric absorption, and such, rob it of its strength; barely a billionth part as strong as when it quit the American Continent, it is gathered by the tremendous framework of antennæ of the receiving station at Cupar, in Scotland. Replenished again, your voice is shunted to land wires that carry it into the Whitehall Exchange in the London Post Office, the European clearing house. The completion of the great adventure on which your voice set out now becomes a formal, routine thing. Your friend is on the phone at the hotel, and you are all set.

BUT now an extraordinary thing—the technical reason for which I shall discuss later—occurs. The voice of your friend, instead of returning over the same route, makes its transit on a way all its own. Returned to the Whitehall Exchange, it scurries—not back to Cupar—but to another huge transmitting station at Rugby, 85 miles removed from London. Here the voice is tremendously amplified—just as was your voice at Rockypoint. Full of vim, vigor, and vitality—millions of times more powerful than your most awful shout—it straddles the antennæ that rears 800 feet—taller than the Woolworth Tower—above the ground, coasts down the three-mile toboggan of wire, and springs for the United States, now 2,990 miles away.

A bare whisper of what it had been, it trickles into the American receiving station at Houlton, Maine. Vacuum tubes resuscitate it, and then, via 600 miles of land wires, it is sped to New York, and thence to Chicago. The whole operation may take no more than a few seconds.

Thus, explains Mr. Miller, although the conversation is carried over a single-wave length and though the question and response follow instantly, you and your friend actually relay your conversations from immensely separated geographical sounding boards. It sounds simple, but I daresay it isn't. From what Mr. Miller and his aides told me, it is a most bewildering process, although—and this is gratifying—they seem to know all about it and apparently have no great difficulty in keeping the mechanism working.

INDEED, they assure me that this new and startling form of communication—surely the most fascinating that the world has ever seen—is hardly more than in the pioneering stage. The engineers are already engaged in research directed toward perfecting the system of twenty, even fifty, years hence—a system of world communication beside which this present vehicle will seem as archaic as the dinky little device with which Alexander Graham Bell, in 1876, talked to his assistant, Thomas A. Watson, over the two miles between Boston and Cambridge, thus putting the word "Hello" on a business basis.

Scientifically, though, Mr. Miller would not prophesy just what form this new vehicle for the human voice will take, but he did hint that before long—perhaps in a decade—there may be laid across the floor of the Atlantic a huge cable for telephone use only. If this project is carried through, it will involve one of the most important engineering episodes of the century.

"Will that mean a complete abandonment of your present system?" I asked.

"Not at all," Mr. Miller answered. "What it will constitute will be a very important supplement to the existing service. In fact, because of the increase in demand, we are already broadening the present service. In addition to the single long-wave channel, over which most of the calls are made, we have established a short-wave channel. The Rockypoint-Cupar channel is conducted over a wave length of 5,260 meters, while the short-wave channel involves a wave length varying from 22 to 30 meters. The American transmitting station for this second circuit is located at Deal Beach, New Jersey, and we have acquired property near Princeton, in the same state, for other short-wave stations.

"But primarily the contemplated cable will at once serve as a complementary and supplementary factor to the radio service. You see, there are atmospheric conditions—static and such—that at times render the operation of the existing services a very difficult matter.

"Here is how static sometimes plays hob with the transatlantic telephone. Somewhere over the Atlantic a terrific storm gathers. Great discharges of lightning, inconceivably powerful, spurt from one cloud to another. The electrical current that carries your voice must break through this area of storm; but terrific as is this man-made power, it is trifling compared to this preternatural violence. During particularly excessive disturbances, it is almost impossible to drive a message through.

"Even so, we have reduced these periods to a point where they have become rare," Mr. Miller said, "by placing both receiving stations in northern latitudes—in Maine and Scotland. Curiously enough the amount of static in these vicinities is fifty per cent below that prevailing, say, in New York or more southern points. Then, by aligning our antennæ at each of these places—pointing them directly into the face of the oncoming message—we have further succeeded in outlawing the reception of alien energies. And additional protection derives from the fact that the long- and short-wave systems are rarely put out of action at the same time.

"Finally, the cable, I believe, will absolutely insure secrecy of conversation."

"Tell me," I suggested, "whether or not it is possible to overhear transatlantic telephone conversations with the ordinary radio set."

He smiled. "That's something everyone wants to know. It is possible, but not with the ordinary radio sets. We have developed a form of transmission that virtually precludes any chance of eavesdropping with the ordinary set."

IN MY investigation, I was particularly struck by the importance which is conferred upon this means of communication. A transatlantic call, apparently, is as good an introduction as a ten-inch biography in Burke's Peerage or three generations in the Social Register. Since the service has been in operation, scores of calls have been made by Americans to foreigners in high position—cabinet members, royalty, premiers, dictators—who would not otherwise be accessible to the persons calling.

What they wanted, I don't know. Probably an endorsement of a new kind of lawn mower. Still, the significant fact is that these calls are almost generally accepted, for Europeans have always been interested in what these queer Americans are doing.

When Helen Wills, the tennis player, was reported engaged, a British newspaper hastily telephoned to her in California. The 6,000-mile telephone call was rewarded with an affirmation, and Miss Wills, for her part, learned that it was a very dull, foggy day in dear old London.

In the main, Mr. Miller explained, social calls compose about forty per cent of the conversations put through, with business calls—messages from bankers, brokers, and business men—ranking just above.

Husbands traveling abroad frequently make use of the new service to assure wives that it is real business—and not monkey business—that keeps them in Paris; and sweethearts separated by oceans are never loath to put delicate fabrications upon the one hundred kilowatt current. And there is always the precedent of the husband from the Illinois

Careful driving won't do it
Good gasoline won't do it

Only oil can keep your engine's first-year feel

Why did you choose the make of car you drive?

To this question probably 9 out 10 car owners will reply, "Because I liked its performance." In other words you chose your car mostly because of the engine's powerful "first-year feel."

No single upkeep item is so important in preserving this first-year feel as the quality of the oil you use.

As the result of thousands of miles of driving tests on the Atlantic City Speedway, on dirt roads and paved highways, we confidently say this: The New Mobiloil will keep your engine's first-year feel for at least 30,000 miles. We say "confidently" because *actually* the New Mobiloil has kept the first-year feel in many engines for more than twice 30,000 miles.

Also in fair comparative tests the New Mobiloil developed increased power and showed a 20% less consumption than many competitive oils of the same viscosity.

And it is an established engineering fact that the oil which lasts longest and stands up best at high speeds is the oil which lubricates best at any speed.

Again may we repeat that no single item in preserving your engine's first-year feel is so important as the oil you use. Get full protection for your engine by using the New Mobiloil—the achievement of 63 years of specialization in the manufacture of scientific lubricating oils.

city who, finding upon his arrival in Paris that he had lost the shopping list which his wife had given him and commanded him not to lose, slyly called up his daughter at home and got her to repeat it to him, *sotto voce*.

One of the inveterate users of the phone was the late Belgian capitalist, Lowenstein, who fell to his death from his airplane while crossing the Channel. During his airplane trip across this country, he was in daily conversation with his foreign representatives, no matter what city he was in. It cost him a pretty penny, but he was, just before his death, one of the wealthiest men in Europe. Dillon, Read and Company, famous bankers, got on the phone to arrange a $25,000,000 loan to the Batavian Petroleum Company, a subsidiary of the Royal Dutch Company. It seems that correspondence had failed to clear up some minor detail upon which the transaction was temporarily snagged. One of the executives here in New York called up London and cleared up the misunderstanding within two minutes. The cost was forty-five dollars.

A WHOLE series of such incidents is recorded in the files of the telephone company, the calls emerging from all compass points in the United States and landing in all parts of Europe. A business man in Holland called up an automobile concern at South Bend, Indiana, and ordered $100,000 worth of automobiles. A manufacturer in Vienna called up a concern in Atlanta, Georgia, and ordered 300 bales of cotton. His script having been lost in the mails, an American composer sung his song to the stenographer of a London producer and it was played, two hours later, at the opening of a show at the Alhambra, thus averting a postponed performance.

A deal involving $1,000,000 worth of tobacco was arranged over the telephone between New York and Hambug, Germany, at a cost of $82.50, and a New York broker, trying to capture the benefit of a few minutes' difference in the rate of exchange, hurriedly purchased $6,000,000 worth of foreign currencies in the course of a two-minute conversation. Then an enterprising Chicago realtor, who had just seen the chance of getting an option on a valuable bit of property, telephoned a prospective buyer who was summering in Paris and promptly got an order to buy it. Not to overlook, either, the Detroit jewelers who got a "beat" on the proposed increase in the price of diamonds by jamming a call through to Amsterdam, purchasing $200,000 worth of unset stones just before the boost went into effect.

Dr. A. S. W. Rosenbach, dealer in first editions, utilized the service in striking fashion. There was scheduled for auction at Southby's, in London, a copy of the vellum Aldine, "Hypnerotomachia Poliphili." Printed in 1499, it is an extremely rare item, much prized by collectors, for there remain in existence only three or four copies. Doctor Rosenbach, in Philadelphia, decided not to let the prize slip out of his fingers and, on the day of the sale, called up the auction room.

He, on the phone, more than 3,000 miles away, began a spirited competitive bidding with an English dealer who was right in the room. A clerk acted as intermediary. The price began at 500 pounds and moved upwards in great bounds. Doctor Rosenbach finally won with a bid of 3,000 pounds.

"But in view of the fact," I interrupted, "that you have but two channels to London—what do you do when three or more people want to use the service simultaneously?"

"Well, that rarely happens," Mr. Miller explained. "We have educated most people into making a date in advance. They pick a time, we reserve that time for them, and the channel is free and clear for them then."

"WHAT is the longest distance call thus far made over this system?" I asked.

"From San Diego to Stockholm, a distance of 8,630 miles," Mr. Miller said. "Here's a very extraordinary thing to consider. Suppose, for no reason at all, that a man in San Diego was able to shout loud enough to be heard in Stockholm—that is, to talk loud enough so that the sound waves he set up could be heard in the Swedish city. In view of the fact that sound waves travel only 720 miles per hour, it would require twelve hours for the American's voice to reach Stockholm, and another twelve hours for the second man's voice to return.

"In other words, there would be a twenty-four-hour lag between sentences and words. But the voice is transported over the electrical circuit at an average speed of 110,000 miles an hour, requiring but one-fourth of a second for the journey. It attains its highest speed via the radio—186,000 miles a second—and its lowest speed in the cable between St. Louis and New York, 20,000 miles a second. In other words, electricity squeezes 8,630 miles into a mere 275 feet."

"What is the longest call—that is to say, the longest in point of duration—that has ever been made?"

"Well, there have been a number that lasted about an hour, but the longest was one from Paris to New York. It lasted one hour, thirty-seven minutes, and thirty-two seconds. The cost, I believe, was $1,527.50."

THERE seems to be no special etiquette governing the use of this remarkable device; or, at least, if any has been set up, no one seems to follow it, with the exception of statesmen, who indulge in sonorous platitudes hailing the great occasion, predicting that out of it will come broader understanding and amity.

When ordinary people get on the wire, everything, to use the phrase, goes. Generally it's something like this:

"Hello, Sam, this's Bill—back in Toledo, you know."

"Well, well, well," replies Sam, slowly swallowing the significance of this. "Well, well, well, I'm flabbergasted." Then, after a pause, "How's tricks?"

"Great, Sam. How's things with you?"

"Pretty good. How's good old Toledo?"

"Same old burg. I bet," Bill suggests, "that you're painting Gay Paree red."

A $10 pause.

"Sure . . . with a great big bucket of paint. But, Bill, I'm getting lonely for the gang."

After that, there comes what seems an inescapable exchange of observations on the difference in time between the two cities, the fact that the sun is shining in one place and it is foggy in the other, and "what God hath wrought."

"You ought to try it," suggested Mr. Miller. "There's really a great kick in it."

Matthew Stirling's Adventures in the Land That God Forgot

(*Continued from page 61*)

the Rouffaer was the highway into the unknown district.

"'Gas getting low!' shouted Hoyte.

"We turned back, having been two hours in the air and seen land no white man had seen before us. We began to look for a landing place where we could unload our supplies.

"Where a tributary stream came into the Rouffaer, Hoyte came down and touched the water with the pontoons. As quickly, he rose again, for the water was too shallow and rough for the plane. Further down he tried it again, this time with success. The river was quite broad at this point and Hoyte headed the plane for a low bank with a few yards of clearing behind it. We jumped out and tied fast. On the muddy bank were fresh barefoot tracks, though not a soul was to be seen!

"We had already used more gas than was safe, so we didn't dare to seek another spot. We looked to our revolvers and followed the tracks for several hundred yards into the jungle, at the same time searching for a hiding place for our supplies. Still we saw nobody, but the jungle began to twitter with curious birdlike calls which momentarily grew louder and more numerous.

"'Papuans!' whispered Hoyte.

"We hurried back to the plane and started to unload it, carrying the stuff into some tall saw grass about a hundred feet away and covering it as best we could with oilcloth and dead leaves. The bird calls had increased alarmingly. We could hear them in the jungle on the opposite side of the stream, above and below us, and in the jungle back of us. Plainly, we had been completely surrounded by Papuans.

"Then, as if at some signal, the bird calls became savage shouts and whoops. The air literally rang with the hubbub. About four hundred yards upstream six canoes containing about thirty jet-black,

Common Sense

A FAMOUS doctor said, "Many of the people who want me to diagnose and treat their ailments are more impressed by some scientific medical apparatus than by plain, common sense advice. And they are more willing to follow orders faithfully if given some special office treatment.

"Recently a man I know well came in looking haggard. I gave him a thorough physical examination while inquiring about his living habits. The diagnosis was clear but the patient a problem. If I had told him the simple truth that what he needed most to get back his health and strength was to slow down, sleep more, and get the proper amount of fresh air and exercise, he would have thought I did not understand the complications which were undermining his health. Had I sent him a bill for such advice, he would have told his friends that I was a robber and not fit to practice medicine.

"So I gave him a treatment with a scientific apparatus and wrote a simple prescription. At the same time I gave strict orders as to what he should eat and drink, how many hours he might work, how long he should remain in bed, and the amount of time he should devote to outdoor exercise. To make sure that he was following my orders concerning his living habits, I had him report once a week for further observation and treatments. In a few weeks he was well. He will tell you—and he believes it—that I am a great doctor.

"Perhaps someone may say my methods with him were open to criticism. But it was my responsibility to use every means within my power to bring him back to good health. Knowing my patients as I do, I know that many of them will not obey my orders for *correct living habits* if given without special treatment or medicine. More than half of the people who consult me would not have to do so if they would learn and practice important rules of health. They expect me to cure them of physical ailments which they could easily have avoided."

A majority of cases of physical let-down and distress are caused by careless or wilful violation of health rules. Bad eating habits, too little sleep and rest, lack of fresh air and exercise, worry, self-pity are responsible for many cases of bad digestion, headaches, poor circulation, constipation, jumpy nerves, depression and run-down condition.

The Metropolitan Life Insurance Company has had a booklet prepared by eminent health experts which tells simply and clearly the fundamental rules of intelligent living habits. A chapter or more is devoted to each one of eleven important rules of health under the headings Sleep and Rest, Fresh Air, Sunlight, Exercise, Cleanliness, Water, Food, Comfortable Clothing, Work and Play, Good Posture and Good Mental Habits.

fuzzy-topped men appeared like magic. Downstream as many more canoes and men appeared. The men were armed with bows and arrows and they gesticulated wildly. Both squadrons began to paddle madly toward us. I could see the Papuans fitting arrows to bows.

"Hoyte jumped onto the wing to crank the motor, while I cut loose the line and stood on shore holding the plane by hand. Hoyte was already exhausted by our efforts in that scorching midday sun and he just couldn't make the big motor turn over.

"The first Papuan arrows slithered over our heads or swished into the river short of us. One arrow ripped through the plane's wing—and at the same instant the motor exhaust roared; she was going at last. With throttle wide open, Hoyte headed the plane's nose toward midstream, while I crawled along the wing back to the cockpit, our tail just clearing the tree. The Papuans, paralyzed by astonishment, stood like ebony statues in their canoes. Then they leaped into the river in panic, routed without our having fired a shot.

"AFTER our second camp, which we named Batavia, was established, about seventy-five miles above Albatross Camp, we became quite friendly with the Papuans of the vicinity through the time-tried medium of beads, knives, mirrors, and various other trinkets. Daily they came into camp to look over the plane.

"The plane at the time was being used as a transport for supplies on a regular schedule, a fact which the Papuans soon noted.

"On the second day, shortly before the scheduled arrival of the plane, every Papuan had vanished from Batavia Camp. When the plane came in, the pilots reported with some amusement that numerous arrows had been shot at them along the course. They had simply gone up beyond arrow range, but still the sniping had continued.

"The next day the thing happened again. First the Papuans vanished; then, a little later, Hoyte and Hamer arrived to report another futile arrow bombardment. They had even flown low for a time, confident that no arrow could hit the fast-moving plane, whereupon a veritable fusillade had come from the jungle.

"A Malay sergeant investigated. He found the course of the stream lined with Papuans in ambush awaiting the return trip of the plane, and yet their chief professed friendship.

"'No, no,' he explained in all innocence. 'We are not angry with the strange white men who bring us presents. We are only trying to kill the big bird with the terrible voice that frightens us.'

"The sergeant promised to kill the chief if he or any of his men killed the 'big bird,' but efforts to kill the 'big bird' continued as long as we had the plane in use."

After Batavia came Motor Camp, two hundred and fifty miles up on the Rouffaer. Then Head Camp, thirty miles beyond Motor, and finally Exploration Camp, at the end of the navigable waters. This latter camp, at the threshhold of Pygmy-Land, was five hundred miles from the Mamberano's mouth. Gaining that point took four months of grueling work.

In the terrific heat and under the constant torment of insects, men went down with malaria like flies in a flame. A hospital had to be built at Camp Batavia, where Doctor Hoffman labored day and night. Every canoe bound down-river carried men too sick to go on, and the up-bound canoes carried replacements. The whites, too, felt the paroxysms of the fever, but for them there was but one choice—to go on.

A windstorm almost wiped Albatross Camp off the map. The plane, fortunately, had been drawn up for overhauling. Hoyte and Hamer were working frantically to lash it fast against the wind, when a big tree fell only a few feet away, smashing the boom to which the plane was attached. A second falling tree demolished the staging leading up to the plane.

Later, the plane was caught in one of these storms just short of Batavia Camp. For fifteen minutes Hoyte and Hamer drove it, bucking and tossing, through pitchy darkness. Coming down at camp, one of the plane's pontoons was smashed.

The damage to the airplane rendered it useless for further flights, so it was dismantled and sent back with Hoyte and Hamer to America. This left Stirling, Hedberg, and Peck, of the Americans, to continue the expedition.

"With the plane out of the way," continued Stirling, "the Papuans became daily more hostile and troublesome. They invaded Head Camp by scores and stole whatever they could lay their hands upon. An effort by our soldiers to stop this led to the camp's being surrounded by about a hundred angry natives who launched an attack with arrows. We didn't want trouble but our soldiers finally were compelled to fire. Several Papuans were killed, whereupon they retreated.

LATE in August, Exploration Camp was established in a setting of dense jungle and mountains. On both sides were precipitous cliffs of granite, masked by tangles of vines. Knifelike ridges projected upward toward the skies. Not even Papuans ventured in here, the barrier land between them and the rumored pygmies.

For days the whites and Dyaks scrambled and crawled in the final grim test—that of getting over this barrier. On some days they advanced only a mile or two, mostly on all fours like monkeys. Again, hours were spent in cutting a path through jungle growth where no man had passed for centuries, if ever. On notched trees, felled by the Dyaks, the whites crawled over gorges and wild rock-strewn streams. It was man-killing labor.

Finally, from a tree top, a Dyak sighted smoke. They made for it and came to a village. Only one person was in sight, a tiny girl of about six years. She *was* a pygmy, and she smiled!

"She was neither afraid nor surprised," Stirling told me. "She calmly waited for us to come up, prattled with delight at some bright beads that we gave her, and then led us to a house in which there was an old woman. She, too, was unafraid. We signed to her that we wished to see other people, so she promptly departed, leaving the little girl in our care. In a few minutes the old woman returned with several younger women and some men. They were all quiet, very kindly, and neither timid nor obtrusive. We were made welcome, for the first time in New Guinea, by these pygmies who had never seen nor heard of a white man.

"By evening thirty men were assembled about our camp, as well as women and children. They weren't dwarfs, but true pygmies, miniature men and women but little more than four feet tall. We bargained to trade a knife for a pig, and the pig was immediately brought, along with a bunch of bananas. Several pygmies held the pig while another stood off and dispatched it neatly with an arrow shot. We ate and slept that night in peace, awaking next morning to find that word of our coming had already spread some miles through the land. All day long we sat in camp and received delegations of polite, welcoming pygmies.

"WE SOON found that the pygmies were honest. Paid in advance for any article, they would at once go and fetch the article, as agreed. They seemed hospitable. Each of us was given a present of arrows or bracelets, no distinction being made between ourselves and the Dyaks. They proved to be keen traders.

"In no way did they resemble the Papuans, either in temperament or in physiognomy. The latter were excitable, intensely nervous, and unstable. The pygmies were calm and steady.

"The men wore fiber nets over their hair, and many had elaborate headdresses of black cassowary feathers. They carried net bags decorated with boars' teeth, and in these each had a tiny bag in which was a cacoon. They wore the tusks of boars, reed tubes, seeds, and cuscus tails in their noses and ears, necklaces of shiny black seeds or bright yellow orchid stems, and rattan arm bands, under which were concealed aromatic leaves or sweet-smelling flowers. Their most striking article of apparel was a large gourd which curved upward over the abdomen to the chest, being worn in lieu of a loin covering. In expressing amazement, they clicked their finger nails against the gourd, making a sound like that of a telegraph key.

"The women wore aprons of short strips of bark, a greater number of neck ornaments, the rattan hair net, but no headdress. By no stretch of the imagination could they be considered beautiful.

"Igoon was the head man of the village. He held that post, we were to learn, by virtue of his ability and wisdom and by common consent. The chieftainship didn't pass from father to son, but to the ablest available citizen, who continued in office until an abler man deposed him in popular opinion. The head man had no authority other than that conceded by reason; such an authority, in other words, as any community confers upon one who 'knows what he is talking about.'

"Politically, the pygmies were thoroughgoing socialists. They practiced a primitive agriculture in a common garden What the garden produced was distributed share and share alike. Nobody had less, nobody had more, than his neighbors Land and houses seemed to be common property, as were the tools, the trails, the bridges, the dogs, and the pigs. There were no rich men, no poor men. If one excelled another in public esteem, it was because of his prowess as a hunter or warrior, or because of his good sense and wisdom.

"They tried to be helpful. One day th

Why It Takes a Penetrating Foam to Clean Teeth *Completely*

The difference between Colgate's and ordinary toothpastes lies in the unique, active foam released by Colgate's, the instant it is brushed on the teeth.

For this sparkling foam not only carries a polishing agent that makes teeth sparkle brilliantly . . . *it does more!* It possesses a remarkable property called low "surface-tension" which enables it to go down to the very bottom* of all the tiny crevices and fissures in teeth and gums. There, it softens and dislodges the food particles and impurities which cause decay . . . and *washes* them away in a foaming, detergent wave of cleanliness.

The reason why Colgate's acts in this way is because it contains the greatest cleansing agent known to man. This cleansing agent makes the famous Colgate foam whose action is described above and it is the presence of this particular ingredient which makes Colgate's a better cleanser; a more economical cleanser . . . different in action and in results from ordinary, sluggish toothpastes which merely polish the outer surfaces of the teeth.

Colgate's active foam sweeps into every tiny crevice, washing out decaying impurities which ordinary brushing can't reach.

Greatly magnified picture of tiny tooth crevice. Note how ordinary, sluggish toothpaste (having high "surface-tension") fails to penetrate deep down where the causes of decay lurk.

*How Colgate's Cleans Crevices Where Tooth Decay May Start

This diagram shows how Colgate's active foam (having low "surface-tension") penetrates deep down into the crevice, cleansing it completely where the toothbrush cannot reach.

Dyaks were felling a tree near the middle of camp and were a little dubious as to its falling in the proper direction. The pygmies, without waiting to be asked, sprang to their assistance. About thirty of them brought a long pole and pushed with it against the tree to give it the desired fall.

"Their tools, all of stone, were superior to those of the Papuans, though of the same simple nature. Their houses were better built and neatly swept. The women, like those of the Papuans, lived by themselves, but in this the pygmies went their neighbors one better, or worse: In the women's huts also resided the village pigs. Fire was made by the age-old method, the friction of rattan against wood with the aid of tinder and dry leaves. Foods were more varied than those of the Papuans, a typical dinner being composed of pork, sugar cane, sweet potatoes, and bananas. I couldn't recommend the pork as they cook it. Raspberries, taro, and tobacco were about the only other crops they raised. They had no beast of burden."

DAY after day new visitors from distant villages came in to see and to trade with the white men. The trading grew keener as the pygmies shrewdly demanded more for their possessions, and the whites put on entertainments of phonograph music, sleight-of-hand, and "magic." The pygmies weren't nearly so much astonished by some of these difficult tricks as they were by some simple action, like rapidly turning the pages of a book. The phonograph soon lost interest, but they marveled at what they saw through field glasses turned backwards.

The whites shaved, and the pygmies promptly did likewise, but by their own method. They pulled the hairs out by the roots, a crescent-shaped stone knife and the thumb-nail being used to perform the operation. Igoon's village became a Mecca, and daily Igoon grew in his importance and became more elaborately ornamented in his person. But in the offing trouble was brewing, nevertheless.

Stirling went on:

"A large number of villages, varying in size from a half dozen to sixty or a hundred people, were scattered through the region and joined by a maze of foot trails. Some of these villages had their own distinct languages, all perfectly understood by the neighboring villages however, and the larger villages seemed intensely jealous of each other.

"It was this jealousy which led to dangerous complications. Igoon's village became too popular to suit its rivals. Neighboring chieftains drew us aside to whisper disparagingly of Igoon's pigs and his hospitality. They insisted that we become their guests. Also, as luck would have it, we were running low in articles of trade. This led to latecomers' suspecting us of unjustly favoring Igoon's people or others who had been on hand when knives, mirrors, and beads were plentiful.

"Igoon, on the other hand, became just as insistent that we remain in his village as did the others that we leave it. We wanted to do some further exploring in the region. Finally we decided to use our present camp as a base from which to make excursions.

"This new plan, put into effect, proved utterly unsatisfactory to the pygmies. It only half pleased Igoon and displeased everybody else. At first we were received cordially enough in the neighboring villages, but as soon as it became known that we had not come to stay, friendliness changed to downright hostility.

"At the time we were at a village called Tombage. The pygmy guides we had engaged overnight refused to lead us farther. When we spoke of presents left at Igoon's village, the men of Tombage made plain that we could regain favor only by throwing over Igoon for good and moving permanently to Tombage.

"This was a nice howdy-do, so we decided to go on without guides. For two hours we put up a desperate struggle, cutting our way and tunneling through dense undergrowth which was soaking wet and a mystery even to the Dyaks, crawling up rocky rivulets through jungle that seemed to begin and end nowhere. Finally we had to give up. Without the pygmies we were helpless, lost. We went back to Tombage prepared for retreat.

"All of the pygmies were gathered around and there was a strange quietness in the air. Standing beside a big log, about twenty-five yards from our tent, were three men carrying bows and arrows. Back of our camp, the same distance away from them, was a man from the neighboring village of Towase. His face was painted black and he was wearing a most elaborate coiffure. His hair had been arranged in a hundred or more long curls and was oiled until it shone. Over it he wore six hair nets, one atop the other. He was bedecked with an array of savage finery.

"Then the three Tombage warriors began to shoot their arrows with deadly accuracy at the visitor. They shot one at a time, taking careful aim and drawing their arrows to full length, but the arrows streaked through the air in rapid succession. The Towase man would crouch tensely, facing the bowman, and dodge the arrow, which was only a fraction of a second in reaching him. Between shots he would occasionally take a hasty shot himself.

"No stage play was this, no childish game, but serious business. The aim of the Tombage men was good, and practically every arrow touched the living target. I checked six shots. Three of them glanced off the man's back, one off his head, one grazed his cheek and pierced the wad of hair nets, and the sixth he dodged. One false move and he would have been a dead or badly wounded man.

"IN VIEW of our being in disfavor it was no time for us to interfere, so we took the trail for the village of Igoon while the grim shooting went on.

"Igoon explained it. The man from Towase had merely wanted to marry a Tombage girl. The shooting contest was a test of his courage and dodging ability in battle. If he came through the test alive he was a fit bridegroom. If he didn't—well, the lady had simply picked the wrong man and had to find another."

More than a month the party lived with the pygmies. Hedberg, Peck, and the Dutch leader, Dr. Van Leeuwen, finally arrived with convict carriers and soldiers to join Stirling and Le Roux and their Dyaks.

"Le Roux and I made countless head and body measurements for scientific study," Stirling related, "until we were literally overwhelmed with requests to be measured. The pygmies regarded this as a sort of ceremony of greeting. They even insisted that we measure the children. We gathered hundreds of articles representative of their industry, culture, and life. Our trading was done always with the scientific interest in the forefront. We had such a large quantity of this stuff that getting it back to the coast became a serious problem.

"Marriage was an odd institution among the pygmies. The arrow-shooting test was but a phase of it. Sometimes the pygmies formally married and sometimes they didn't, though they all had children. When a woman was taken in marriage the husband chopped off the first joint of one of her fingers with a stone ax. If his wife died, the widower chopped a joint off one of his own fingers.

"Many women in Igoon's village complained that their men were away in other villages under the spell of rival charmers. Despite this philandering, however, there seemed to be few domestic difficulties and the women generally were treated well.

"Earthquakes, we found, are common in those mountains. One evening we had a particularly violent one. I've felt a lot of earthquakes at one place or another and they have usually been preceded by a characteristic rumble, but this one came down on us with a roar like that of an express train, growing louder and louder, until at the climax of the roar came a jarring shock that knocked things topsy-turvy. Then the roar receded as it had come, passing from west to east.

"WE HAD one difficulty in getting out of this land. Because of the quantity of ethnological objects that we had collected, we were put to it for carriers, and tried to hire the pygmies. They refused to help us, and with designs aforethought. They reasoned that if we couldn't take out what we had bought by trade, they would fall heir to all of their former possessions. They even refused to sell us food to replenish our own depleted supplies.

"Nevertheless, we had no desire to end our lives in a pygmy village. We foiled the pygmies in their first design by loading the first carriers out with our ethnological collection and by forming relays to bring out the camp equipment. For food we subsisted on a variety of ferns and green bananas, which we cooked. The pygmies, despite their threats, didn't molest us, though they were fighting mad at our going. In the end they relented and we parted friends.

"Hedberg went down with malaria. Our Dyaks were cut and sore from scrambling over rocks; one had been so badly injured that he had to be carried; another was helpless with black water fever. Our shoes were in shreds, as was also our clothing. The men were thin, wornout, held up only by the fact that their faces were turned home."

Stirling laughed.

"Gosh, what a sight we were," he said. "But, happy? I was the happiest man in the world! We had done gone and done it, as we used to say in school. We had got our money's worth!"

THE BELL SYSTEM IS BUILDING AHEAD OF THE GROWTH OF THE COUNTRY

This is the telephone's job and goal

An Advertisement of the
American Telephone and Telegraph Company

THE United States is developing a new civilization. The telephone is an indispensable element in it. The Bell System is building ahead of the growth of this civilization. In 1929 the telephone budget for land and buildings is 54 million dollars, with new buildings rising in 200 cities. New equipment for central offices will cost 142 millions; exchange lines 120 millions; toll lines 119 millions.

The Bell System's total expenditure for plant and service improvements this year will be 559 million dollars.

This outlay is required because the telephone is a universal servant of this democracy. Business uses it to create more prosperity. Homes use it for comfort and protection, for keeping friendships alive and enriching life. Its general use enables each personality to extend itself without regard to distance.

The telephone ideal is that anyone, anywhere, shall be able to talk quickly and at reasonable cost with anyone, anywhere else. There is no standing still in the Bell System.

The Great Tomorrow

By WALTER B. PITKIN

Professor of Journalism, Columbia University; Formerly Associate Editor of the Encyclopædia Britannica

Hunting Lions By Television

AT THE next World's Fair we are promised front seats at a lion hunt in Africa. Television will bring it to us. After that, there will be only one thing left to do, and that is to shoot lions in Africa by television, we sitting comfortably at home as we aim our rifles with a radio dial. To give the sport the right zest, our inventors must rig up a contraption which enables the lions to bite the hunter by radio.

Don't Fly! Just Glide!

SO YOU don't want to drive your own plane? You find piloting too strenuous? All right! Just hook your glider to a Raab-Katzenstein express train, and you'll be relieved of all care, effort, and responsibility in air travel.

On February 26, the Germans ran the first air train in the world's history. The locomotive was a husky plane designed to haul several gliders. Each glider was attached so that its passenger could unhook it whenever he pleased. The train flew at an altitude of 1,200 feet. Each glider cut itself off and gently descended while the train was traveling at top speed.

A long-distance service is now being started. Then real air travel will begin. A glider is very cheap—only a few hundred dollars. It is very easy to handle. No reason why a big firm couldn't rent you gliders and take you wherever you wished to go, for much less money and at much less air hazard than in separate machines, or you might own a private one.

Farms in Skyscrapers

BUT it will not seem half so queer to the average man as farming in skyscrapers. The time is at hand when this will become common. Already it has begun. New York City produces foodstuffs quite as truly as Kansas does. At a recent meeting of the Institute of Chemistry, Dr. H. E. Barnard said: "Thirty men working in a factory the size of a city block can produce in the form of yeast as much food as 1,000 men tilling 57,000 acres under ordinary agricultural conditions." And yeast, say the scientists, can be used as the basis for a variety of palatable foods. Chemists feel sure that they will be synthesizing the proteins before very long; and when they do, that will shift more food manufacturing from farm to town. Then, too, the cities will be hte logical sites for growing certain food plants under glass and in peculiar lights which stimulate leaf, stalk, tuber, fruit, or flower, according to what you want. Up at the marvelous Boyce Thompson Institute, in Yonkers, New York, they are already doing this. Within another generation, what is now a scientific trick will become a commercial commonplace.

And Now All's Well Again

WHAT would you do with an old natural gas well that's all petered out and as empty as a hole in the ground—which it is?

A cunning Canadian has hit upon a use for it. He is C. J. Yorath, president of the Canadian Western Natural Gas, Light, Heat and Power Company. His company is going to refill the old wells! They have some wells where the gas pressure is high. They lie pretty far from present markets, away up in the Turner Valley, southwest of Calgary. Their gas is now going to waste—which is a pity. So Yorath is going to pipe this overflow away over to some empty wells at Bow Island. Billions of cubic feet will thus be conserved.

What next? Will artificial gas be tanked up in old holes too? Well, why not?

One World, One Speech, One Harmony

YOU have often thought how much better off the whole world would be if everybody spoke the same language. Perhaps the best thing that could happen in the next century would be the total abolition of foreign languages. But which one will survive as the world speech? English, surely. Dominant today, it will become universal in the Great Tomorrow. And its victory is being accelerated by the movies and radio. Our pictures have already developed a mania for learning English in the uttermost parts of the earth. Soon broadcasting will be perfected so that American programs will reach all of Europe, Africa, and South America with ease. Then you can go to any town and into any store or home and talk with the natives. Race hatreds, silly nationalisms, and stupid wars will have hard sledding in those days.

Ether Talk Around the World

WITHIN a year or two you can flash a 500-word letter or a photograph halfway around the world in 48 seconds. Dr. Zworykin, of the Westinghouse laboratories, has a wholly new device that reproduces the dispatch directly on photographic paper at this appalling velocity. Here's another thing that will help to Americanize the world. Conversation by ether is coming, and most of it will be in the English language. The preponderance of American radio broadcasting and international telephoning has already created a greater interest abroad in the American language, and each new development in communication brings the day of a common tongue nearer. And what will all the authors of conversation books for tourists do then?

Shall We All Wear White Tomorrow?

THE Bureau of Standards finds that white cotton and silk admit ultra-violet rays to the skin, while wool and colored fabrics shut them out. Ultra-violet brings health and thwarts many ailments. When people, in the Great Tomorrow, follow science instead of fads, will they all dress in white, even in the winter, as Mark Twain used to do? It's a cheap way to get the rays.

These rays come through tracing cloth, too, as C. H. Young, of McGill University, has just discovered. But heat waves don't penetrate it easily. So Young suggests that, by using tracing cloth for our curtains and opening our windows, we can keep cool and yet benefit from ultra-violet even better than if we were to install the ultra-violet glass. Thus do the good things of life grow cheaper and cheaper.

Looking Pleasant Panoramagraphically?

BUT there are many new things whose use and human value cannot be even guessed. Some of them may lie around for years gathering dust until something else bobs up that creates a market for them. We saw such an oddity the other day at the Bell Telephone laboratories. Ten years ago Dr. Kanolt, of the Bureau of Standards, had invented it and laid it away to rest because he saw no particular use for it. Then Dr. Herbert Ives, who made television possible, tackled the same problem independently, never having heard of Kanolt's work. He devised a camera which photographs you in several positions continuously. The picture also gives depth effects, like the old-fashioned stereoscope. Look at it directly, and you see yourself in front view. Look at it from the left, and you see yourself in profile! So too with all other positions. Now, can you think of a use for this?

Snubbed *into* solitaire

Here is a man of charm and distinction who loves bridge and plays it like a master. Yet were you to follow him to Palm Beach in the winter or to Newport in the summer, you would usually find him playing solitaire — certainly not from choice—but actually snubbed into it by those of his own set. He is the fourth nobody wants. And he doesn't know why.

If you have ever met a person with a real case of halitosis (bad breath) you can readily understand what a barrier to social or business success it would be. Imagine yourself in such a predicament.

As a matter of fact, the probabilities are that you *do* have halitosis *frequently*. Few escape it for the reason that every day, in normal mouths, odor-producing conditions (many of germ origin) develop. So, thousands have halitosis and are unable to detect it.

Since the risk is great and detection difficult, the wise thing to do is to definitely put your breath beyond suspicion by the daily use of full strength Listerine as a mouth wash and gargle. It both prevents halitosis and ends it, should it get the upper hand.

While safe and pleasant in action, full strength Listerine is a powerful germicide which kills even the stubborn Staphylococcus Aureus (pus) germ in 15 seconds. Naturally, it destroys lesser germs in the mouth. Furthermore, it's an active deodorant which overcomes odors of all kinds.

No fastidious person will omit the use of Listerine daily. Lambert Pharmacal Company, St. Louis, Mo., U. S. A.

LISTERINE

THE SAFE ANTISEPTIC

GREAT! That's what men say about Listerine Shaving Cream, so soothing, so refreshing.

Digitized by Google Original from UNIVERSITY OF IOWA

The Drift Fence

(*Continued from page 65*)

From time to time Jim had to take a swallow of water from the canteen. These movements caused him acute pain, but when it subsided he suffered only the dull, throbbing ache in head and breast. He could stand it. He did not mind except when it interfered with his pondering of the problem of Molly Dunn. At some late hour in the night relief from his mental struggle came, if not relief for the physical distress under which he labored. He had made up his mind about Molly, and a sweetness, a gladness, pervaded his soul. Then he fell asleep.

WHEN Jim awoke at last, not only had dawn come, but the sun had risen. His throbbing headache had departed and he seemed to be doing pretty well indeed. He sat up, finding that only the use of his left arm and shoulder hurt him severely.

About this hour, he reflected, there would be consternation in the Diamond camp. Curly and Bud would scatter those cowboys like a bunch of quail; and lonesome riders encountered in the woods were going to have to give strict account of their presence.

Thus engaged in thought, he was not prepared for low clatter of hoofs down the trail. The horse that made it was neither heavy nor shod. It swelled clearer for a little, slowed down, and then ceased.

"It's Molly," said Jim softly, and yet he endeavored to fortify himself against mistake. The moments dragged, until a rustle of brush and soft footfalls just behind the lean-to brought him up transfixed and thrilling.

Suddenly the slight, gray form he had in his mind's eye appeared before him. She was bareheaded and the sunlight glinted from her disheveled hair. She carried a bundle. Her eyes appeared unnaturally large and black in her small, pale face.

"Morning, Molly. I reckoned you'd never come," he said gladly.

"Are you—all right?"

"I had an awful night. And I was bad until just now," he replied.

She sat down and, depositing her bundle, she put a hand to her bosom as if to still its heaving. She appeared worn and troubled, as if she had passed a harassed, sleepless night. She seemed such a wistful, pathetic little figure. Jim's heart filled with tenderness.

"Molly, did you get home safe?"

"Yes. Slinger didn't come, an' Ma never heahed me."

"That's fine. I'm sure glad. I've worried a lot." Then, noticing that she wore a bloodstained bandage around her left hand, he asked solicitously if she had injured herself.

"No. I just put this on to fool Ma, so I could go to the store," she explained, in a matter-of-fact tone. "An' I told Mr. Summers I'd cut myself an' was scared of blood poisonin'. I bought this medicine, an' I've fetched some clean linen, a towel an' soap, an' somethin' for you to eat."

"You're just wonderful, Molly!"

She gave him a fleeting flash of eyes. "I'll fetch some water," she returned.

Presently she reappeared, as noiseless as a shadow, to set the dripping canteen down beside him, and then knelt to undo a buckskin thong around the bundle.

"It's goin' to hurt right smart," she said practically.

"Molly, I could stand being carved into mincemeat by you!"

Whereupon she laid a cool hand on his forehead and temples, and then slipped it inside his open shirt to feel of the bandages.

"Wal, you don't 'pear to have fever, but you shore look an' talk flighty," she said. "Will you hold still an' keep quiet? This's goin' to hurt like sixty. I've done it more'n once for Arch."

Jim nodded his acquiescence. She cut the strips of scarf that had served as a bandage, and then she essayed to remove the pads. They had stuck tight. She saturated them with water and pulled gently at them. Jim made the mental reservation that it hurt twice times sixty. But once the pads had been removed, how soothing to his hot skin and the irritated wounds were the touch of her cool hand and the feel of water!

"There. I cain't do no more for you," she said, after applying a stinging solution to the wounds and bandaging them thoroughly. "I reckon these bullet holes are healin' clean, but it'd be sense to have your men get you to Flag, pronto. . . ."

"Thanks, Molly. I'm very grateful to you," he rejoined, opening his eyes to smile up at her. "I'll go to Flag, if it's necessary. But I'll come back. . . . Molly, is it safe for you to stay with me a while?"

"Safe? I reckon so, now I'm heah," she replied. "Ma won't miss me. . . . But all the same I ought to *run!*"

"Run? From what?"

"From you, Mr. Jim."

"Please leave off the Mister. We've known each other a long time now. Why should you run from *me?*"

"I've been with you only twice, an' you made a fool of me both times," she replied resentfully.

"I never did," he protested. If he could stir her, even to anger, he might overcome the aloofness he sensed in her this morning.

"You shore did. That night on the porch at Flag! An' yesterday—that was worse. Your persuadin' me!"

"Molly, consider. There was no excuse for me at the dance. But yesterday there was."

"Maybe for you. But not for me. I shore wonder what you think of me."

"MOLLY, if you'll look at me, I'll tell you what I think of you," he said, in the coolest, easiest tone he could muster.

The dark head whirled. Her spirited action, the fire of her eyes, the receding of hot color, implied a doubt of him. Yet there seemed something else in her expression, not conscious hope, but a pathos due to the dream she only half divined.

"Will you marry me?" he asked simply, but with deep emotion.

"Mr. Jim!"

"Let's dispense with the Mister. Call me plain Jim, and say 'Yes.'"

"Boy, now I *know* what ails you," she said, in self-reproach.

"No, you don't. I haven't come to that."

"If you're not out of your haid, what on earth are you?" she cried wildly.

"In love, Molly."

"In love! . . . With *me?*" she whispered.

He got hold of her hand, to find it trembling. "Listen, child," he began, determined to convince her. "You remember our meeting. Well, I think I fell in love with you then. If not then, at the dance surely. And last night I made up my mind to ask you to marry me. I've been shot, I know, Molly. And I'm excited. But I am absolutely in possession of all my wits. I love you very dearly. And I want to make you my wife."

"Me? Molly Dunn?"

"Yes, you—Molly Dunn."

"Oh! . . . I cain't believe it," she exclaimed, incredulous of the amazing truth. "But, Mr. Jim—"

"Stop calling me that," interrupted Jim imperiously. "Call me Jim. . . . Do you hear? *Jim!*"

"Shore, I heah you . . . Jim," she replied sweetly.

"It sounds very nice. Now, what do you say, Molly?"

"I'm shore upset. An' I'll be so—so proud all my life—an' happy that you love me an' want me. . . . But, Jim, I cain't marry you."

"Molly! Do you love someone else?"

"No."

"Don't you—couldn't you care for me?"

SHE gave him an enigmatical little smile. "Jim, you *have* lost your haid," she went on. "I'm Molly Dunn of the Cibeque. They always called me that. My brother is Slinger Dunn. An' this last shootin' will make him an outlaw."

"It needn't, Molly. No one need ever know. I'll not tell. And I'll find a way to change Slinger."

"But that's only one reason," she protested. "My father has lived for years under a cloud. . . . My mother isn't much good, either. There's talk aboot her an' this an' that cowboy. Jim, I may be pretty, like a wood mouse, as Arch calls me, but I'm nobody. I'm no-no fit girl for you."

"Why not?" he demanded, stabbed again by that fierce, jealous doubt. "You've sure got good looks. You've the face, the hands—the instincts of a lady. There must be good blood in your family."

"Yes. My mother came from a southern family. She brags aboot it. It's a lot to do with her fittin' so poor in a log cabin."

"Molly, if—if—" he tortured himself to get this out—"if you've had affairs with any boys—with Jocelyn—or anyone—affairs you're ashamed of—just forget them. I *know* you're the kind of a girl who'd tell me. But I really don't want to know. I think you've had a rotten deal down here in the Cibeque. What chance have you had—among these louts. So, Molly, turn your back on the whole mess and come to me."

NEW DEPARTURE BALL BEARINGS

In Automobile Wheels

NOTHING ROLLS LIKE A BALL

The wheel of an automobile must roll at high speed, prepared for any shock that chance may bring. It must be ready continually for the unexpected wrench of a rut or a car track—for the sudden swerve to right or left—for the vicious thrust of corners sharply turned.

Obviously, therefore, wheel bearings must be enormously strong. And because of the continued high speed at which they rotate under load, they must be as free from friction and wear as human ingenuity can possibly make them.

This means the use of New Departure Ball Bearings. For New Departures are the highest type of anti-friction bearings and because pure rolling motion is frictionless—*nothing rolls like a ball*—like a ball bearing.

New Departures do not show perceptible wear after long use. Wheels containing them never wobble as those with inferior bearings are apt to do. These are the reasons why so many American passenger cars have New Departures in their wheels and why seasoned motorists prefer them.

WORLD'S LARGEST BALL BEARING MANUFACTURER

Digitized by Google Original from UNIVERSITY OF IOWA

"Jim Traft, do you think I'd ever disgrace you *now?*" she flashed, with tears welling down over her cheeks. "Just that you said, would make me love you, if nothin' else would. But it also makes me see clear. . . . I—I *cain't* marry you."

Jim did not press this point any further, for her demeanor, the way she clung to his hand, the tremendous agitation that shook her, the telltale eyes of which she was not conscious, were facts that moved him with tumultuous joy.

"But, Jim, I reckon you've heahed talk aboot me," she went on. "An' you're shore the one man I'd tell everythin'. Don't you let any lies aboot me stick in your haid."

"I didn't, Molly," said Jim, which he feared was not wholly truth. But, on the other hand, had he not clung to some strange championship of her? Then he told her of Hack Jocelyn's vain boastings, of his innuendoes, and at last his open, vile claim.

"Slinger will kill him for that," she replied furiously.

"I'd have done it myself," declared Jim, "if the boys hadn't pulled me off him."

"Jim, he never had no claim on me," Molly said earnestly. "Some of the other boys have tried to make up to me. But I cross my heart, Jim, no boy ever got anythin' like you got from me."

"Darling!" cried Jim.

That, and the stealing of Jim's arm round her waist, drawing her down, would have been Molly's undoing. But he heard a soft step. A shadow crossed the light above him.

JIM had only a glimpse of Slinger Dunn looming over him, gun in hand. Then Molly, with a scream, threw herself upon Jim protectingly.

"So heah you are, you wood louse," grated Slinger.

"Arch, I found him—on the trail—bleedin' to death," cried Molly.

"When—an' what you doin' up heah?"

"I—I went ridin', Arch. Yesterday. I heahed a shot. Then you came by like mad. An' I found him."

"You was meetin' him heah."

"No. No. Honest—I wasn't."

Jim needed only one look up at Slinger Dunn's face to understand Molly's terror.

"Dunn, she's not a liar," he said. "She couldn't have known I was on the trail. I was trailing the man who cut the drift fence."

"Aw, she'd lie an' you'd swear to it." His piercing gaze rested curiously on Jim. "How do *you* happen to be alive?"

"Your bullet hit my watch."

"Wal, heah's another," said Slinger, with fierce intensity, and he brought the gun up to align it with Jim's head. But quick as a flash Molly covered Jim.

"For God's sake, Slinger, don't kill him," she begged.

"I shore will. An' I jest aboot as lief bore you, too. . . . Git up."

He kicked Molly, and his boot came in contact with Jim's thigh. The brutality of it, after the deadly speech, seemed to liberate Jim from a cold paralysis.

"Let go of me, Molly," ordered Jim. "If he's such a skunk as that, he might kill you. And if he means to murder me you can't stop him."

Molly not only refused to move, but she got her arms round Jim and clung to him, shielding his vital parts with her quivering body.

"Arch, you cain't shoot him—when he's down—crippled—defenseless," she burst out passionately. "It wouldn't be human. It wouldn't be like Slinger Dunn. . . . If it's on my account, you're wrong—terribly wrong. He never meant—bad by me."

"Molly, I reckon he's *done* bad by you. An' you're not only lyin' for him, but givin' yourself away."

"You cold-hearted devil!" she exclaimed. "How could you have a decent thought? . . . Kill me too!"

"Ahuh. You little hussy! . . . But bein' daid wouldn't hide your shame, Molly Dunn."

"Oh, Arch, there's no shame. . . . There's been nothin' but thoughts an' feelin's that have changed me. . . . I love him. Cain't you see it? I love him!"

"Wal, I ain't blind," replied Slinger, and, reaching down, he laid hold of Molly and tried to pull her off. Then suddenly Molly, fierce as a wildcat, flung herself upon Slinger and fought him for the gun.

The girl's courage, following her declaration of love, roused the lion in Jim. With all his might he kicked Dunn's hand, knocking the gun out of it.

"Hold still! Somebody comin'," whispered Dunn hoarsely, stiffening.

Molly slipped out of his grasp, down to the ground. Jim listened, but could hear nothing save the pounding of his heart. Dunn stood strung like a listening deer. Then the brush crashed.

"Hands up!" came in a cool, sharp voice that made Jim's blood leap.

Dunn's back was turned. Swiftly he elevated his arms high above his head. Jim moved, to see that Curly Prentiss had appeared round the corner of the lean-to. He held a cocked gun.

"Come round heah, Bud," he called. And, with more crashing in the brush, Bud Chalfack followed his extended rifle into view. Both cowboys stepped closer, eyes piercing and hard.

Jim slipped Dunn's gun out of sight—an act as impulsively swift as the thought that prompted it.

"Face around heah," ordered Curly, and as Dunn pivoted, he showed no surprise, but an alert, cold suspicion.

"BY HEAVEN!" shouted Bud. "If there ain't the boss. . . . An' Molly Dunn!"

Jim seized avidly upon his opportunity, though his wit and spirit far exceeded his physical strength.

"Hello, boys," he began huskily. "So you found me—at last. . . . Put up your guns."

"What's wrong heah?" demanded Curly, and Jim's heart felt a rush of warm gladness and thrill at the significance of the cowboys' mien.

"Nothing wrong, Curly—now—you've found me," replied Jim, cheerfully. "Put down your gun—and you too, Bud. I'm nervous."

"Wal, you look it," growled Curly, complying with Jim's order. Bud likewise lowered his weapon. "I reckon you'd better talk fast."

"Curly," burst out Jim, in relief, "yesterday I found a cut in the drift fence. And horse tracks on the trail. I followed them down here. . . . Somebody shot me, knocked me galley-west off my horse. . . . When I came to, Molly Dunn was bathing my face. She was on her way up to camp—to warn me that Jocelyn and the Cibeque outfit had planned to kidnap me—for ransom. She heard the shot and found me.

"Well, it turned out the bullet had glanced off my watch, and cut up through my shoulder. We tied it up. I wasn't able to get on my horse. Molly wanted to ride up to camp and fetch you. But I thought it'd be best for her to go home. You fellows would probably trail me, and if you didn't she could ride up today. . . . Well, Molly came today, and it seems that her brother trailed her. Found us here. And, well—the truth is, he thinks I'm a bad egg—and had evil intentions toward Molly. That upset me—and made Molly sore. . . . And, I reckon—that's all."

"SLINGER DUNN, you're shore a thunder of a bright fellar," quoth Curly, with all the sarcasm of a disgusted cowboy. "Let your hands down. An' mebbe you'd do well to make yourself scarce around heah. But before you go, you put this in your pipe an' smoke it, you — — — hard nut of a Cibeque gun-slinger!— My boss, Jim Traft, wouldn't never have evil intentions toward *no* gurl, much less so sweet and luvly a little lady as your sister."

"Slinger, sumbody ought to beat the daylights out of you," added Bud. "Me an' Curly both made up to Molly. Was we good enough fer her? No, we was not. Mebbe Jim *was* good enough. But you can gamble both he an' Molly are above your low-down suspicions. . . . Now, you mosey along, and hereafter stay on your side of the fence!"

Slinger eyed them while they delivered their separate speeches, and then looked strangely down upon Molly, and lastly at Jim. Then he strode out, to disappear in the brush.

The situation lost its suspense.

"You dog-gone old tenderfoot," said Curly, sitting down beside Jim. "Gone an' got yourself shot fer the Diamond! I shore hope it ain't bad."

Bud crowded in beside Molly. "Boss, I wuz orful scared fust off. Course, we didn't see who it wuz. . . . Gosh, I never wuz so glad aboot nothin'. . . ."

"An' so little Molly found you!" ejaculated Curly. "My Lord, the luck uv some fellars!"

"Howdy, Molly," drawled Bud. "So you saved our boss? Wal, I reckon now the Diamond will belong to you."

"Boys," interposed Jim, with a happy ring in his voice, "I know *a* diamond that will be Molly's, if she'll take it—along with the boss of the Diamond."

The cowboys looked bewildered volumes and were speechless. "You boys take yourselves off in the woods for ten minutes," ordered Jim audaciously.

Curly got up awkwardly, after the manner of cowboys, and Bud followed suit. "But say good-by to Molly," added Jim, relenting.

Curly had dignity and selflessness. "Miss Molly, you shore hev my thanks. Jim has won over the Diamond, an' if he's won you—wal, I don't wonder, an' I reckon him the luckiest fellar on the range. Good-by an' good luck."

They slumped away into the spruce, leaving a pleasant jingle of spurs.

Quicker freezing of Ice and Desserts

Now possible with the Frigidaire Cold Control

—an important feature of Frigidaire

THE Frigidaires now offered by dealers everywhere are recognized as a distinct achievement in automatic refrigeration.

Here is real beauty . . . symmetry of design . . . clean surfaces that stay clean. Here are cabinets, finished in gleaming porcelain enamel or white Duco, and with all mechanical parts completely enclosed. Here is an automatic refrigerator that is so quiet that you don't hear it start, or stop, or run. Here are elevated food shelves that make stooping unnecessary, and extra power to guarantee that food will be kept safely cold on the hottest days. And here is the Cold Control that provides six freezing speeds at the turn of a dial . . . faster freezing of ice, and perfect results in the making of salads and desserts.

The Cold Control . . . as simple as setting a watch.

Only Frigidaire offers this combination of important features of beauty and power and convenience. They have made Frigidaire the choice of more buyers than all other makes of electric refrigerators combined. Low prices, convenient terms and exceptionally low operating cost put Frigidaire within the reach of every home.

See it today at display rooms everywhere or write for complete catalog and the new recipe book.

Frigidaire Corporation,
Subsidiary of General Motors Corporation,
Dept. C-106, Dayton, Ohio.

Please send me a free copy of the Frigidaire catalog and the recipe book of frozen delicacies.

FRIGIDAIRE

The QUIET *Automatic Refrigerator*

Digitized by Google
Original from UNIVERSITY OF IOWA

"Oh, they're terrible—an' lovable, too," burst out Molly, lifting a flushed face.

"You bet they are. But that tickled me, Molly," declared Jim. "I've had a time with them. And of all the tables turned on them, this with you is the best! I think we turned the table on Slinger, too. . . . Darling, do you know you told him—*you loved me?*"

"What else could I do?" wailed Molly.

"But, heavens, tell me you didn't lie!"

She turned away her face. "No, Jim."

"You do love me?" he implored, drawing her close.

"I cain't help it. . . . But don't ask me—never no more—what you did."

"I shan't, if you're going to be distressed. But, Molly Dunn, that offer stands!"

"Don't!— What do you think I'm made of, anyhow? . . . But, Jim, the wonderfullest thing I ever lived was when you hatched that lie to save Slinger. Jim, if I hadn't loved you before that I'd have done it after. . . . Perhaps it's all for some good. You shore have changed me. Who knows? Maybe even Slinger Dunn might be made to see."

"I had the same thought, Molly," said Jim earnestly. "And some day I'll follow it up. . . . Now you must go, Molly."

He released her, won to solicitude by the gray hue and strain of face she betrayed. But suddenly she surprised him by flinging her arms around his neck, and pressing lips and cheeks to his. "Oh—Jim! *Jim!* . . ." Then she rose and ran into the spruce.

Jim lay back spent, elated, conscious of recurring pangs in his wounds, overcome by his feelings. But presently his reverie was disrupted by the advent of the cowboys with his and their horses. Bud found his saddle, and then came into the lean-to for the blankets.

"Come on, you boss of the Diamond," he said, making no effort to help Jim up.

Jim slowly crawled to a post of the lean-to and, using that as a support, he labored to a standing position. Then he swung up into the sadd e, to fierce, shooting pangs through his shoulder.

A WHOLE week had to pass by before Molly Dunn came out of her trance. Good luck facilitated an otherwise insupportable situation. Her parents never learned she had been away from home nearly the whole of two days.

She felt Slinger's eyes upon her at times when she was not looking at him, but he never spoke to her. More significant of his mental chaos were the hours he spent sitting idle. Sometimes he would go into the field and work, careful to take a rifle along. Molly would catch a glimpse of him, leaning motionless on a spade, looking off into the forest.

A second Sunday came. Would she date all the rest of her life from that last day in the woods with Jim Traft? What would become of her? When Andy called, she begged him to excuse her. "Why, gurl, you're sick. You look turrible," he said anxiously.

Then, in the afternoon, young Keech came on horseback. He was very mysterious, and Molly felt she would presently be rude, but he whispered to her that he had brought something for her which he had left outside by the fence. He gave no explanation and departed.

"Crazy fool," muttered Molly, who had no patience these days. "Whatever is he up to?"

Nevertheless, curiosity consumed her, and she went out by the gate and searched in the bushes. There she stumbled upon a large package, neatly tied in paper, the like of which she had seen in the big Flagerstown store.

She watched her chance to carry the parcel in unobserved, and up to the sanctuary of her attic. Then, with trembling hands and beating heart, she opened it. Inside were three smaller parcels, and some books, one old and several new. One parcel was a box of candy tied with ribbons. Another held the most beautiful silk scarf Molly had ever seen. The third was a little sewing kit, containing everything imaginable.

"Shore, it's from Jim—bless his heart!" she murmured, and searched frantically for a note. There appeared to be none, and her wild hopes subsided. She examined the books and thrilled at their titles. The old book was a school grammar and had the look of long thumbing. Then on the flyleaf she discovered handwriting:

James Traft. Wellsville High School. September 1, 1878.

MOLLY was thrilled, puzzled, and then suddenly dismayed. "It's a hint for me to study how to talk correct," she muttered resentfully. But anger would not abide with her. One single query drove it away. Why should Jim Traft want her to make up for her lack of education? There could be only one answer. He wished her to study. He believed in her. He meant— But Molly dared not follow up that thought.

Molly hugged the grammar, miserably sure of her mingled pain and joy. She put it under her pillow. She kissed the silken scarf and tied it round her neck. And all the rest of that afternoon she sat by her window, devouring both the candy and the storybooks.

The next Sunday Molly waited all day for another possible visit from young Keech. But he did not come and she had to fight bitter disappointment. Reason came back to her, however, after she had become thoroughly wretched. Keech would have to ride to Flagerstown, a whole day, and another back home. Then it would take the same time to make the trip down the Cibeque and back. Four days out of one week! That was too much. But he might come again the following Sunday, and she lived on the hope of that.

Slinger still stayed at home, though now and then he went to the village; and Molly detected that he was drinking. Once or twice he had spoken gruffly to her. And he had cut the corn and packed it into the crib; he had repaired the fence to keep the hogs out; he had begun to chop the winter supply of firewood.

Molly marveled, and sadly divined the torment in him. No doubt he had expected a visit from the Flagerstown sheriff, or the cowboys of the Diamond. But they did not appear. And no word of Jim Traft's having been shot by fence-cutters had yet reached West Fork. Molly believed now that it never would, and so she told her brother.

Other news and rumors were rife, however, some of which might be true. Work on the drift fence had not progressed beyond Tobe's Well. All the labor tha the Diamond put in was in repairin sections that had been laid low. Sma herds of stock had been reported on th trails, driven by riders whose names we not even whispered in West Fork. Mone appeared plentiful in the village. The had been several shooting frays, of sma consequence, one of which had been a attack on Andy Stoneham while he w walking the trail to Molly's home.

ANOTHER Sunday arrived and with after Molly had waited long, agoni ing hours, young Keech, wearing more a mysterious air, more assurance that shared a great secret.

"Thar's a pack fer you in the barn, h in the corner," he informed her, with meaning grin. "I'll drop in on my w back, in case you want to send a letter

"Letter!" faltered Molly. "How how soon'll you be back?"

"Reckon aboot sundown. I'll whistle he returned, and rode off down the la

Molly watched him guiltily. I seemed to take it for granted that she w a party to this courtship of Jim Traft The affair certainly could not be ke secret very long, even if young Kee justified the trust Jim had in him. So everybody would learn that she w accepting gifts from the nephew of ri old Traft, and that would only be anoth black mark for Molly Dunn of t Cibeque.

Not that Molly cared on her o account—she was thinking of Jim, a how her people and neighbors of W Fork would only have more against hi Oh, if she could only let them know honesty—his goodness!

She went to the barn and found t pack. Three times as large and heavy the first one! Molly hid it, and r back to the house. She would return But, no, she had not the strength to that, let alone hurt Jim's feelings. S would write him not to send any more

Up by her loft window, Molly labor over that letter, and her tears fell upon For she had to explain to Jim why he m not send more presents, why he must f get her. And then she seemed driven add more, the content of which s scarcely realized and which she dared r read over.

Keech trotted down the lane, a received the letter as a matter of cour Molly watched him ride away into t gloom of the forest. And when he h gone she stood there, looking up at t grand bulk of the Diamond, from t rugged rim of which the afterglow of su set was fading, and felt vaguely that son how she was a forlorn little soul, cheat of love and happiness. Yet she was gl she had risen to the heights, even if f ever afterward she must be plunged in the depths.

Under cover of the thickening dusk s secured the pack, and carried it to t cabin and up to her secluded abo Carefully she assorted the parcels, lit and big, searching for a letter. But ag there was none. And Molly was glad. she read written words of love and h and demand from him she would be unstable as water.

More books, and these from St. Lou To her amaze all the parcels were mark with the name of that distant east

Better than all the laxatives

COMPLETELY harmless in spite of its great efficacy. It reduces the poisons which make the body cells grow old."

These are not our words. They are the words of a great scientist and famous physician, Dr. Georges Rosenthal of the Pasteur Institute of Paris.

Yeast is a food—every bit as fresh as delicate dewy leaves of lettuce or spinach right from the garden.

But fresh yeast—as millions know who have benefited—has health properties no other single food possesses. Myriads of living active yeast plants in every cake gently stimulate sluggish bowel muscles—bringing about natural easy elimination, ridding the body of depressing poisons. Appetite picks up, bad breath and headaches go, ugly skin eruptions disappear!

Start today to eat Fleischmann's Yeast. You can get it at grocers, restaurants and soda fountains. Write for booklet. Health Research Dept. J-67, The Fleischmann Company, 701 Washington Street, New York City.

HERE IS THE FRESH FOOD—Fleischmann's fresh Yeast—that famous doctors in six countries recommend. For beautiful, vigorous health just eat three cakes daily, one before each meal or between meals—plain or in water, cold or as hot as you can easily drink. For best results, eat it regularly, and over a sufficient period. Habit-forming laxative drugs can gradually be discontinued.

(Diagram above from "Troubles We Don't Talk About," by Dr. J. F. Montague; J. B. Lippincott Co., Phila., Pa., Publishers.)

Copyright 1929, The Fleischmann Company

(RIGHT)
DR. GEORGES ROSENTHAL, doctor of the schools of Paris, says, "Yeast is the policeman of the intestines. It reduces harmful poisons. It regulates digestion. It is a classic remedy for boils."

(LEFT)
"The digestive tract," says Dr. Rosenthal, "is a veritable laboratory of poisons. Fresh yeast checks these dangerous poisons." Don't depend on habit-forming drugs and pills. Keep this important tract clean, active and healthy with fresh Fleischmann's Yeast.

city. He had sent for things. The Flagerstown stores were not good enough for her. How could she ever resist his way of making somebody of her? For the ensuing hour she marveled at and gloated over a multiplicity of pretty and useful little presents. Then she crawled into bed and cried herself to sleep.

During the next few days Molly went through a hundred variations of mood, ranging from lofty pride to self-pity, from resignation to furious revolt. And then she seemed to fix upon a settled wretchedness. Yet the days passed and life had to be lived and neglected work done.

ON SATURDAY afternoon she went to the village with her mother, the first visit there for a month. It was the one day in the week when there was any activity at West Fork. Saddle horses and buckboards, along the hitching rails, attested to visitors in town; all the available space along the plank sidewalk was taken up by wagons and buggies.

They came at length to Summers's store. Mrs. Dunn and Molly had to await their turn, and when Mrs. Dunn met the worst gossip in West Fork, to become avidly absorbed at once, Molly strolled on through this store into the next, which was connected with it.

Presently she found herself quite near the door, and curiously took a peep out. A young man had just ridden up to the porch. And when Molly recognized Jim Traft she nearly dropped to the floor. Then, as the usual hum of talk of the loungers outside abruptly ceased, Molly realized that she was indeed not the only interested one. Jim dismounted and threw his bridle, to walk up half the steps.

"Good afternoon, gentlemen," he said coolly. "My name's Jim Traft, and I'm looking for Slinger Dunn."

Molly bit her tongue to keep from crying out. Her quick glance flashed over his lithe figure. He wore corduroys, high top-boots, and a brown shirt. Manifestly he could not have had a weapon upon him. Relief mitigated Molly's terror. He did not mean to fight, and certainly Slinger, no matter how provoked, could not shoot an unarmed man before all these people. Jim did not look exactly pleasant, but how fine, Molly thought, and manly and clear-eyed.

"Wal, Mister Traft, you'll find Slinger in Mace's saloon," drawled someone.

"Thanks," replied Traft, and flipping a silver coin to an urchin there, he said: "Johnny, go in and tell Slinger Dunn that if he isn't afraid to come out, Jim Traft would like to see him."

The boy snatched up the coin and bounded off the high porch. Jim stepped up another step. He appeared composed, but pale. He had some deep motive in bearding Slinger Dunn right in his own den. Molly fell prey to a tumult of thrill and shudder. Traft's message had caused a low exclamation to run through the occupants of the porch, a dozen or more of whom Molly could see through door and window.

"By gum, Slinger's a-comin'," said someone.

"Reckoned thet'd fetch him," replied another. These two stood near the door and partly shielded Molly. She could not see Slinger yet.

Then the slow step of a spurred boot sent combined fire and ice over Molly. Slinger came into view, crossed the porch to confront Traft.

"Did you send thet kid in heah—" and Slinger jerked his left hand backward; his right hung significantly free and low—"askin' me out if I wasn't afeard?"

"Howdy, Slinger. Yes, I did," replied Jim, and he stepped up the last step. After a keen, fearless glance straight into Slinger's eyes, he extinguished the cigarette he carried and dropped it off the porch. It was noticeable that he wore gloves.

"Wal, you want to be careful aboot sendin' fer me thet way."

"No offense. I just wanted you outside."

"An' what fer, Mr. Traft?"

"Several things, Slinger, and for that reason I'm glad some of your friends and townsfolk are present," replied Traft. A small group of men had followed Dunn out of the saloon, but did not come up on the porch.

"What you want?" demanded Dunn.

"First, I want to tell you I'm sorry my outfit suspected you of cutting our drift fence. We found out who did it. So I'm apologizing for myself and the Diamond—to you, publicly."

"Wal, it wasn't necessary fer nobody to apologize to *me*," returned Dunn. "All the same I hadn't nuthin' to do with cuttin' your drift fence."

"Well, that settles that. Now you settle *this*. There's talk going around about your sister and me. Some of it is credited to you. Did you tell Hack Jocelyn and Seth Haverly that you not only heard I had insulted Molly—mistreated her—but that you *believed* it?"

"I reckon I did, Mr. Traft."

"Thanks," said Traft, raising his voice. "Now, listen. You are dead wrong. I fell in love with Molly—pretty pronto, I admit. And I asked her to marry me. *Twice!* . . . Was that an insult? I shall ask her again. Will that be an insult?"

"I cain't see it thet way."

"I did—well, embrace her *before* I asked her. But I meant no insult. I was just excited—out of my head. Could that be held against me, by any fair-minded person—knowing I followed it up with an offer of marriage?"

"No, it couldn't be," declared Dunn.

"Thanks again. . . . Well, Molly refused me. And one of her reasons was that she was Slinger Dunn's sister."

Molly saw Arch flinch, and she felt a pang for him. This Jim Traft had a tongue as deadly as a bullet.

"NOW, Slinger Dunn, listen," added Traft, his voice rising. "If you were half the man you think you are, you'd quit this lazy, drinking, gun-slinging life for your sister's sake. She deserves a better fate than to be disgraced and degraded by a rotten two-bit of a desperado brother. . . . But you've not got sense enough to see what she's worth. And as for your talk about her, well, you are a dirty, low-down skunk. You're a yellow dog. You're a liar, and a suspicious, miserable Cibeque blood-spiller. Now, I'm not much on guns, but if you're not a coward—a *coward*—you'll lay off that gun-belt. And I'll swear, if I don't beat you as you deserve, I'll borrow a gun from somebody here, and fight you your own way!"

Without the slightest hesitation, Slinger unbuckled his belt, containing the heavy gun, and handed it shakily over to someone. He sailed his sombrero off the porch, exposing a livid face. He made a gesture, eloquent of supreme fury. Then like a panther he leaped at Traft.

(*To be continued*)

Watch Me Get Fired!

(*Continued from page 56*)

eyes filled. She hurried from the office.

Old Man Hobson pawed listlessly through his papers, then looked around for Miss Pierce. He had not noticed that she had left. But he did not summon another girl. Instead, he rose and went to the door, stood looking out at the people in the outer office.

One by one, he considered the men. He had trained every one of them to do precisely as he was told to do—and nothing else. Every one could be depended upon to do exactly that—what he was told to do.

No boss could have had a more faithful crew. There was not a man among them who would argue a point with the Old Man. . .

And that thought brought Sam's straightforward comments to the Old Man's mind: "That's what all these 'yes men' in here have done—hoisted the white flag."

IT BROUGHT up the further alarming thought that there was not a man on that staff who could be depended upon to take the helm in case accident should overtake the Old Man himself—not a man who could lead a fight in a crisis.

They were all people who were holding their jobs, not because they hoped for better things, but because they were afraid to let go and take their chances elsewhere; they were people whose courage had been stripped from them by the Old Man's browbeating tactics—people who did what he told them to do because they were afraid not to.

He had taken the hope out of their jobs. He could read that in their eyes.

For the first time in his business career, Old Man Hobson felt utterly alone. There was nobody to turn to. He had built a successful business—and for what purpose?

He was getting along in years. He was tired. Yet he could not stop, because there was nobody to step into his place?

It came over him with a rush that the money involved was a petty thing; that it was something else that had held him to that task of his—the hope of seeing his son do big things with it. He would have lived on in his boy's success.

His son's words came back to ring in his

The Coupe, Body by Fisher

America's biggest motor car value

-because of all these Big Car Qualities . . .

Never in all motor car history has there been such value in the low-priced field as that offered today *at no increase in price* by the New Pontiac Big Six. Consider carefully the qualities which prove this value. They alone hold the secret of Pontiac's startling flight to new sales peaks.

Big car performance—Speed, acceleration, power and smoothness surpassing everything in its price class.

Big car style—Smart new bodies by Fisher in a complete variety of popular colors . . . bodies that are comparable in every detail to those found on cars costing hundreds of dollars more.

Big car long life—Adjustable pressure feed lubricating system which reduces all bearing friction to the lowest possible point . . . crankcase ventilation which keeps engine oil free from water . . . the Harmonic Balancer which reduces torsional vibration . . . the cross-flow radiator which assures perfect cooling at all speeds all the year 'round . . . many other advanced engineering features, including automatic temperature control, which eliminates the need for radiator shutters . . . all features which contribute to its long life.

Big car safety—Two separate braking systems . . . an emergency brake working on the transmission . . . and four-wheel, internal-expanding, dirt-and-weather-proof service brakes.

Big car comfort—An adjustable driver's seat, foot-controlled headlights, Fisher VV type windshield, coincidental ignition and transmission lock, and other equally important big car comfort features are likewise included in this newest Pontiac.

Ask your Oakland-Pontiac dealer about its *many additional* big car qualities. Arrange for a demonstration. Take the wheel yourself. Only then can you appreciate how much more you receive for every dollar invested in America's biggest motor car value—the New Pontiac Big Six.

Consider the delivered price as well as the list when comparing automobile value. Oakland-Pontiac delivered prices include only reasonable charges for handling and financing when the G. M. A. C. Time Payment Plan is used.

Pontiac Big Six, $745 to $895, f. o. b. Pontiac, Michigan, plus delivery charges.

ears: "Take the hope out of a job—and what's left?"

Hobson suddenly became conscious of the fact that the people in the office were looking at him with startled eyes. A clerk rose and came toward him.

"You're ill, Mr. Hobson," he said, with concern in his voice. "Let me help you."

"Eh?"

The Old Man was old indeed!

"Better come in and sit down, Mr. Hobson," the old clerk urged. "I'll send for the doctor."

Quietly, Old Man Hobson permitted himself to be led into his private office.

"Clem," he said suddenly, "don't send for any doctors. Just shut that door. I want to talk to you."

Wondering, Clem obeyed.

"How long have you been with me, Clem?" the Old Man inquired.

"About thirty years, Mr. Hobson. Isn't my work satisfactory?" There was fright in his tone.

The Old Man stared at him a moment.

"Clem, what do you hope to get out of this job you're holding?" he asked.

Clem looked startled. Then mystification clouded his face.

"I'm satisfied, Mr. Hobson," he said. "I like the place. And—I've been here a long time."

"But, Clem," Hobson persisted, "what do you want? If you could have anything you asked for, just for the asking—what would it be?"

Clem studied the Old Man for a moment.

"Well, if I could have anything I asked for—I'd ask for my health to hold out. I'd like to be able to keep up and not slow down. When he gets old, he isn't wanted. He does well if he can keep his job. . . . That's the greatest blessing I'd ask for—to be sure that I could keep right on for years to come, and die in harness."

OLD Man Hobson peered deep into Clem Turner's eyes. Old Man Hobson was shrewd. He could read men's thoughts in their eyes. He studied Clem Turner's face. Then he turned and looked into the mirror at his own.

And he read there the same story that was written on the chief clerk's face—fear. The one lived in a fear lest he lose his means of livelihood; the other, lest the work of a lifetime fail to bear fruit.

Hobson turned back to his chief clerk.

"Clem," he said huskily "Clem—we're both in the same boat!"

He sank back in his chair again. Clem stared at him, incredulous, mystified.

"Clem," Hobson said again, "I've made a mess of things, haven't I? . . . I've made a mess of things! . . ."

His voice trailed away, as he fell to thinking, his chin on his chest, his hands resting limply on the arms of his chair.

"Mr. Hobson," Clem exclaimed suddenly. "I want to know what's gone wrong!"

Hobson did not reply.

"Tell me!" Clem insisted. The relationship of master and man was forgotten. "Tell me! . . . I've been working for you for thirty years. I've got a right to know what's gone wrong—so I can help you!"

Hobson's eyes rose to meet the old clerk's. Their eyes met—locked. Then Hobson leaned forward, laid a hand on Turner's shoulder.

"Clem," he said. "I wonder if—if we can't help each other! I wonder if it's too late!"

A faint flicker of hope illumined the Old Man's eyes.

"Clem, do this: Go get Tom Riley and Peter Hartshorn. And get Jim McKay. . . . Bring them in here."

"Now?" Clem asked.

"Right now, Clem. Right now."

One by one they appeared—those four men who had been with Hobson for upward of thirty years, men who had given the best years of their lives to the business.

Hobson welcomed them all quietly, indicated chairs. They waited in silence, their faces all betraying their concern as to what was about to take place.

"Boys," Hobson began in a low tone, "something happened today to teach me the biggest lesson I ever learned in my life. . . . My own son taught it to me. I doubt if anybody else could have done it. I doubt if even he could have done it in any other way But that lesson smashed me right between the eyes."

The men listened in rapt attention.

"I've tried to go it alone," Hobson explained. "And it can't be done. . . . It can't be done. . . . I never realized before what I'd been doing to you men. I never realized what it meant to a man to have his hopes killed. Yet I've made a practice of killing hopes around here. . . . I didn't have any idea what it meant to people. . . . I had no idea. . . ."

There was no sound in the room, except the breathing of the little group seated about the table.

"Boys," Old Man Hobson continued, "there are a lot of things about this business that you know better than I do. You know that. I admit it. You know of a lot of things that could be improved."

The four men's faces were utterly noncommittal.

"Today," said Hobson, "this is my business. But tomorrow—"

He paused.

The four men waited nervously—very evidently anticipating bad news.

"Tomorrow, it will be *our* business. . . . *We* will run it. . . . Not just *I*. . . . My hopes will be your hopes. . . . Your hopes will be mine. . . . We'll all be in the same boat. . . . We'll have to pull together. . . . See what I mean? . . . It isn't too late, boys! . . . What if we are all gray-headed? What's the color of your hair amount to, if your head and your hand are steady?"

TREMENDOUS eagerness shone in Hobson's eyes. But he could read in their faces the fact that the others had not fully grasped the import of what he was saying. Or was it doubt he read there?

"It's easy!" he insisted. "It's easy! . . . I'll have the lawyers fix it up so that we all have a share in owning this company. . . . You have a share, Clem. And you have a share, Tom . . . and Jim and Peter. . . . And I have a share. It will be *our* business. . . . We'll all have a common goal to hope for."

Hobson leaned back in his chair again.

"If only I had done this before," he commented softly. "If only I had!"

"Mr. Hobson." It was Clem Turner who spoke. "Do you mean you propose to put the business on a sort of profit-sharing basis?"

"That's the idea!" Hobson's eyes shone with eagerness. "Everybody will have an interest. . . . It will put some hope into the job. . . . Take the grind out of it."

The four men looked at each other incredulously.

"Can't we do it?" Hobson inquired.

"Why, sure we can!" asserted Clem. And Hobson was amazed at the glow in his eyes—a glow that he saw creeping into the eyes of the other three men.

"I'd be happy," Hobson said, "if Sam were captain of this team—with us old, experienced fellows to sit in with him and help him steer around the rough spots. . . . Think he could swing it?"

"Sam?" Tom Riley spoke up. "Sam swing it? Huh! I'll say so!"

"But that isn't to be," explained Hobson. "That's the thing that waked me up. . . . That isn't to be. . . . I'd planned for years to turn my job over to Sam. That had been my one big hope."

MISS PIERCE came quietly back into the room, hesitating only a moment in her surprise at finding a conference of employees in the private office.

"Mr. Sam got the Wescott contract, after all," she announced, with a telltale gleam of excitement in her eyes.

"That's fine!" Hobson dropped his eyes. "That's very fine!"

"He's coming up here pretty soon," Miss Pierce continued. "He says he's going to finish what you and he started this morning—that racket, as he called it."

Hobson looked pained.

"You see, I got a taxi and rushed down to Cordingly's," Miss Pierce explained. "But he hadn't been there. I found him at Wescott's. . . ."

The Old Man looked up at her questioningly.

"Mr. Sam is a lot like his father," she said. "When I began to scold him for leaving, he came at me as if he was a wildcat. 'Let me tell you something,' he snapped at me. 'I haven't been to Cordingly. And I'm not going to Cordingly! The minute the signatures on this contract are dry, I'm going to take it right up to the Old Man. This is going to be a Hobson job! I'll sell the Old Man my ideas if I have to knock his stubborn block right off his shoulders!' . . . And he ought to be here before many more minutes go by."

Old Man Hobson's face was a study. He looked from one to another of the four men around the table.

There sounded a sudden commotion in the outer office. The outer door was flung open—slammed closed again. The typewriters stopped their clatter. Swift, determined steps marched in from the outer door, through the railing—came to an abrupt halt just outside the door of the private office.

"Who's in there?" demanded Sam's crackling voice of the girl at the desk just outside.

But those inside did not hear her reply—for the Old Man drew their attention with a sudden: "Sh-h!" His face was glowing with excitement, like a boy's.

"Watch me get fired!" he whispered loudly, and sat back in his chair as the door of the inner office burst open.

FILM covers teeth

—it dulls them—it destroys them

Yet gleaming whiteness will return if you remove it

SCIENCE discovered the way to keep teeth white and brilliant while seeking a way to combat the start of tooth and gum diseases. This is because dingy teeth and most dental ills come from the same cause. That cause is a dangerous film that creeps over teeth and into crevices—a sticky, dingy coating that stubbornly defies the ordinary ways of brushing.

Today, the approved method of protecting teeth is by removing film. A special dentifrice called Pepsodent has been compounded with that as its sole purpose.

You must fight film

You can feel film with your tongue — a slippery, viscous coating. Food and smoking stain that film. Germs by the millions breed in it . . . germs of many different kinds.

A way to remove it, that quickly restores brilliance. Film, it is agreed, also fosters serious tooth and gum disorders. Please accept free 10-day supply.

Film hardens into tartar. And germs with tartar are the chief cause of pyorrhea. Film is also the basis of decay.

The special way to remove it

Ordinary brushing ways are not successful in removing film from teeth. You must employ the scientific method that first curdles film so that brushing can easily remove it in perfect safety to enamel.

You marvel at the natural whiteness of children's teeth. Yours may once again regain that color. May take on a brilliance that is actually amazing. Lustreless, dull teeth are known to be unnatural.

Get a full-size tube of Pepsodent wherever dentifrices are sold, or send coupon below to nearest address for 10-day tube.

MILES—SPEED—TIME—WEAR TIRE MILEAGE RECORDS BROKEN

Every one of original 60 Silvertowns still rolling after 16,000 miles

HERE you are, tire buyers! Some real food for thought before you buy tires!

For the Silver Fleet . . . organized to demonstrate what Silvertowns will do in the severest sort of service . . . now gives you the plain facts on tire performance.

And with the tour yet uncompleted . . . with the final record yet unwritten . . . the makers of Silvertowns already can say . . .

"Just try to beat this record as it stands today . . . with any tires but Silvertowns!"

For the Silver Fleet is well past the 16,000 mile mark. 44 tires still contain their original air . . . have never been off the rims . . . for even so much as a nail puncture.

***NEW SCROLL STARTS EAST** with Silver Fleet. Mayor Rolph, of San Francisco, signs a new Good-Will Scroll addressed to Mayor Walker and the people of New York City.*

In terms of mileage, the 16,000 figure on the speedometers tells but part of the story. Remember that 16,000 miles is the accomplishment of 5 dozen tires. All told, the Fleet has piled up a grand total of a million tire miles . . . with no major troubles in that amazing distance.

When you consider the punishment to which these tires have been subjected . . . when you study these pictures and grasp the conditions they have faced . . . the record is a remarkable one. For what owner of any car would not be satisfied with similar service?

But the most important point of all is this: These tires are every one stock tires. Standard casings in every respect, just like your nearest Goodrich dealer has to offer. They receive no care you cannot give them yourself . . .

By all means, see the Fleet, if it has not passed your section of the country.

In the meantime, visit your nearest Goodrich dealer. Surely, you need no further proof of the greater value, the superior mile-for-mile economy of Goodrich Silvertowns. The B. F. Goodrich Rubber Company, Est. 1870, Akron, Ohio. Pacific Goodrich Rubber Company., Los Angeles, Calif. In Canada: Canadian Goodrich Company, Kitchener, Ont.

CLOSE CALL, THIS! The camera caught this tire in a tight place, but no damage was done. Such incidents and roads like those in the picture at the right have been common occurrences on the Silver Fleet's tour.

Goodrich Silvertowns

What to Do at Your Age to Protect Your Health

(*Continued from page 53*)

great deal of outdoor exercise. Then it is just as if they say to themselves, "No time to play any more; I've got to get right down to brass tacks and make my fortune." This attitude is often the result of marriage or the arrival of the first baby. It is a big mistake. It is far wiser to delay the fortune-making for a few years and for both men and women to make it their duty to get regular outdoor exercise. Everybody who is able to do so should indulge in more or less fairly strenuous physical activity until he is around forty years of age. That's the best method I know of for approaching middle age free from headaches, insomnia, faulty elimination, and high blood pressure. Moreover, this change from an active life to a sedentary one is often productive of heart disturbances.

Another thing I have noticed about "prime of lifers" is a tendency to avoid periodical visits to the doctor and the dentist. The truth is, they are feeling so fit that illness isn't in their minds. That's fine, but what they *should* have in their minds is *prevention*.

Tonsils, for instance, which have not been bad enough to remove during youth, are carried over into this robust period of life without any thought except to be recognized as the reason for a sore throat now and again. But the infection carried into the blood stream through neglected tonsils may be laying the foundation for rheumatism, kidney disorders, and heart disease in middle or later life.

So, although you are feeling so strong and well that a little thing like a sore throat or a temperature doesn't worry you at all, take warning. Here are symptoms crying out aloud. You do not want to be a "sissy" about your health, but there is no need to be foolhardy.

And don't neglect your teeth. Pay your six-monthly visit to the dentist and get ahead of the little microbes which just love to get in their deadly work before you are aware of their existence.

Here are a few more health hints that I wish to pass on to those in the prime of life:

1. Take care of your elimination. Chronic constipation is one of the worst causes of middle-aged misery that I know of.
2. Give yourself a *daily* sweat, even if it is only a moderate one.
3. Drink plenty of water and keep your kidneys in good shape.
4. Don't overeat. For a time you can take care of the extra food that you may tuck away, but sooner or later it will appear in the shape of fat—and no one wants to carry around the excess baggage of fat.

NOW let us talk about *middle age*.

The human nervous system seems to pass through three periods of change and readjustment. The first is the adolescent period. The next takes place around thirty years of age and marks the apex of virility and the highest ascendant point in the prime of life. The third change occurs around the forties—usually the late forties. It marks the termination of middle age and the approach of advancing age.

If there has been failure to control the appetite and to take proper physical exercise during the prime of life, by the time forty is reached obesity will have made its appearance. It may not be very pronounced, but there is a general thickening up around the waistline.

Now, the over-accumulation of fat during middle age results from a number of things—hereditary tendencies, overeating, and under-exercising—and it may also be attributable to the fact that the thyroid gland of the average individual begins then to slow down. The thyroid gland determines the rate at which we burn up fuel in the body, and this is why when you get beyond forty—even if you don't eat any more than you did ten years before and even though you take the same amount of exercise—you will begin to gain in weight.

We don't like to see people under thirty-five under weight. Good flesh in youth and the prime of life is insurance against tuberculosis, but after forty it is better to court a little under-weight tendency than to be obese. In pneumonia, overweight is a tremendous handicap. And from whatever angle you view it, overweight is a decided liability after you reach middle life.

WHEN you reach the age of forty I advise you to have an analysis made of your health. This should include, outside of the ordinary investigations normally made, an analysis of your stomach secretions, an X-ray of every part of the body, including the teeth, a metabolism test, a Wasserman test, and other special tests just to show where you are. If you have picked up anything that you shouldn't during your busy journey through life, this examination will reveal it. Anyway, is is a wonderful thing to have in your possession all the charts, analyses, and diagrams which will be presented to you at the end of the research. They aid your physician in keeping tabs on your general health, and are extremely valuable for use in checking back during the years to come. This thoroughgoing research should be repeated when you are around fifty-five years of age, or at least before you are sixty. One or two such investigations serve to make much more valuable and practical the comparatively simple annual health audits.

At the mid-channel period of life a continued elevation of the blood pressure sometimes suggests that tobacco should be reduced or its use stopped altogether. And if you have been dallying with alcohol in your younger days, you may find it advisable to climb aboard the water wagon. Also, take stock and see whether you are drinking too much coffee and tea—most middle-aged people are.

If you have had typhoid or any other serious infectious diseases in early life, now is the time to watch out for gallstones. In the later forties, too, we must watch for early indications of cancer. While we don't want to worry about cancer, we should know the early indications, such as neglected moles, sore tongues, unusual lumps in the breast, severe and unusual attacks of stomach disorder with sudden loss of weight. Remember that most cancers may be regarded as curable if they are discovered in time and if the proper course is pursued.

It should be needless to add that as we approach fifty there ought to be a slowing down of physical exercise. However, in this connection bear in mind that age is relative. One man of forty-five years may be about that age in his physical tissues, blood vessels, etc. Another man may be only forty, still another may be fifty or fifty-five. Around fifty years of age it is common to find men and women varying as much as ten years in the actual condition of their body structures; consequently, age must be interpreted with some elasticity. For instance, I stop many men from playing tennis when they are forty-five; yet I have a patient of fifty years whom I allow to play tennis moderately. Anyway, I should say that forty-five is a safe age at which to begin the reduction of strenuous physical activities. But what I am saying about tennis and vigorous competitive games does not apply to golf. From the physical standpoint, the mid-channel of life is the ideal golf period. And do not neglect the daily walk.

I am now going to ask many middle-aged people to cure themselves of that disease known as Americanitis, or, in plain words, habitual hurry.

I am appalled by the number of men who die between the ages of forty and fifty just because they have allowed themselves to be driven from morning to night without relaxation or proper rest. If you middle-aged people who have been driving yourselves with a whip don't let up, how can you expect to reach a comfortable old age?

Mobilize your intelligence, reorganize your work, slough off the non-essentials, make up your mind that there will be no night work after forty—evenings must be devoted to diversion and play.

A number of middle-aged men have said to me, with their voices full of pride, "Do you know, Doctor, that I haven't taken a vacation away from my work for the past ten or fifteen years."

If I could only have said what was in my mind when they told me this, I should have replied: "Dolts and idiots, don't you know that you have been doing the most foolish thing, from a health standpoint, that you could possibly do?"

Therefore, if any middle-aged people who read this article have been in the habit of foregoing vacations, let them stop this foolish practice. At this period of life an annual vacation is a *necessity*. And please see that you get it.

NOW just a few words to the middle-aged married folks. This is the time of life when you should begin to watch your step. Your children are grown up, or at any rate are off your hands to a considerable extent; the early married years, which are usually full of struggle and hardship, are over. You have more money and more luxuries. See to it now that you don't begin to drift apart, as so many married people do at this period.

If you have neglected your social life,

HIP! . . . HIP! . . . HIP! . . . four oars must flash in perfect rhythm. If one lags a little —if one isn't as good as the other three—the whole crew is weakened.

Bear that in mind when you buy motor oil. There are four quarts in every gallon—but often they aren't *four of a kind!*

For ordinary refining leaves in every gallon of oil, a quart or more of material that is of little or no value in lubricating an automobile motor—one quart that isn't as good as the other three.

But Quaker State is not refined in the ordinary way. It is *super*-refined—a process that removes the quart of waste that ordinary refining leaves in —a process that makes the four quarts in every gallon of Quaker State *four of a kind!* Four quarts of the finest lubricant that ever went into a motor!

So what you actually get is an *extra* quart in every gallon of Quaker State!

And all four quarts come from 100% pure Pennsylvania Grade Crude Oil—the very finest that nature produces!

© 1929, Q.S.O.R.Co.

35¢ PER QUART

Higher in West, Southwest and Canada

Let your motor show you the difference! Stop at the green and white service station sign. Drain your crankcase and refill with Quaker State. Then drive—with the sweetest lubrication your motor ever had!

Quaker State Oil Refining Co., Oil City, Pa.

Quaker State Specialized Tractor Oils are designed to give every make of tractor a longer life and a merrier one

[THE ORIGINAL CERTIFIED PURE PENNSYLVANIA MOTOR OIL]

because, possibly, you have been enmeshed in business worries and family cares, make an effort to retrieve this error. Middle-aged people need a sane and healthful social intercourse to help them over one of the most trying periods of life.

You wives who have been occupied entirely with your children get out and play with your husbands. As a matter of fact, no wife should allow herself to become so engrossed with her children that she neglects the social and play life of her husband. If the average, restless, high-strung man cannot have diversion around the home and in company with his wife, he is all too likely to seek playmates elsewhere.

THE reason I speak of the period between fifty to sixty-five as *advancing age* is that I think it is hardly fair to the active men and women of that period who are, many of them, doing their best work, to call them *old*. Of course, there may be something personal in this. I'm in this period myself.

Frankly, though, we must admit that we are no longer *young* and we should live accordingly.

After fifty years of age, medical guidance becomes more and more essential to the best health and highest efficiency. We must know where we are weak and where we are strong; where we should soft-pedal and where we can still step on the gas.

One of the most important things, I think, which should come up for consideration after fifty years of age is the daily rest period. Yes, I know there are many of you who will hold up your hands in horror at this suggestion. Nevertheless, I believe it is a wise health measure to adopt the practice of resting about one hour around the middle of the day. You don't have to go to sleep, but, for the sake of your health, don't think, much less speak, about business during this rest hour.

And *never, never* entertain the idea of retiring from business. Let the younger men and women fuss over the details, but carry on with the essentials. Too many men have retired while they were still active both in mind and body, only to fall a prey to imagined ills.

All that I am going to ask you "advancing years" people to do is to modify your activities and allow yourself more time to rest. Also I wish you to have an annual health audit—that is, check up on your blood pressure, on the state of the blood and the kidneys, etc. It is at this time that the question of the more serious anemias arises—that is why I want the condition of your blood carefully watched.

If, when you reach fifty, you have failed to reduce your weight properly, then this matter of weight reduction becomes *imperative*. You simply *must* reduce. Get right down within the limits for your height and age, bearing in mind, of course, that there is a great individual and family difference in weight tendencies. If in doubt about these matters, consult your family physician.

I don't want you to coddle yourself when it comes to the matter of trifling exposure, but do not put yourself into the way of unusual exposure or sudden drafts. Pneumonia is a foe not to be dealt with lightly at this period.

After fifty, your diet should be wisely regulated. Don't abuse your digestive machinery; don't overeat, and don't eat highly seasoned food. If you have been watching your reactions to food for a number of years, you know what foods agree with you and can work out a sensible diet for yourself.

Around this period of life eyeglasses should be re-fitted once a year—under no circumstances should they be allowed to go over two years.

The older we get, the less we sleep, and, with many of us, the less soundly we sleep. But this should not become a source of worry. If we are in fair health, we get the sleep we require. And the noonday's rest that you are taking (or that you are going to take, if you are sensible) will make up for any shortage.

One other thing I should like to advise, if you can possibly manage it. Take two vacations a year, instead of one.

NOW we come to *old age*.

I can only hope, for your spiritual satisfaction, that you have worked out a philosophy of living that will help you to adjust yourself to the fact that you are *old*. I should have warned you around middle life that a philosophy of living is necessary if you want to be a nice old man or woman, welcomed by middle-aged folks and young alike. However, it isn't too late to rectify my omission.

From sixty-five to eighty you have to learn how to capitalize the assets of age and, as far as possible, how to avoid its liabilities and dodge its handicaps.

You must avoid undue exertion, and a new importance should attach to the noonday rest.

Coarser foods should be eliminated from the diet. Remember that at this period of life the entire human system, from the circulation of the blood to the digestion, returns more and more toward the less robust type of childhood. (This second childhood that you hear about does not refer to the mentality, but to the diet.)

Moreover, special care should be observed at this time regarding the kidneys and the heart. And if the blood pressure is above normal, this should receive attention—but not worry. The sicknesses to avoid are pneumonia, kidney trouble, heart failure, and the explosions incident to very high blood pressure.

CONCERNING the period of *advanced age*—eighty and beyond—I can only say that it becomes increasingly necessary to follow the advice I have given for old age.

I firmly believe that seventy-five years should be the *average* length of life of the human species, and that a more intelligent and conscientious observance of the rules of living, as developed by modern science, would speedily enable the race to attain one hundred years as a common experience. As it is, we consider it remarkable if we meet hale and hearty old people around seventy-five and eighty.

I have found that the vast majority of my older patients have no fear of death. As they get nearer and nearer the end of their earthly journey they look upon death as a perfectly natural thing, as a transition sleep between this world and the next.

It has never been my experience to witness a Godless deathbed scene; that is, I have never witnessed a person, old or young, passing out of this life resisting death and fearing the future. There seems to come, especially to old people, a compensating hope in the future and a comforting faith in immortality.

Solutions of July Travel Trails

PRIZES: THE AMERICAN MAGAZINE offers a prize of ten dollars for every original Travel Trail accepted for publication. Send the solution with your trail. Art work not essential. A Travel Trail, to be eligible for the contest, must not be longer than twenty words, including the starting point and destination. Also, it must have the home-town of the contestant as its starting point or destination.

Other suggestions are: Keep all cities and towns of your Travel Trail in the relative positions they occupy on a map. Clue sentence, if included, should carry interesting local facts and contain a few of the words required for traveling the trail.

Strive for an interesting, trail-like design. Limit the letters overlapping between any two words to a number as little in excess of three as possible. This helps to make your trail admit of only one solution. As far as you can, use well-known and appropriate words. You can make your trail sufficiently difficult by traveling from one word to another through unusual three-letter combinations.

Contestants are not limited in number of trails submitted. This month's contest is limited to trips to points of historical interest. Send in yours to "Travel Trail" Editor, The American Magazine, 250 Park Avenue, New York City. Manuscripts not accepted for publication will not be returned.

SOLUTIONS TO JULY TRAILS:

RALEIGH, sealed, trousseau, beautiful, bear, clear, leave, avenge, engaged, age, marriage, grammar, monogram, diamond, monk, ceremony, money, one, sooner, honeymoon, balloon, all, NIAGARA FALLS, carriage, scar, cares, reside, ideal, inside, wins, wing, ring, wedding, owed, showered, shoes, COSHOCTON.

WEST POINT, best, establish, able, enable, arena, renown, nowhere, serenade, ade, cadets, scad, scan, cannon, ANNAPOLIS.

DAYTON, Monday, RICHMOND, tartaric, tar, starter, TERRE HAUTE, utensil, silage, age, carriage, vicar, CHICAGO.

ELDORA, orator, tore, creator, acre, across, crossroad, crow, row, morrow, more, ore, sore, sordid, didactic, (*R.* crossroad, roach, ache, niche, nice, rice, brick, tick, didactic), act, react, reap, MINNEAPOLIS.

SOUTHAMPTON'S SPARKLING SANDS ...LONG ISLAND...WHERE ONE MEETS THOSE WHO KNOW FINE CARS

IT IS interesting—and significant—that Studebaker's great straight eights and sixes, motor cars quite low in cost, should enjoy such notable popularity among fashionable Southampton habitues. Here, as at every play-place of Americans of means and discernment, these champion cars rival the costliest—not alone in numbers, but in the enthusiastic partisanship voiced by their owners. As for the way Studebaker Champions acquit themselves in friendly, informal brushes of speed, judge results by the fact that Studebaker holds, undisputed, *every* official stock car speed and endurance record ...and sells more eight cylinder cars than any other maker in the world. Illustrated is the Commander Regal Roadster for four, available with either straight eight or six cylinder power.

WHY FAMOUS MEN OF THE DAY USE BARBASOL

"It gives an errorless shave and hits 1,000 in smoothness, comfort, speed"

"If I had to brush, lather, rub and stand the nicks and pulls that were a part of old-fashioned shaving methods, I would grow a beard. But thanks to Barbasol I don't have to. This modern shaving cream makes a hit with me every morning. It gives such an easy, cool, soothing, comfortable shave."

George H "Babe" Ruth

GEORGE HERMAN RUTH, "THE BABE." Baseball's most colorful player, idol of the American boy and without doubt the most popular ballplayer of all time. He fields and hits homers for the Yankees.

SEND your shaving brush and mug back to the minors for their useful days are over. Modern times bring you a modern shaving cream that gives a remarkable performance without these props. It's the success of shaving creams and the shaving cream of successes.

You ask for Barbasol. And with it you get a shave that's cool when you're hot, soothing to the nerves and skin, reviving as a barber's massage and fast and clean enough to satisfy the fastidious man who has too few idle minutes.

Without making a mess of things or leaving your face a mass of nicks and cuts, Barbasol will give you the most joyful, smoothest, quickest and most comfortable shave you've ever had.

Here's how it's done:
1: Wash your face, leave it wet . . . 2: Spread on Barbasol, don't rub. It's the frictionless cream . . . 3: Shave! Up and down and around the chin the razor speeds over the face. Smoothly, quickly, evenly. Without pull or scratch, the whiskers, the toughest whiskers, are hewn at the skin line . . . 4: Then dry the face with a towel.

Take a look at yourself. Your face looks as it feels—clean, refreshed and youthfully alive. And it will look that way all day. For while being the modern vehicle for shaving, Barbasol also pampers the skin. It is healing and soothing. It contains rare vegetable oils that help to revitalize the skin, keep it clear, clean and young looking.

Barbasol

For Modern Shaving

No brushing—No lathering—No rubbing

KEEPS THE SKIN youthful, bright and keenly fresh looking. That's why men like this New Barbasol Skin Freshener. It cools, revives, freshens. Douse it on the face — after shaving — whenever tired. Nothing better . . . you'll agree!

Part with the uncomfortable past, today, and welcome the future. Step up to the nearest drug counter and get a giant tube of Barbasol. Two sizes, 35¢ and 65¢. The Barbasol Company, Indianapolis, Ind.

It's Great for Sunburn

To discover the healing, soothing, properties in Barbasol, rub it on sunburned skin. Relief from pain comes almost instantly. The skin loses its redness and soon recovers its normal temperature. Then sunburn changes to a healthy tan.

Boy-about-Town

(*Continued from page 33*)

chauffeur sitting out in front of her party.

Getting back to the main issue, the scion of the House of Hardwick was being educated (if at all) at Valley Hall.

"Oh, really!" cried Hattie, trying to look as if she had heard of that famous school.

"That must be a pretty hot school, all right," said Geraldine.

"I'll say so," exclaimed Junior, and sure enough he did. It was the costliest school now going on, and some of the nation's most important boys went there. But young Hardwick, though a student at this exclusive school, was anything but bookish. In fact, he told how he had outwitted the fiends in human form who tried to insert knowledge into his head. Harriette nodded sympathetically, for she, too, hated to have her cultural yearnings cramped by school-teachers.

V. H. was strictly a boys' school, but a person of talent got feminine society. Junior often went downtown and trampled on the hearts of a movie cashier, a candy salesgirl, and a waitress in Schemmel's restaurant. All these ladies, it seemed, were pretty hot, all right.

"Do you play football and everything?" asked Gerry.

No, Junior was not an athlete, owing to the fact that he was far from strong. This brought him up to the very climax of his life story.

He was the hero of a five-hundred-dollar operation at Mercy Hospital, not counting the fifty smackers a week for the private room. The hot nurses, too, had fallen victims to his charms and bootlegged him illegal pie and cake.

"That's a pretty hot suit of clothes all right," ventured Tillie, taking a pinch of sleeve.

"Bailey's."

"Who's he?" asked ignorant Tillie.

It was explained that all his clothes came from Bailey's, outfitters to the youngest set. Didn't the boys here buy their clothes at Bailey's? All the V. H. fellows did. The number of smackers Junior cost the pater for suitings and neckwear was nobody's business. Apparently he was Bailey's most visible means of support.

A GRACIOUS guest was Junior Hardwick, and the democratic way he gobbled Mrs. McIntyre's simple refreshments was most flattering.

But the inevitable hour came when Joe honked for the young master. Junior consulted fifty-three dollars' worth of wrist watch, and said it was time to meet the pater's train. Arrangements were concluded for the morrow.

"I'll stop here for Geraldine and she can show me where everybody else lives."

"All righty," said Gerry.

According to the constitution and bywords in Harriette's head, the president, not the secretary, was the official guide of Pequot, but she did not raise the issue.

That night she shared with her humble but respectable parents the good news about Lawrence Hardwick, 2d—his hot school, his operation, and his high cost of upkeep. Mother was pleased that high society had come into Hattie's life so early, but poor Pater could not get this boy through his head. In fact, he lost his mental balance and said: "It's far kinder to drown them before their eyes are open!"

On the following afternoon a gleaming limousine full of beauty and chivalry and Joe stopped before the Deale home. Did the host poke his head out and yell: "Hoo! hoo! Hattie!" in a crude Pequotish way? Not at all. He came up to the house, met Mother with etiquette, and protected the presidential elbow from rough characters on the trip to the car. The rough characters were the same old boy and dog. Jim-Jams made no attempt to conceal his disgust at the horrible sight he saw, and as the car moved off he dropped in a dead faint and almost fell on Admiral. Her neighbor's agony made Harriette very, very happy.

AT THE movie the genial host planted himself in the geographical center of his garden of girls and nourished all with chocolates. Dottie Darling, the patron saint of the order, was lovely, though curling up with no improving books. Before returning the girls to their simple homes, Junior took all hands to the Red Cross Drug Store, where he threw off all restraint and ordered a round of maple, walnut, caramel sundaes. The day's orgy jolted the Hardwick fortune two smackers and forty cents, but he made light of this matter.

"There's more where this comes from," said Junior.

Three inches of this theater party appeared in the next issue of The Pequoter, and all names were frankly mentioned. For the first time the Junior Culture Circle landed on the front page!

The ensuing scandal was delightful. Harriette had meetings with Jim-Jams, with Allan Landsford, and with Click Smedlay, and delicious insults were served. Elders took a hand in the whispering campaign and Junior Hardwick became a public question. Sam Deale got a cheap reputation as the leading wit of the 8:13 by saying, "Give me a kid who is popular with girls and unpopular with boys and you will give me a pain in the neck."

In our particular republic people are always saying: "What this country needs—" but the *local* issue, that summer, was "What Junior needs." Authorities differed widely. His mother, an able woman, but blinded by prejudice, felt that he needed feminine society. Junior himself believed that his greatest need was maple, walnut, caramel sundaes. Mr. Deale spoke in favor of a hair-cut. Mr. Smedlay advocated a diet. Mr. Jameson prescribed hard labor. His son Jim-Jams said: "What that sissy needs is a good sock in the jaw." At least everybody agreed that Junior needed *something*.

The news of the five-hundred-dollar operation had reached the lower classes.

"When *I* get through with him," said Jim-Jams, "it'll cost seven hundred and fifty to fix him up!" Click offered to do a thousand dollars' worth of atrocity without service charge. Junior's habit of going bareheaded did not puzzle Breckinridge Jones. "They's no hat made that's big enough for that swell head," said Breck.

On the Wednesday afternoon following the theater party Harriette's opinion of herself moved to a new high level for all time. On that day of glory, while she sat on the porch doing little or nothing, the Hardwick chariot again stopped before the humble house of Deale. Junior came up the walk fair as a star when only one is shining in the front yard. Lawrence Hardwick, the Younger, was shattering another juvenile precedent; he was making an afternoon call!

Harriette hastily curled up with a book kept for that purpose, then etiquettishly gave her guest a chair. Like everybody else, she knew what Junior needed. He needed to be read to.

"Listen to this," she said. "I think this is prackly the most beautiful poem there is."

"All right. Shoot," said the brave lad.

This gem was mercifully brief and she was pronounced a pretty hot reader.

"Looky here, Harriette." Junior shook the silken locks out of his eyes. "Why don't you let me join the club and improve my mind and everything?"

"I never took in any boys," the founder replied. "They are so ignoramious and hard to culture."

The candidate made glowing promises. His mater would throw the hottest party yet thrown. They had a five-hundred-dollar radio and lots of ginger ale. There would be a giddy whirl of pleasure all summer. Finally he laid the limousine and Joe at her feet, which she would no longer need for walking purposes. The Junior Culture Circle would go joy-riding constantly.

IT WAS a heavy temptation for an eighty-three-pound girl to resist.

"The constitution and bywords," she admitted, "don't say boys *can't* belong."

"I didn't know you had any constitution and bywords."

"They're not wroten down yet. I been so busy."

"Sure, it would be all right to take in *one* boy. I thought up a yell for us."

"What is it?"

"If I can belong—"

"All right, you can belong." Thus, casually, the Junior Culture Club became co-educational.

Out of his academic knowledge, Junior had produced this yell:

Oh, Gee!
Who are we?
We are the people of the J. C. C.

The president agreed that this was a lovely yell for culture lovers to holler as they lolled around town in their twelve-thousand-smacker limousine.

As already noted, Junior was a fast worker, and two days later the hot party was thrown. At three on Friday, Lawrence the Second, draped in one of Bailey's new-

Digitized by Google

Original from UNIVERSITY OF IOWA

est creations, bore his bouquet of Pequot beauties to Hardwick Hall, vulgarly known as the Doc Reynolds place.

As they neared the scene of revelry, a delightful incident occurred. Jim-Jams and some other ruffraffs and hoodlumps were holding a slight ball game in the street. Joe honked these nuisances out of the way, and the younger social set gave them the knowledge yell. Hearty jeers were exchanged between the upper and lower classes, and the jeer leader went so far as to stick his head out and cry: "You hicks oughta get run over!"—an observation which was destined to have historical value.

THIS may now be set down as a profound truth: When Junior comes in at the door, culture flies out of the window. There was no higher life at this party, only restreation. There was laughter, guzzling, and dancing, but no exercise for intellecks. Ginger ale, girl, and song were Junior's dish.

If he had been etiquettish enough to shower attentions upon the president, much might have been forgiven him. But he did not know how to act. He danced shamelessly four times with Gerry McIntyre, and once with each of the other guests, but not at all with the Founder. Geraldine was happy and gay in a new frock and an amateurish dab of rouge. Tillie Rickhill's fat little nose crinkled at the smell of impending cocoa. Junior told everybody in confidence that the collation was to include four-color ice cream and paper hats.

"Before we eat we ought to have a meeting of the club," said the host, "to elect me a member and everything."

Glad to get back into her proper place in the public eye, Harriette fell into this trap and called the Junior Culture Circle to order.

"I elect Junior a member," said Geraldine.

"So do I!" cried Tillie Rickhill. The Greek chorus echoed this sentiment.

"You are unaminously taken in," announced President Harriette.

"Now we got to elect officers," proposed the new member. "I cannydate myself for pres'dent. The pres'dent ought to be a boy. A girl is not so hot for pres'dent."

Harriette protested bitterly that this was against the constitution and bywords.

"Show me the constitution and bywords," said the cannydate.

"They're not wroten down yet but—"

"You're a heck of a pres'dent!" Junior now recommended himself cordially for the job, appealing to the lower sides of these girls' natures. He had a car and lots of spending smackers; under his administration life would be rich with maple, walnut, caramel sundaes. "All in favor I should be pres'dent say 'aye.'"

Harriette shouted an emphatic "No," but what was she against so many?

The usurper instantly changed the name of the society to the Junior Pleasure Club. "All that poetry and stuff," he said in part, "is a lotta baloney."

This was more than frail flesh and blood could bear. Hattie's thin veneer of culture dropped off and she talked like a bobbed-haired bandit. "Oderous creature!" she cried. A fat-faced sissy and a swelled-headed ignoramious were other regrettable phrases she used. It is possible that the prince of the House of Hardwick had never been so thoroughly denounced in all his sheltered life.

"You better be careful how you speak to me, you darn ol'—"

His epithet was lost in assault and battery. The youth had made the error of bringing his hated face too close to outraged maidenhood and what happened to it was a resounding slap. The victim made a defensive grab for his assailant and received a kick on one of his gaudy shins. Harriette now freed herself from his grasp by the primitive device of biting him slightly upon the hand.

Junior pursued her insincerely out over the sunlit lawn, obviously willing to let this little biter go out of his life promptly and forever. But when she reached the sidewalk, and safety, she surprised him by setting up a heart-rending cry for help.

"That's my gang of boys," she exclaimed. "They'll be simply furious at how you treated me. They'll bust up your rotten old party."

"Yeah—my pater will have you all put in jail." Thus spoke the true son of a famous law firm, but it is a fascinating fact that he returned to the house with great speed. If the deposed president was going to tell her troubles to that gang of pugilists, Junior's place was in the home.

Jim-Jams was the first to reach the scene of the crime.

"What's the idea?" he asked. "Why ain't you at the party?"

The rising young actress pressed her hand against her heart and made noises like a maiden in distress. She waited until the audience had all arrived and then said in a remarkable voice:

"I escaped away. I slapped him and kicked him and bit him and escaped away. He chased me way out here, but you came just in time to save me."

"What'd he do to you?" asked Breckinridge Jones.

"He caused me a great deal of sufferage."

"How?" asked Jim-Jams, who had been trying for years to do that very thing.

The hoodlumps crowded in with looks of relish upon their evil faces. As she had spent the greater portion of her career treating them like poison ivy, something told her that Jim-Jams, Breck Jones, Click, and Al Landsford would do little, if any, party-busting on her behalf.

BUT there was a fifth athlete present, an insignificant splinter of the human race named Lon Brickly. His intellect was not a towering one but he was fated to strut and fret his little hour upon the stage. Lon Brickly was in private life the brother of Genevieve, one of the Greek chorus girls now enjoying life so basely in the horrible Hardwick house. Upon him Harriette now fixed an accusing eye.

"You shouldn't ought to hang around here, Lon. You ought to go home and tell your mother to get Genevieve out of that party before it is too late."

"What's the matter of Genevieve?"

"Oh, my goo'ness; don't stop to argue. There's no time to lose!"

"Go on, Lon, beat it," said Breck Jones.

Thus incited, Lon hurried home to break the news to Mother that some danger, variety unknown, threatened his sister Genevieve. It was not Harriette's fault, as she afterwards pointed out, that Mrs. Brickly telephoned around to all the other mothers and scared everybody half to death.

It is a well-known fact that youth has some occult power of broadcasting good news. This juvenile wireless now spread the word that some sort of atrocity was being held at the palatial Hardwick home. Instantly, other kids began to appear out of the circumambient void and delicious rumors were served. There was one morbid and popular theory that the lovely Geraldine McIntyre was being tortured with horrible agony. It was easy to believe anything of a boy who said that ball players should be run over. Jim-Jams threatened to give Junior Hardwick a sock in the jaw, and others chose various parts of Junior's anatomy to give him socks in.

All this violent talk was sweet music in Harriette's ears. With her talent for self-deception she began to fancy herself a Joan of Arc about to lead an army against the usurper, but suddenly her dreams of glory were shattered by a cry:

"Looky! Here comes two cops. I bet he's goin' to get pinched!"

Simultaneously with the arrival of the police came two worried mothers driving family cars.

An officer of the law walked into the mob scene and laid a hand on Harriette's shoulder.

"You come with me, young woman," he said. "You've got some explainin' to do!"

THIS tangled affair Mrs. Samuel Deale duly unraveled for her husband at their evening meal. These distressed parents could speak freely, because Hattie was not in their midst; she was locked in her room, theoretically repenting of her sins. Samuel finally got it through his uncultured head that his daughter had, in one crowded hour of glorious life, personally bitten an heir, broken up a ball game, ruined a pinochle match in the police station, destroyed the peace of mind of a half dozen assorted mothers, spoiled a children's party, smashed the Junior Pleasure Club to bits, blasted a young man's reputation, and been practically arrested for disorderly conduct and inciting to riot.

"But who telephoned the police?"

"Junior, the girls say. He got scared when he saw all those rough boys."

"That'll help his popularity a lot," said Mr. Deale bitterly.

"It doesn't matter, Sam. They are sending him away to a boys' camp tomorrow. Mrs. Hardwick doesn't seem to think that we are very cultured here." There was a suspicion of a twinkle in Catherine's eye.

Mr. Deale rose to his feet.

"Do you mean to tell me that Hattie drove that boy out of town? I see I'll have to speak to her about that!"

"Yes, but don't be too harsh, Sam. After all, she had some provocation. He took her club away from her."

"That's the sort of attitude," Samuel replied," that causes widespread disrespect for the law!"

Mr. Deale walked firmly up the stairway, unlocked his dangerous daughter's door—and gave her two dollars.

"Now He Swings His Crutch . . . up the road to independence"

"He came to my office in considerable excitement"

Clifford S. Burdge, president of the North Side Bank and Trust Co., Bristol, Conn., tells the story of his advice to a cripple... and what happened

"SEVERAL years ago I was a bank officer in another city," said Mr. Burdge. "I used to buy my paper, every evening, from a newsboy whose stand was just outside the bank door. Angelo, we'll call him.

"Angelo is a cripple—the result of injuries received when just a child. One day, Angelo came into the bank, and to my desk, in considerable perplexity.

"He wanted to know what to do. He had saved up a thousand dollars, and he was being 'pestered to death' to put all the money he had into a 'marvelous opportunity' that would 'double his money' in a few months.

"I knew how Angelo must have worked to save that thousand. I told him why he simply could not expect safety if he put his money into anything so highly speculative. I showed him why, in his circumstances, he ought to put safety before every other consideration.

"Finally, Angelo decided to safeguard his $1000 by putting it into a thoroughly high grade security. Since that time, Angelo has saved and invested steadily; not only has he still got his thousand, but he has already saved two or three more, and is safely launched on an investing career. Angelo now swings his crutch up the road to independence."

✣ ✣ ✣

In an era of skyrocketing prices and widespread speculation, the mature and sober judgment of the banker can exert a tremendous influence on the safeguarding of the investment of literally millions of investors. Safety as the cardinal principle of investment was never so important. An average investor can do nothing wiser than go to his banker, or a high grade investment banker, before he decides what to buy.

Good yield, of course, is a highly important consideration, although a high per cent should never be permitted to outweigh the most rigid safeguarding of principal. For any investor who has several thousands to invest, the question of diversification enters—how to spread his investment over different types of securities.

Bankers throughout the country, in widely separated communities, choose from among Straus offerings, both for recommendation to their depositors and for their bank reserves. Among such bonds are seasoned securities from many different investment fields—railroad, municipal, industrial, real estate, public utility, and foreign bonds. From among bonds offered by S. W. Straus & Co., many thousands of investors have filled all their needs for twenty years and more.

As a help to all who are interested in studying the principles of sound investment, S. W. Straus & Co. has prepared an interesting, easy-to-understand booklet, "How to Invest Money." Every person seriously concerned in safeguarding his future should own a copy of this booklet. It will be sent without charge. Write for Booklet H-1021 or fill in the coupon below.

Clifford S. Burdge, president of the North Side Bank and Trust Co., Bristol, Conn., formerly bank examiner for the State of Connecticut, is actively interested in the rapid industrial and commercial development of the prosperous district centering around Bristol.

Farm Trade Tips

Volume 1 — *Business Building Ideas for Rural Retailers* — Number 4

ELEVEN SALES "TIPS" THAT WILL SELL FOR YOU, TOO

Red Rooster

Mount Joy, Pa., and the surrounding country woke up one morning and found tacked on telephone poles a 5" by 8" card printed in red, saying, "WATCH FOR THE"—and underneath was a picture of a big red rooster. For two weeks people wondered. More of the mysterious cards appeared in town and out along country roads. Then came a newspaper announcement by Eshleman Bros. that the following Saturday a hungry Rhode Island Red rooster would appear in their window to be fed—and that the person guessing nearest to the number of grains of corn he would eat that day would win a prize. Clyde Eshleman says they had more farm trade in the store at one time that Saturday than ever before. Guesses ranged from 24 to 1630. The rooster "guessed" 230.

PROFIT FROM NATIONAL ADVERTISING

Picture Contest

An amateur picture-taking contest for farmers put on by a group of merchants in an Illinois town not only increased sales of cameras and films, but also led to large aggregate purchases of paint, cement, shrubs, yard and garden furniture, fencing, lawn mowers, and many other items of merchandise, says L. B. Lyons, Washington, Ill. The contest began April 1st and closed October 1st. Prizes of cash and merchandise were offered. Only farmers were eligible. The pictures of farm homes and their surroundings were all of the "before-and-after" type—illustrating how appearances could be improved with little expense. The whole community, as well as the merchants, benefited.

Picks His Trades

Earl O. Pursley, successful Tennessee car dealer, gets quick turnover on used cars that are traded in to him—because he actually selects them before they are traded. In *Motor* he tells how he always keeps on the lookout for the type of cars that are most in demand by used-car buyers. He takes their license numbers, checks up on their ownership, makes out prospect cards, and sends his salesmen around. He averages one new-car sale for every ten such prospects!

Murray "Farms" On Main Street

Robert J. Murray, successful hardware and implement dealer of Honesdale, Pa., believes in action displays to sell farm machinery. His implement department is equipped with motor driven line shafting, and on a moment's notice he can throw a switch and start the grindstone, saw, or mowing machine working. The above picture shows one of his spectacular demonstrations. With the silo built on the sidewalk right in front of the store, a power unit and blower make it a better "show" by blowing the corn out over the roof three stories above ground. Farmers for fifty miles around attend Murray's demonstrations.

STOCK NATIONALLY KNOWN LINES

"Surprise" Sampling

A. W. Burnquist, general merchant of Waubeka, Wis., wanted to introduce his store and merchandise to new farm customers. So he wrote to manufacturers and asked for quantities of nationally advertised samples, telling them of his plan. They were glad to help. When the samples arrived he arranged them in individual assortments and packed each assortment in a neat shopping bag with customer's name attached. Then he sent out postcards to customers announcing the following Saturday would be Surprise-Package Day—and would they call for the interesting package that was waiting for them? *They came!*

Selling Fertilizer

Orin McClendon, Lanett, Ala., tells how his store increased its fertilizer sales. On a large vacant lot next to the store two plots of cotton were planted last year. Fertilizer was applied to one plot and compost to the other. Signs were put up and each Saturday farmers coming in to trade noted the progress of growth in the two plots. At the end of the season the cotton was picked and weighed in the presence of a group of farmers. The plot on which fertilizer was used produced 45 per cent more cotton—an increase that more than twice paid for the fertilizer. The store's fertilizer sales increased 50 per cent this year.

SELL THE TRADEMARKED BRANDS

Trademark Contest

W. J. Dunmire of Latrobe, Pa., tells of a "Trademark Contest" idea that increased business in the store he works in. Fifty nationally advertised trademarks (labels from packages, cans and boxes) were mounted on cardboard and numbered, and slightly disfigured to make identification somewhat difficult. They were then displayed in the window, and two $10 prizes were offered—a woman's prize and a man's prize—for the largest number of trademarks correctly identified, accompanied by the best letter telling the store how it could improve its sales service to its customers. This contest stirred up a lot of interest and resulted in increased sales in all lines.

Stork List

A woman pharmacist in Ohio keeps a mailing list of babies up to three years of age, checking it weekly for new arrivals. To the mothers she suggests baby equipment and prescription items of seasonable interest. In case of a death an appropriate card is sent.

"It"

F. Demers, successful grocer of Saco, Maine, arouses customers' *curiosity* over a special article he offers each week. As customers enter his store a large sign on the door questions "Have you seen IT?" On the wrapping counter beside the scale is another sign with one word "IT" printed on it, and under this sign is the special which is being introduced. The special is changed from week to week.

—*Progressive Grocer.*

TIE UP WITH NATIONAL ADVERTISING

Weekly Phone Ad

At exactly 7 o'clock every Friday evening every telephone in Des Moines, N. M., and in the surrounding country, rings. The Palace drug store is on the wire with a 3-minute broadcast of Saturday specials which go on sale the following day. The town has no newspaper and this novel method of advertising was resorted to through the cooperation of the local telephone company. The cost is reasonable and sales results have been excellent.

—*H. Davis, Des Moines, N. M.*

PUSH NATIONALLY ADVERTISED GOODS

Getting Ads Read

A Pennsylvania hardware dealer pays $3 in trade each week to get his newspaper advertisements read more widely throughout the county. In each of his three ads each week he inserts the following—*"If Mrs. B——k of R.F.D. No. 1 will call at the store within one week we will give her one dollar in merchandise, FREE."*

$10 for Your Tip

We pay $10 apiece for acceptable farm trade tips. This is not a contest. Send in as many tips as you wish. We may use them all. You don't have to be an experienced writer. It's the idea that counts. The only requirement is that the tip must have brought in more farm trade or sold more goods. Give complete details.

Send your idea to *Farm & Fireside*, Dept. A-4, 250 Park Ave., New York City.

The Newest and Most Fascinating of All Word Games

Travel Trails

By Arthur Ebenhack and Loren Stout

Take Pleasant Trips Via Travel Trails

When shall we seven meet again?

Clue Paragraph:

A maestro, a centurion, a dandy, a pioneer, one troubadour, and two other travel trailers rode from their several abodes. With a tiny can and a fine dish, they crossed an eerie bayou. Try to find the tryst of these seven. The word upon which they meet (indicated by arrow) *is very appropriate and less redundant than tournament.*

Six More Prize-Winning Home-Town Trails

Follow them this time without clue sentences

PATENT APPLIED FOR

See page 108 for solutions of the July Travel Trails and announcement concerning future trails.

IRMA M. JOHNSON
LENEXA, KAS

HOW TO FOLLOW A TRAVEL TRAIL

Each word must have exactly the same number of letters as the spaces allotted, and each word must have three consecutive letters that travel straight down (or up) through the same three letters in the word below (or above); and the word before the destination must also have three consecutive letters that travel into the same three letters of the destination, as illustrated by this sample trail solved for you.

The clue sentence with each trail contains a few of the words which can be used as legs of the journey. Proper names are not allowed in solving a trail, unless included in its clue sentence. A word cannot be used twice in the same trail. The solutions of the trails on this page will be published in next month's issue of The American Magazine.

UNIVERSITY OF IOWA

...in a cigarette it's TASTE!

WHEN it comes to taste, the really fine cigarette begins where the average cigarette leaves off. Something more than ordinary tobaccos and routine care are needed to produce the aroma and character that are Chesterfield's own.

* * *

Not ordinary tobaccos, but tobaccos *chosen*, one by one, in all the leaf markets of the world, for flavor, richness, mildness . . . tobaccos matured and mellowed by *ageing*, in Nature's perfect way.

* * *

Not routine care, but tobaccos blended to scientific *balance*, to bring out the finer qualities that *make* a cigarette—and "cross-blended," the Chesterfield way, to round out and perfect the delicious flavor.

* * *

Chesterfield is much more than "something to smoke," just because each step is governed by taste, *above everything*. And long experience has taught us—and Chesterfield smokers as well—that a really fine cigarette can be made by no other rule.

TASTE *above everything*

Now Your Morning Shave Can Last Longer

You can stay clean-shaven all day because of closer shaving made possible by small-bubble lather.

THERE is a satisfaction when, in the evening, you realize that your morning shave is lasting. This six o'clock satisfaction means you've had a really close shave in the morning. That means a properly moistened beard, and Colgate's guarantees that. Small bubbles—that's the Colgate secret of such efficiency. Small bubbles get down to the base of the beard and moisten it more thoroughly than big, air-filled bubbles.

Two vital facts—easily proved

The minute you lather up with Colgate's, two things happen: 1. The soap in the lather breaks up the oil film that covers each hair. 2. Billions of tiny, moisture-laden bubbles seep down through your beard . . . crowd around each whisker . . . soak it soft with water.

Instantly your beard gets moist . . . . easier to cut and pliable . . . . scientifically softened right down at the base . . . . then your razor can do its best work.

Better grooming—the utmost in shaving comfort. A world of critical men, after various experiments with big-bubble lathers, have found that Colgate's is supreme. You, too, will agree. Let us help you in deciding—note our offer below.

ORDINARY LATHER

Ordinary, big-bubble lather (greatly magnified). Note air-filled bubbles which can't soften the beard efficiently. Only water can do the job. Only small bubbles permit sufficient water.

COLGATE LATHER

Colgate's lather (greatly magnified) showing moisture contact with beard and minimum air. A common-sense principle scientifically authenticated and proved out practically by millions of men.

COLGATE, Dept. B-1714, 595 Fifth Ave., New York.

Dark Happiness

(*Continued from page 43*)

pot-bellied stove, scroll-backed sofa, spired cottage organ—demanded too much floor-space; an assortment of rockers, whatnots, anemic corner-chairs, demanded not enough. At some time or other, the windows had held curtains—muslin curtains—but only naked rods now showed against white shades. John ran up these shades and pried up the sashes. He opened brittle blinds. . . .

Between the dining-room door by which they had entered and the room's south-west corner, stood two pine sawhorses some five feet apart—carpenters' saw horses apparently—incongruous amid the other furnishings. John's eye fell on them as he stepped toward the table.

"Funny, the many times this room has been swept, those ghastly things haven't been lugged out."

"What are they?" Irene asked.

"Caleb Cravenside's coffin rested on them. They've scarcely been touched since the day of his funeral."

HE SHOT the bolts on the big front door, opened it finally, bore the "horses" outside. Voices sounded from the road. He did not come back.

Blind Jessie Barnes sank down on the sofa. Gathering her loosened hair together, picking out some haystalks, she knotted it skillfully with pins she had covered.

"How long has your eyesight troubled you?" Irene asked curiously. She was strangely vexed at John Forsythe's delay.

"I've been blind ever since I had my scarlet fever, the last year of the war."

"Totally blind?"

"I can tell when the sun's shining; that's about all."

"But how do you get about—up here tonight for instance?"

"I can't tell you how I do it. I know my way 'round; I see it in my mind, if you know what I mean. I don't suppose you do, though. You can't have eyes to do it—eyes with natural eyesight. Just closing good eyes, that's not enough."

Jessie's voice could not be ter masculine, yet it had a lumber throaty precision—each word spoken a certain positiveness—as characteristic that Lincolnesque mouth.

"I guess those men have arrived hear Mr. Forsythe talking to someon

"Yes, that's Enoch Baldwin. deputy sheriff for the county and on the strongest pillars of the church. doesn't like John Forsythe. John r Darwin and Huxley and—Sir O Lodge—"

"How do you know about Sir O Lodge?"

"Please don't make the mistake o of city folks—thinking that just bec we're country folks up here in the m tains o' Vermont, we never read boo

"You can—distinguish those voices

"You depend on your ears awful when you're blind. I often tell folks to lose my sight to find it. Not that always get what I mean. My gra . . . I hear Sammie! . . ."

"Sammie?"

"Sammie LaFlemme. They cal

THE NEW

WILLYS-KNIGHT GREAT SIX

The most distinctive and most luxurious Willys-Knight ever designed

The new Willys-Knight Great Six is the most beautiful and most luxurious automobile that Willys-Overland's designers have ever created. No other car of the time so completely expresses supreme mastery of modern style.

Such graceful sweep of line, such perfection of symmetry, such rich harmony of color, such tasteful elegance of finish—all combine in a distinguished ensemble that testifies to the achievement of new ideals in motor car design.

In engineering as in artistry, the new Willys-Knight Great Six is advanced to a degree which few of the most costly automobiles ever attain. The *patented* Willys-Knight double sleeve-valve engine reaches its highest development—faster, more powerful and more efficient than ever before.

Motorists Wise

SIMONIZ

TRADE MARK REG U.S.A.

MAKES THE FINISH LAST LONGER

Keeps Dust from Scratching

SIMONIZ YOUR CAR . . . hundreds of thousands of motorists who really know will tell you it is the modern way to keep cars looking new and beautiful.

The hard dustproof protection only Simoniz provides guards the finish from injury, makes it last longer and keeps the colors from fading. And, after your car is Simonized, it is easily kept looking clean and bright, for dust and dirt can be wiped off without scratching or marring the finish.

There is a surprise in store for you when you see how quickly and easily Simoniz Kleener restores the lustre. Then Simoniz provides that brilliant surface of protection, which is the real secret of motor car beauty.

Insist on Simoniz and Simoniz Kleener —the leading hardware and auto accessory stores carry them.

THE SIMONIZ COMPANY, Chicago, U. S. A.

Easily Applied *With a Cloth*

'Hives' hereabouts 'cos he's foolish and nervous and scratches himself when nothing's biting him. His father shot his mother, and was hung down to Windsor. I took the boy rather than have him abused at the Poor Farm. But he ought to be home ending up his chores."

"You have a farm of some kind?"

"Oh—I've got a house and a barn and land. But after Ma died I had to sell the stock to get my brother from a scrape. Ashley hit a man and killed him over in Sargent's sugar-house, and it cost me right heavy to see him through the courts."

"Where is he now?"

"We managed to get him only two years for manslaughter. Soon's he got out, he headed for the West."

"You mean you don't know *where* he is?"

"He's not much on writing. I heard from him about three years back when he wrote for fifty dollars to make good a bad check. Sally, my sister, claims he's in Oregon."

"You live with a sister?"

"No, Sally lives in Greenfield. I live with Rhoda Cass. Her father's hired man got her in trouble, and when they kicked her out, she came down to me. Sammie does our chores and sleeps in the shed."

"Is your sister married?"

The blind woman nodded. "—the mother o five youngsters and another due in August. If they didn't need so much I could get me a cow."

"You send money to a sister, yet you can't afford a cow?"

"I raise chickens—and braid rugs. We get along up here in Vermont. It's Sally's big family that keeps me scratching."

"But why are you called upon to help your sister's children?"

"'Cos they'd starve if I didn't. That's a pretty good reason."

Irene's ears were attuned to that distant murmuring of voices. And yet she questioned further:

"Is your sister's husband—dead?"

"No—but Matt got his foot crushed, working as a freight hand. The road made him settle for two hundred dollars. They spent most o' that on Mae's appendicitis —she's their oldest girl. Matt draws eighty a month now, gate man at a mill. He don't have to walk much. It's a blessing he gets that."

"But who helps *you* out when you need it?"

IRENE was startled by Jessie's sudden chuckle.

"I'm not one o' those needing help, Mrs. Cravenside. You might think so, o' course. But that's not my rôle. I've taken care o' myself ever since I was twelve—not only that, but I took care o' Ma. Eighteen years in a mattress grave she spent, 'fore mercifully changing it for one in a cemetery. Pa got sick of a wife who couldn't help him farm. He simply cleared out, and I can't say I blame him."

"But—being blind and—everything—it doesn't sound to me as though you had much—fun!"

Jessie seemed to cogitate. Then once more she chuckled.

"Oh, yes, I have fun. But you wouldn't understand it. I get my fun doin' things for folks—and leaving 'em puzzled as to how they were helped."

What could she mean? But John's step, returning, was heard on the doorstone.

"Well," he announced, "I've got rid of *them*—though they're not at all convinced. The situation's ugly and nightly growing uglier. They're after you, Jessie, as much as after Donald."

"It don't surprise me," the blind girl answered cryptically.

Big John Forsythe swung a chair toward the sofa and seated himself.

"JESSIE," he declared, "you've helped folks in this village, and most of 'em admire you. But along with their esteem goes a dangerous bit of fear. You do a lot of things, Jessie, that some of 'em don't savvy. It's long ceased to puzzle 'em. It's lately got 'em scared."

Jessie plucked her shawl. Her strong mouth relaxed.

"I suppose it's Enoch Baldwin?"

"It's more than Enoch, Jessie. The way you get around this country by night is—uncanny. Hank Curley says you left his place Thursday night and cut directly across the old quarry. Few could do it in daylight without broken necks. Yet Hives says you came home—"

"Nobody'd think it was so wonderful if I picked my way through the quarry by daylight. All of 'em forget it's always night to me.

"That's not the point. Grossly ignorant persons like Hank, or fanatics like Enoch, think you must have gifts not intended for ordinary mortals, and their resentment makes them dangerous. It's really their fright—at what they can't explain. They don't admit that fright. But it's the same sort of unreasoning terror that two hundred years back sent witches to the stake. We don't burn people at the stake today, Jessie, for unusual spiritual gifts. But there's other ways of removing them so the illiterate can be comfortable. You know what happened to Ephraim Waite?"

"Who was *he?*" Irene questioned. She had seated herself also on the sofa.

"He held views like Jessie's on soul survival—that the dead didn't die—that even live people could go out of their bodies, on occasion, and sufficient provocation. Certain fanatics worked till he was committed to Brattleboro Asylum."

Jessie laughed without mirth. . . .

"They pay a preacher to tell 'em about eternal life," she said, "and how the Master died and came back a spell, to prove coming back was possible, yet when someone comes along *who actually believes it*, they lock him away where he can't—well, practice it!"

Forsythe was leaning forward in his chair, with elbows on his knees. He shrugged his burly shoulders.

"You've got to be circumspect, Jessie. You've got to treat with life as you find it—"

"As if I'd been doing aught else, all my born days!"

"The fact remains, Jessie, certain folks are getting jumpy. At you, I mean—a lot of things you do that don't seem natural to them. And I don't refer wholly to your getting about at night."

"Well, what else has this town got against me?"

Digitized by Google Original from UNIVERSITY OF IOWA

"What a difference our SECOND CAR has made to our girls!"

THE MOTHER of three little girls lives on the edge of an Eastern town. Before her marriage she was the leader of a troop of girl scouts. Then for a while the babies claimed all her time, and when she found herself enjoying freedom again, the troop had disintegrated.

"We are too far out to walk to town comfortably, and my husband has to use his car every day," she writes. "Last year on my birthday he bought me a car for my very own.

"I started in right away to assemble another scout troop. Some of the girls live out of town, and I pick them up on the way to the centre. With my own three little ones, I sometimes have a load of ten. It's given me a fine fresh interest, and what a lot it has meant to our girls!"

Two-car ownership is not expensive. In less than ten years the number of families with two or more cars has grown from 300,000 to 3,000,000. The General Motors line provides every combination of cars that any family may require; and the used cars General Motors dealers sell offer *unused transportation* at lowest possible cost.

To buyers of new and used cars alike, General Motors extends the convenient GMAC Payment Plan.

SCHOOL STARTS *next month*

Give them

A BETTER CHANCE *this year!*

HELP them to get better marks in school and give them a greater opportunity to be leaders this year.

Start them this year with Compton's. Then you'll see their interest grow, their grades improve and their sense of leadership develop. Ask any teacher. She will tell you. Famous educators have called Compton's Pictured Encyclopedia "the greatest forward step for children in the history of learning."

COMPTON'S Pictured Encyclopedia for Children

is new and different. It is the only thing of its kind in the world. It is the first complete set of reference books in encyclopedic form that has ever been written and pictured for children in terms of their own interest and understanding.

No wonder children with Compton's make better marks and develop greater leadership in school. No wonder children who are showing the first signs of genius or talent find a wonderful source of information and inspiration in its pages. Just think what this means to your children at the beginning of this new school year.

If you have not yet seen a sample Pictured Section of Compton's, mail this coupon and you'll have a glorious surprise coming to you.

We have arranged for a home delivery of Compton's upon a first payment of as little as $3.50 down, so that it is now within the reach of everyone. Here is the coupon. The samples are free. Mail it now.

Please check the ages of your children so we can send sample pages most interesting to them.

☐ Pre School ☐ Grade School ☐ High School

John studied his hands a long moment, then replied:

"You might as well know—for another thing, they claim it's not human for anyone with no more money than you earn, to open her home to everyone who comes along with a hard-luck story—to take in anything from a sore-eyed kitten to a drunk like Massey Bishop—"

"Massey Bishop had fallen and hurt himself, when his son kicked him out!"

"I know. But ordinary blind women don't do such things. They just don't get your motive. You kept Massey down to your place for four days—"

"I guess Sammie and Rhoda Cass were good enough chaperons. Besides, his back was wrenched."

"That's not the point. Normal people wouldn't do it. They'd let the overseers of the poor do it, or their pastor, or, in the last resort, the sheriff. That's what such authorities are for. I'm sorry to say it, Jessie, but the truth is . . . such behavior is being used against you for proof that you're *cracked!* Now *I* know you're not cracked. But it builds up a sentiment against you—a thing you can't afford."

IT WAS silent in the sitting-room. A light night wind sprang up and stirred some brier fronds beneath a side window. Jessie sat on the sofa in statuesque pose, chin high, characterful fingers plucking at her lap

"What's the point of all this right now?' she asked finally.

"The point," said John, "is this: I want to clean up this Cravenside gossip. For two reasons—yes, *three*. First, Don Cravenside was my friend—who left his family property in my care—who later disappeared under harrowing circumstances—and I want to know what happened as a matter of principle. Second, there's his wife. Mrs. Cravenside here has now lived eight months in the cruel plight of not only being separated from her husband, but not knowing whether he's alive or dead, whether she's married or a widow—"

"*There's things in life worse than death!*"

"What do you mean by that, Jessie Barnes?"

"You wouldn't understand, John Forsythe. But I'm female, I guess, if I haven't got eyes. I know things by—by intuition if you want to call it that. Go on. What's reason number three?"

"Yourself, Jessie. It'd be the most monstrous piece of injustice ever perpetrated in this valley if fanatics like Enoch Baldwin made out a sufficient case against you to have you committed to Brattleboro too. And I don't like their talk. Not to put too fine a point upon it, one of their main indictments against you is—you know the secret of Donald's disappearance—they think they've seen you with him—*or his spirit*—they think he's back up here on this property and that you go about somehow, communing with him nightly. Enoch contends you were seen with him tonight."

"I wasn't, John Forsythe. That I can tell you, straight to your face, and I can't solve this mystery o' Donald's. I know it's a riddle but—I can't explain it."

"You can't—or you won't?"

"You know well enough, John Forsythe, that I've always accepted when the Lord sent me work. Whether it's Don Cravenside, alive or dead, that I'm helping now—or my brother Ashley—or even the man who wronged Rhoda Cass—*or someone you've not heard of*—I admit there's a man's spirit mixed up in all this, tortured about as much as anyone with feelin's could be, and it's not for such as Enoch Baldwin, or Mike Austin, or Hank Curley to say I shan't help. But the 'gifts' that I've got, anyone could have—even Lotusville folks—if they'd be less theological and more religious, less 'natural' and more generous, less ignorant and more filled with human kindness."

"I'm not your inquisitor, Jessie. I'm only trying to make your lot less difficult."

"You're a good sort, John. But you're as puzzled as anyone in town—how I do what I do. Why don't you confess it?"

John Forsythe looked rueful. He said, with some irony, "You seem to forget I'm a civil engineer. It's my job—and temperament—to deal strictly with facts. Displays of phenomena outside of natural law—well, they're a sort of anathema to one of my profession."

"We don't need to go all over that again, John. There was a time when you civil engineers had people jailed for fraud 'cos they tried to sell stock in a contrivance that carried the human voice on a wire—"

"But, Miss Barnes," broke in Irene, "by your own admissions in the yard, you *do* know something. Consider my position."

"I'm doing a chore, Mis' Cravenside, and I simply ask to help. You've heard me say I know something that's not for me to tell, 'bout why Lotusville thinks this hilltop's haunted. Aside from that statement, I've not told you anything—'cept if I was you I'd go back to Philadelphia and let the Lord settle this by circumstance."

JESSIE got to her feet. John stepped before her.

"You can't leave this room, Jessie Barnes, till you've given us a truthful 'yes' or 'no' to one vital question: *Is Mrs. Cravenside's husband, real or phantom, down in the orchard to the east of this house? Did he play that music we heard when we saw you?*"

"John, I'm surprised at you. I thought you were my friend."

"I *am* your friend, Jessie. But developments tonight are more serious than you think."

The blind girl debated. . . .

"Will you let me go out of here peaceably, and on about my business, if I answer your question?"

"I think so. Yes—certainly."

"And you won't try to follow?"

"I'll promise if you wish it."

"All right, you hear me say it: Whoever or whatever made that music in the orchard—whoever or whatever's been the cause o' all this upset—*it's not the person Mrs. Cravenside married!*"

"Then what—or who—?"

"I didn't contract to answer you further. Now you keep your promise and let me get out!"

John stood aside. And Jessie departed. Out through the dining-room she walked with queer directness, through the low-studded kitchen and rose-latticed door. When her feet reached the sod, they heard her no longer; it was eerily quiet all

The above views show the five plants in which Nash Cars are built. These great factories are located at Kenosha, Racine and Milwaukee, Wisconsin

JOHNS-MANVILLE products serve industry and home owners in many ways. J-M Asbestos Shingles protect and beautify the home. J-M Improved Asbestocel helps to keep it warm. J-M Brake Lining makes motoring safer for millions of car owners. J-M Acoustical Treatment conserves the nervous energy and speeds the work of millions in office buildings and industries. Throughout the manufacturing world, J-M Packings, insulations and fireproof materials are famed for economy and conservation of life and property. Look for the "J-M" trade-mark—the hall-mark of quality of an established manufacturing authority.

Fireproof Roofs for Five Great Factories

THE leading motor car builders of this country have established a world-wide reputation for efficiency in every phase of operation. Nash Motors is another of these great industrial establishments to protect its huge investment in buildings with roofs provided by Johns-Manville. The five great factories in which Nash cars are built are roofed with Johns-Manville roofs of three types selected for the purpose from more than twenty distinct types of J-M Roofing.

The Nash Buildings are chiefly covered with Johns-Manville Asbestos Roofs of which 800,000 square feet have been used. This is a smooth top roof, free of gravel or slag surfacing. It is made of many layers of fireproof J-M Asbestos Felt and J-M Asphalt Roofing Cement. The performance of this type of J-M Roof is bonded by the National Surety Company. The length of the guarantee may be 20, 15 or 10 years as desired, depending on the type of J-M Roof selected.

Let an Expert Help you to Choose

There is a J-M Roof for every purpose and every type of construction. The superlative roof is unquestionably the J-M Built-up Asbestos Roof—a fireproof, smooth-topped roof which will withstand every variety of weather. There are also J-M gravel topped roofs for those who prefer this type of roof protection.

Johns-Manville Roof Experts are men trained in the roofing business. A J-M expert is available without cost or obligation to help you in selecting the right roof for your buildings. Since Johns-Manville sells all varieties of roofs the J-M representative is in a position to give you genuinely unbiased advice.

J-M Roofs Applied only by Approved Roofers

Nor does J-M service end with advice. When the right roof has been chosen a Johns-Manville Inspector checks every detail during application, and afterward makes regular inspections throughout the life of the roof. And as far as application is concerned J-M Built-up Roofs are applied only by approved roofing contractors whose ability and reliability plus adherence to our rigid application specifications qualify them for the J-M franchise.

We invite you to use the convenient coupon, or write us for a copy of our new booklet, "Johns-Manville Bonded Built-up Asbestos Roofs."

"Here's the ball I *beat* you with!"

"YES, sir, that Maxpar is a great ball." You hear that everywhere—in locker rooms, in club restaurants, on the course.

No other 75c ball is as long in flight, as true in roll, or as tough and durable as the Maxpar. More and more golfers accept it as the finest 75c ball made in America today—just as the imported Black Dunlop is accepted as the world's best golf ball.

Get a box of Maxpars from your pro. Tee up with one on your next round.

MAXPAR

DUNLOP-MADE

over the hilltop. John's glance met Irene's.

"She lied!" said the latter.

"Then it's the first since I've known her—something like ten or twelve years."

"Mr. Forsythe, the solution to the Cravenside mystery is right here on these premises. My husband is somewhere about this vicinity. I can't tell you how, but I *feel* his presence."

John studied her gravely. Irene went on—

"Jessie spoke of intuition. Well, I may have it too. Within the next twenty-four hours I'm going to learn what became of Donald, how he contrived to vanish in his own locked house, where he's been in the meantime, why he came to Vermont. I might have learned it long before this, if I'd only recalled his family homestead."

"Then you've decided that what you told me down in my study, about cell disintegration, doesn't really hold water?"

"I haven't said that. I haven't said we'll find him . . . alive!"

"But if Jessie's lying, as you seem to think?"

"I'll qualify that, about her lying. Her statement was so ambiguous that it bordered on deception. And that's a form of falsehood. Aside from that, however, my presence up here is forcing the problem into the open. And—I wonder—if I want it—forced into the open?"

John continued thoughtful and uneasy.

"Well," he said at last, "in any case, Jessie's gone home after giving us her word that it wasn't your husband down in the orchard. I'm inclined to believe she wouldn't deal in falsehood. Now, what shall we do next?—go scouting in the night to rout out a ghost?"

"Suppose," said Irene, "we look over the house."

HE PICKED up the lamp. They started inspection of those lugubrious rooms.

Yet Forsythe was thoughtful over what the woman had expressed as he had not been thoughtful in months. His eyes showed it. His preoccupied manner disclosed it. He had fleeting presentiments that he had lived all the years of his life to arrive at this night, this episode, the meeting with this widow who might not be a widow, this bizarre experience that invited a peep behind the Great Curtain of conscious life which might reveal the crux of cosmic vibration.

His own parents had been dead since boyhood. He had brothers and sisters, but they lived elsewhere. They saw no interest in his lonely mode of existence—tramping the Green Mountain trails by day, coming home by night, when he did come home, to a womanless house and the company of his dog. They labeled him eccentric and left him alone.

Women had come and gone in his life, but, considered as a sex, he beheld them as annoyance. Certainly no fine-grained, sophisticated, brainy woman had ever shown interest in his thoughts and pursuits. His vocation tended away from any chance of meeting them—and thus the present contact held romantic significance which Irene could not suspect. The upset grew within him as he led the way into a partially dismantled parlor, back into a bedroom, thence up steep stairs to the chambers above.

Conventional New England bedrooms they were, with low-hung painted bedsteads, gaunt bureaus, old-fashioned commodes, oval portraits of long-dead nobodies hung too high on their walls, mattings underfoot which rats had chewed badly. The bureaus had mirrors that caught the reflection of John's lamp and betokened phantoms they had received in solitude far more unspeakable than the grotesque shadows these two made on the walls. With hearts throttled down, they pulled open the doors of strange closets, half prepared for anything to be disclosed. They looked in eerie storerooms, and in spooky attics over chambers and ell. Nowhere was there evidence that the place had been occupied—except by rodents. Mice-feet showed everywhere.

They went down into a shallow, odorous vegetable cellar—and came up hurriedly when Irene saw the cobwebs. Great labyrinths of them made the place hideous. No need of looking for anything in the basement. Even a phantom would strangle in those networks.

The limousine, with Katrina, the maid, and Jamie, the chauffeur, came purring up the lane as that inspection ended.

"YOU SEE," said John Forsythe, setting down his lamp on the plateau of dining-table, "staying up here tonight, till the ark has been renovated, has its obvious discomforts. You'd better turn back to the Hebron hotel."

Irene laughed grittily.

"No," she decreed. "I came up here expecting discomforts—willing to endure them till this mystery is solved. It's no pleasure excursion for me; not even a visit. I know we haven't seen any signs of poor Donald. Yet my quest ends here—and perhaps before the morning."

"But the place is so dirty—!"

"Katrina can make the chambers habitable, I'm sure. I saw some clean bedding—fold on fold of pure-linen sheets—in a chest upstairs. There's time to air it out between now and midnight."

"You'd stay here alone, with only two servants!"

Irene dropped her eyes. She turned half away—as though examining the sideboard.

"I was hoping," she faltered, "I could persuade you to—to stay up here—with me. You're as interested as I am, aren't you?—to run down this secret?"

The man cast a hot, swift glance at the woman's pretty shoulders. Then, with a boy's attempt at artlessness, he answered:

"Sure. I'd just as soon stay. I didn't know you wanted me."

"Maybe I—maybe I want you—more than—more than you think."

It startled him, that—more than anything that had transpired on that hilltop to the moment. Had she lived so long apart from her husband that she had buried him in memory? Hadn't she loved him properly to start with? Forsythe discovered himself breathing heavily as he opened more windows and let in the night wind.

"Oh, look!" cried Irene. "Over that mountain there! See, the moon is coming up!"

Katrina, the maid, was a stout, phlegmatic Teuton. As though knowing more about such matters than her mistress, glad to get in action after cramped hours of motoring, she promptly sheathed herself

MASTER SEVEN-YEARS-OLD travels 2600 MILES Alone

Master Barton Huber, age seven years, inspects a bit of scenery somewhere along the 2600 miles of Greyhound route he traveled alone

A SHORT time ago it became necessary for a boy of seven years to travel from a west coast city to Chicago, alone. There, twenty-six hundred miles over Sierras, Rockies and plains, a brother awaited him. And his people chose, for the journey, the motor buses of Greyhound Lines, including "Yelloway" System.

With a ten dollar bill, a suitcase too big for him to carry, and a bulletin from the District Traffic Manager to all drivers and agents en route, Master Seven-Years-Old boarded an East-bound bus.

Drivers and agents watched over him, supervised his meals and menu, turned him over to other drivers at transfer points. On time, fresh and hale, he danced from his bus at Chicago into the arms of the brother.

A tiny incident in the routine of a great travel system. But an incident which mirrors public faith that Greyhound men guard zealously over every mile.

Spanning thirty-two states, crossing the continent on three distinct routes, this is the longest transportation system in America. Yet traveling wherever business or pleasure calls, you can count on the character, courtesy and intelligence of men who wear the insignia of Greyhound Lines.

They guard your comfort and safety. They are courteous not only to their own passengers but to the thousands of other motorists they meet.

That is one reason so many millions now travel by Greyhound and "Yelloway" buses.

Fares are the lowest ever offered for dependable overland transportation. All the romance and beauty of the scenic highways are yours. And you go in safety, in the care of competent, responsible people—men with whom a little child can safely cross the country alone.

Full travel information and tickets may be had at your local Greyhound or "Yelloway" station. For interesting circle trip suggestions, write *Motor Transit Management Company, 1157 South Wabash Avenue, Chicago.*

Friendly to your digestion

NEARLY everybody needs a *mild* digestive stimulant after meals. The perfect aid to digestion is Beeman's Pepsin Gum.

Beeman's is mild . . . delicious . . . smooth . . . It's so good, that you'll want to hurry through a meal for the after-dinner stick . . . Buy a whole box today, so you'll always have it the minute you want it.

BEEMAN'S PEPSIN GUM

aids digestion

in aprons—after a blue-eyed, freckle-faced chauffeur had brought in the bags—and dug out pantry brooms as though by clairvoyance.

All the skewed windows were raised throughout the house; the motor was dispatched to the village store for groceries. John Forsythe brought wood and fired the big range. Water soon boiled for tea in a kettle, a globular thing of heavy black iron.

While Katrina was cleaning, a full moon rose higher. A great copper plate, it appeared on the mountain crest; as it climbed up the heavens it changed to cool silver. Jamie, with soot on his nose and a towel around his waist, persuaded Katrina to let him turn chef. Irene and John took a turn about the hilltop.

Her neat tan pumps protected from wet grass by galoshes from her luggage, the woman walked with Forsythe down the frowzy, budding orchard. In and around gnarled tree trunks, past cancerous growths of sickly sweet blackberry banked along walls or twisted rail fences, along the marsh-meadow on the east of the premises, thence around to the south, they explored in white moonshine.

"Look!" cried John suddenly. "See where Jessie went!—the path across the mowing!"

Plain in the night light showed the whitish-silver twisting, winding away toward the wooded southwest.

"What makes it?" Irene whispered nervously.

"The grass has been trodden," Forsythe explained, "and the dew is so heavy that it hasn't straightened back. It probably won't till tomorrow morning's sunshine."

"There seems to be only a single track, doesn't there? She went away alone then."

"On the contrary: two people wouldn't walk in wet grasses abreast."

Whereat they sought the track of any second person joining into the other. They gave it up as hopeless; the grass about the hilltop was too rough and sparse.

By the light of John's flash, they looked into the barn. A cryptlike place it was, moss-hoary with years, its mammoth lofts empty, planks propping its doors. Withal it was sweet with the scent of old hay.

"I HEAR a dog barking somewhere!" Irene exclaimed, as they started through the shed. "It seems to be crazed with excitement over something."

"It's Tripe!" declared Forsythe. "I'd know his bark anywhere—and it's coming from the Hollow—"

"The Hollow?"

"The direction of my house. Come on, let's go out."

They got into the yard. The barkings were plain, far down across the mowing where the lamp-gleam was visible in the window of John's kitchen. On the rear embankment the two paused and listened.

"There's something coming up the mowing!" Irene announced. "It looks like an animal!—yes, it's your dog—he's racing this way."

"Now, who let *him* out? You saw me close the windows and doors."

"Can it be possible somebody's gotten into your house?"

"Anything's possible. I'll go down and find out—and extinguish the light."

"Can't you wait till you've had food? We'll make the trip together."

Few women of such poise, intelligence, and grace had addressed John Forsythe in similar camaraderie. The romantic disturbance was growing within him, compounded of factors he could not define. She did not seem to him like Cravenside's wife. It was a marital paradox, conceiving her as married to the narrow-shouldered, bespectacled fellow who had been old Caleb's son—somewhat finicky of manner, sallow of countenance, concerned about his rubbers, winning prizes in Foxboro Academy for his skill in mathematics. She commanded virility, self-reliance, fearless male leadership. What purblind impulsions had effected their matrimony?

"Come here, Tripe!" the surveyor ordered gruffly. "What have you been up to?"

"See!" cried Irene. "He's got something in his mouth! It looks like a rag—it *is* a rag—"

"Give up, Tripe! Bring it here! Out with it!"

THE Airedale came close, sniffed the turf near its master's boots, pulled back playfully, encircled the pair in canine caprice. Then a little distance off it squatted on all fours and chewed what it carried. Forsythe stalked across.

"You're right," he announced. "It looks like a piece of somebody's shirt. Where have I seen this pattern before? Who's Tripe been—?"

"I know that pattern! The foolish boy at the bridge—he wore such a shirt."

"Hives LaFlemme! Been snoopin' has he?—and Tripe took away a section of his—?"

"Mr. Forsythe!" The woman's fine hand closed down on his wrist. "The foolish boy doesn't mean you any good. you know that, don't you?"

"I've heard so," John laughed. "But how did you know it?"

"He told me, in referring to you the evening, that he meant to kill you some time—if he found a good knife."

"Well, no one will miss me—if he does the job clean."

John couldn't explain just why he said it. Callow it was . . . forcing an issue from sophomoric whimsy.

"No?" Irene asked. "Then you're very unfortunate!"

He hadn't expected her to say it that way—to say it at all—and lift her head quickly. It vexed as it shamed him. It reminded him that, after all, flirtation was crass, that despite their camaraderie a problem intervened.

"Well, I guess Hives didn't loiter with Tripe on his rear. And if you don't mind, I'll have a look down there once."

She suffered him to go a little way before she caught up with him. But no word was exchanged as they went back down the path.

"I deserve it," growled Forsythe. "What did I expect—that she'd burst into tears?"

They gained his rear yard and came between the sheds. The porch door was locked; kitchen windows were in order. The dog raced ahead, out into the road. Up and down it ran, pausing both north and south to bark warningly at distance

4 FORWARD SPEEDS

SILENT THIRD · DOUBLE HIGH

THE SIX-SIXTY-SIX

On hills, where you want fast pick-up after traffic slows you down, it is thrilling to feel the Durant Six-Sixty-Six sweep smoothly ahead of the field in Silent Third. And on the straightaway, Durant Double High provides a time-saving, surplus speed range. There is less gear-shifting, less engine wear and a very appreciable saving in gasoline. One drive will give you a vivid new conception of the advantages of Durant's exclusive 4 forward speeds.

He *thinks* he is speaking Correct English!

Can you find his FIVE mistakes?

IF YOU were introduced to an attractive, prosperous-looking man or woman who constantly made crude mistakes in grammar and pronunciation, what would you think? You could not *help* thinking that this person was sadly lacking in education; you would feel that he, or she, belonged on a lower social level.

And yet, unless you have made the correctness of your own speech a *habit*, you never can be sure that *you* are not unconsciously making errors which may cause others to lower their estimates of *your* education and refinement.

You may not make such glaring errors as *I ain't, you was*, and *between you and I*, but perhaps you commit other mistakes which offend the ears of those who know, and cause them to judge you unfairly.

Perhaps you sometimes use *who* for *whom*, or *would* for *should*. Are you always sure whether to spell words with one or two "c's" or "m's" or "r's" or with "ei" or "ie"? Do you ever say, "I did it already"—or, "He don't mean what he says."

What Can You Do?

For many years Sherwin Cody studied the problem of creating the habit of using good English. After countless experiments, he finally invented a simple method by which you can acquire a better command of the English language in only 15 minutes a day.

Under old methods rules are memorized, but correct habits are not formed. Soon the rules themselves are forgotten. The new Sherwin Cody method provides, on the contrary, for the formation of correct habits by constantly calling attention only to the mistakes you make—and then showing you the right way, so that correct English soon becomes 'second nature." Already over 50,000 people have used this method with the most marked results.

Free Book On English

A new book explaining Mr. Cody's invention is ready. If you are ever embarrassed by mistakes in grammar, spelling, punctuation, pronunciation, or if your vocabulary is limited, this new free book, 'How to Speak and Write Masterly English," will prove a revelation to you. Send the coupon or a letter or postal card for it now. SHERWIN CODY SCHOOL OF ENGLISH, 98 Searle Building, Rochester, N. Y.

Then it slipped beneath the fence and was hidden by the house-front.

"Queer," grunted John. "Tripe got in somehow." The door was unlocked with the key from John's pocket. Both of them entered.

Tripe came trotting through the sitting-room to meet them.

"Something's open in front!" the surveyor exclaimed.

"Yes, the hall door was shut when I sat in that chair. And look!—that picture!—it wasn't on the carpet."

Forsythe's engineering school diploma had come down from its peg. A chair was turned over.

"Someone's been here all right." Forsythe strode across the hall. "So that's how they did it—through this front chamber window."

White curtains billowed in the northeast corner bedroom. A sash was upheld by a piece of broken board.

"Is—anything missing?" Irene asked.

John glanced about. The bedroom seemed normal. He turned toward his study.

"Yes, something's missing—that Turkish scimitar Ned Blaisdell gave me—he brought it from Gallipoli—he was there with the British—"

"That murderous thing!—I remember seeing it. It hung above that shelf—"

"I barred Tripe in the kitchen, didn't I? And he probably leaped till he got the door open."

"Did that foolish boy know you owned such a weapon?"

"Not that I'm aware of."

"Was he ever in this room—to see it?"

John shook his head. "I don't know. But he's always had a queer dislike of me. Especially since I threw him off the homestead property one night because I didn't want him shot at, for a phantom himself."

"Yes, he told me. And now, apparently, he's got the knife he wanted!"

THEY went back up the mowing.

"*Das Schlafzimmer ist bereit,*" Katrina, in the doorway, announced to her mistress. "*Und alles unten ist geschlossen.*"

"All right, Katrina. We'll be in presently," said Irene. But she made no move toward the door. She dropped down on the top step of the porch and gazed off over the moonlit orchard.

"Let's not go in yet," she said.

John sat down beside her.

"Mrs. Cravenside," he said, "may I ask you a question, a personal question?"

"Certainly you may. I told you that before."

"Have you considered the possibility that—well, that there might have been a third party to your husband's disappearance—a person of the feminine—"

"I know what's bothering you. You think perhaps Donald might have gotten himself entangled with a woman I wasn't aware of—and she was the cause of his vanishing so? No, common sense dictates that if another woman had been at the bottom of it, he'd have drawn money from the bank, taken some luggage, and dropped quietly from sight. I often visited a week at a time in New York or Washington. He'd get to the ends of the earth in a week, before I missed him or wondered at his absence. Men running from a woman scrape don't stage their disappearance so that half the police in America are immediately on the lookout. And besides—you knew Don—he wasn't the type."

"Yet Jessie's made some pretty plain hints at something mighty dark. I know her, Mrs. Cravenside. She's had me baffled, dozens of times. But I'm convinced in my heart she's standing between you and some sort of scandal—she's the kind who'd save you from it and never let you know."

"Is she entirely—human—do you think?"

"*Human!* Good Lord! What on earth do you mean?"

"PLEASE don't decide that I'm crazy too . . . but . . . how do we know that all the human beings around us, who appear to be normal and natural physically are . . . precisely like ourselves?"

"But—what on earth *could* they be, if they weren't like ourselves?"

"Well . . . mayn't persons with abnormal powers, such as this Barnes girl seems to have, be entirely different in creation from anything we dream? Haven't you ever had that thought?"

"No!" cried John, amazed. "I'm an engineer. I deal in facts—"

"But facts alter from generation to generation, don't they, Mr. Forsythe? Aren't we continually discovering new truths? All I know is . . . since my husband's disappearance I've been shaken from my ideas and conceptions about life and the universe—I've seen myself like millions of folk everywhere, thinking that all there was to life was the five hun senses and three meals a day—the str gle for survival mitigated by social pleas ures—"

"But this last idea of yours, that Jessie might be . . . supernatural . . ."

"Not *super*-natural. *Supra*-natural. I mean in spirit. After all, how do we know that there are not identities sprinkled all through the world today, *as aware of their celestial natures*, let's say, as I am that I'm Mrs. Donald Cravenside, or as you may be that you're John Forsythe?"

The surveyor laughed incredulously. "You mean, that they know they're angels, though they look to us to be ordinary human beings?"

"I didn't say angels. Yet, after all, what is an angel? I mean entities that have come into physical bodies for the span of a normal human life for some particular earthly service." Irene paused. "Even you must admit it is a very ancient idea that we sometimes entertain angels unaware!"

It was a strange veer to the conversation, in that eerie house, with prolific night still stretching ahead. And Forsythe was affected far more than he conceded.

"Anything, it seems to me, is *possible*." The woman smiled wearily. "My husband may have stumbled on some secret of energy that wrought his own disintegration when he least expected—or he may have awakened to some great cosmic mystery about his own nature—but one thing is certain: All society, and the scientific world, and religious circles, and really sane people everywhere, are suddenly waking up to the fact that there's a great world of activity behind physical life, the surface of whose manifestations we haven't begun to scratch. Certainly, in

Like a Conquering Army THESE BOOKS

have marched triumphant through the centuries

THE libraries of the old world and the new are crammed with volumes, shelf on shelf, which a thousand men in a thousand lifetimes could never find time to read. And millions more volumes have passed forever into oblivion, not even to find shelter in the archives of public libraries.

Yet *these* books have come thundering down through the centuries, influencing, teaching and delighting mankind with their indomitable power. They are as new and invigorating as when their immortal authors instilled in them the breath of eternal life.

Emerson once said: "Would that some charitable soul, after losing a great deal of time among the false books, and alighting upon the few true ones which made him happy and wise, would name those which have been bridges or ships to carry him over the dark morasses and barren oceans, into sacred cities, into palaces and temples."

It was one of the monumental achievements of America's greatest educator, Dr. Charles W. Eliot, to bring together the truly great books, to sift the pure gold from the mass of writings the ages have produced. For forty years President of Harvard University, Dr. Eliot realized the need of a library offering everyone the culture which a university strives to give.

The Five-Foot Shelf (Harvard Classics) is the magnificent result of his inspiration and knowledge. These books are the criterion of all literary selection. Through them people have found that the classics are not dull—but intensely stirring; not beautiful antiques, but lively, stimulating modern thought with vital application to everyday life.

In this wonderful library are the writings of 302 immortal authors.

The busy man and woman of today need not stumble through hopeless masses of reading matter, for in the Harvard Classics are the books that live forever, the books that have as proud possessors more than a quarter of a million intelligent, ambitious families.

These books stand for stimulation of thought and, above all, endless enjoyment. They are the books which have won for themselves the well deserved tribute, "A liberal education in fifteen minutes a day."

P. F. Collier and Son Company has published good books since 1875. By the famous Collier plan, you can pay for these books while you are reading and enjoying them.

DR. ELIOT'S FIVE-FOOT SHELF OF BOOKS

(The Harvard Classics)

CHARLES W. ELIOT, *forty years President of Harvard University, Editor of the famous Harvard Classics.*

The original "Stuff" confections—often imitated but never equalled

trying to get light on this mystery, I've learned things, and seen things, that I supposed existed only in the pages of the Arabian Nights!"

There was sudden hunger behind John's frankness.

"I mightn't be such an awful skeptic, Mrs. Cravenside, if I only had a woman like you to . . . sort of talk things over with, now and then."

"Well," she laughed, flushing, "you *have* got me to talk them over with, haven't you? Aren't we working out such a problem in them—together?"

She was suddenly half exotic beside him—something that might have come to him out of the beauty of that pastoral dark. . . .

"On the other hand," Irene concluded, "supernormal phenomena, metaphysics, mysticism—it may all be extraneous. We may be dealing with nothing more or less than natural human nature behaving mysteriously under unusual provocation. Anyway, we can't solve the problem by sitting here all night, waiting for the ghost to show himself. And a little sleep may clear a few cobwebs from our eyes. . . ."

NO FORMALITY lingered in Irene's manner when she finally turned to Forsythe at the head of the stairs. Her face was strangely pale above her lighted hand-lamp.

"I'm not saying good night," she offered, laying her hand on his arm.

"I—I understand."

"We can't stand on conventionality tonight. I'm taking the northwest corner chamber. Katrina will sleep in the small room behind it and Jamie will sleep in the room above the kitchen. You take the east chamber—it looks down on the yard and the hillside toward your house."

"I'll say your maid's a wonder, to fix this floor so quickly!"

"Your door is just across from mine," Mrs. Cravenside went on. "I intend to leave mine open—or a little way ajar. If I call in the night, don't stand on ceremony. *Come in at once—I may need you terribly!*"

"You seem to have things pretty well arranged for dramatic developments between now and morning."

"If nothing happens tonight, Mr. Forsythe, I doubt if it will happen at all. I believe I've disturbed some extraordinary situation by coming up here. Reactions must appear. If I weren't convinced of it, my conduct this evening might have been wholly different."

John entered his room. Confused he was . . . confused. . . .

The roof-slope cut the ceiling at the south of his chamber—a long, narrow place having two eastern windows. Between them stood the bedstead, with head against the wall. John tried to close the door that opened toward the stair pit. Its casing was warped where the old house had settled.

His manner of disrobing followed the custom of lumber camps: He pulled off his shirt and unlaced his brogans, but kept on his trousers after loosing his belt. His automatic bothered him. He took it out grimly and laid it on a chair seat.

The country was quiet as he parted the curtains and ran the shade high. The frogs were stilled now, though a solitary peep sometimes came from the marsh. Once he heard an uneasy canine whimper—where his bellicose Airedale was barred belowstairs. He blew out his lamp and scrutinized the vista.

Strange that on a hilltop so peaceful in New England night such upset could be happening. The moon was riding high, a small silver dollar. It made the country dreamy—an expanse of night-locked charm that was garrisoned by mountains. No earthly lights were visible, but the moonshine was bright on his own roofs in the Hollow. Nothing moved in that expanse—that he could discern. Once a sharp snap came up plainly from the yard. Forsythe glanced down, to behold the great limousine. Against the house wall it was parked and its nearly cold engine had contracted in the chill.

He reclined on his bed, on top of the coverlet. Hands behind his head, he found himself gazing at the door across the hall. Irene moved about in her chamber as though the two rooms were connected in a suite. . . .

In the name of all mysteries, how had Cravenside married her? And crediting that miracle, why had he deserted her? She had brains, she had quality; any man would be proud to possess her as a wife. Yet Don had gone from her. Over eight uncertain months he had furnished no clue explaining that absence. John rehearsed the details. Point by point, item by item, he recounted the converse they had had since twilight.

He thought of her theories advanced in his study. He thought of their talk on the porch. It brought back the old, old wonder about the riddle of existence. The riddle of existence! . . . .

What were human beings? How did they differ, one from the other? Were they units of energy derived from raw ether—made solely of wrappages like Peer Gynt's onion? Yet how did that soul identity making each individual get into those wrappages to begin with?

JOHN'S brain grew fatigued. Finally he slept.

He could not have said exactly when sleep came. For an hour of quiet—stupendous quiet when Irene's lamp went out—he must have lain thinking. Then husbands and phantoms had lessening significance. Came furtive thoughts of romance. It would be very easy to love Irene Cravenside . . . very easy . . . very easy . . .

Suddenly Forsythe came electrically awake! What had he heard—a dull, muffled crash?

"*Ar-r-r-r! Ar-r-r-r! Ar-r-r-r!*"

A woman was screaming right there in his room!

No, not in his room. Outside, in the hall! Footsteps scuffed. Doors caromed. More screams—high-pitched, horrible—and the noise of labored breathing. Down in the kitchen the dog was barking crazily.

John tumbled to his feet. His hand found his gun. But a light, not a weapon, was needed at the moment.

"*Gespenst! Gespenst!*" a German voice was shrieking. "*Es kommt ein Gespenst! Ach! Ach! Ach!*"

"Katrina—behave!" It was Irene commanding.

John found a match. It flared in the hall space. Irene held Katrina from plunging down the stairs. The maid was in her nightdress. Irene was disheveled. Jamie, the chauffeur, came groping from his room.

Digitized by Google Original from UNIVERSITY OF IOWA

"*Ein Mann hängt am Fenster!*" Katrina raved insanely. "*Sehe! Sehe!*" She fought to heave herself down the steep stair pit.

"What the devil's she saying?" Forsythe demanded.

"There's a man at her window—"

"*Nein! Nein! Ein Gespenst hängt am Fenster!—Upside down!*"

"She says—a ghost—at her window—hanging upside down!"

"*HANGING UPSIDE DOWN!*"

"Look!" the chauffeur cackled.

John whirled around. Katrina's door stood open. From the small western window the shade had been wrenched. The window frame was naked, gray moonlight beyond.

Hanging from above, on the outside of the house, a ghastly silhouette stared into the chamber—*the inverted head and shoulders of something vaguely human.*

Before the match flare nipped John's fingers he looked into great, boggle eyes—one of life's most grisly sights, a human countenance seen upside down.

"*Ach! Ach!*" Katrina moaned hysterically.

"The yard's full of—full of—" Jamie began.

But Forsythe didn't hear. He was staring himself—staring in shock. . . .

(*To be continued*)

How Much Do You Know About Wall Street?

(*Continued from page 4.*)

These floor brokers are of different kinds. There are the commission brokers who act on the floor entirely for their own firms, executing orders for the firm's customers. A single firm might hold a half-dozen seats. One great odd-lot house has forty floor traders. That means an investment of $20,000,000, at present prices, in Exchange memberships alone. Then there are the two-dollar brokers. They do not act directly for customers. They represent only other brokers. They are called two-dollar brokers because their charge was at one time two dollars for each 100 shares bought or sold, though it has been increased now. There is the specialist who devotes himself entirely to one stock, or perhaps two. Last year, when Cutten and Raskob and the Fishers planned their sensational pool in Radio shares, they engaged as the pool manager Mike Meehan, a radio specialist and one of the most sensational floor operators on the Exchange.

Then there are the odd-lot brokers. Sales on the floor must be in lots of not less than 100 shares. A transaction involving less than 100 shares is called an odd-lot. Such an order is handled by an odd-lot broker, who accumulates orders for odd-lots and combines them in groups of more than a hundred on the floor.

Besides the brokers, there are about eight hundred men working on the floor. It requires one hundred and fifty-three men just to report sales. One hundred and twenty work for the ticker service. The whole number employed by the Ex-

"*Please* tell me . . ."

JEAN CARROLL'S *Column on Hair Beauty*

What shall I do for oily hair?

Dear Miss Carroll: My hair is very oily and I have tried most everything to remedy it. I must wash it every week and then it gets oily before the week is up. If you will tell me what to do to get rid of that excess oil, I will be thankful.—Miss E.S., Quakertown, Pa.

Dear E. S. Will you do what I suggest even though it doesn't seem to work miracles the first week or so? You see, people are so used to a speed-mad age that they expect miracles overnight. But our bodies are exactly like those our ancestors had and won't work at 70 miles an hour. It takes time to build up health—general health or hair health.

Relaxed oil glands must be *coaxed* back to normal. The first thing to do is to get the right shampoo. The Packer Company, with whom I am associated (makers of the famous Packer's Tar Soap) have made a special shampoo for oily hair—*Packer's Pine Tar Shampoo.* It is very slightly astringent—just enough to say gently to the relaxed oil glands—"Now tighten up a little and behave yourselves."

Use this shampoo every four or five days at first . . . it lathers at once and rinses easily, so it's quick. Then massage a little every day to bring the good rich blood to the surface to tone up your scalp.

Your hair and scalp *will* respond. Your hair will stay fluffier longer and you can lengthen the intervals between shampoos. Hair that tends to be oily, however, will probably always need to be washed once a week to keep it fluffy all the time.

Help for dandruff from outdoors

Dear Jean Carroll: Last week I was home sick. But it is an ill wind that doesn't blow some good and my good consisted in hearing your radio talk about hair.

It was with rather a shock that I realized how sadly I have neglected my hair. To begin with my hair is red, but it is dull and lifeless and all the sparkle seems to have disappeared. I also have dandruff. But it has its redeeming features too. It is naturally curly and up to a year ago, looked amazingly well for the amount of care it got.

I want to get it back to normal as quickly as possible and I shall welcome all the help you can give me.—Miss H. D., Columbus, Ohio.

Dear H. D. That's what I call a nice letter. It sounds business-like. So I'll be business-like, too. *Get rid of that dandruff.* The sparkle and lustre won't come back while little dandruff germs are doing their beauty-destroying work. Get a cake of Packer's Tar Soap and massage the rich piney lather into your scalp. (Dandruff germs and pine tar just don't get along together.)

Shampoo every four or five days with this soap—doctors have recommended it for years as a standard treatment for dandruff. Then brush your hair every night and morning, and may I say, wash your brush every day or two? As the dandruff disappears, you'll see life and lustre coming back. (Lucky you, to have curly red hair!)

A special shampoo for dry hair

Dear Jean Carroll: I have a dry scalp. My hair is also very "endy," and never appears combed no matter how many times I comb it. Is this caused by dry hair?—Mrs. W. E. D., Philadelphia, Pa.

Yes—and the thing to do is to get the oil glands functioning normally, with massage and brushing and the proper shampoo. The Packer Company has made a special shampoo for dry hair—*Packer's Olive Oil Shampoo.* This shampoo leaves hair softer and easier to manage because, in addition to olive oil and pure vegetable oils, it contains soothing, softening glycerine.

Use this shampoo every ten days. And wake up those lazy oil glands with scalp-massage every day. I'm sure you'll see a real improvement.

JEAN CARROLL

Radio talks by Miss Carroll on hair-beauty, every Friday at 11:45 a. m. (Eastern Daylight Time) over the Columbia Broadcasting System's Radio Beauty School hour.

If you have any of the difficulties described above, one of the PACKER products will help. If you have a special problem, write Miss Carroll personally.

change is more than eighteen hundred.

In the public mind, the Stock Exchange is this great trading floor. But there is much more to it. Few realize, for instance, the immense organization required to send quotations over the ticker. In the Stock Exchange basement, consisting of four floors, is more machinery than will be found in most large factories. It is used for driving the tickers and keeping that stream of tape—3,500 miles of it a day—flowing into thousands of wastebaskets.

And remember, after your broker bought those 100 shares of General Motors stock for you, they had to be paid for and the stock had to be delivered. You may borrow money to buy stock, but on the Exchange every transaction is a cash one and stock must be delivered the next day. You will not get the exact 100 shares held by the man who sold to you. At the end of the day every broker has engaged in thousands of transactions. He owes all sorts of stock to innumerable other brokers and they owe stock to him. He owes them money and they owe money to him. The job of balancing all these trades is done after trading ends, and it consumes, sometimes, most of the night. It is done by a branch of the Exchange called the Stock Clearing Corporation. And next day, through the offices of this same department, all balances of money are made by checks and all balances in stock are delivered.

THE magnitude of the business done in this institution is almost beyond the range of our understanding. The stocks of 1,121 corporations are traded in. They comprise more than 700 million shares. Their market value is 67 billion dollars. Last year 920 million shares changed hands, or fifty per cent more than the whole total. There have been years—like 1901—when the sales of shares was three times as great as the whole total listed. That year the 558,000 shares of St. Paul stock were turned over twenty-two times. Last year we had much the same performance with Loose-Wiles stock. There were 500,000 shares of this issue, but the sales rose to 18,600,000 shares.

The volume of all sales last year was about 82 billion dollars. Add to this three billion in bond sales. There you have a total of 85 billion dollars. The sales made by all the farms in the country, the sales of all the great steel companies, of all the automobile manufacturers, of all the department stores, plus all the money spent on building construction in a single year, do not equal this sum. The brokers collected in commissions several hundred million dollars for this service. If the Exchange did not exist, this volume of business could not be transacted; or to do this business without it would cost not less than four billion dollars.

Yet this is only a part of the business of Wall Street. It does not include the Curb Market, where another 230 million shares were sold last year, or the new stock market in the Produce Exchange, where doubtless an additional 30 million shares will change hands this year; nor the vast over-the-counter market, where sales are at least as great as on the Curb.

All this has to do with the work of the Exchange. Millions come to Wall Street to buy corporation stocks. There is another side—the side where corporations come to Wall Street for money. The exchanges could not exist without the bankers to supply funds for trading. But it is also doubtful if the bankers could perform their functions efficiently without the exchanges. The process by which a great corporation gets its needed funds through the Wall Street bankers and how the bankers use the Exchange in this work is perhaps the least-understood function of this intricate financial machine.

IN THE old days a business in need of money went to its banker and borrowed on its notes for short periods. The modern corporation finds its need too great for that. It requires millions. And so it gets its funds by means of bond issues or issues of stock.

Let us say 10 million dollars' worth of new stock is issued by a corporation. A great banking house will underwrite this issue; that is, it will take the whole 10 millions of stock from the corporation, hand over its check, and the corporation goes about its business. It has the money. The underwriting banker must now sell the stock. He, in turn, organizes a syndicate; that is, he forms a group of other bankers to whom he allots portions of the issue, they, in turn, underwriting or purchasing their allotments. Now comes the public offering. The stock is advertised and sold to the public as rapidly as possible. The investor pays perhaps $100 a share to the syndicate. The syndicate pays, let us say, 97 to the underwriting banker. The banker paid 96 to the corporation.

Now, the public does not buy very rapidly. Perhaps twenty-five per cent of the stock will be taken by investors. Fifty per cent will be purchased by speculators. The problem of the syndicate bankers is to get the other twenty-five per cent into the hands of investors and to divert that fifty per cent in the hands of speculators into the possession of real investors. The bankers must now "make a market" for their stock. They give to their brokers what are called "scale orders"; that is, they will instruct a broker to buy the new stock at 99 and to sell it at 101. In that way the price is kept from going down. Every time it goes up, the bankers feed a little more into the market. Thus, they will gradually get the greater portion of the issue into the hands of the investing public. There is usually a period when the greater portion of the issue floats about in the hands of the speculative element. This speculative element is therefore essential as a waterway on which the stock can be ultimately floated to the investor. The Stock Exchange is an essential mechanism in this process. In 1909 sixty-six per cent of the stock of the United States Steel Corporation was still in the hands of speculators. In 1915 this had been reduced to fifty per cent. In 1920 it had been cut to twenty-five per cent. It is perhaps less than twenty per cent today.

This, briefly, is the function performed by the bankers in Wall Street. They are not as a rule members of the Exchange.

There are hundreds of banking houses engaged in this business. This is the kind of work which is done by the great houses of J. P. Morgan and Company, Kuhn, Loeb and Company, Dillon, Read and Company, and numerous others.

When the activities of the bankers and

Digitized by Google Original from UNIVERSITY OF IOWA

exchanges and others in Wall Street are all combined, we have this surprising fact: That, measured in dollars and cents, the total of business transacted in these eighteen squares of ground is larger than that done in all the rest of the country together. The wealth on the district's open streets alone is staggering. Throughout the day, securities, certified checks, money, gold, are being moved from office to office. Messengers carrying strong boxes and portfolios can be seen going about the streets at all hours. I have gone to some trouble to make an estimate of the amount of money and securities carried about the streets of Wall Street in a day. It is not less than $450,000,000.

When the day's work is done and all this vast treasure has been put away for the night, its value surpasses that found anywhere else in the world. Across the street from the Morgan offices, the little Assay Office holds three billion dollars in gold—about one half of all the gold in the world. Down the street, the Federal Reserve Building houses gold, securities, and specie and bills totaling a billion and a half. Every bank and insurance company and trust company has its own treasure and its own treasure caves. The ground underfoot in Wall Street is a vast labyrinth of steel vaults. The Federal Reserve Building goes down nine stories under ground. J. P. Morgan and Company's building goes down four or five. All are encased in the solid rock of Manhattan Island, almost a perfect location for the storing of this hoard.

The policing and protection of this wealth is a task of immense importance and difficulty. Thousands of men are employed in this work alone. Eighty-four guards are engaged at the Stock Exchange. All the banks have forces ranging from ten to one hundred. A company of ex-marines protects the various departments of J. P. Morgan and Company, while plain-clothes men can be seen throughout the street. As messengers move about the streets carrying millions, armed guards follow them. Armored wagons can be seen in almost every block. The looting of Wall Street might well excite the imagination of any daring scoundrel. But there are no holdups and no burglaries in Wall Street. The simple truth is that it would be madness to attempt one.

I AM sure you have been saying to yourself—if this is all there is to Wall Street, why is there so much outcry against it? Unfortunately, this is not all there is to it. Wall Street deals in money and profit, and it performs a useful and necessary function. But Wall Street is human, and grave abuses have crept in. Speculation and the manipulation of prices are, of course, at the bottom of these abuses. The Exchange has expended much money and effort to eliminate dishonesty, fraud, undue manipulation, downright gambling. And the fact remains that after you have listed all the evils and are asked what you can set up in place of the Exchange, you will not be able to answer.

Much of the condemnation of speculation revolves around marginal trading and short selling. Suppose you buy $1,000 worth of some stock (ten shares), pay the $1,000 to your broker, get the certificate and put it in your bank box. That is a

In this familiar tea —a health value that is helping thousands

Scientists have discovered in simple Japan green tea a safeguard against several every-day ailments

Are you needlessly troubled with minor ailments? Several of them have now been traced by scientists to a simple cause.

Most foods we eat lack one precious food element. And many people, it is now believed, are suffering from certain common maladies because their three meals a day give them too little of this all-important Vitamin C.

It is this health-giving safeguard which scientists have discovered in familiar Japan green tea.

Lacking in most of our foods

"Important to us," writes one eminent scientist, "are the results of a diet *poor* in Vitamin C. The symptoms are a *sallow, muddy complexion, loss of energy, fleeting pains usually mistaken for rheumatism.* It now appears that this condition is rather common among grown people."

If your vitality is low, if you are "run down" and easily tired out; if you are troubled with the discomforts that so often come with loss of energy—nervousness, sleeplessness, poor appetite or lethargy—if your skin is sallow or muddy—if you suffer at times from so-called rheumatic pains—take this simple precaution that is already protecting thousands. There is certainly no "cure-all" in fragrant, pleasant cups of Japan green tea. But today they are known to bring an abundance of Vitamin C, a safeguard against these ailments.

A rich supply of precious Vitamin C has been discovered by scientists in simple Japan green tea

Few foods aside from Japan green tea, spinach and some fruits and vegetables, contain Vitamin C. The Japan green tea that grocers sell is rich in it.

Try it for a few weeks

For loss of energy that spoils many a day, for a sallow, muddy skin, for pains that seem like rheumatism, try this simple plan: Drink flavory cups of Japan green tea *regularly* for lunch, for supper or in the afternoon. Take advantage of its rich supply of Vitamin C. After a few weeks you will probably be feeling—and looking—more vigorously alive, more healthy.

For years one of the two most popular teas in the country Japan green tea comes in several grades—in packages under various brand names or in bulk. Your grocer has it or can get it.

FREE VALUABLE LEAFLET *giving full facts on health value of Japan green tea with a colored souvenir booklet on tea mailed direct to you from Japan. Mail coupon to American-Japanese Tea Committee, 750 Wrigley Building, Chicago.*

Wake up teeth and gums!

Every Pro-phy-lac-tic *cleans* AND *massages!*

MANY an unhappy hour has been caused by gums that were sluggish! For healthy gums are active gums—and healthy gums mean healthy teeth.

Now—thanks to the live, springy quality of its bristles—every Pro-phy-lac-tic brings a vital double benefit to your teeth and gums. As you brush, it not only cleans, *but massages* as well.

Pro-phy-lac-tic is scientifically shaped to clean every tooth scrupulously—front, back, and sides. The bristles are perfectly spaced to clean even *between* the teeth. *More*—Pro-phy-lac-tic bristles are specially blended from the finest quality of live bristle to do the vital job of *massaging* the gums while they clean your teeth.

Try a fresh Pro-phy-lac-tic tonight. Notice how your whole mouth responds with a radiant tingle of good *health!* Pro-phy-lac-tic Brush Company, Florence, Mass. Pro-phy-lac-tic Brush Co. (Canada), Ltd., Montreal.

ABOVE—*The famous Tufted Pro-phy-lac-tic...*
LEFT—*The Masso Pro-phy-lac-tic—designed for gums that need special massage.*

RIGHT—*The Oval Pro-phy-lac-tic—for the smaller-than-average dental arch. All these brushes come with handles in six colors.*

Pro-phy-lac-tic Radio Program—WEAF Network—Every Tuesday 8:30 P. M. Eastern Standard Time

pure investment. But someone explains that with the same $1,000 you can buy fifty shares of stock instead of ten. If your ten shares go up five points, you make $50. But if fifty shares go up five points, you would make $250. And all for the same $1,000. You would buy the fifty shares on margin; that is, you would put up $1,000 margin and borrow the other $4,000 through your broker, who would hold the stock as security. The fact is that by far the greater portion of trading in stocks is done that way. This is speculation. The enemies of the Exchange call it gambling. The Exchange says it is not. Gambling, they say, is based on pure chance; speculation is based on knowledge or faith. The distinction is a fine one. Certainly, the vast majority of amateur speculators who risk their money on nothing better than market tips are not proceeding on faith or knowledge any more than the man who has studied the sporting pages and bet his money on a horse race or prize fight.

SHORT selling is even more fraught with risk. Suppose you thought certain shares would go down. Then, to speculate, you would sell them. As you don't own any of the stock, you would sell them "short"—sell what you do not own. Nothing puzzles the lay public more than this. The stock is selling, say, at $100 a share. You think it will go down to 90. You order your broker to sell a given number of shares at 100. But how can you sell it when you have none to deliver? Well, you borrow the stock which you sell. Your broker looks after this detail. He "sells fifty shares short" for you. Then he goes out and borrows fifty shares from another broker and delivers these to the purchaser next day. The other broker will lend the shares for many reasons, but he does not lend without a consideration. Your broker must, in return, lend him in cash the market value of the stock—$100 a share. He must pay interest on the money, but in consideration of lending the stock, he pays a low rate. Where stock is very scarce, he pays a still lower rate, and in many cases no interest at all. At times he may even get a bonus. A week later the stock goes down to 90. You now instruct your broker to buy fifty shares at 90. These $90 shares are then returned to the broker who loaned the stock, who returns the $100 a share he received as a loan. Thus, you have, in fact, sold the stock for $100 and effected your delivery with stock for which you paid $90, a profit of $10 on each share.

These two operations—marginal trading and short selling—constitute the backbone of speculation. But they are not common to the Stock Exchange. When you buy your house for a cash payment down and a first and second mortgage for the balance, you are buying on margin. Your piano, your radio, your phonograph, your automobile, are usually bought on margin. And as to short selling—that too is common. Your coal man who sells you in the summer for winter delivery sells you coal he does not own and has not bought yet. That is a short sale. The farmer who sells in advance the crop which he has not planted and may never harvest is selling short. There is certainly nothing in these two practices which violates any rule of commercial morality. If it is improper,

Digitized by Google Original from UNIVERSITY OF IOWA

the objection must rest on other grounds. As carried out in practice in stock speculation, it is, in my judgment, a pure gamble. It has been responsible for more losses, more panics, more bankruptcies, more fatalities in Wall Street than any other cause. Certainly, no one should engage in it who is not thoroughly conversant with Wall Street ways, who is not an expert in market management, and who has not the time to hang over the ticker and watch the movements of the market.

DOES anyone ever get rich speculating in Wall Street? The answer is, yes. But if you ask me does anyone ever remain rich speculating, the answer is, no. I refer, of course, to open-market speculation. In one sense few ever get rich without speculation. Every new enterprise is a speculation. Those who bought General Motors stock when that concern was formed were speculating. Many thought it a foolish speculation. Some called it Durant's folly. But if you had bought 100 shares of that company when it was formed in 1907, paying for them $10,000, you would now have 40,000 shares worth 85, as I write, totaling $3,400,000, not counting $400,000 in cash dividends.

Many people made money last year on the great rise in stocks. Radio went from 32 to 224. Brooklyn Edison jumped from 163 to 268. Case Threshing Machine soared from 63 to 352. Holders of those shares made great sums. Had you bought one of each of the leading fifty shares on the Exchange list in 1923 at a cost of $4,600, they would today be worth $10,050. There is a speculative value attached to every good stock and those who buy stocks outright frequently make fortunes by holding them. The speculator, however, usually buys on margin. He is forever shifting from stock to stock. In the end he almost always loses.

A leading Wall Street broker recently returned from a visit to his great string of branch offices throughout the country. He told me that seventy-five per cent of the people who had been trading with his house lost their money. And he knew the reason. They bought and sold on tips. Those who made money were the men who acted on careful examination of the corporations they invested in, paid for their stocks, and took them out of the market.

Any banker, any Wall Street authority will tell you not to buy stocks on margins, and above all not to attempt short selling. You can buy stocks on the installment plan. Many large brokerage houses and banks will procure stocks for you and let you pay for them over a period of months.

You cannot make a better use of your surplus funds than to put them into the stocks of sound corporations, even though you pay for them on the installment plan. If, however, you are determined to speculate, then let me urge you to give up your job, spend several years in Wall Street studying its methods and accumulating a small fortune some way or other to start, and then spend the rest of your days in a broker's office hanging over the ticker tape. You may make money that way, though I cannot guarantee that you will keep it. You will be rich on some days, but I cannot assure you that you will be rich every day. I can reasonably assure you that you will die poor.

A SUBJECT SELDOM DISCUSSED..

HENCE OFTEN MISUNDERSTOOD

THE purchase of a casket, although a duty closely associated with sentiment, should involve a careful consideration of value. As endurance and protection are primary requisites of a casket, is it not natural and proper that one should ask "Who makes it?" "How is it made?" "What is it made of?"

Every National casket is constructed with the greatest care and with one aim—to build the best casket that can be built for the price asked. Down to the smallest details, our standards call for the use of only the highest grade materials. In all grades National casket construction and design reflect the ability of skilled and experienced workmen.

National caskets are identified by the visible but inconspicuous trademark reproduced above. This trademark is a pledge of quality. It specifically states the material used. If you choose a casket bearing this mark, you can be sure that you are receiving true value—a casket which conforms to the highest standards of acceptance and good taste.

National caskets are sold only through funeral directors. It is reasonable to assume that those who handle merchandise of high quality have high standards of service.

We have prepared a little booklet, "Funeral Facts." We shall be glad to send this to anyone upon request. Address Dept. C-3, 60 Massachusetts Avenue, Boston, Massachusetts.

THE SPORTFOLIO

The Stirring Comeback *of a* Great Runner

By CHARLEY PADDOCK

World-Famous Sprinter and Sports Authority

PAAVO NURMI, of Finland, is a silent man and rarely speaks English, though he understands our language very well. On one occasion he was a member of a group of athletes when we were discussing the difference between failure and defeat. We had reached the conclusion that the two should never be confused; that every man and every team now and then is bound to be beaten; and that it is the spirit in which you take your beating which makes or breaks you. And it was at this point that Nurmi interrupted with one of those rare but infectious smiles of his, murmuring the single word, "Guillemot." The name recalled a colorful character who might have been a greater champion than Nurmi himself, and the half-forgotten story of his career came back to me.

It was in 1919 that I had first seen him, early on a misty morning in the Bois, just beyond the walls of Paris. The French were holding their distance tryouts to determine what men should represent them at the 1920 Olympic Games, and the favorite of all that field was the veteran Jean Vermuellon. Before the men got off, out from the city came a gay group who had undoubtedly been making a night of it. There was one fellow among them a little bit more under the weather than the rest, and someone dared him to run in the race. Still in a daze, the young chap was alternately willing and timid, cocksure and dubious of his ability to weather the grind against the pink-of-condition athletes. As the gibes of his friends increased, he defiantly threw off his coat, shirt, and shoes, and entered the lists. They got him a pair of sneakers and they stood him on the starting line. As soon as the gun was fired, he got next to Vermuellon, the champion, and so disappeared into the forest.

After the men had run several miles, the first competitor came into view again. As people looked, they were surprised to see that it was not Vermuellon, the favorite; and when he drew nearer, they were astonished to note that it was the fellow who had started out in such a hilarious frame of mind. He came pounding down the road and broke the tape for the championship of France. Overnight, Joseph Guillemot was the new hero of France, and the following year he went up to Antwerp to run in the Olympic 5,000 meters against Nurmi the Unbeaten.

Lap after lap in that great race Guillemot stayed at Nurmi's shoulder. Finally, they came to the last time around the track, and the Frenchman, because of his youth and his fighting heart and his great natural ability (no one had ever possessed so much), was able suddenly to pass Nurmi and to break the tape in front. Of course, Joseph Guillemot returned to Paris still more the hero and the idol of his countrymen.

In 1923 I stood in that same forest and I watched the tryouts for the Olympic Games of 1924. Again Guillemot was on hand, as the favorite of the field, and he led all the runners out of view. Finally, into sight, came the first runner, and when the people looked, they saw that it was not Guillemot. Then came the next and the next and the next, until forty-five had crossed the finish line before Guillemot staggered blindly down the stretch. He had failed to make his own team to represent his own country in the greatest Olympics that had ever been held.

THE next year Guillemot sat at Colombes Stadium, beyond the gates of Paris, and he watched the man whom he had beaten four years previously, Paavo Nurmi, the super-runner of modern times, go on to victory after victory, and as he watched him run, he no doubt remembered that during those years when Nurmi had been training in far off Åbo, he had been loafing. When the Games were over and Nurmi had four times been crowned Olympic champion, Guillemot said to a few of us who had known him a long time: "I am not so much interested in whether or not I ever break any of Nurmi's records, or whether I ever beat Nurmi again. But I am going to prove to myself that I can come back, and that I can train." No one heard of Guillemot after that for a long time.

Loren Murchison and I came to Paris on a trip around the world in 1925, and when our races were done, we stood at the start of the 5,000 meters. Just before this event got under way, an old, familiar figure trotted across the field. The crowd recognized him as Joseph Guillemot. He started out ahead of his field, as he had always done in days gone by, and, lap after lap, he gained on that field until finally he broke the tape far ahead.

Joseph Guillemot had proved to himself and to the world that he could come back. He had shown the difference between failure and defeat.

"Nothing is Ever All Over With You"

(*Continued from page 27*)

window in his pajamas, finding a mournful and tragic pleasure in the fact that he was shivering.

The next afternoon he made many rows of figures on scratch paper in order to demonstrate what he already knew— that the three timid numbers which represented his bank account would not allow any more dates such as last night. Having demonstrated it thoroughly, he called up a florist and had a dozen of the season's first jonquils sent to Lou.

He ate one meal that day. The next day he tried to economize still further; then, at midnight, went out and indulged himself in a wild orgy of hot dogs.

The rest of the week went the same way. When he had decided that he had conquered his appetite, the pangs of his stomach always in the end got the best of him. . . . He found another furnace to tend at two dollars a week, although his present schedule of work and study allowed him scarcely enough sleep.

On Saturday night he learned with a mighty thrill that Lou had given up a fraternity dance with Roy Fullerton in order to meet him. "Wasn't it wonderful of me?" she asked. "Two dates now that I've chucked for you!"

"It *was* wonderful," he agreed with solemnity.

AFTER the second mid-semester examinations Reed's average went down perceptibly. His funds were even lower. . . . But it was impossible for him to look down into Lou's eyes on the Pi Omega porch and retain any sanity. For always in the back of his mind was the grim reminder that everything would be ended in June. Lou would go to Paris. He would be left behind.

The days seemed to grow swift and lean as they neared this bleak climax. One spring day Lou received her passport; she was tremendously excited as she showed the red-covered document to Reed.

"Have you got yours yet? You'd better be writing right away—you don't have much time."

"But I'm not going." It was the twentieth time he had told her, dully and despairingly. His foolish pride forbade his mentioning the real reason; and because of his disregard of money the last few months she could not guess it.

"Don't be so obstinate!" she said. "It would do you good to quit thinking about study a while and have a good time. Besides, I'm counting on you."

As a final defense he became evasive. . . . "Well, maybe."

When there were only two weeks left, he was seized one night at the study table with a panic of realization. He turned off the lamp, walked to the window, and stared at the forest of shimmering lights on the campus. The year was nearly gone; he had won the wager he had made with his own pride and self-respect . . . but had he lost Lou?

He could hardly wait until the next

Hotels Need Hundreds of Trained Men and Women

WILL you accept one of these big-paying positions in America's 3rd Largest Industry? Thousands of positions now open in hotels, restaurants, clubs, schools, colleges, hospitals and institutions! You can easily get one of them! No previous experience necessary!

MANAGE AN APARTMENT HOTEL

Men and women needed as Managers for apartment hotels, hotels, clubs, restaurants, etc. YOU can qualify!

CLIFFORD LEWIS,
President
Lewis Hotel Training Schools

Former U. S. Government Hotel and Restaurant Expert, who has been appointed Managing Consultant by over 300 hotels. Mr. Lewis has qualified thousands of men and women for success in the fascinating hotel and institutional field.

These Students "Made Good"

Thru Mr. Lewis' efforts a Lewis Graduate was appointed Manager of a famous resort hote having 400 guest cabins. A second is now Purchasing Agent for a chain of 22 hotels. Although without previous experience, a Lewis Trained woman is Assistant Manager of a fashionable apartment house, while another Lewis Graduate is Assistant to the General Manager of a new $8,000,000 club house. YOU can do as well.

Earn $2,500 to $10,000 a Year

The Lewis Schools have qualified thousands of men and women for $2,500 to $10,000 a year hotel jobs. You can do as well! Learn in spare time at home. Many students obtain well-paid hotel jobs before finishing course! Barton R. Casaday says: "Even before completing your course, I secured an excellent position."

Big Pay—Fine Living—Fascinating Work

America's Third Largest Industry offers many big advantages. Salaries are liberal, meals and apartments usually furnished FREE—advancement quick!

Previous Experience Unnecessary

Our Simplified Home Study Plan quickly qualifies you for a well-paid position. Totally unacquainted with hotel work, Emily Hay's first hotel position was as Managing Housekeeper of a beautiful hotel. Age is no obstacle. Lewis Training helped O. O. Miller, 55 years old, win success. Common-school education all you need. I put you in touch with positions. "On strength of your recommendation, I have been made Hostess," says Jeanne Sacheto.

BE A HOTEL HOSTESS

Hotels, clubs, apartments everywhere are calling for hostesses, managers, etc. Splendid salaries, fine living, luxurious surroundings for you!

Our Free Book, "YOUR BIG OPPORTUNITY", tells about the wonderful opportunities open for you in this fascinating profession and explains how you can quickly become a high-salaried hotel executive. Registration in our Employment Bureau FREE of extra cost. Send for this big, FREE book TODAY!

Champion Spark Plugs excel and outsell throughout the world

It is a fact that Champion Spark Plugs keep the vast majority of the motor cars of the world running.

In the realm of business few indeed are the American products which enjoy the proud privilege of outselling all others throughout the world.

No matter what the business, or product, you may rest assured that if it has merited a universal preference, it is because it has deserved it; because it is a better product.

There is a very real significance in the fact that Champion Spark Plugs outsell throughout the world. A significance that is part and parcel of a never varying formula which directly concerns the material, design, manufacture and ultimate performance of Champion Spark Plugs. For the unity of purpose which dominates Champion has always been expressed in an uncompromising search for better material, better design, better manufacture and better ultimate performance.

You can buy Champion Spark Plugs with every assurance of superior performance and dependability. They will exact from your engine the utmost in power, speed, acceleration and economy because they are the better spark plugs.

CHAMPION

TOLEDO, OHIO **WINDSOR, ONT.**

afternoon to see her. When he hurried up the steps of the Pi Omega house, Roy Fullerton was sitting with Lou in the porch swing. The two youths nodded guardedly and Fullerton went on with his conversation.

" . . . Now, what I think is this—life is only a sort of game and an adventure, if you want to take it that way. Look at history. History is all right for the grinds. I've flunked it twice, so I don't know much about it—but I had a date one night with a Smith girl walking around Chartres Cathedral in the moonlight . . . that's the way I like to take my history, on the wing."

Lou laughed with him. "I think so too," she agreed enthusiastically. "I can't see how anybody would want to cram his mind full of old dusty facts when . . . why, Reed! Where are you going?"

"I'm going home," said Reed through his teeth, without glancing back. "I'm going to study for a history quiz!"

They were together only once or twice more, and those times they were estranged and distant, neither daring to bring up the subject which had become a barrier between them. . . . The last night was not so painful as Reed had always imagined it would be. Feeling almost numb and uncaring, he took Lou's bags from the Pi Omega house to the cab. They rode to the station in silence. There, among the chattering groups of outgoing students, they waited in misery for the train.

"Well," he said; "good-by." Stiffly he extended his hand. "I hope you have a good time in Paris," he added in a frozen voice.

That was all. Her lips trembled a little, but without speaking, she followed the redcap into the long, sleek Pullman. "He might at least have helped me on the train!" she said furiously to herself within the berth, as she tried to blink away the hot tears.

On the way back through the deserted campus Reed kept muttering grimly, "It's all over. It's all over."

THE tourist third-class deck of the small French Line boat chosen by Lou's party might well have been any one of a dozen campus settings. There was a jazz band with enthusiasm and shell-rimmed spectacles. There was the old professor who makes his yearly trip to Brittany and becomes excited about the discovery of ancient Celtic inscriptions. . . . But for the most part there were only fresh-faced youngsters who were secretly awed and thrilled by their first trip to another continent. Every night they danced, placed small wagers on the ship's pool, and then separated into couples scattered about the deck.

The second night at sea Lou was discovered simultaneously by a senior from Cornell, a literary sophomore from Princeton, a football player from Dartmouth, and a young cynic from the University of Missouri. Roy Fullerton, who had sailed with the same party, was lucky to get one dance with her, and before twelve o'clock she had made dates for her entire first week in Paris.

The third night was exciting. There was a bit of rough weather and it was fascinating to start one of your usual dance steps and lurch ten feet across the floor into another couple!

But she had promised the evening to Roy Fullerton. At the first opportunity he led her out on the deck, where the wind howled dismally and it was snug to hover close to the warmth of a ventilator. Lou felt tired, she did not know why. She let Roy put his arm about her and listened half-heartedly while he expounded his philosophy of romance. ". . . you know, I'd like to have lived in the days of the Cavaliers. Imagine a street in Paris in the time of Villon! Swords and doublets and all that tripe." He ran a hand through his overlong hair, narrowed his eager brown eyes, and gazed in silence at the whitecaps which showed through the darkness. "Or a clipper ship." He sighed. "There's no romance now—"

"Oh, rats!" whispered Lou.

"What did you say, dear?"

"I said I was cold. I wonder if you'd go down and get my coat—my fur coat."

WHEN she was alone she suddenly covered her face with her hands, and her shoulders shook. She could not have explained the pain which had caused life to become dreary and intolerable; she only knew that she wanted to hide from it.

At last she looked up, feeling small and lonesome on the wind-swept deck. The only human beings in sight were a few seamen engaged in work about the rail. . . . The ship rose and fell on the vast, cold bosom of the Atlantic.

Almost in fear, she turned and put her head in the crook of her arm. After a time a hand touched her shoulder. She did not move, and the hand began to shake her shoulder gently. In a sudden panic she looked up. . . . Hovering over her was a grimy figure in overalls, at first glance one of the seamen who flitted like black ghosts about the deck every night.

"What?" she whispered in husky terror.

Then her face went white and she trembled. "*Reed*—!"

He was on his knees before her. "Honey! Honey! I wouldn't have scared you for the world. It was supposed to be a surprise. Oh, I should have told you. . . . Of course you couldn't know me—my face all oil stains and everything. Just the same—"

He kissed her. "I don't give a darn," he said fervently, "if there *is* oil and sweat and grease on my face." He kissed her again. "Get this! Get this, and get it straight. You wanted me to go in for adventure. Well, I have." He shook her. "Do you hear me? I've gone in for adventure and having a good time—I'm a stoker down there with a black gang of Greeks and Bulgarians. How do you like *that?* I strip down to my waist and I get my face dirty and I shovel coal. And you are going to kiss me again—because then you can go up to your pretty little chintz-hung stateroom and read books about adventure . . . and wash your face!" He was breathing fast; his eyes blazed with excitement.

She began to cry in a low, hysterical voice. Her hand on his rough, denim-clad sleeve was shaking violently. Reed buried his face against her knees.

"Lord, I didn't mean to hurt you! But, Lou, I couldn't stand it. I went back to my room that night . . . then I took the first train for New York. I said to myself, '*It's all over. It's all over.*' . . .

Digitized by Google Original from UNIVERSITY OF IOWA

But nothing is ever all over with you. I made them give me a job as stoker. Can you beat that? I *had* to be on the boat with you. And nights when I'm off duty I pretend to be working on the deck, just in the hope that I can see you."

He broke off. Beside the rail two or three other deckhands were staring at him, no doubt wondering if he were drunk or insane.

His voice went on, muffled within the cool hands which she held to his face.

"If you have any dates in Paris you might just as well chuck them right now, because you're going out with me every evening. You're—" He closed his eyes and groaned. "But I forgot. I can't! I can't see you in Paris—oh, let's not talk about it! Anyhow, it's all been worth it, just for tonight." He studied her face seriously. "Wait. There's a place over your right eyebrow that hasn't any smudge yet!"

She could not speak. She drew him to her, greasy overalls and all. They were motionless as statues when Roy Fullerton returned with the coat. He stared first at them and then at the interested seamen. "What's all this?" he demanded.

Reed wearily got up. "Which would you rather do?" he asked. "Go away and look at the moon—or get heaved over that rail?"

Fullerton stared a second at the sooty specter before him—surely nobody he had ever seen before—and walked toward the stern of the ship. When he returned he was leading one of the officers. "I don't know who he is," he was saying tremulously. "Somebody annoying the lady—"

The officer was frozen with horror. He tugged wildly at his Gallic mustache and uttered explosive orders in French. A small army of deck hands responded. They laid violent hands on Reed and bore him, kicking and struggling, toward the nether regions of the ship.

LOU was paralyzed until that moment of finality when she saw Reed's wildly agitated heels disappearing. Then she made a dive toward him, but the door was sternly closed and the officer, still growling imprecations, stood guard over it.

Roy Fullerton took her arm. His face was white with suppressed excitement. "Why, that was Sherrard! Can you tie *that?* . . . I didn't know until—"

"Yes—and if you'd only helped him when those beasts were taking him away . . . you're just as much of a beast as they are! You're a—*a grind!*"

He tried to hold her protectingly. "Lou! If you could only see how you look—"

"I don't want to see."

She ran blindly into the first open door. In her stateroom she flung herself on the berth, to the amazement of the serious-minded co-ed from Minnesota who was studying French in preparation for the moment when she arrived at the Gare St. Lazare.

After a long time Lou got up and peered cautiously into the mirror. . . . There was a smudge on the tip of her nose which appeared to be engine oil. Across her cheek wavered an ecstatic line of soot, and over one eye was a zigzag grease spot.

"I'll lend you my cold cream," volunteered the studious co-ed in a small, suspicious voice.

"ZO" the Vitamin Cereal *is ready to serve with milk or cream. Children love its crisp, crunchy tidbits. Featured this month at all Health Food Centers.*

Your little boy *needs* this food

Parents dare not slight their little boy's nourishment *even for a day!* Today he is eating for tomorrow. He is laying the foundation of health. He needs plenty of lime, iron, vitamins, and roughage.

"ZO", the great vitamin cereal, is so delicious that children gladly eat all you serve them. It is super-rich in the elements little ones need. Food iron for rosy cheeks. Food lime to build good, white teeth, and straight sturdy legs. And Vitamin B that protects health.

At the famous Battle Creek Sanitarium and in thousands of homes, "ZO" has been used for years.

Your local Health Food Center—usually the leading grocer—has "ZO" and all the other foods in the Battle Creek line.

BATTLE CREEK SANITARIUM HEALTH FOODS *for Everybody*

Free Diet Service

At Battle Creek we maintain a staff of graduate dietitians to advise you on any diet problem. If you will write to Ida Jean Kain, our chief dietitian, she will send you suggestions for your particular diet. "Healthful Living," a most interesting and helpful book written by a leading nutrition expert, will be sent free if you write your name and address on the margin of this ad and send it to us. It describes with recipes many of the foods used in the Battle Creek Diet System. THE BATTLE CREEK FOOD CO., Department 1-C, Battle Creek, Michigan.

Ask about Lacto-Dextrin, Psylla, Savita, Protose, Malted Nuts, Paramels, Fig Bran, Laxa, Vita Wheat, and Bran Biscuit.

He Drives a Car on Crowell Cash!

As our special Subscription Representative, Mr. Guscott of Ohio earned enough in his spare time last season to pay for a new car and his renewal profits will more than take care of the operating expenses for a number of years. Moreover, Mr. Guscott holds down a regular job during the day and all his magazine work is done in the evening.

YOU, TOO, CAN HAVE SPARE TIME MONEY!

In the same way, even if you have only a few spare hours in the evening or odd moments during the day, you may earn enough to buy a car or something you want even more by taking care of new and renewal magazine subscriptions for THE AMERICAN MAGAZINE, WOMAN'S HOME COMPANION, COLLIER'S and THE MENTOR. Just as soon as you send the coupon and receive our reply you can begin making money at once. Do you want to try it? Then, send for full particulars and free outfit TODAY!

Chief of Subscription Staff, Desk 39-A
The Crowell Publishing Company
250 Park Avenue, New York, N. Y.

Nonspi
AN ANTISEPTIC LIQUID

Keeps Your Armpits Dry and Odorless

NO man or woman should permit armpit perspiration with its disagreeable, offensive odor and ruinous, discoloring stains to embarrass them personally nor destroy their clothing.

You can rid yourself of armpit perspiration. A few drops of NONSPI (an antiseptic liquid) applied to the underarms will keep them dry, odorless and sweet and protect your clothing.

NONSPI destroys the odor and diverts the underarm perspiration to parts of the body where there is better evaporation—and need be used on an average of but two nights each week.

NONSPI is an old, tried and proven, dependable preparation—used, endorsed and recommended by physicians and nurses.

More than a million men and women use NONSPI the year around—spring, summer, fall, and winter—to keep their armpits dry and odorless and protect their clothing.

Get a bottle of NONSPI today. Use it tonight. Your Toilet Goods Dealer and Druggist has it at 50c (several months' supply) or if you prefer

Accept our 10c trial offer (several weeks' supply).

The Nonspi Company
2635 Walnut Street
Kansas City, Mo.

For the enclosed 10c (coin or stamps) send me a trial size bottle of NONSPI

YOU can earn good money in spare time at home making display cards. No selling or canvassing. We instruct you, furnish complete outfit and supply you with work. Write to-day for free booklet.

The MENHENITT COMPANY Limited
720 Dominion Bldg., Toronto, Ont.

"I don't want it," said Lou. "Not right now—I want to look at myself a while longer."

She was awake most of the night, while Reed's words echoed dismally in her heart—"I forgot. I can't see you in Paris." . . . She thought of solitary confinement, irons, bread and water, all the traditional punishments of the sea, and pictured him enduring them. A dozen times she wanted to dress and run to his aid.

The minute she awoke she popped upright in bed, slapped her nose with a huge powder puff, and rang for a steward. She was in her negligee, wildly scribbling, when she admitted him. "Not breakfast," she said. "I want you to take this note down to the stoke-room, or whatever they call it."

He shook his head with respectful misunderstanding. Lou gestured as if with a shovel. "*Le billet.* Note, you know. . . . Down where the coal is."

"Coal? . . . *Charbon?*"

"Oh, no, no!"

He called a steward who spoke English. "Ah, but mademoiselle—" With uplifted hands he tried to convey to her the awful social gulf which separates a steward from the stoke-hole, not to mention a lady passenger.

In mute protest she held out a hundred-franc note. The stewards backed out, overpowered but still doubtful. "Now, be sure you bring back an answer," she called after them.

Twenty minutes later one of them returned, fearfully holding between thumb and forefinger a grimy piece of paper festooned with thumbprints. On one side was her note, on the other Reed's reply hastily scrawled in pencil:

Maybe I don't want to see you again too! But after last night I've got about as much chance as—as a snowball in the stoke-hole. No, they didn't put me in irons or anything like that, because they're short on help, but they'll never let me slip out again. I'll see you in Havre if I can, for a few minutes anyhow. Not in Paris, I'm afraid. That's all I can say. Time's up. Good-by, dear.

She read the note twice and dabbed angrily at her eyes. The rest of the day dragged past on listless feet. When the Cornell senior met her in the corridor with an invitation to play bridge, she smiled gravely and said that she must study her French.

THAT evening she ordered dinner brought to her stateroom. For a few minutes she enjoyed the self-pity of eating alone, then the dull pain within her made her bury her face in the pillow.

"Reed! Reed!" she whispered.

Next morning she sought the reading-room. She was buried in a magazine when she heard one of the women instructors tell about a conducted tour of the ship. . . ."It's so instructive. They show you the engine and the compass and even the laborers shoveling coal—"

Lou jumped as if somebody had called her name. "Can anybody go?" she asked.

"Why, yes, I believe it is quite usual."

She hurried to the steward's office for a permit. A few minutes later she was one of a middle-aged party bent on self-improvement which followed in the wake of a politely bored French officer. The officer glanced once at the rest of the party and four times at Lou. She could not help tilting impatiently on her high heels while he took ages to explain the steering gear, chiefly for her ears. Then came the compass. Her heart had begun to thump in despair, when at last they descended several iron companionways and the officer, with a flourish, threw open an iron door. The glare of the furnaces leaped out through a steel grating like a living tongue of light. The passengers gazed down and exclaimed with ohs and ahs.

It was a miniature inferno which opened up before them. They saw the bare, glistening backs of half-naked men bending up and down before great, fiery mouths of iron. They felt the dreadful pulse of power. They heard the steady clang, clang, clang of shovels, as steady as the beat of a tom-tom.

Lou only knew that one of the gnomes bending before the flame had a slim, youthful body. She did not stop to think. She pushed through the astonished pedants, opened a door, and ran to Reed. He turned at the touch of her hand on his bare shoulder.

"What are you doing here?" he yelled savagely.

THEY stared at each other. The other stokers did not stop their rhythmic toil; the clang of the shovels and the pulsation of the engines went steadily on, taking no heed of love or youth. A large whiskered Corsican, boss of the black gang, walked up to Reed with inquiry in the shrug of his shoulders. The officer in charge of the passengers was at Lou's side, gesticulating in protest. She could not hear a word he said. She did not try. Pointing to Reed, she shouted in the officer's ear, "Just a few minutes. . . . He's my cousin. He's my *brother.* He's—"

"Ah!" Being a Frenchman, he understood. After a few words with the boss of the black gang, he said, "Five minutes only, mademoiselle. It is not an ordinary request, you may be sure. . . . The party will be on the deck above."

She glanced wildly at her wrist watch, then went with Reed past the door to the companionway, where there was comparative seclusion. He leaned against the rail and closed his eyes. "Lord, but it's cool here!"

"Is that all you've got to say?"

He muttered a little sulkily, "Next time I hope you take an oil-burning ship."

One of their precious minutes passed while their eyes met inimically. "Well," he asked, "what can I say? You started this conversation."

"Don't be so nasty! You might tell me I'm pretty, and that you're crazy about me, and that we're going to play together in Paris."

"All right. . . . You are. And I am. And we're not."

"We're *not?* Oh—Reed." Her voice faltered.

He braced himself, gulped, and made the final confession. "I couldn't tell you before—I'm *broke.* I've got to work my way back. How could I take you anywhere in Paris?" He wiped his brow. "And believe me, when I get back I'm going to take *law*—I've had enough of the sea to last me a lifetime—"

She stopped him. Leaning forward

Digitized by Google Original from UNIVERSITY OF IOWA

with her hands carefully behind her, she kissed him with caution. "Even for you," she said, "I couldn't ruin this dress. Now! Do you think after you shoveled coal to see me five minutes on the boat I could have a good time in Paris without you? You're so melodramatic and everything, you make me sick. Let's be practical, Reed, and think about our future. We'll begin in Paris, and everything will be fifty-fifty—"

"Um. How about *my* fifty?"

"Oh, *I* have that. Think what I saved on your passage coming over!"

There was a long pause. Together they glanced at her wrist watch—three minutes had passed.

"No," he said slowly, "I couldn't do that. Not from a girl."

Her eyes blazed. "You work like this for me—and then you won't give me a chance—!" She turned to walk away from him.

Reed desperately grasped her hand. "Wait a minute. If you look at it that way—if you'll let me try to pay you back this summer—" His voice trembled with new hope.

"Of course. And then when we get back to the University next fall you'll be smart enough for both of us, and the average of our grades will be pretty good. Reed, don't you see? . . . I want you to be quite silly for a while, and I want myself to be serious—I'm even going to study when I get back. Maybe I'll be an honor student or something!"

"And then—?"

"And then—?"

They looked into each other's eyes while the watch ticked off the few remaining seconds of their five minutes. The floor vibrated with the drive of the engines; the clang of the shovels went on like the beating of a metallic heart.

"Time's up," said Lou in a low, sorrowful voice.

"No," Reed said sternly. He touched her fingers with his and backed slowly toward the stoke-hole. "Time's never going to be up—not with you and me. . . . Not with you and me!"

There's No Stopping a Woman with Courage Like This!

(*Continued from page 29*)

hire women chauffeurs and locomotive engineers, and no more shall we be persuaded to ride behind women air pilots. But that's no reason why women should not learn to fly."

"What led *you* into flying as a career?" I asked.

"Oh, that goes a long ways back," she laughed. "Nine years, to be exact."

And nine years *is* a long ways back in this new industry of the clouds. Nine years ago not a single commercial airplane was being made in this country. The first air line had yet to be started, the first mail ship yet to be flown. Phœbe Omlie is one of the pioneers of our air commerce, though she is only twenty-seven years old!

Her birthplace was Des Moines, but when she was twelve her parents moved

Now Comes The New Shorthand

Miss E. B. Dearborn, Famous Commercial Educator and Originator of Speedwriting

Win Success Thru SPEEDWRITING

DOROTHY MARION RINGER—"I began writing shorthand after studying Speedwriting only four hours. I am employed as secretary and find no difficulty in taking dictation as fast as it is given to me."

MARGARET E. STREETER—"I wanted to make a start in the business world, but the thought of the time I must spend on shorthand discouraged me. Then I heard of Speedwriting! Six weeks later I started to work in a lawyer's office, taking all the dictation."

MILLICENT TAYLOR—"With only half the Speedwriting Course finished I have been able to take dictation as fast as an expert stenographer in a conventional shorthand system. Feature writers, like myself, will find Speedwriting a means of taking more accurate accounts of interviews, etc."

No Signs or Symbols to Learn—You Write It in the Ordinary A-B-C's

FOR years there has been a crying need for a really modern, scientific shorthand that could be written RAPIDLY—that would be more ACCURATE—more PRACTICAL—and could be learned more EASILY and QUICKLY than ordinary shorthand. Now at last it is here—the new shorthand. Business and professional men and women everywhere have hailed it with enthusiasm. Experienced stenographers as well as beginners are adopting it.

Speedwriting The NATURAL SHORTHAND

Right this minute you know the fundamentals of this amazing new method—you use the sam "A-B-C's" as you do in your daily speech. No need to spend long, tedious months memorizing a "foreign language" of dots and dashes, hooks and curves. You start using Speedwriting in a few hours and in a few weeks you can acquire all the speed and proficiency necessary for practical work. Speedwriting was originated by Miss E. B. Dearborn, who has taught practically all systems for eighteen years in such institutions as Columbia University, Rochester Business Institute, Simmons College, and the University of California.

Learn to Typewrite the Speedtyping Way

New Speedtyping Course quickly qualifies you as expert typist. Details FREE.

with her and her brother to St. Paul, and it is the latter city that she speaks of as "home." At the same age, she began to drive the family automobile and to evince great interest in the thing under the hood called the motor.

When the time came, she entered the Mechanics Arts High School of St. Paul, where she quickly astonished her instructors by the variety of her interests. She studied cabinetmaking, mechanics, modeling and sculpture, languages, stenography, bookkeeping, and the usual high school subjects. She was elected to the presidency of her class.

IN 1919 President Wilson came to St. Paul to make one of his addresses in support of the League of Nations. It was a great day in the city, and one of the demonstrations of welcome to the President was made by a group of airplanes from the Curtiss Northwest Aviation Field. The planes zoomed right over the high school building, so close that it seemed they must strike the roof. Phœbe Fairgrave was thrilled as she had never been before.

"I hadn't given a thought to aviation until that day," she told me, "but suddenly, as I watched those planes, I wanted to fly."

The high school term ended and Phœbe was graduated with honors. It was without difficulty that she found work in an insurance office—and during the next two weeks she was the unhappiest girl, without ache or pain or worry, in St. Paul.

"The work wasn't hard," she confessed. "The pay was good. My friends said I was lucky, but I was utterly miserable. The more I pictured myself shut up in an office, year after year, the more miserable I became. I wanted to scream."

But she didn't scream. She did something far more practical than that. She quit her job in the insurance office. In her own name in the bank was a little less than four thousand dollars which had been left her by her grandfather. That money, she reasoned, ought to be enough to buy an airplane.

Planes were cheap at the time, because the War Department was disposing of its surplus stock. An army plane was for sale at the Curtiss Northwest Field, and Phœbe soon discovered it.

"Ever been up?" asked W. A. Kidder, president of the Curtiss Northwest Company.

"No-o," admitted Phœbe, and suppressed the impulse to take to her heels.

Kidder drew Major Ray Miller aside. "Take her up," he instructed. "Stunt with her until she's so airsick that she'll never want to leave the ground again."

Miller went up with his passenger. He looped, slid off the wing, zoomed, banked, did the nose dive and tail spin, and threw in a few tight spirals for good measure. He was an expert pilot and he omitted nothing in his repertoire. Then he landed.

"Well, how'd you like it?" Kidder asked the girl.

"Oh, fine, Mr. Kidder!" she replied. "I'll be back tomorrow for another ride. Also I'll bring the money for the plane."

"You—you liked it?" repeated Miller in amazement. "Didn't you feel just a wee bit sick?"

"No," said Phœbe, innocently. "Should I have, Major?"

The truth was that she had felt sick. There had been an awful tightening in her throat and a lightness in her stomach, but she had gritted her teeth and held the nausea back.

"All right," said Kidder without enthusiasm. "I'll see you here tomorrow."

Next day Phœbe was back, and because he had no choice in the matter, Kidder sold her the army plane. At once she started to look for a pilot who would teach her to fly it. Every pilot professed to be inordinately busy. Major Miller hurriedly made his excuses. Kidder shrugged and said he was helpless.

"How about that man?" demanded Phœbe, indicating a young lieutenant who was working about his plane.

"You'll have to ask him," said Kidder. "If he wants to take you up, it's all right with me."

Phœbe appealed to the lieutenant. She was only eighteen, just a little over five feet tall, and she weighed less than a hundred pounds. The lieutenant himself, Vernon C. Omlie, was only twenty-three and in him was a streak of chivalry as broad as his back. Furthermore, he admired the girl's nerve.

After five minutes' talk with Omlie, Phœbe had won a friend and one of the field's most capable instructors. The young lieutenant was seriously interested in the future of aviation, which he envisioned as the next great development in the country's transportation.

"But, in the meantime," Omlie said one day, rather ruefully, "we flyers have got to eat."

"What do you mean?" the girl asked.

"The country isn't ready for an air commerce yet," the lieutenant explained.

"Yet you do earn a living," the girl insisted. "How?"

"Oh, stunting, mostly," said Omlie. "By following the air circuses. The public likes to be thrilled, so we put on shows that thrill and make folks think that only supermen can fly. It is bad for aviation, because the more difficult we make flying look, the harder it will be to get the public into the air. But we've got to eat, so we thrill 'em, at fifty cents per head. We 'stunt,' wing-walk, and jump from parachutes until their hair stands on end. Later we'll pay the piper. But what can we do about it now?"

THAT night Phœbe thought a long time over what the lieutenant had told her. It seemed plain that if she were going to earn a living in aviation, she too would have to join the "stunters." But she hadn't even made a solo flight.

"I have it!" she thought suddenly. "Any boob can jump with a parachute. I'll become a jumper!"

Next morning she told her brother Paul, who was three years older than she. "Good Lord! What next, Sis?" he groaned.

"I've reasoned it all out," she replied calmly, "if this thing is worth doing, it's worth doing right. I'm going out to beat the world altitude record for women. That will give me a reputation right at the start. I'm not going to be just an ordinary woman jumper."

Paul nodded, with despair in his eyes. To bring peace in the family he, too, had gone into aviation so that he might be with Phœbe and act as her guardian, and he knew that if she had decided to be a

Digitized by Google Original from UNIVERSITY OF IOWA

parachute jumper, a parachute jumper she would be, despite all opposition.

Mrs. Omlie, with amused eyes, told me what followed.

"Mr. Kidder was frantic," she said. "Not a pilot except Vernon would have anything to do with me, because they didn't want it said later, when I broke my neck, that they had aided me in doing it. Finally, when they saw that I wasn't to be stopped, they put a harness on me and tied me fast to the cockpit with a rope. The rope was just long enough to permit me to get over the cockpit onto the wing, that being the first lesson of a 'chute jumper.

"WE WENT up. At about 2,000 feet I took a deep breath, said a prayer, and crawled over the edge of the cockpit onto the wing. I wasn't frightened. The plane was as steady as a floor. I wasn't the least bit dizzy, though I always get dizzy on a high building. The wind pinned me tightly to the wing, almost without my holding on.

"For several days I practiced getting out onto the wing, and as nothing disastrous happened, the men thought less about me. Then one day they forgot to fasten the rope, a fact which I kept to myself. I crawled onto the wing as usual and kept on going all the way to the end. Vernon motioned for me to come back and I saw his face turn white. 'Steady, old boy!' I shouted, and laughed, for it was fun. I knew I was ready to make my first 'chute jump, and within a few days I did make it."

"Were you frightened?" I asked

"Well, a little," she admitted. "But my pride drove me on. I got to the undercarriage and hung down headfirst. It looked like a long way down to the open field we were flying over. I had folded the 'chute myself and I wondered if I had folded it properly. 'Well, I'll soon find out,' I said, and let go. For a second or two I had no breath and almost forgot to pull the cord that releases the parachute. Then I pulled it in a hurry. The 'chute opened and I slowed up with a jerk. Next thing I knew I was dangling from the branch of a tree in the woods, having missed the open field entirely. It had been no worse than going down in a fast elevator."

Her next jump was without event. Then, as no woman had yet made a double parachute drop, she resolved to be the first. The double drop is usually made from a height of about 2,000 feet. The first 'chute is released immediately, but is cut loose after a fall of about 600 feet, when the second 'chute is released to convey the jumper to the ground. The big thrill in such a jump comes in the seconds between the cutting loose of the first 'chute and the opening of the second. It is like two jumps in one.

A big crowd was out to see Phœbe's stunt. There was a gasp as the girl parted company with the first parachute and shot downward like an arrow for a hundred feet. Then the second parachute opened like a big, white umbrella. She was safe but for one climaxing incident: She landed in a small lake, far from rescuers, and she couldn't swim.

"Luckily," she laughed, "the wind which had blown me into the lake kept the 'chute open, and it acted like a sail in

drawing me to shore. After that, however, I wore an automobile inner tube as a life belt when jumping near the water, though I never landed in a lake again."

When this stunt was over, the reporters interviewed Phœbe. One of them asked, "Miss Fairgrave, do you seriously intend to keep on doing this kind of thing?"

"Yes," she replied. "It's going to be my living."

With Omlie as her pilot, and with her brother, she joined Glenn Messer's Flying Circus, then at Des Moines, Iowa. Messer, a former war pilot, was one of the most daring of aërial performers and also one of the finest. Today, like the Omlies, he is conducting an air field, at Birmingham, but in those days he, too, "had to eat." The list of pilots with him included such flyers as Ted Lecocq, Fred Parker, P. R. Perry, "Bud" Bridgens, and Malcolm Pilkington. War flying had given them the air fever. Lindbergh, too, began with a flying circus, as did hundreds of other famous pilots. The "circus" was a stage in our commercial aviation.

THAT winter, 1920-21, Phœbe and Messer devised new thrillers and practiced them in a barn. When spring came, it was the Messer-Fairgrave Flying Circus which took the road of the air. In the feature thrill of the show, Phœbe stood on top of one plane and Messer swung from a trapeze of another. The two planes swept together, parted again, to leave the girl swinging from Messer's outstretched hands. In another stunt, Phœbe climbed from the wing of one plane to that of a second plane in mid-air. She now did a triple parachute drop, did acrobatics on the bar of the under-carriage, and hung by her teeth from a trapeze. The "movies" were employing her as a "double" for famous stars who had to perform daring air feats to escape the villain.

On July 20, that year, Phœbe almost made her last parachute drop. As fate would have it, the accident occurred at her old home, Des Moines. In landing, she was carried into the wires of a high tension electric line. In a half dozen places her flesh was seared to the bone. Only by a miracle did she escape with her life.

Her first thought was, "This mustn't reach Mother." The physician in attendance was persuaded to minimize her injuries in his statement to reporters. Phœbe telegraphed home, "Don't believe a word you hear. It was only a little accident, that's all."

But relatives in Des Moines became suspicious as she continued in the hospital. So, to keep the alarm from her mother, Phœbe left the hospital and rejoined the circus in Missouri. However, a relative had written to her mother, "She is badly hurt and is trying to keep it from you."

"I just had to relieve Mother's worry," Phœbe Omlie told me. "There was only one way to do so: to go ahead with my work as usual. A camera man from one of the motion picture studios was waiting for me at Fairfield. I told him I'd go up.

"I didn't dare let Vernon know what I intended to do, so I let him think I was merely going up for a ride. He suspected nothing because one arm was strapped to my body by bandages. When we got up, however, the camera plane swung over near us. I got my arm out of the bandages and crawled out on the wing. Once I was there, Vernon was powerless to stop me, and I began doing my stunts. On my one hand I could use only two fingers, the others being burned. But really it didn't hurt—much.

"Everything went splendidly until the camera plane swooped up for a close shot. I got the full blast from its propeller and, taken without warning, I lost my grip entirely. I was falling backward, but the Lord and luck didn't desert me. I doubled a leg and it caught about one of the struts. The camera got it all.

"Next morning the local papers reported that I had worked, which was what I wanted. I sent the clippings to Mother. 'You can see that I'm not badly hurt,' I wrote, 'or I wouldn't be back at work again.'

"The truth is," she confessed, with a grim little smile, "I didn't get back to work until two weeks later."

That was her first serious accident. Mrs. Omlie has had three. At Memphis a pupil she was instructing "froze" to the controls in sudden fright. Vainly she tried to right the ship with her own controls, but the man's strength was greater. The plane went into a tail spin and they crashed. Both suffered broken bones.

"The third accident was my own fault," she explained. "I had failed to inspect the ship before taking off, or otherwise it wouldn't have happened. A control rope had slipped off a pulley and, of course, once I got up, the control jammed, just as I was making a right-angle turn. We came down, smashed the ship and my legs, but they soon mended."

HER marriage to Lieutenant (now Captain) Omlie took place in February, 1922. Instead of rejoining Messer that spring, she launched her own, the Phœbe Fairgrave Flying Circus. It proved a profitable year for the circus, but she and Omlie planned constantly for a more substantial venture.

"Commercial aviation was getting established," she related. "We began to look about for an air field of our own and gradually decided upon Memphis."

It was the Mississippi flood which really established the field and proved its worth to the South. The airplane was the one sure, quick way into the vast flooded area, and from Dorena, Missouri, to Vicksburg, Mississippi, flew the Mid-South planes from daylight until dark. They patrolled the swollen river with inspectors and photographers in search of levee breaks for a distance of 300 miles. They maintained an air-mail service between Little Rock and Memphis. The Red Cross, the great news associations, the news reels, and the news picture agencies used the Mid-South planes. Dangerous work was this, the flying of land planes over water, and Phœbe Omlie stood her "trick" with the rest. The Mid-South pilots came through without an accident.

"I got a bigger 'kick' out of that fact," Mrs. Omlie told me, "than I ever did out of my parachute jump or circus stunt. We are no longer selling thrills; we are now selling safety. The air-circus days are gone for good."

The President Lives Under a Multitude of Eyes

(*Continued from page 21*)

carried on by hundreds of thousands of people. Some prove incompetent. A very few are tempted to become disloyal to their trust. But the great rank and file of them are of good ability, conscientious and faithful public servants. While some are paid more than they would earn in private life, great throngs are serving at a distinct personal sacrifice. Among the higher officials this is almost always true. The service they perform entitles them to approbation and honor.

THE Congress has sometimes been a sore trial to Presidents. I did not find it so. Among its members were men of wonderful ability and veteran experience. I think they made their decisions with an honest purpose to serve their country The membership of the Senate changed very much by reason of those who sacrificed themselves for public duty. Of the duties of all public officials with whom I have ever been acquainted, the work of a Senator of the United States is by far the most laborious. About twenty of them died during the eight years I was in Washington.

Sometimes it would seem for a day that either the House or the Senate had taken some unwise action, but if it was not corrected on the floor where it occurred, it was usually remedied in the other chamber. I always found the members of both parties willing to confer with me and disposed to treat my recommendations fairly. Most of the differences could be adjusted by personal discussion.

Sometimes I made an appeal direct to the country by stating my position at the newspaper conferences. I adopted that course in relation to the Mississippi flood control bill. As it passed the Senate, it appeared to be much too extravagant in its rule of damages and its proposed remedy. The press began a vigorous discussion of the subject, which caused the House greatly to modify the bill; and in conference a measure that was entirely fair and moderate was adopted. On other occasions I appealed to the country more privately, enlisting the influence of labor and trade organizations upon the Congress in behalf of some measures in which I was interested. That was done in the case of the tax bill of 1928. As it passed the House, the reductions were so large that the revenue necessary to meet the public expenses would not have been furnished. By quietly making this known to the Senate and enlisting support for that position among its constituents, it was possible to secure such a modification of the measure that it could be adopted without greatly endangering the revenue.

But a President cannot, with success, constantly appeal to the country. After a time he will get no response. The people have their own affairs to look after and cannot give much attention to what the Congress is doing. If he takes a position, and stands by it, ultimately it will be

adopted. Most of the policies set out in my first Annual Message have become law, but it took several years to get action on some of them.

One of the most perplexing and at the same time most important functions of the President is the making of appointments. In some few cases he acts alone, but usually they are made with the advice and consent of the Senate. It is the practice to consult Senators of his own party before making an appointment from their respective states. In choosing persons for service over the whole or any considerable portion of a single state, it is customary to rely almost entirely on the party Senators from that state for recommendations. It is not possible to find men who are perfect. Selection always has to be limited to human beings, whatever choice is made. It is therefore always possible to point out defects. The supposition that no one should be appointed who has had experience in the field which he is to supervise is extremely detrimental to the public service. An Interstate Commerce Commissioner is much better qualified if he knows something about transportation. A Federal Trade Commissioner can render much better service if he has had a legal practice which extended into large business transactions. The assertion of those who contend that persons accepting a Government appointment would betray their trust in favor of former associates, can be understood only on the supposition that those who make it feel that their own tenure of public office is for the purpose of benefiting themselves and their friends.

Everyone knows that where the treasure is, there will the heart be also. When a man has invested his personal interest and reputation in the conduct of a public office, if he goes wrong, it will not be because of former relations, but because he is a bad man. The same interests that reached him would reach any bad man, irrespective of former life history. What we need in appointive positions is men of knowledge and experience who have sufficient character to resist temptations. If that standard is maintained, we need not be concerned about their former activities. If it is not maintained, all the restrictions on their past employment that can be conceived will be of no avail.

THE more experience I had in making appointments, the more I became convinced that attempts to put limitations on the appointing power are a mistake. It should be possible to choose a well-qualified person wherever he can be found. When restrictions are placed on residence, occupation, or profession, it almost always happens that someone is found who is universally admitted to be the best qualified, but who is eliminated by the artificial specifications. So long as the Senate has the power to reject nominations, there is little danger that a President would abuse his authority if he were given the largest possible freedom in his choices. The public service would be improved if all vacancies were filled by simply appointing the best ability and character that can be found. That is what is done in private business. The adoption of any other course handicaps the Government in all its operations.

In determining upon all his actions, however, the President has to remember that he is dealing with two different minds. One is the mind of the country, largely intent upon its own personal affairs and, while not greatly interested in the Government, yet desirous of seeing it conducted in an orderly and dignified manner for the advancement of the public welfare. Those who compose this mind wish to have the country prosperous and are opposed to unjust taxation and public extravagance. At the same time, they have a patriotic pride which moves them with so great a desire to see things well done that they are willing to pay for it. They gladly contribute their money to place the United States in the lead. In general, they represent the public opinion of the land.

But they are unorganized, formless, and inarticulate. Against a compact and well-drilled minority they do not appear to be very effective. They are nevertheless the great power in our government. I have constantly appealed to them and have seldom failed in enlisting their support. They are the court of last resort and their decisions are final.

THEY are, however, the indirect rather than the direct power. The immediate authority with which the President has to deal is vested in the political mind. In order to get things done, he has to work through that agency. Some of our Presidents have appeared to lack comprehension of the political mind. Although I have been associated with it for many years, I always found difficulty in understanding it. It is a strange mixture of vanity and timidity, of an obsequious attitude at one time and a delusion of grandeur at another time, of the most selfish preferment combined with the most sacrificing patriotism. The political mind is the product of men in public life who have been twice spoiled. They have been spoiled with praise and they have been spoiled with abuse. With them nothing is natural, everything is artificial. A few rare souls escape these influences and maintain a vision and a judgment that is unimpaired. They are a great comfort to every President and of great service to their country. But they are not sufficient in number so that the public business can be transacted like a private business.

It is because in their hours of timidity the Congress becomes subservient to the importunities of organized minorities that the President comes more and more to stand as the champion of the rights of the whole country. Organizing such minorities has come to be a well-recognized industry at Washington. They are oftentimes led by persons of great ability, who display much skill in bringing their influences to bear on the Congress. They have ways of securing newspaper publicity, deluging Senators and Representatives with petitions, and overwhelming them with imprecations that are oftentimes decisive in securing the passage of bills. While much of this legislation is not entirely bad, almost all of it is excessively expensive. If it were not for the rules of the House and the veto power of the President, within two years these activities would double the cost of the government.

Under our system the President is not only the head of the Government, but he is the head of his party. The last twenty years have witnessed a decline in party

spirit and a distinct weakening in party loyalty. While an independent attitude on the part of the citizen is not without a certain public advantage, yet it is necessary under our form of government to have political parties. Unless someone is a partisan, no one can be an independent. The Congress is organized entirely in accordance with party policy. The parties appeal to the voters in behalf of their platforms. The people make their choice on those issues. Unless those who are elected on the same party platform associate themselves together to carry out its provisions, the election becomes a mockery. The independent voter who has joined with others in placing a party nominee in office finds his efforts were all in vain if the person he helps elect refuses or neglects to keep the platform pledges of his party.

Many occasions arise in the Congress when party lines are very properly disregarded, but if there is to be a responsible government proceeding in accordance with the express mandate of the people, and not merely at the whim of those who happen to be victorious at the polls, on all the larger and important issues there must be party solidarity. It is the business of the President as party leader to do the best he can to see that the declared party platform purposes are translated into legislative and administrative action. Oftentimes I secured support from those without my party and had opposition from those within my party, in attempting to keep my platform pledges.

Such a condition is entirely anomalous. It leaves the President as the sole repository of party responsibility. But it is one of the reasons that the Presidential office has grown in popular estimation and favor while the Congress has declined. The country feels that the President is willing to assume responsibility, while his party in the Congress is not. I never felt it was my duty to attempt to coerce Senators or Representatives, or to take reprisals. The people sent them to Washington. I felt I had discharged my duty when I had done the best I could with them. In this way I avoided almost entirely a personal opposition, which I think was of more value to the country than to attempt to prevail through arousing personal fear.

Under our system it ought to be remembered that the power to initiate policies has to be centralized somewhere. Unless the party leaders exercising it can depend on loyalty and organization support, the party in which it is reposed will become entirely ineffective. A party which is ineffective will soon be discarded. If a party is to endure as a serviceable instrument of government for the country, it must possess and display a healthy spirit of party loyalty. Such a manifestation in the Congress would do more than anything else to rehabilitate it in the esteem and confidence of the country.

IT IS natural for man to seek power. It was because of this trait of human nature that the founders of our institutions provided a system of checks and balances. They placed all their public officers under constitutional limitations. They had little fear of the courts and were inclined to regard legislative bodies as the natural champions of their liberties. They were

Become an Expert Accountant

The Profession That Pays

The demand for skilled accountants—*men who really know their business*—is unceasing. Big corporations are in constant need of expert counsel in matters relating to Auditing, Cost Accounting, Business Law, Organization, Management, Finance. Men who prove their qualifications in this important branch of business are rapidly promoted to responsible executive positions—given an opportunity to earn real salaries. The range is from $3,000 to $15,000 a year—even to higher income-figures.

Send for Free Book—

very apprehensive that the executive might seek to exercise arbitrary powers. Under our Constitution such fears have seldom been well founded. The President has tended to become the champion of the people because he is held solely responsible for his acts, while in the Congress, where responsibility is divided, it has developed that there is much greater danger of arbitrary action.

It has therefore become increasingly imperative that the President should resist any encroachment upon his constitutional powers. One of the most important of these is the power of appointment. The Constitution provides that he shall nominate and, by and with the advice and consent of the Senate, appoint. A constant pressure is exerted by the Senators to make their own nominations, and the Congress is constantly proposing laws which undertake to deprive the President of the appointive power. Different departments and bureaus are frequently supporting measures that would make of them self-perpetuating bodies to which no appointments could be made that they did not originate. While I have always sought coöperation and advice, I have likewise resisted these efforts, sometimes by refusing to adopt recommendations and sometimes by the exercise of the veto power. One of the farm relief bills, and later a public health measure, had these clearly unconstitutional limitations on the power of appointment. In the defense of the rights and liberties of the people, it is necessary for the President to resist all encroachments upon his lawful authority.

ALL of these trials and encouragements come to each President. It is impossible to explain them. Even after passing through the Presidential office, I find it still remains a mystery. Why one person is selected for it and many others are rejected cannot be told. Why people respond as they do to its influence seems to be beyond inquiry. Any man who has been placed in the White House cannot feel that it is the result of his own exertions or his own merit. Some power outside and beyond him becomes manifest through him. As he contemplates the workings of his office, he comes to realize with an increasing sense of humility that he is but an instrument in the hands of God.

NEXT MONTH, fiction to suit all tastes! If you like a crackajack legal mystery, there's Melville Davisson Post's story, "The Guilty Man;" if young love amuses you, turn to "The Perfidy of Woman," by Edith Barnard Delano. There are delicacy and charm in "Love is Not Love," by Nelia Gardner White, and real distinction in Inez Haynes Irwin's "Freesia." Dixie Willson proves that money doesn't always bring happiness, so it was back to the simple life for the couple in "Mr. Money." "Prima Donna Stuff," by Margaret Culkin Banning, shows how one woman adjusted herself to her rôle and managed to find it pleasant—an adjustment that thousands of women are having to make today. Zane Grey's serial, "Drift Fence," brings the West to your door, and William Dudley Pelley's serial, "Dark Happiness," will intrigue you with its mystery and its romance.

The Something That's in a Man's Heart

(*Continued from page 67*)

to do the work of two. Poverty teaches us how many things we can do without and still be happy.

"Personally, I believe that in the great majority of cases, we get what is coming to us in this life. And I am quite sure that Emerson was right when he insisted that compensation is one of the inescapable laws of nature. Take my own case: I am cut off from the activities that most men enjoy. But since I can't indulge in golf, I have more time for my rose garden. I know my roses as intimately as other men know their golfing companions. Flowers speak to me in their own language.

"WHEN I go motoring, I don't drive like a man possessed. My object is not to get to a certain point as quickly as possible so that I may turn around and come back as quickly as possible. Instead, I drive slowly so that I may drink in the beauty that unfolds itself along the roadside. If there is a particularly fine view, or an exceptionally beautiful sunset, I can stop and enjoy it as long as I like. That's what I go out for—to see, and hear, and *feel*. I often turn off the main highway into side roads where the going is slow, and the peace and quiet heaven itself.

"Thank the Lord, we don't all need the same things to make us happy. You would be lost without the use of your legs; I no longer miss mine. I have learned not to think of legs and the fun that a good, stout pair might bring me. It is far wiser, I find, to concentrate upon the joy that my eyes and ears and heart and mind provide.

"One of my most satisfying compensations is the leisure I have for reading. I daresay I read much more than the average active man does. The companionship of my friends is very dear to me, but I am never lonely when my friends cannot be with me. In my library are other friends, tried and true, who await my mood and pleasure.

"Largely because I am cut off from much physical activity, I have had the time to form a rather intimate acquaintance with myself. And please don't smile at what may sound like colossal vanity: I haven't found the process a bit dull. Try it yourself: Simply set out in good faith to explore your own spiritual, mental, and companionable possibilities, just as you would set out to make a similar investigation of the possibilities of a stranger in whom you happened to be interested. You may surprise yourself by discovering a diverting and worth-while companion.

"To me, life is made up of amazing discoveries. I go down to my rose garden at

Corns

vanish after this amazing liquid

TOUCH the most painful corn with this amazing liquid. In three seconds all the pain is gone. Acts like an anaesthetic. You wear tight shoes, dance, walk again in comfort!

No paring or cutting—that is dangerous. Besides the corn then comes back. This way loosens it. Soon you peel the whole corn off with your fingers—like dead skin. Works alike on corns or calluses.

Professional dancers by the score use this method. Doctors approve it as safe and gentle. Millions employ it to gain quick relief. There is no other like it.

Ask for "Gets-It" at your druggist. Money back if not delighted. There are imitations. Be sure to get the genuine.

"GETS-IT" *World's Fastest Way*

midnight, and there, revealed by the sorcery of the moon, I come upon beauty that I never dreamed existed. I stumble upon bits of truth between the covers of a book or a magazine. I get inspiring glimpses of nobility during a conversation with a friend, or just as likely in the exchange of a few sentences with a stranger whose life touches mine only for an instant. I discover both truth and beauty—which are, in fact, one and the same thing—in the soul of a woman who works cheerfully and happily at a machine in my factory to earn a living for her crippled husband and their three small children.

"Have you ever noticed that sometimes when men discover a small fragment of truth, they make the mistake of assuming that they have a monopoly upon all the truth there is? Too often they formulate cast-iron creeds and say to the world, 'See, we are right; everybody else is wrong.'

"This seems to me very shortsighted. There is so much beauty in the world that it is only when we put our glimpses together that we are likely to get an approximate view of the whole.

"Decidedly, there's no sense in hugging the notion that Providence has picked on us. If we listen carefully and steadily to the something that's in our hearts, it's possible to find compensation for almost any hardship or handicap.

"Not only must a man keep faith *with* himself, he must also keep faith *in* himself. When I was starting out as a manufacturer, I often had to borrow money to meet the needs of my expanding business. At first, the men I went to for loans refused outright. They made it plain that they couldn't see much of a future for me.

"These rebuffs never worried me long. I always said to myself: 'Don't blame a man because he can't see in you what you see in yourself. Get a hustle on, and show him that he has passed up a good thing.' Invariably, this program worked. In a few years, the very men who had turned me down the flattest were offering to lend me any amount of money I needed."

"THERE'S one thing you haven't told me," I interrupted. "Even if you had started out with no odds against you, you have made a success of your job that any man might be proud of. Have you worked out any short cuts, or special methods, or business principles, which have proved valuable to you and which might be valuable to others?"

"I'll tell you how I work," said Mr. Eldridge, "and you can judge for yourself.

"Many folks," he went on, "get ready for the big work of the day by first clearing away the trivial and unimportant jobs. They want to start on the big stuff with a clean desk and no loose ends. I don't work that way. I dive head foremost into the biggest job or the knottiest problem on my program.

"In other words, I spend my freshest energy on the biggest and the most important thing I have to do. Afterward, if I have the time and strength, I clean up the details. Otherwise, I let somebody else do it. I believe that the reason so many men never seem to get anywhere, in spite of a lot of hard work, is because they wear themselves out getting ready to tackle a job."

✣ ✣ ✣ ✣ ✣

"Last night I came home with great news"

"I'D TELEPHONED Ruth that I had a surprise for her and she could hardly wait for me to get home. You should have seen her face when I told her the Boss had given me a $25 increase in salary.

" 'It's wonderful,' she said, 'just wonderful. Now we can pay those bills and even start saving.

" 'Remember the night we saw that coupon in a magazine and you decided to take up an I. C. S. course? It made a new man of you, Bob, and I knew it wouldn't be long before the firm would notice the difference in your work. We certainly owe a lot to the International Correspondence Schools.' "

How about *you?* Are you always going to work for a small salary? Or are you going to get ahead? It all depends on what you do with your spare time.

Don't let another precious hour pass before you find out what the I. C. S. can do for you. It doesn't cost you a penny or obligate you in any way, but it may be the means of changing your entire life. *Do it now!*

Learn Electricity by Actual Work

In the Great Shops of Coyne

Complete Training in 12 Weeks Get into the BIG PAY FIELD. The whole world of Electricity is open to you as a COYNE-trained man. 12 weeks from now you can be a trained Electrician no matter what you are doing today. Make this the most profitable and enjoyable summer of your life. Come to Chicago on beautiful Lake Michigan, the Electrical Center of the world. I'll allow your Railroad Fare from any place in the United States! Clip Coupon Now for Full particulars and for Big Free Book.

Electricity Offers You a Big Future Coyne training is practical, money-making training — not correspondence. You work on the greatest outlay of Electrical Machinery in any school in the country, everything from Doorbells to Power Plants—everything to make you a thoroughly-trained BIG-PAY EXPERT.

No Advanced Education or Experience You don't need advanced education and it makes no difference what kind of work you are doing now, I'll make you a trained man through the COYNE LEARN-BY-DOING METHOD! I have done it for thousands—I will do it for you!

Aviation Electricity—Radio—Auto Electricity Courses and Railroad Fare Included—If You Enroll Now

I'll allow your Railroad Fare to Chicago, from any place in the United States if you act quick! And right now I am including absolutely free of extra charge, my complete Aviation Electrical, Radio and Auto, Truck and Tractor Electricity courses. CLIP COUPON NOW!

We Are Specialists We do not attempt to teach you several trades. We specialize in Electricity and nothing else. Have been teaching Electricity by actual work for 30 years.

Earn While You Learn My Employment Department helps you get a job to earn a good part of your expenses and assists you to a good job on graduation.

Send Coupon NOW! Don't delay a minute—get my big Free Book and full particulars of my special offer.

What Do Trees Mean to You?

(*Continued from page 39*)

things living which gave the Indians of the plains a sense of kinship with trees, the cedars are a symbol of home. Whether in the rocky fields of New England, or in New York and Pennsylvania, or farther south, the sharp points of the young cedar sentinels, interspersed with the sumac, and often with juniper creeping about their feet, are a characteristic feature of the landscape. They are the evidence of fields reverting to forests—of that gradual re-covering with which nature seeks to heal the barrenness caused by man's destructiveness.

It is the special glory of the pines that they have lived deeply and have kept the scars of ice and drought, and the marks of their battles with the wind. The sound of the sea is in the singing of their needles—a memory of ages past when the world was younger and the pines lived by the side of great waters. Most familiar in the East is the white pine, blue of leaf and dense of form as a youngster.

Across the plains our eastern white pine gives way to the longer-leafed, heavier yellow pine, appropriately named "*Pinus ponderosa*." This straight-trunked giant, often six to eight feet in diameter and two hundred feet tall, is to be found from the Rockies through to California. In parts of the Sierras it lives in company with the sugar pine, which the late John Muir, who knew them all, described as the noblest of the pine family. Taller than the yellow pine, its columnar trunk rises branchless for a hundred feet or more, solid, straight, true, and almost black in color. The branches of the crown tend to droop, and carry at the ends great cones, sometimes eighteen inches long and weighing more than a pound. When these drop from a height of one hundred and fifty or two hundred feet they can do so much injury that they are locally known as "widow makers."

BUT lord of them all, unsurpassed in any corner of the world, is the giant sequoia. Its only possible rival is its cousin, the coast redwood. Much has been written about the fabulous size and age of these "big trees." The largest are between thirty and forty feet in diameter, and nearly three hundred feet tall. Some of them were two thousand years old when Christ was born. But more impressive than statistics about them is their magnificent vitality and strength. The huge shafts of their trunks rise for a hundred or more feet sheer and branchless—vast columns so firm that not even the heaviest winds can shake them. They are covered with a cinnamon-colored, fibrous bark, deeply ribbed and shredded, and very thick. So clean and vivid is this bark that the sequoias look young in the presence of firs that are one tenth their age, but whose bark is soiled and worn, and often covered with moss. The warm and vital color of the "big trees" makes them loom up in the distance in the forest.

The appearance of enormous vitality is not belied by fact. Not only have these sequoias lived longer than all but two or three known species of trees, but they have survived the fires of countless centuries which have destroyed all forms of life. In the Giant Forest in the Sequoia National Park is a burned snag—the charred remnant of a tree that grew to be perhaps fifteen or eighteen feet in diameter. Repeated fires during its fifteen or twenty centuries of existence destroyed all but a fragment perhaps fifty feet high and four or five thick at the base. This charred stump has on the outside a strip of living bark about two feet wide, which runs up to the top of the snag. There it feeds a branch covered with vigorous green leaves, the outward and visible sign of the triumph of life over flame. No other living thing could have survived so much damage from repeated fires. It is the supreme monument of the will to live.

The "big trees" are to be found only in the California Sierras. Forty or fifty groves are known to exist, some of which contain several thousand trees, and others scarcely a dozen. Some of the best have already been destroyed by man—one of the greatest acts of vandalism of all time. Of the remaining groves, a few are in the Yosemite and the Sequoia National Parks. Those outside are not yet safe from ultimate destruction by lumbermen.

WHERE the number of remaining "big trees" is small, the quantity of their cousins, the redwoods, is still large. These are found for the most part in the so-called Redwood Empire of northern California. Formerly the redwoods filled the canyons along the coast from Oregon to a point south of Monterey. California through the unceasing efforts of the "Save the Redwoods League," is at last taking steps to preserve a few of the finest groves in the north. Unlike the "big trees," which grow mixed in with other trees, the redwoods are often found in pure stands. One of the most magnificent of these, at a place called Bull Creek Flat, is composed of redwoods, some of which are estimated to be more than three hundred and fifty feet tall, with trunks five to six to eighteen feet in diameter.

What California is doing to save the trees other states will, let us hope, be tempted to copy. The "Save the Redwoods League" is helping California to acquire some of the best surviving stands of redwoods to be preserved in state parks. Oregon and Washington still have bits of the primeval forest famous for the splendor of the Douglas spruces that have escaped the sawmill. But at the present rate of destruction, these states will soon be like those portions of the South which have been stripped by the lumber and turpentine interests, making the country barren.

In time, even the men who have come most to denude the land of its trees will learn that this policy is as shortsighted commercially as artistically. Fortunately nature needs only a little encouragement and protection to begin to heal the scars where the forests have been ruthlessly destroyed. No longer are the trees man's enemies. In time, we shall learn that they are man's best friends.

The Mystery at the Mill

(*Continued from page 71*)

slowly, looking about him at the fields and the wooded hills in the distance, faintly colored by the first touch of the autumn; the ricks of wheat straw and the hay stacked in the meadows, and the corn cut and bound in shocks with grapevine. He stopped some time to study the current of the river and to examine its clay banks, but for the most part he sauntered as one vaguely at his leisure in the vacation of an autumn afternoon.

But the soul of the man had no vacation.

The vast, inscrutable justice of Heaven appalled the lawyer. There was no escape from the decisions of this tribunal. The universe was adjusted to a righteousness that transcended any human conception. All things were evened up. By no cunning, by no device of trickery, could one make a permanent gain upon another in this world.

Always the evil that one did turned backward on himself.

The thing came up out of the haze of antiquity in the legends of the Pentateuch. There was David, setting Uriah in the forefront of the battle, and Nathan coming after to pronounce his doom. There was Jezebel, slaying the prophets, and waiting at her window with her tired head and her painted face for the dogs to eat her. It was a world of terrible adjustments.

Detached and awful was God's Court of Equity!

And in this reflection the lawyer made little progress.

It was evening when his path came out on the highway at the ford. He stopped in the dust of the road. Here the river widened, could possibly, at this season, be forded on a horse; but beyond, a shoulder of the hills came down and the river cut through, running deep and swiftly.

HERE, on high stone abutments, sat the new wooden bridge, sixty feet above the water, a white, graceful span, covered with a shingle roof and painted to protect it from the weather. It was some quarter of a mile above the ford, but the river made no turn and it was clearly visible.

Colonel Braxton remained for some time in the highway at the river crossing. Here, evidently, was the point at which the dead man had come into the water. It coincided with his estimate, both in distance and in time. And, to confirm this conclusion, here in the dust was the track of a horse where it had crossed the river and returned. But there was a further evidence that puzzled him. Here, also, in the dust at the water's edge were the footprints of a man. They were not clearly outlined prints of which the dimensions could be accurately determined, for they turned and shifted as though made in the uncertain actions of a struggle.

And in another feature they were strange:

They seemed to begin and end just here in the dust of the road at the water's edge. They extended, as in this struggle, from one sodded border of the road to the

The consciousness of being immaculate

THE charm of a woman whom we think of as beautiful does not depend merely upon the attractiveness of her face and figure. It arises from more subtle things.

It is the woman who gives care to those intimate phases of the toilette—sometimes neglected and sometimes misunderstood—who is charming. The graciousness and poise which are so large a part of charm arise from a well-cared-for body, from the health and vivacity engendered by meticulous cleanliness—and from the consciousness of being immaculate.

No woman can be sure of that blessed feeling unless she understands what feminine hygiene really is. There is no reason for any woman's not knowing the facts. The makers of "Lysol" Disinfectant offer you, free, a booklet called "The Scientific Side of Health and Youth." It was written by an eminent woman physician. It answers the delicate questions which you would like to ask her in person. Send the coupon now.

But in the meantime, buy a bottle of "Lysol" Disinfectant at your druggist's. "Lysol" has been the unquestioned standard for personal hygiene for forty years. Do not experiment in this critical matter. Complete directions with every bottle.

Sole distributors: Lehn & Fink, Inc., *Bloomfield, N. J.*

other, and could be no farther traced. The horse, too, from its tracks, had plunged about before it entered the water.

It was evening, and the lawyer sat down by the roadside and ate the bit of luncheon that he had brought with him from the carriage.

Beyond, at a little distance from the bridge, on the extended shoulder of the hills, sat Rickman's house. This house was the objective of his journey. When he had finished with the meager food, he set out along the highway to Rickman's house.

The night had descended when he reached the door and knocked at the wooden panel. For some moments there was no response; then the door opened and a big, ox-shouldered man appeared with a candle. He did not speak, but he looked closely at the visitor, his head lowered between his shoulders and the candle extended in his hand.

But the lawyer did not intend to remain standing on the doorstep.

"My name is Braxton," he said. "I have a letter from the Governor of Virginia, asking me to come here. . . . I have come."

And he stepped through the door and passed the man into the room.

The big man went in beside the lawyer, looking down at him from the summit of his immense bulk, as though he guarded, convoyed, him into the house. Then he went about in the room lighting other candles.

It seemed a sort of nervous business—the act of one who would get himself in hand. And when he had finished with it, he was changed. His manner was now genial, as though it were a mood that, upon reflection, he had deemed expedient.

"Ah, yes," he said. "Colonel Braxton, I am honored—will you sit down, sir?" And he drew up a chair by a table on which he had set the lighted candles.

The lawyer sat down. He put his hat and stick on the table beside him.

"I am sorry to arrive at so late an hour," he said; "but I was detained on the way. The letter from the Governor reached me last night, and I came down this morning on the steamboat from Fort Pitt. I should have been here by noon. But I was delayed."

Rickman came around the table and sat down beyond Colonel Braxton. "I am sorry for your inconvenience," he said. "What delayed you?"

"A dead man," replied Colonel Braxton.

SOMETHING sprang up in Rickman's face, was throttled and thrust back.

"A dead man!" he echoed.

"Yes. It was at Simon Betts's mill."

"Ah!" said Rickman. "Someone killed there?"

"No," replied Colonel Braxton; "I think he was killed here."

The man turned with the quick, heavy action of an animal prodded at a tender part.

"Here!"

The lawyer gave no attention to the act. He went on in his leisurely voice.

"I mean in this neighborhood," he said, "perhaps at the river crossing. The body floating in the river entered the sluice at Betts's mill this morning. The man had been drowned, and had been for some hours in the river."

"Did they know him?" said Rickman.

"He was a stranger," replied the lawyer. "No one knew him . . . unless you know him. He was a small man, a city clerk of sorts, I concluded, with a close-clipped mustache and sandy hair beginning to grow thin about the temples. . . . Has such a man been here?"

"No," said Rickman; "no one has been here."

"A horse crossed the river at the ford," continued the lawyer, "and returned. There is the track in the road. You did not see the horse . . . nor the rider?"

"I did not," replied Rickman. "But I have been closely engaged about my affairs. I am alone here, and there was the bridge to paint. It was late when I finished it last night."

"IT WAS late when the man was drowned," said Colonel Braxton.

Rickman turned again with that swift, heavy motion.

"Late!"

"It was precisely fifteen minutes after eleven o'clock," replied the lawyer.

"You know that!"

The words were a sort of startled expletive.

Colonel Braxton went on, as though his sentence had not been interrupted.

"His watch had stopped at that hour, when he went into the water. The body arrived at the mill at five—that was six hours after; the current runs about a mile an hour. . . . He must have been drowned, then, at about this point on the river"

"At the ford!" said Rickman, as though he added an obvious conclusion. "It's a dangerous ford. I said that to the Assembly when I petitioned for a bridge at this point. The water is midside to a horse even in the dry season, and the rider might be thrown in it. Some horses are afraid of water."

The lawyer interrupted.

"Ah! Do you think that could be the explanation of the footprints I saw in the road, there at the water's edge? . . . The horse afraid, and the rider getting down to lead him into the water?"

"Footprints!"

Again that fear started in Rickman's face, paused, and gave way to an expression of unconcern.

"Yes," he said, "that would be the explanation. The horse in its fear of the river became unmanageable, and the rider was pitched off or got down to lead him—that ford is a public menace, which the bridge removes."

He plunged into a discussion of the bridge. "It's a good bridge. Have you seen the model?"

He arose and turned about in the room. Behind him, supported on two chairs, was the miniature of the covered bridge that the Assembly of Virginia had approved. It was as the man said, an admirable model, cunningly trussed and braced to bear an incredible weight upon it. It bore now the man's weight, as he rested his huge hands on the thing. The inventor of this structure was a man of genius. He had won the authorities of Virginia to his model, it was said, by placing it thus supported by two chairs and jumping on it. It held, and his model was adopted. But the inventor was dead; and the bridges built by Rickman were in controversy.

Rickman began to talk about the injustice of this controversy. This form of bridge, so designed, was incredibly expensive to construct. One without experience could have no idea of its cost. The best materials only could be used. The loss in lumber that would prove unequal to the strain was immense. And skilled labor was required, the most expensive labor.

He went on. It was injustice for the authorities of Virginia to charge him with this fraud in his accounts; to harass him with an inspector sent out to gather up the details about his work, to estimate the masonry and lumber, and take the affidavits of the workmen . . . and all this mass of proofs against him. His voice rose and his face flushed.

Colonel Braxton did not reply. He took out a cigar, went over to the fireplace, and, stooping down, struck a match to light it. There was some split wood in the fireplace and a mass of char above it.

"You have had a bit of fire," he said; "are the nights cool?"

That strange expression threatened again in Rickman's face.

"Yes," he said, "last night . . . I started to light the fire, but the logs were green and they did not kindle. It is sometimes cool here."

"It is warm enough tonight," replied the lawyer; and he went over to the open window.

The air was soft and scented from the fields, and the world was full of light, as in a fairy day. There was a great moon and every star was out The white bridge at a little distance on the high banks of the river was clearly visible. The clews that he had traced in this mysterious affair were drawing to their source. There remained only a further incident to verify

He spoke, still facing the open window.

"It is a fine night" he said. "Suppose we walk to the bridge."

Rickman was in no sense anxious to have his work examined. But he was glad to divert the attention of the lawyer and he counted on his explanations to cover any change from the model that an unskilled layman might notice in the night. And, in consequence, as they walked across the field to the abutment, he kept up a running fire of talk. In many respects the model was defective. In miniature the details were sound, but extended they required some changes. One had to use a builder's judgment, and the like.

But he wasted his explanations.

The lawyer's mind was in another quarter.

COLONEL BRAXTON stepped out on the stone abutment and looked at the cover of the bridge where it ended within reach of his extended hand. The contractor, walking about on the bridge floor behind him, continued with his vague explanatory talk. But the lawyer gave no attention. He had found the thing he sought. And suddenly he spoke.

"Rickman," he said, "nothing can be hidden. One goes about to take his little precautions, in the dark, for safety, and, behold, the world is full of light!

"I get a letter from the Governor of Virginia asking me to come here and talk with an inspector he has sent, and prepare

this case of fraud against you. But the inspector arrives a day before me, and I find him dead on the floor of Betts's mill. And I find you here, Rickman, with a lie in your mouth. You *did* see him, for the tracks of the horse led to your door. And you *did* get possession of the dangerous evidence that he had assembled against you, for you burned it in your fireplace; one does not light a fire of split wood by burning paper above it—the char from the burned paper was on the top of the logs. And it was you who rode the dead man's horse to the ford, and, getting down, drove it into the river . . . after you had killed him!"

The big man, walking about on the bridge floor, stopped. He did not move, but the sinister thing that had been skulking behind his face emerged and possessed it.

"Killed him!" And when he finally spoke the words his voice was low and distant like a whisper. "There was no mark on him. He was drowned."

"He was drowned," continued the lawyer; "but there *was* a mark on him. Listen, Rickman. There was a gray smear on the arm and shoulder of the dead man. It was not from the white clay of the river. I examined it closely, and there was oil in it . . . oil . . . and, therefore, that gray smear was paint!"

He extended his hand and pointed to the cover of the bridge beside him. For the distance of some feet at the height of a man's shoulder, the fresh white paint had been wiped off.

His voice, deep and steady, hardened like a thing organic:

"There is no security in murder! You lured the dead man to this bridge after the papers laid out on the table in your house showed the case against you, and when he stood where I am standing, you thrust him over the abutment into the river. Half your size, and taken without warning, he had no chance; but in his terror he caught at the cover of the bridge, and the sweep of his arm carried the wet paint with it . . . carried it to Betts's mill . . . carried it to your damnation!"

THERE was silence. And then, with no sound, with no premonitory motion, like an inert projectile touched with fire, the big creature behind Colonel Braxton rushed on him. But the lawyer was expecting precisely this murderous act, and with a swiftness incredible in a man of his bulk, he dropped on the abutment.

The huge creature could not check his mad rush and, like his victim, he caught at the bridge to save himself. His shoulder and his arm made the same sweep of the painted cover, and with a cry he plunged into the river.

It was sixty feet to the river from that stone abutment and, his extended body striking the water, the blow killed him, as on the night before it had killed his victim.

Colonel Braxton rose, to see the body of the murderer set out on its journey . . . its journey to old Betts's mill . . . to join the other that awaited it.

The lawyer looked up at the stars. . . . "He shall fall himself into his own pit."

Swift and terrible, and without premonition, were the adjustments of God.

✤ ✤ ✤ ✤ ✤

"Unaccustomed as I am—

....Yet 4 Weeks Later He Swept Them Off Their Feet!

IN a daze he slumped to his seat. Failure . . . when a good impression before these men meant so much. Over the coffee next morning, his wife noticed his gloomy, preoccupied air.

"What's the trouble, dear?"

"Oh . . . nothing. I just fumbled my big chance last night, that's all!"

"John! You don't mean that your big idea didn't go over!"

"I don't think so. But Great Scott, I didn't know they were going to let me do the explaining. I outlined it to Bell—he's the public speaker of our company! I thought he was going to do the talking!"

"But, dear, that was so foolish. It was your idea—why let Bell take all the credit? They'll never recognize your ability if you sit back all the time. You really ought to learn how to speak in public!"

"Well, I'm too old to go to school now. And, besides, I haven't got the time!"

"Say, I've got the answer to that. Where's that magazine? . . . Here—read this. Here's an internationally known institute that offers a home study course in effective speaking. They offer a free booklet entitled *How to Work Wonders With Words*, which tells how any man can develop his natural speaking ability Why not send for it?"

He did. And a few minutes' reading of this amazing book changed the entire course of John Harkness' business career. It showed him how a simple and easy method, in 20 minutes a day, would train him to dominate one man or thousands—convince one man or many—how to talk at business meetings, lodges, banquets and social affairs. It banished all the mystery and magic of effective speaking and revealed the natural Laws of Conversation that distinguish the powerful speaker from the man who never knows what to say.

Fortunately, the opportunity to resubmit his plan occurred a few weeks later. But this time he was ready. "Go ahead with the plan," said the president, when Harkness had finished his talk. "I get your idea much more clearly now. And I'm creating a new place for you—there's room at the top in our organization for men who know how to talk!"

And his newly developed talent has created other advantages for him. He is a sought after speaker for civic, banquet, and lodge affairs. Social leaders compete for his attendance at dinners because he is such an interesting talker. And he lays all the credit for his success to his wife's suggestion—and to the facts contained in this free book—*How to Work Wonders With Words.*

* * *

For fifteen years the North American Institute has been proving to men that ability to express one's self is the result of training, rather than a natural gift of a chosen few. Any man with a grammar school education can absorb and apply quickly the natural Laws of Conversation. With these laws in mind, the faults of timidity, self-consciousness, stage-fright and lack of poise disappear; repressed ideas and thoughts come forth in words of fire.

Send for This Amazing Book

Have you an open mind? Then send for this free book *How to Work Wonders With Words.* Over 65,000 men in all walks of life—including many bankers, lawyers, politicians and other prominent men—have found in this book a key that has opened a veritable floodgate of natural speaking ability. See for yourself how you can become a popular and dominating speaker! Your copy is waiting for you—free—simply for the mailing of the coupon.

Has winter any joy to equal a drink of cool water on a hot afternoon?

It is Never Too Hot for Me

Illustrated by THOMAS FOGARTY

By CHARLES A. DAVID

NOTHING pleases me better than to wake in the morning and find things fairly sizzling. I like all nature bathed in genial warmth, fairly dripping sunshine; sky and violets wearing the same shade of blue; dewdrops glistening like pendent diamonds; and every flower occupied by a bee or butterfly. The mountains have changed from azure to amethyst; the moist fragrance of honeysuckle hangs like smoke in the air; and even the English sparrows have quieted down and forgotten to quarrel. To wake on such a morning is like opening one's eyes in Paradise.

If anything can be more soul-satisfying than a clear, hot July morning, I do not know what it can be, unless it be a clear, hot morning in August—or maybe one in September. Just compare it with a winter morning, when things are cold, dark, and dreary; when all outdoors is stilled into frozen silence; when the wind comes howling down from the north, bringing snow or sleet, or rain that is colder than either; when fires won't burn and smoke comes down the chimney in spiteful puffs; when pipes in the bathroom are frozen hard and fast; when sirup refuses to run, and when butter has to be cut with a saw; when icicles hang from window sills, and the frosted panes shut out what little light is stirring—

The kind of day when birds seek shelter in the ivy, the squirrels in their dens pull the cover higher and turn over for another nap, and even that prince of optimists, the blue jay, gives up in disgust and hugs the leeward side of the biggest tree he can find, where he sits with hunched shoulders and drooping tail, knowing full well that the nearest acorn is locked in a coating of ice and that it would take dynamite and pick to unearth a worm.

Some folks have the gall to say they like this kind of weather—say it is so full of pep and as bracing as wine. But I was not built that way. If I cannot have things at least comfortably warm, I would rather not have them at all. I don't like winter or anything even remotely connected with it.

The raucous rattle and scrape of coal in a scoop scrapes every nerve I own. The sound of shaking down a furnace chills me to the bone and sends shivers down my spine. Taking out ashes is man's lowest occupation. Ice on the steps is a menace to life and limb. Frozen pipes are breeders of profanity, and the glare of snow on the ground hurts my eyes. I don't like keyholes that whistle, or pipes that sound as if they were choking to death, or grass that crackles when stepped on. I don't like winter underwear. Wool socks are sure to give me a cold when I change to cotton; ear muffs keep me from hearing; and getting out of bed calls for more nerve than going over the top.

No, I don't like winter, and there is no use making out I do. I am sorry to admit it, but cold weather puts me in a bad humor that lasts until the first bluebird of the season has a fit under my window, and until the jonquils paint a yellow streak across the garden.

Then, and not until then, is there any gladness in my smile. If I could have my way, I should like to live in a little three-room bungalow exactly on the equator, open on all four sides, without the sign of a chimney, and without a coal scuttle within five hundred miles. One reason why I am, and always will be, "agin" winter is that, to exist at all, I have to wear an overcoat. Of all the overcoats I have known, and I have met quite a few, I am yet to find one that did not have something the matter with the sleeve lining. No matter how much the coat cost, or how perfectly it seemed to fit, before long it would develop some sleeve trouble. The lining of the sleeves might be too full, or it might be too tight, or there might be a spiral twist about it, or a corkscrew turn that will keep you guessing as to where your hand will come out—that being something you can never count on.

THERE is nothing so grateful as warmth. It is just another name for life, while intense cold spells death. I never could understand why so many people seem to be so down on the summertime and the glorious weather it brings. To me, the summer months, July, August, and September, are the high tide of the season—the glory months of the year. I get more kick out of them than all the others put together. I find myself looking for their coming, as I would look for the coming of a friend that I loved and trusted.

To me, sunshine is a tonic—not one that unduly invigorates, but one that lulls and soothes, and that sets me dreaming dreams, the like of which I have never dreamed before. I have always had a fellow feeling for the little blue-throated lizard that loves the hot sunshine and feels hurt if a cloud throws a shadow over him, if only for a minute. Summer days are never too long for him—with nothing on earth to do but catch an occasional fly, and just lie and doze. I have sometimes thought if I were not myself, I should like to be a little gray lizard, with a blue shirt front and a home on an old rail fence.

It may be just a fancy of mine, but it seems to me that men who sweat easily and freely are likely to be good-natured, happy, and jolly; while those who are forever finding fault and grumbling, and who would rather snarl than smile, are usually as dry-skinned as a mummy.

One of the jolliest mortals I have ever known was also one of the fattest. If anyone had a right to complain about the heat, it would have been this three hundred pounds of laughing good nature. But he was never known to fuss about the heat—he just took it as it came. He never went around among his friends, punching them in the ribs and asking if it was hot enough for them, and for this we loved him. There was so much of him that he billowed when he walked and spilled all over the chair when he sat down. His neck was a series of pink rolls that cascaded over his old-fashioned stock. His beautifully polished head was as innocent of hair as the palm of a baby's hand, except for a fringe that connected his ears. On the coldest winter day his bald head and smiling face were always comfortably damp; and in summer the moisture gathered there as naturally as dew on the petals of a rose.

Boy that I was, I used to think that his original way of getting rid of the surplus flow of sweat was one of the most thrilling things I had ever seen; and I never tired of watching the rite, for that was what it was. He began by placing the palm of one chubby hand on the back of his neck, and then would bring it slowly up over the head, pushing the flood before it, until it reached a point where the eyebrows bulged. Then he would give his fingers an inimitable flip that sent something less than a gill of water on the grass far in front. I used to practice the trick by wetting my head and following his motions, but I could never manage that amazing flip.

I HAD another friend who was just the opposite of my stall-fed one. He was as lean as the other was fat; his skin was like parchment and his Adam's apple seemed to creak as it worked up and down. He was forever and eternally wanting to know if you had ever seen such heat—he was quite sure he never had. And, true to form, he had the reputation of being as cross-grained and hard to get along with as a tarantula with the toothache.

If I ever join an exploring party, it will not be one headed for the polar regions, but it will be for some clime that is warmer than this—some place, for instance, where I can occasionally flush a yellow-legged

grasshopper; where every blossom holds a bee; where dragon flies flash in the sunlight; where terrapins slide off their floating logs without a splash; where tadpoles scuttle for deeper water at the slightest sound. I should not mind a trip to the summer seas, to chum with the parrots, the pythons, and the birds of paradise, but I have no craving to visit a land where ice is free and where all outdoors is one big refrigerator.

I am perfectly content to pass my life where heat waves dance and quiver over sandy roads, where you can't find a rock cool enough to sit on, where you have to look out for snakes at every step, where the catbirds look like wilted dishrags, where the sun perch stop swimming to fan themselves with their fins, where every little pond has its orchestra of frogs, where doodles dig and baby birds cry for breakfast. In short, where things are decently warm.

THE happiest day that I can remember, and about the hottest, was a Saturday in my favorite month of July. For some reason or other, the store where I was employed closed for the day, and the day was mine to do with as I wished. I made no plans, as there is something cut-and-dried about plans that takes half the fun out of an outing. I liked to go it blind and let things shape themselves just as they happened to occur. I did not want to know exactly where I was going, what I was going to do when I got there, or what time I was coming home.

The day dawned as if it had been specially ordered for the occasion. There wasn't a cloud, or a breath of air stirring. The smoke from the kitchen chimney went straight up until lost in the blue, the leaves on the poplars hung motionless, and, as early as it was, the old rooster and his wives were going about the yard with bills open and panting for air—a sure sign that the day was going to come up to what was expected of it.

Then I walked until I was clear out of hearing of civilization and its accustomed sounds, with only the many voices of nature to break the silence. I tramped until I found a lazy, loitering stream that looked as if it had nothing in the world to do—and all day to do it in. If you should get lonely while wandering around, you can find no better companion than running water. It will lead to places you have never been before and whisper secrets that will set you to thinking along new lines.

As the stream wound through meadow and field, it seemed to me that every wild flower native to the region leaned over the bank and smiled at its reflection in the water. Long-stemmed yellow violets lifted their blooms high above the moss; next came patches of the purple ones, the kind that everybody knows and loves; and here and there flamed the splendid cardinal flower, like a lost Christmas tree ablaze with tiny lights. And from under drifted pine needles tiny daisies and the ghostly white leaves and flowers of the Indian pipe pushed themselves up to the light. At one place the little stream widened out where it crossed a country road, and under the bushes on the lower side the current had formed a tiny pool, inhabited by transparent minnows and a lonely crawfish. A little farther on, someone's cow had crossed, and left deep hoofprints in the soft earth. In these water had gathered, and into one a baby terrapin had wandered and could not get out. It got a free ride home in my breeches pocket.

It would take a book, and a big one, too, to tell you what we, the brook and I, saw on that wonderful July day so long ago.

I THINK my love for the good old summer-time and the hot days that followed in its wake began when I used to lie flat on my back on the front walk, right in the sun, and fool butterflies. I would twist a bright red rag around a toe and hold that foot up in the air, while I waited for some absent-minded butterfly to come drifting along and, mistaking the bit of calico for a big, red flower, unroll its watch-spring tongue and start a still hunt for honey.

I did not mind the broiling sun and the hot sand any more than a lizard would, and it made no difference to me how long the butterfly kept me waiting. In those happy days, we had no near neighbors and my only steady playfellow was a small negro boy who answered to the name of Blackberry. The name suited him. His summer costume consisted of an abbreviated shirt, worn like an apron, and a strip of eelskin sewed around one wrist, to make him strong. He did not always wear this shirt, but he never failed to carry it with him in case of an emergency.

I am a little hazy as to who Blackberry was, but I think he belonged to our wash woman. He was the nearest approach to a valet that I ever had, as he tagged my footsteps all day, and at night he was expected to fetch a pan of water to the back steps and wash my feet before I went to bed. I think that comprised his duties. We spent much of our spare time in a cane brake, with a number of small ponds scattered through it, and with dark, mysterious paths through the tall canes connecting them. The fishy smell that hung over the place drew me like a magnet; the bloated, white-bellied bullfrogs that lolled over the lily pads entranced me, and I never tired of watching the leeches or the million tadpoles that made for deep water at the first footfall.

One day Blackberry was squatting right on the edge of a pond, half asleep, when a bumblebee came zooming along and stabbed him. Instantly he dived, and as the water was shallow, he didn't do a thing but stick up in the muddy bottom. His feet and legs were out of the water and kicking for all they were worth.

I jumped in and managed to pull him out, but his head was a solid ball of whitish clay, several sizes too big for his body. I finally located his eyes, mouth, and nostrils, and got them unplugged so that he could breathe and see. I suppose I saved his life.

It was about these ponds and that marsh that I learned to know and love the liquid fluting of the red-winged blackbird, the one that haunts small inland waters where pink-hearted lilies tilt and sway; and where mellow bugs cut dizzy circles under the banks in the still water; where bullfrogs clear their throats—and then decide not to say it; where kingfishers clank upstream as if going to a fire; where little green spiders are kept busy dodging the dirt-daubers; and where the little yellow sweat-flies keep you slapping.

I try not to covet, but I cannot keep from envying the animals that sleep through the winter and the birds that pick up and go South, and leave the cold weather behind them. It must be great to be able to enjoy the summer and not have to dread the winter that is just around the corner. Think of the common black bear and the time he must have, as he spends the warm months licking wild honey from the dripping comb, stripping vines of their luscious fruit, tramping roughshod through the broom sedge, flushing grasshoppers by the thousand, and gulping them down by the handful.

With the first tang of frost in the air, he retires to his den, pulls up the cover, hugs himself to make sure he is all there, and quietly dozes off for the winter. He does not wake up until spring, with its promise of another summer, pushes the sap into every twig and touches the waxen petals of the arbutus with the pink of summer clouds. He knows nothing of the winter storms that piled snow and ice over his retreat.

I never see a humming bird, child of summer and the sunshine, without a secret wish that I might go with it to a land where flowers bloom all the year round and where winter is unknown.

I know of no sound that is as suggestive of the very spirit of summer as the strident cry of the locust, or July fly, as it is called in the South. When it slowly winds up its rattle, getting louder and louder until the peak is reached, and then lets it run down, just as slowly, it is a sure sign that the day is going to be a hot one and that it will get hotter as it gets older.

ON BLUSTERY winter nights, when windows rattle and blinds slam, I like to read James Whitcomb Riley's "Knee-deep in June." As I turn the leaves, a warm glow seems to pervade the room, and before long, in imagination, I can hear the buzzing of bees, the chirping of crickets in the grass, the distant tinkle of a sheep bell, and all the other glorious sounds that go to make up a perfect summer day. No artist with brush and colors ever painted a summer day as true to life as did this friendly poet with a few strokes of his pen. Every line is a picture thrown on the canvas of memory, which will live as long as barefoot boys and straw-hatted men love the outdoors.

Summer, to me, means freedom and rest, blissful rest—the kind that soaks into your very bones and takes possession of every fiber of your being, and makes you want to turn your back on exertion and go into the resting business for good and all.

TO MAKE GOOD in the town by which he was ostracized in his wild youth, to become president of the very bank he helped to hold up—these are but two of the amazing episodes in the life of Dave Tucker, ex-convict, wealthy ranchman, banker; a man respected, admired, and looked up to by a whole community. This truly remarkable and arresting personal story appears next month.

A play you ought to read

The Tragedy of Neglected Gums

Cast of Characters: Your Dentist *and* You

YOU: "*My gums are responsible for this visit, doctor. I'm anxious about them.*"

D.D.S.: "What's the matter?"

YOU: "*Well, sometimes they're tender when I brush my teeth. And once in a while they bleed a little. But my teeth seem to be all right. Just how serious is a thing like this?*"

D.D.S.: "Probably nothing to bother about, with a healthy mouth like yours. But, just the same, I've seen people with white and flawless teeth get into serious trouble with their gums."

YOU: "*That's what worries me. Pyorrhea—gingivitis—trench mouth—all those horrible-sounding things! Just a month ago a friend of mine had to have seven teeth pulled out.*"

D.D.S.: "Yes, such things *can* happen. Not long ago a patient came to me with badly inflamed gums. I x-rayed them and found the infection had spread so far that eight teeth had to go. Some of them were perfectly sound teeth, too."

YOU: (*After a pause*) "*I was reading a dentifrice advertisement . . . about food.*"

D.D.S.: "Soft food? Yes, that's to blame for most of the trouble. You see, our gums get no exercise from the soft, creamy foods we eat. Circulation lags and weak spots develop on the gum walls. That's how these troubles begin. If you lived on rough, coarse fare your gums would hardly need attention."

YOU: "*But, doctor, I can't take up a diet of raw roots and hardtack. People would think I'd suddenly gone mad.*"

D.D.S.: "No need to change your diet. But you *can* give your gums the stimulation they need. Massage or brush them twice a day when you brush your teeth. And one other suggestion: use Ipana Tooth Paste. It's a scientific, modern dentifrice, and it contains special ingredients that stimulate the gums and help prevent infection."

* * *

An imaginary dialog? An imaginary "you"? Admittedly, but the action is real. It is drawn from life—from real tragedies and near-tragedies enacted every day in every city of the land!

And if dentists recommend Ipana, as thousands of them do, it is because it is good for the gums as well as for the teeth. Under its continual use, the teeth are gleaming white, the gums firm and healthy. For Ipana contains ziratol, a recognized hemostatic and antiseptic well known to dentists for its tonic effects upon gum tissue.

Don't wait for "pink tooth brush" to appear before you start with Ipana. The coupon brings you a sample which will quickly prove Ipana's pleasant taste and cleaning power.

But, to know all of Ipana's good effects, it is far better to go to your nearest druggist and get a large tube. After you have used its hundred brushings you will know its benefits to the health of your gums as well as your teeth.

BRISTOL-MYERS CO., Dept. J-89
73 West Street, New York, N. Y.

Kindly send me a trial tube of IPANA TOOTH PASTE. Enclosed is a two-cent stamp to cover partly the cost of packing and mailing.

Henry Ford Talks to Young Men

(*Continued from page 45*)

ran it into a pig, and later remelted it and then ran it into molds. It struck me that this was a slow process. It wasn't 'clean.' There was at least one step too many. Why not run the iron directly from the blast to the mold? I told some of my associates then that we would some day build a plant where we could run iron direct from the blast to the foundry. Today, we take the iron and shoot it into our blast furnaces at the River Rouge, and from the blast furnaces we pour it in a molten stream direct into the foundry and molds, for cylinder blocks and other parts, instead of putting it into pigs first and then melting it over again.

"Study the way you are doing things! See how many steps in any particular process you can eliminate. An inefficient process is almost invariably a 'dirty' one. All waste is a kind of dirt.

"HERE is another thing we have learned that is of great importance to boys who are starting in. It has to do with the investigations a man ought to make when he starts a job that he intends to see through.

"*You can look ahead into the future just about as far as you can look back into the past. 'Hindsight' is the balance of foresight, just as the root system of the tree is the balance for the branch system. Dig up your tree and you will find that the spread of the root system is equal to the spread of the branches!*

"I have in mind a man who once started out to make some improvements in certain machinery. After spending a lot of time and big sums of money, the net results of his efforts were some devices not so good as those already existing. Because the job was undertaken without his knowing what had previously been accomplished by the designers of that kind of machinery, his work was a total loss.

"When a man sets out to do any kind of job that is new to him—to write a thesis, to design a machine, or to improve some industrial process—the first thing he wants to do is to *find out what has been done*. He ought to discover all he can about what has already been accomplished by others who have worked on the same problem. If he doesn't know what has been done *before*, he is almost certain to go *back*. That is one purpose of our museum; it will enable students to look all the way back along every principal series of mechanical development.

"Investigate! You don't have to go at your work as though nothing had been done on it since the year 2000 B. C. Begin where the other fellow left off! Then there is a chance you will go forward and improve on what has been done before.

"Out here in front of our engineering laboratories, about two hundred feet from where we are talking, there is an artificial lake, and at the center of that lake is a well. When I was a boy there was no lake, but the well was there; and because the well furnished the necessary water supply, a sawmill engine was set up out there where the lake is now.

"One Sunday afternoon, when nobody else was around, I came from the farm where I was working to find out what I could about that engine. I took off the cylinder head and thrust in my arm. The piston moved and caught me. I was in trouble, as many another boy has got himself into trouble when he has been following his legitimate business of trying to find out things. I got myself loose, but I was there for an hour and a half, with the prospect that I might be held fast until someone came the following morning and released me.

"That was not the only adventure I had when trying to find things out. There were altogether too many to tell here. I went from shop to shop, machine shops, boat shops, and others, in quest of knowledge. In some places I got into trouble. There were just about as many places from which I was kicked out as there were places in which I was welcomed.

"These shops were my school. I conducted my investigations and got all the knowledge I could about what had been achieved mechanically *by traveling around*. It took a lot of time. In other words, in my youth, in the nineteenth century, it was much the same as in olden times. The apprentice had to travel through many cities, many countries, to learn the state of his art. But now, in our museum, we are gathering together, all in one place, the things that will make knowledge of this sort easily accessible. The boy who wants to investigate and find out what has been done can do so here. Once he has found out, we hope that he will apply his knowledge to make new combinations and to produce things that will show an advance over the old."

"WHAT was the point you intended to make with reference to a boy's putting his knowledge and experience to use?" I asked.

"Some men spend all their lives inquiring, and never *do*. Always there comes a time when a man ought to stop confining himself to investigation in order to apply that which he has. It would be safe to make a rule of it in this way: Once you have studied a problem and have got together all the information you *can* get, don't wait to see if you can hit on some idea that will make the rest come easy and solve the job for you before you begin it. Get started! Apply what you already know! Make the best use you can of what you've got. In this way you will get further experience. Most of our so-called new things are only new combinations of old things, anyway. By *doing* you will find out what more you need to know; you will get more and more experience, more and more knowledge, and be able to do more and more things.

"That is one of the really great secrets of all achievement, in my opinion. *Education comes to us as the result of trying to do things. Success is in doing them—in finding out what you can do, and in doing it right.*

"And never let yourself think that you cannot accomplish what you set out to! There is no young man, nor grown man, living who cannot do more than he thinks he can. Any boy who has read the biography of Thomas A. Edison will recall how it was that Mr. Edison got his start: A newsboy on trains running between Port Huron and Detroit. He was not satisfied with doing just that. He fitted up a little laboratory in the corner of the baggage car—or rather, George Pullman fitted it up for him—and in his spare time he tried chemical experiments. Once something he was doing blew up and set the car on fire. The baggage man threw him off at Smith's Creek station. And we have that old Smith's Creek station at Dearborn now!

"But even that did not satisfy this boy Edison's desire for action. He printed a newspaper in that baggage car, made up of items picked off the telegraph wires, and sold the papers on the train. He is going to sell them again out here next October when we celebrate the fiftieth anniversary of his invention of the incandescent light.

"And laying over in Detroit between trains Edison spent his spare hours in the old public library. When you see Edison as a boy, you always see him using his 'spare hours,' and it is wonderful how many 'spare hours' he had for so busy a boy. You can always spare hours or days or months for what you really want to do.

"If there is one thing I know absolutely it is this: Everyone can do more than he thinks he can. Doubtless we all have limitations, but we don't know what or where they are. Anybody can walk right through the boundaries we ordinarily believe are our limitations.

"Our experience in the Ford Motor Company consists of just telling men to do what they firmly believe they can't do. But they do it—and then they look around surprised at themselves. They think maybe it was something in us that made them do it. Impossible! It is all in themselves. Of course, Edison knew that he *could* do it. That is an advantage certainly. But everyone can do much more than he is now doing, even if he does not know it. He can find out by doing.

"*Never be afraid of tackling a job you've never done before!*"

"WHAT about the young man and his money?" I asked.

"Wise spending is a creative accomplishment," was the answer. "It is one of the qualifications of a good business man. No man ever built a productive institution of any kind by saving money. That is done by knowing how to spend wisely.

"Of itself, money is the least valuable thing on earth. It is valuable only when it is used as a tool for self-improvement or to accomplish some end worth while. Saving, as it has been schooled into boys in the past, gives money altogether too high a place, and with some boys saving takes the place of spending in a way that would increase earnings. That, of course, is a mistake.

"What right has a boy got to save money? His job is not to accumulate dollars, but to use them to prepare him

Village Smith sings an anvil chorus for his favorite pipe tobacco

(All Edgeworth endorsements are genuine—unpaid and unsolicited.)

WE don't know whether a spreading chestnut-tree still stands in Branford, Connecticut. But we do know that Branford still boasts a village smith—by name, John Donnelly.

A mighty man is John. In sixty years he says he's smoked a half ton of pipe tobacco; and of all the brands he's tried in his pipe he likes Edgeworth the best. As he swings his heavy sledge a chorus of sparks dances from his anvil—and a chorus of content puffs from his pipe!

And why not? Nearly all pipe-smokers are calm, serene fellows. Come to think of it—you don't know many pipe-smokers of the nervous, flighty breed.

Pipe-smoking runs to calm, thinking men. Ask a pipe-smoker a question; he takes a puff on his pipe and gives you a straight, sound answer. Somehow with a briar between your teeth you simply don't have troublesome, disordered thoughts.

Try this offer—FREE!

There's a lucky horseshoe on this page—especially if it's a long time since you've smoked your pipe! It's this free Edgeworth offer. Simply write your name and address to Larus & Bro. Company, 45 S. 21st St., Richmond, Va., and you will get some welcome pipeloads of Edgeworth Ready-Rubbed smoking tobacco. If you like these trial helpings you can be sure you'll keep on liking Edgeworth, for (as you will discover) its likable quality *never* changes—tin in, tin out!

Both Edgeworth Ready-Rubbed and Edgeworth Plug Slice are sold in various sizes from small pocket packages to handsome pound humidors, and also in several in-between sizes. "Plug Slice" Edgeworth is packed in thin slices, for pipe-smokers who like to "rub up" their tobacco in the palm of the hand.

Two forms—same blend—both for your pipe 15¢

self with the training, knowledge, and experience which every leader needs. If he saves, it should be with some such expenditure in view.

"In the past, boys have been taught to save so they might not go to the poorhouse in their old age. *But no boy who learns how to spend money ever lands in the poorhouse!* So I say to boys, 'Spend your money! Spend it for things that will put you ahead of where you were yesterday! It is time enough to save when you can earn more than you can spend wisely. You don't get to that point by saving.' Savings should be put aside out of one's surplus only. As a general thing, a man ought to invest in himself until he is forty. Until that time, if he started at scratch, he isn't apt to have any surplus out of which to save.

"If I were bringing up a boy today, I would see to it that he had two things, and I would make his education center around them: He would have a shop in which he could work with fine tools and he would have some money to spend—to invest in himself in order to develop himself and get experience. Putting money in the bank does not develop in a boy the qualities of imagination and leadership that every boy should be given a chance to acquire.

"A dollar put into a book and a book mastered might change the whole course of a boy's life. It might easily be the beginning of the development of leadership that would carry the boy far in service to his fellow men. The same dollar, put in the savings bank, would at the end of a year yield the boy four or five cents. Now, which is the better use of the dollar?

"It should be expected that when a boy begins to spend money on himself he will make a lot of mistakes. But spending will excite his imagination and teach him *how* to spend.

"Many persons think that by hoarding money they are gaining safety for themselves. They want to be independent. Only the other day, I had occasion to tell a man that there is no such thing as independence through money. If money is your only hope of independence, you will never have it.

"A feeling of safety makes a young man lazy, kills his ambition. I have never felt safe, so far as putting my trust in dollars is concerned, and I never want to feel safe. The one real security that a man can have in this world comes through some reserve of ability that he may have. *Spending money helps him acquire that reserve.*"

"What about the future?" I asked. "What are the opportunities you see ahead for the boys of today?"

"IF THE young man of today wants to tie up with something that has a great future, he will go after the airplane. As I have said, the first thing he ought to do is to find out what has been done to bring the airplane to its present phase; and then recognize that the present phase is only a very early stage.

"Boys who are thinking about airplanes now do so without even knowing what kind of engine the airplane ought to have. When I was starting in, I was thinking in terms of steam, because steam was in use in locomotives. It was only after much experimenting that I turned to the gas engine.

"It's perfectly natural that boys should think that airplanes must be run with gas engines. They think so because automobiles are run by gas engines. But some day a boy will come along who will discover that gas engines are not the thing at all.

"Today there is no such thing in existence as an airplane engine. What we call airplane engines are really automobile engines in all their fundamental principles. Some of our experiments here at Dearborn may help discover what an airplane engine should be like. At present, we are giving our attention to the Diesel engine. The outlook is fairly promising.

"The young mind, and every mind, must get together to produce the airplane engine of the future. No one knows now just what it will be like, but you can be pretty sure it will have four characteristics: First, slow speed; second, reliability; third, perfect balance; fourth, it will use a fuel that will be four or five times more powerful than our present fuel. By the time the engine that will meet these requirements is ready, we may have a type of plane that can come down and make a landing at a speed considerably less than sixty miles an hour. That is where one of the big human factors enters in. People won't stand for the hazard of a sixty-mile-an-hour landing. The type of plane capable of landing at a much lower rate of speed has *got* to come if the airplane is to accomplish all we have a right to expect of it.

"ENTIRELY apart from the airplane, opportunities for young men starting in today are endless. We are entering the *comfortable* age, and the opportunity to make life more comfortable offers us the widest field mankind has ever known.

"It is sometimes said in criticism that ours is a machine age. It certainly is. But those who imply that men have been made into machines and that life has been mechanized, are reactionary in their thinking. The machine appears only through man's mastery of it. It has been invented and adopted and used by men, first, to save the dignity of their homes by centralizing work in factories, and, second, to save time and energy.

"Those who assume that we have now reached the true industrial age are doubtless in line for a big surprise, as, likewise, are those who think that our principal concern ought to be to conserve what we now have and as far as possible maintain its present character. What we have to show as yet for the generations of labor that have preceded us, is too little; it is not proportionate to the preparation that has been made. The real industrial age which we are yet to enter will be less noisy, more beautiful, more just, more conducive to higher levels of living for all, than is the present stage.

"Compared with what we may expect of machines in the age to come, we have as yet realized very little. In the way of machinery that is automatic, for instance, we have almost nothing. It is not even semi-automatic. And it is the automatic machine that will lift the burden from the shoulders of mankind. In developing such machines there is a chance for a great future for many ambitious young men.

"Above all, if I were a young man just starting in, I would try to keep my thinking abreast of the times in which we live. I would not let my *thinking* nor my *efforts* be paralyzed by what has already been done. What has already been done is not necessarily the best that *can* be done. Many changes are just around the corner.

"Let a young man turn his attention to inventing a kind of kitchen that can feed a hundred people! Think of the waste in time, money, and effort involved in cooking in thousands of different homes in a single community! The day is coming when cooking will no longer be done for individual families. What kind of kitchen it will be that will take this drudgery out of the home, and how the work should be done, remains for somebody to find out.

"Then, take rubber, for instance. In years to come we shall undoubtedly use it for floors and thousands of other purposes for which we do not even consider it today. In Switzerland, it is now being used for roads. In America, we have progressed from dirt, wood, stone, tar, and macadam to cement roads. Will the roads of the future be built of rubber? The question is worth thinking about.

"We need a much greater rubber supply. In due time, from various sources we are going to get it. Mr. Edison, after a long experiment, has found an *herb* that produces rubber. Not a bush nor a tree; it is an herb that grows everywhere. Mr. Edison says that rubber produced from crops of this herb will furnish an emergency rubber supply in case our imports are ever cut off. Whether it will do more than that he will eventually tell us.

"I see an era coming when our cities will be heated by electricity. When this comes about our homes will have to be built different, with better insulation. They will be more evenly heated in winter, cooler in summer. This, too, is something for young men to think about.

"HERE is another thought for the young men of our rising generation. In Detroit, they have been talking for some time past of building subways. I once said to a man who broached the subject to me, 'You want to hurry up and finish them, or you will not get them finished in time for people to use them for anything but parking spaces!'

"Probably subways are necessary in New York. Elsewhere, certainly, and perhaps even there, thought should strike out an independent course toward other means of solving traffic and transportation problems. We should be thinking about new types of cities, with streets adapted to modern traffic instead of the horse-drawn vehicles.

"The modern city has really done its work. In the future we are going to have cities, to be sure, and plenty of them; but in a few decades the drift will be away from the kind of cities we have built in the past. The big city has taught us much, but the overhead expense of living in such places is becoming unbearable. The cost of maintaining interest on debts, of keeping up water supply, sewerage and sanitary systems, of traffic control, and of policing great masses of people, is so great as to offset the benefits derived."

WHAT'S THE COMPRESSION OF YOUR CAR?

THE automobile industry is now beginning to present its new models. Notice how many have engines of high compression, designed to take advantage of Ethyl Gasoline.

For Ethyl is the standard high compression fuel. It permits a tighter squeezing of the gasoline in the cylinders before ignition, so that more power results with each stroke of the piston.

Ordinary gasoline can stand only a certain amount of compression; beyond that it "knocks" and loses power.

That is why automotive science developed Ethyl Gasoline. It is good gasoline *plus* Ethyl fluid, a compound containing tetraethyl lead, which eliminates knocking and increases power as compression is increased.

Through the service of leading oil companies of the United States, Canada and Great Britain, you will now find Ethyl Gasoline available wherever you drive.

But you don't have to have a new car to enjoy the benefits of Ethyl. Its virtues are especially noticeable in older cars of average compression. For it "knocks out that knock." Ride with Ethyl today. Look for the familiar Ethyl emblem.

You can be known as A Clever Woman

who earns money of her own

YOU can hold the admiration of men—you can astonish your friends and win new ones—you can have a reputation for smartness. Yes, you—any ambitious woman with a love for pretty things—with the desire to make herself and her home attractive.—And it's easy as A, B, C.

You Don't Need Experience

We show you how to do it. The Fireside way is so simple you start to paint beautiful giftwares, almost immediately; start to make money of your own. You do everything right at home.

Gifts, Bridge Prizes, Gay Toys, Etc., Etc.

Cabinets, book-shelves, wall plaques, hanging shelves, magazine baskets, lamp bases, lamp shades, table runners, beautiful bits of etched copper, batik drapes, lovable little playthings, picture frames and endless varieties of similar things. Think of the fun of decorating them, and then of having

ready buyers for them—RIGHT AT HOME—at a good profit.

Many Make $10 to $35 a Week

Many of our members have made much more. Think what that means—to YOU! Independence—freedom from money worries! And with it all the opportunity to make hundreds of lovely things for your home, the secret of smarter clothes and of making yourself more appealing.

Spare Hours or Full Time

Spend as much time as you wish on Fireside work. It will pay you well in pleasure and money. We teach you and furnish everything—including a big wonder box of artists' materials, a complete outfit without extra cost.

A $1000.00 Gold Bond

backs up our warranty of satisfaction and success.

Send for FREE BOOK

It's full of colored pictures. It explains our "3 step method!" It tells you the Fireside secret. This is the big opportunity you've longed for. Don't miss it. Now, we want women in every community. Stop wishing and hoping. Write for this book TODAY. It is free!

FIRESIDE INDUSTRIES

Dept. 60-K Adrian, Michigan

VALUABLE COUPON

Fireside Industries, Inc.
Dept. 60-K, Adrian, Mich.

Please send me the FREE book. I want to know more about your fascinating plan.

THE FAMILY'S PROBLEMS

Have You an "Odd" Person in Your Home?

A STRANGE event in our town suggested the solution for one of my family's most annoying problems. We had living with us a dependent uncle, and the more dependent he became, the harder he was to live with. In years gone by we had all loved him devotedly, for he was then a merry, helpful man. But, somehow, life walked off and left him, and never again did he seem able to catch up with the parade. What to do with him, or about him, was our particular problem. Then there came that strange event. It happened like this:

Down the street from us there lived a man and his wife. Their children were grown up. It was pretty well known that this couple had cooled off toward each other. The wife was especially chilly, for she resented her husband's attitude in money matters. He would not admit that everything now costs more than it used to, and he was constantly blaming his wife for being extravagant.

Finally, this woman left her husband, though there was no ballyhoo about it. She just quietly pulled out and went to live with her oldest daughter, where she made herself tremendously useful. One day, after six months' absence from her husband, the refugee wife picked up a copy of the old home newspaper and, being a woman, she read the advertisements first. She saw this:

WANTED: An experienced housekeeper of settled years. Must be a woman of refinement. Apply Box—

The number given was, as she remembered, her husband's business post-office box! An idea flashed into her mind.

"I'll take that job!" she said, and next day she went to see her husband and explained to him that she would come back to his home as the employed housekeeper at so much a month. She named a stiff figure, too. He jumped at the chance, for the two never actually disliked each other—they really were good friends, but the husband-and-wife business did not thrive under their system of management. Well, she went back to her old home and took up her old duties under a new plan, and everything was lovely from then on. Or so the story goes. And out of that story came our big idea.

We decided to employ our dependent uncle. He was to do the marketing, keep the household books, attend to the furnace, the garden, and the yard, and do other occasional stints. For these very real services we agreed to pay him a reasonable sum each month, and out of this sum he was to pay us for his board and room. The salary was large enough to give him a little spending money for personal wants. But actually it was approximately what it had cost us to keep him before. He liked the plan from the start, and so did we. Before we hit upon the plan he had been morose and hard to get on with; now we have been able to renew our old-time affection for him.

In many, if not most, households, there is this odd person—someone who is just outside the immediate circle. It may be an aunt, an orphaned cousin, a grandparent, or the widow of some relative. This semi-outsider frequently causes a real problem in the home, a problem that, often as not, is never satisfactorily solved. The "odd" members of households are very sensitive, and no wonder, for life has either passed them by or handed them a harsh sentence of one kind or another. They feel their dependence keenly, and that results in what often seems a queer assertion of independence from them. Everyone now knows that the human mind works that way—tries to shut out unbearable reality and substitute for it an imaginary tolerable condition.

THE plan we use, I believe, will work almost anywhere. But those who are working it must be careful not to make it appear that the dependent person is employed in the capacity of a servant. Some task that otherwise would be performed by a member of the family must be turned over to him or to her.

One of our friends made the grave error of offering her dependent aunt the position—well, she called it "superintendent of the kitchen," but actually it was cook. The old auntie revolted at once.

"You are trying to make a servant of me—a slave!" she exclaimed. "You brought me here because you thought I would be cheaper than another maid."

And there was much more to the talk than that. Now auntie is governess to the children, and is happy and doing an excellent job, too, for she is a woman of pride and education.

The scheme will work, all right, if you use judgment and tact.—D. J. D.

TO THE READERS: This Family's Problems department belongs especially to you. It is an intimate corner of THE AMERICAN MAGAZINE where names are not revealed, but where problems are discussed and solutions given in terms of personal experience. What was the greatest problem in your family, and how was it solved? Tell us in a letter, or manuscript, of about 1,200 words. All manuscripts accepted will be paid for; others will be returned. THE EDITOR

Digitized by Google Original from UNIVERSITY OF IOWA

General Manager:
"That youngster makes a fine appearance, Nelson."

Employment Manager:
"That's why I hired him . . . clean hands, clean shirt and that lively I've-had-my-bath-this-morning look."

Extra cleanliness . . . It has a real *money* value!

People who get ahead *fastest* in business, keep clean in all particulars every day. Think a minute and see if this isn't true.

We call these persons "clean-cut." They command our respect. We find ourselves *wanting* to like them. They have a "pep" and a confidence that we envy.

But we needn't envy them, because the likableness that comes with daily extra cleanliness . . . the health, clear-headedness, and attractive appearance... are advantages that anyone may have.

Watch the boss's hands

Consider your boss, for instance. He's probably a regular fellow . . . but *he* doesn't come to work, even occasionally, with a two-day shirt or dirty finger-nails.

He has learned he can't *afford* to... that appearances count too much.

Then how about the rest of us, with better jobs and salaries *still to be won*, and competition keen? . . . Can *we* afford not to think a *lot* about the day-in-and-day-out impression our general appearance makes?

It takes a little thought and time, to keep clean in all particulars every day . . . but it's certainly worth it.

Other people know when we take baths

Perhaps it's because of our greater wide-awakeness, our better color, our increased sureness in ourselves . . . but the fact remains that other people do seem to know when we do and do not take daily baths.

Besides, the every-morning-bath is worth while for other good reasons: as a tonic and invigorator, as a protection against easy cold catching, as a cure for many minor skin irritations, as a first-class means to a better all-around happiness. Anyone who doubts this has only to try it a while to be convinced.

Don't forget either that in the eyes of other people, there is no such thing as a "slightly soiled" shirt. To them your shirt, collar, handkerchiefs are either clean or *not* clean.

Underwear is changed with every bath, of course . . . or *oftener.*

How wives and mothers can help

Especially in the matter of daily clean clothes, wives and mothers should be *glad* to cooperate.

Not only are fresh clothes every day an important business asset, but it is when clothes get *badly* soiled . . . *double*-dirty . . . that they are hardest to wash, and wear out fastest.

Isn't there a lot of false economy in that too-frequent family caution, that we must "keep down the size of the wash this week"?

Listen to it! Taste it! The new Kellogg cereal!

Crisp? Why, you can hear it *crackle* in the cream!

If your family haven't had Rice Krispies yet, they're missing the cereal hit of the year.

Golden-crisp rice bubbles. That's what you have in store! Rich with toasted-rice flavor. And so crisp they actually crackle when you pour on milk or cream.

Order a package in time for breakfast tomorrow. And taste them before you fill the bowls. You'll like them.

Have Rice Krispies for lunch. A wholesome dish for the children's supper. Try them with fruits and honey. Nourishing and easy to digest.

Sprinkle Rice Krispies in soups. Put them on ice cream. Make crisp macaroons, candies. Order a red-and-green package from your grocer. Then, just watch the family enjoy themselves!

Made in the famous Kellogg Kitchens at Battle Creek by the Kellogg Company—world's largest producers of ready-to-eat cereals. Makers of Kellogg's Corn Flakes, ALL-BRAN, *Pep Bran Flakes, Krumbles, Kellogg's Shredded Whole Wheat Biscuit—also Kaffee Hag Coffee—real coffee that lets you sleep. Other plants at Cleveland, Ohio; London, Canada; Sydney, Australia. Distributed in the United Kingdom by the Kellogg Company of Great Britain. Sold by Kellogg agencies throughout the world.*

CHICAGO MILWAUKEE ST. PAUL AND PACIFIC

America's Longest Electrified Railroad

On its transcontinental line between Chicago and Puget Sound, The Milwaukee Road operates, by electricity, 440 miles between Harlowton, Montana, and Avery, Idaho, and 216 miles between Othello, Washington, and Seattle. These 656 miles constitute 40% of the Nation's total electrified railroad mileage—by far America's Longest Electrified Railroad.

Tumbling mountain streams in the Belt, Rocky, Bitter Root and Cascade ranges originate the power for the mighty electric locomotives. Heavy trains are moved over the Continental Divide and the grades of the Cascades swiftly, smoothly and surely. Travelers marvel at this scientific accomplishment, said by Thomas A. Edison to be "the very latest word in transportation."

The Milwaukee Road is the shortest route between Chicago and Seattle, and the only railroad operating over its own rails all the way. Its fast, newly-inaugurated schedule is saving travelers between Chicago and the Puget Sound cities practically a business day.

For your copy of "Key Notes," containing information concerning this railroad, write The Milwaukee Road, Room 867L, Union Station, Chicago.

COUSIN MURIEL WAS SURPRISED

"I didn't think you were so clever," she said

"YOU surely deserve a medal, Alice. Who would have supposed you could make this room over into such a charming place? And all by yourself, too! I'm surprised at your cleverness—I never knew you were a *decorator!*"

"I'm surprised at myself, too, Muriel. You see, I was sick and tired of the way it used to look—so dull and depressing. One day I saw this Congoleum '*Poppy*' pattern down town. I liked it so well I bought it. The cost was really next to nothing.

"It looked so lovely on the floor that I decided to get some gay cretonnes for the windows. And that led to fixing up the furniture with the same material.

"It was lots of fun, too. Of course *you* know and I know that if I had tried to plan the whole thing I never would have become a 'decorator.' But somehow the new rug inspired all the rest. The room planned itself. So don't give *me* any medals, Muriel. Give them to the *rug!*"

Congoleum Rugs are masterpieces of design and coloring, reflecting the genius of the well-known artists who create them. Their unusual beauty makes them unique among low-priced floor-coverings. The smooth waterproof surface is a joy to clean. In durability, too, they are unequaled, for they are made by the *Multicote Process.*

The First Lady When I Became

PHOTOGRAPH BY DORIS ULMANN

By Mrs. Calvin Coolidge

Mrs. Coolidge did not know, until told by a friend, that President Coolidge had issued his famous "I do not choose to run" statement, nor did she know that he was thinking of any such action. "I am rather proud of the fact," she says, "that after nearly a quarter of a century of marriage my husband feels free to make his decisions and act upon them without consulting me or giving me advance information concerning them." . . . This is but one of the remarkable incidents she relates in this beginning to her own story as the wife of a President of the United States

WHEN I was a freshman at college, students in one of the English courses were required to hand in themes twice a week. Sometimes subjects were assigned to us; at other times we were permitted to choose our own. One day, with the assurance of youth, I prepared a theme upon "Life" and passed it in. It was returned to me with a single comment written on the margin: "I suggest that you refrain from writing upon this subject until you have had more experience."

That wise counsel has served me well and I have carefully avoided entering the literary field by way of any of its wide approaches. Now, however, I am meeting with so many requests that I recount some of my experiences while living in Washington that I am skirting the outer edges, carefully avoiding the section given over to the

Why Mrs. Coolidge Is So Popular

In her article next month Mrs. Coolidge has this to say: "I have often been asked to name some of my favorite books, and my reply has usually been '*People.*' There is a song from one of our not new musical comedies about girls, which says something about 'the short, the fat, the lean, the tall; I don't give a rap, I love them all.' That is the way I feel about people, and I have been fortunate in being placed where I had an opportunity to gratify my taste by meeting great numbers of them."

mature fruits of philosophical deduction.

Approaching Washington a few days before the Inauguration of 1921, I felt much as a young student feels as he is arriving at a university town to begin four years of college work. About to enter the freshman class, he wonders what experiences lie before him and how he is going to fit into the student body. How are the upper classmen going to look upon him? Does he look as inexperienced as he feels? He hopes that some kindly person will take him in charge and give him a bit of advice, help him get adjusted and start him right.

In many of our institutions of learning the older students, often members of the Y. M. C. A., are delegated to meet incoming freshmen at the train, and a new man arrives to find himself greeted by name and given a friendly hand whose grasp puts him at his ease at once.

This was my fortunate experience when I arrived in Washington, and the hand extended to bid me welcome was that of the wife of the outgoing Vice President, Mrs. Thomas R. Marshall. She had come with her husband to meet us at the station. All that I owe to her friendly guidance cannot be estimated. It is one of the choice memories of the years I spent in Washington.

IN ONE way fate is kinder to the freshman than to the novice who enters a course of training as the wife of a Vice President without previous residence in Washington. He is one of a class of beginners like himself, with no particular responsibility to the student body, no conspicuous position to assume, while she must at once become the presiding officer of an advanced class.

I think everyone knows about the organization called "The Ladies of the Senate," whose members are the wives and hostesses of Senators, and that it was organized during the World War as a unit of the Red Cross and continued as a luncheon club because it had proved of so much value in establishing acquaintance and understanding among the members. It meets for lunch on Tuesdays in the Senate office building during sessions of Congress. The by-laws provide that the wife of the Vice President shall be the presiding officer of the Club, and from that there is no appeal. So here was I, a stranger within the gates, about to assume the duties of the office, while more than two thirds of the members were upper classmen, as it were. Here, again, my guiding friend smoothed the way for me. She took me with her to the luncheon which was held on the day following my arrival. There was a full attendance. She presented me to each member, telling me the state from which each came, and two days later she invited them all to come to tea in her apartment so that I might have the opportunity of seeing them again and getting their names and faces fixed in my mind.

I had had very little preparatory training in the social graces. I had not been a club woman. My activities had been confined to teaching and the upbringing of two lively boys. True, I was the wife of a former Governor of my home state, but that state provided no residence for its Governor. My husband had lived at a comfortable but somewhat old-fashioned hotel where the rates were moderate, and I had spent the larger portion of my time at home with the children. I was more proficient in setting up and operating miniature tracks and trains on the dining-room floor than in receiving and entertaining guests in the drawing-room. I could cook a little, but, I must confess it, I was never a great success at this, although some of my "favorite recipes" are spread abroad in the nation.

I SHALL tell a story in this connection. My one household helper, who had been with me during the nine years of our married life, became ill and the preparation of the food for the family was thereby placed in my inexperienced hands. I flatter myself that I carried on with a reasonable amount of success, until one day I became a little extra ambitious. I undertook to make an apple pie, aided and advised by a reliable standard cookbook. Rather proudly I brought forth the result of my efforts at the evening meal. In outward appearance it was everything that could be desired. The family partook of it and made no comment. I was my own critic and I admitted to myself that the crust was a trifle tough.

That evening two of my friends came to call. As they were about to leave, my husband came into the room and asked if they would like a piece of my pie. They would. He conducted them to the dining-room, where he had set out plates, knives, and forks and—the pie. Devotedly

Mrs. Coolidge, Mrs. Dwight Morrow, and two members of the 1929 graduating class at Smith College, Northampton. The younger ladies are Miss Margaret Palfrey, president of her class, and Miss Phyllis Swain, the class treasurer

they ate, and when they had thus lent their aid in the banishment of the pie, their host inquired, with ne'er a smile, "Don't you think the road commissioner would be willing to pay my wife something for her receipt for pie-crust?" Being stanch friends and not over-accustomed to his way of taking his daily toll of fun, they were properly protestant.

But I could sew, and I have always taken great delight in all forms of this domestic art, preferring that pastime to playing bridge; and when my friends had card parties, they invited me to come and bring my sewing. Every girl should be taught to sew, not merely for the sake of making something, but as an accomplishment which may prove a stabilizer in time of perplexity or distress. Many a time, when I have needed to hold myself firmly, I have taken up my needle; it might be a sewing needle, knitting needles, or a crochet hook—whatever its form or purpose, it often proved to be as the needle of the compass, keeping me to the course. I look for a revival of the homey household arts. Such a revival may not bring about the peace of nations, but I firmly believe it will aid in bringing peace within our homes, and this will be more far-reaching than we realize.

THE people of Washington, both those who are permanent residents and those who are there in an official capacity, have the habit of hospitality. It is as natural to them as breathing and they are always looking for an excuse to plan a party. We soon found ourselves at the center of a busy social life. It has been said that the Vice President is the official diner-out of the administration, and it is true. In a surprisingly short time we had formed a wide acquaintance and began to feel very much at home.

We had taken up our residence at the Willard Hotel, living in the same apartment which had been occupied by our immediate predecessors and which the management had changed and adapted to their needs. Here we made our home for two years and a half.

The wife of the Vice President receives on Wednesday afternoons. The drawing-room of our apartment was not large and sometimes my guests were rather crowded, but nobody seemed to mind and most of them came again.

Cards are not sent out for these afternoons at home. They are announced in the society columns of the daily papers and the doors are open to all who wish to come. On one of my afternoons, a friend drew near and whispered in my ear that a bell-boy was standing in the corridor on the main floor shouting, "This way to Mrs. Coolidge's apartment," and people were turning in off the street to follow his directing hand and discover what the excitement was all about. I soon sent word that he was to cease his efforts in my behalf, and I haven't decided yet whether his idea was to make me appear a favorite in Washington society by piling up a large attendance record or whether he sought to stand in with the hotel management by increasing the demand for tea and cakes. Freesia

A STORY

By INEZ HAYNES IRWIN

Illustrated by
PERCY E. ANDERSON

LORRIE ALDEN pulled the curtains down, regretfully shutting out the spring vista of Mount Vernon Street. He gave a last glance over the tiny dining-room of his little ménage. All set! At least, to a bachelor eye, all set. Freesia in a low dish on the dining-room table and in tall vases everywhere else. Fires in the living-room and bedroom, winking away the Boston chill. Molly, the orange Angora, appropriately asleep on a hooked rug of a faded sage green. Daisy, best and blackest of cooks, tightly bandannaed and starchily aproned, moving with a ponderous lightness about the kitchen. The cocktail glasses on a tray, and the makings waiting in the ice chest. If only *it* would come!

It did come.

The instant the telephone rang, he guessed, and the instant the voice from the switchboard downstairs said, "A messenger—" he knew. The voice went on, "with a package for you, Mr. Alden, and he won't deliver it to anybody but you."

Lorrie had made his decision. He had given his order. He had drawn his check. But not until this instant could he really envisage the entirety of result. He, Lorrimer Alden, was the owner of a Delamere!

"Send him up!" he called into the telephone. He opened the door and stood on the threshold, outwardly calm but inwardly trepidant.

The messenger asked him to sign a blank, and then relinquished a small package, precisely tied, preciously sealed. Lorrie bore it into his bedroom. That inward quiver had not died down. Indeed, his fingers trembled as he cut the strings. He admitted to himself that it was a flaming instant in his life. It was the only picture that he had ever bought. He knew when he bought it that he would never be able, except by the miracle of unexpected wealth, to buy another. He had put all his financial eggs into one art basket. And he had bought his Delamere sight unseen.

How it came about was an amusing story. All his life Lorrimer Alden had loved pictures. All his life he had preferred Delamere to every other living artist. He had not found it difficult—who would?—to account for his absorbing artistic passion. But he had never yet found the phrases which exactly described the effect of Delamere upon him—and Lorrie was an extremely articulate person.

Sometimes Lorrie put it that it was the combination in Delamere of the mordant, merciless reality of his figures with the exquisite imaginativeness of his atmospheres; at other times that Delamere opened two worlds to him—the one as pellucid, as pliable, as rainbow-tipped as a dewdrop; the other as sinister in its connotation as a bullet.

At twenty-five, Lorrie began putting a certain proportion of his slender income aside, that one day he might buy a Delamere. And then suddenly the Delamere prices began to soar. Up, up, up, they went. And when Delamere—a giant of a man and a bull for strength—had, the year before last, suddenly died, they had taken a skyrocket leap. They stayed at that altitude. They would continue to rise, Lorrie knew. You might almost as well think of buying a Vermeer.

And then, of all things—of *all* things—old Mrs. Pleasant made it possible for him to own a Delamere. Mrs. Pleasant was one of the wealthiest women in Boston. For nearly forty years, her personal peculiarities and her social eccentricities had richly decorated the Boston scene. She loved pictures as much as Lorrie did, and she knew almost as much about them. She had a small but splendid collection which Lorrie had helped her to select. She bequeathed that collection to the Boston Art Museum—all except one picture—a Delamere.

Of this picture, a codicil to her will said that if her dear friend, Lorrimer Alden, wished to buy it, at a modest sum which she mentioned, he was to have it. Otherwise, with the rest of the collection, it was to go to the museum. Mrs. Pleasant had bought her single Delamere just before her death. Lorrie had never seen it. For, the day after Mrs. Pleasant's funeral, he left America on a long museum-exploring trip through Europe. But the fact that he had not seen the picture did not bother Lorrie. A chance to own a Delamere! His check had gone forth instantly, to the Pleasant estate.

There was an interesting story about this particular picture. Delamere had used a new model. He declared her the most beautiful girl he had ever seen. But, after the picture was finished, occurred some episode of the Delamere sort, which involved a second model. The girl vanished and Delamere had never found her again.

Inside the heavy brown-paper package, thick layers of cardboard, made into the neatest of protective boxes; inside that, a brown-paper package; inside that, numberless tissue laminations. Lorrie's fingers made a trembling rustle among these coverings. He drew the picture out to the light . . .

Ah! . . .

IT WAS Delamere's masterpiece—undoubtedly, unquestionably, incontrovertibly, Delamere's masterpiece. Lorrie cocked it up on a table near the window; hungrily examined it.

It was the nude figure of a young girl, standing against a silvery background. That was all—positively all! The nude figure of a young girl standing against a silvery background. But, oh, the authenticity, in a tragic, stilled beauty, of the girl's despair! And, oh, the poetry, in a diaphanous, glee-shot quality, of the silver air! Did the despair lie in those eyes like drowned violet? Did the glee lie in—ah, but that question was unanswerable. On the table, opposite the picture, stood a slim vase of freesia. Of course, Delamere had given the picture no name—Delamere hated names. But instantly Lorrie named it —*Freesia.*

Lorrie reached for a cigarette, lighted it. The strangeness of life—ah, he would never get over that! The contrast, for instance, of Delamere and his work! Delamere himself had been the most brutal of sensualists. His life had been a horror! In fact, Delamere—and all the stupendous wonder that lay in his fingers—had died of the life he led. Everybody knew that he preferred for models young, very young, girls. And everybody also knew how any young girl who had been Delamere's model emerged from the contact.

Strange, Lorrie reflected for the thousandth time, passing strange, that Delamere could divide the exquisite young things that—with a very genius of destruction—he seemed to pick up

The two men, shoulder to shoulder, looked at the woman. "Are you sorry I didn't send you a picture?" Timothy asked

everywhere, into two creatures: one, the broken figment of a poet's tragedy, who appeared on his canvas; the other, the hopeless waif, who, when his fickle fancy changed, vanished into . . . into . . . Lorrie preferred not to think.

He rubbed out his cigarette, threw the stub into the fire. Well, it was over. He had bought the one treasure for which, ever since his art-maturity, he had been saving. That one art-treasure was enough. He was provided with beauty enough to last him the rest of his life.

How delighted Timothy would be!

For Timothy and he, half-brothers, the children of the same father, had inherited from that father all his artistic predilections. That warm yearning which always filled Lorrie's heart when he thought of Timothy, surcharged it now. Fifteen years between them . . . and yet, with what skill old Timothy had always minimized that disparity! And then, when Lorrie was about eighteen, the disparity actually disappeared.

There was nobody in the world, Lorrie reflected, that he loved so much as Timothy. That was not strange. There was nobody in the world he respected so much as Timothy. And after all, *that* wasn't strange! Timothy was the finest example of a gentleman he had ever met—the "parfit gentil knight."

Somehow, though, it had never occurred to him that old Timothy would marry. He believed that it had never occurred to old Timothy himself until he met Beatrice. And then the love had been swift, the marriage immediate. The news had come like a thunderbolt to Lorrie in Rome. For one instant, after he had read Timothy's simple announcement, he had known a burning jealousy. The next instant that jealousy had vanished before his more burning generosity. Timothy in love and happily married! Timothy possibly the father of a family! Lord, life was good!

THE note was brief. "I met Beatrice six weeks ago, in a small western town—a lonely, tired, discouraged child. I have pictures of her," Timothy concluded, "but none are really Beatrice. You shall have one, though, if you want it, after you see her."

How much those few lines had said! Men in love—like women in love—Lorrie knew well enough were subject to strange fay enchantments, inexplicable hot madnesses. But Timothy . . . Could Timothy's sure, perfect sense of the beautiful possibly go astray? Lorrie didn't believe it could. No, Timothy wasn't just an elderly man falling into a sex trap set by the first—Lorrie hastily coined the word—propinquitous young female. Beatrice would be—well, Beatrice would be Timothy's choice. Lorrie couldn't wait to see her.

And then the telephone rang. There they were! As he hurried through the living-room, the odor of freesia enveloped him like a delicate cloud.

"Mr. and Mrs. Alden!" the switchboard operator announced.

"Send them up!" Lorrie ordered.

He opened the door, and then he could not move. He stood in an intolerable excitement, waiting. The elevator cables trembled; they pulled the car noiselessly upward. The gate jarred open. A woman stepped out . . . behind her . . . Timothy. Lorrie started at a race down the long hall to meet them.

"Hello, Tim!" he called joyously. And "Hello, new sister!"

A long black satin coat encased her slimness. White lace foamed in front between the broad bands of an ermine stole. Little hands dropped like white lilies out of the broad sleeves. A white lace scarf triangled her face. She threw it off . . .

Ah! . . .

THEY met in the middle of the hall. In a violent mental tumult, Lorrie reached for his brother's hand and stood, holding tight to it. Timothy smiled. Then the two men, shoulder to shoulder, looked at the woman.

"Are you sorry I didn't send you a picture?" Timothy asked.

"No," Lorrie answered huskily. "Not sending me a picture was right!"

Beatrice's eyes went to her husband's face . . . in such a love . . . in such a pleading . . . "Does he mean it, Timothy?" she asked, in a trembling voice. "Oh, does he really like me?"

Lorrie kissed her. And then, his arm through her arm, he conducted her to the living-room.

"Wait here just a sec!" he managed to say lightly. "My bedroom isn't quite in order yet."

He moved at a moderate pace into his bedroom, but once there, his motions, like his thoughts, were lightning. His thoughts . . . Beatrice . . . Delamere's model . . . Tim . . . did not know . . . could not know . . . He seized the Delamere and crushed it in a single powerful clamp. He laid it on the fire. He placed the big, thick, metal screen before the flames. "Now, come in!" he called.

He took the coat off the white-petal wonder that was Beatrice.

"Oh, what beautiful freesia!" she exclaimed. "I smelled it the moment you opened the door. It's my favorite flower."

"It is my favorite flower too," Lorrie informed her. He turned to his brother. "She is freesia, herself! Isn't she, Tim?"

(*The End*)

The Guilty Man

THERE is something dreadful about any tribunal that has our fate in its hands.

Fate is a prerogative of divinity, and when it is usurped in our human affairs, it brings with it the awe of the Ultimate Authority behind the world. The human tribunal that assumes it may be formal or lax. It does not matter. From its purpose it becomes a dread tribunal.

The Grand Jury sitting in this western county of Virginia was a mere group of its ordinary freeholders, selected by lot to maintain the peace and dignity of the State; a group that one might have herded out of any county fair or any political assembly. But when it sat with closed doors in the courthouse to present the formal charge of murder against a citizen, it became a dread thing, that impressed the people with a solemnity from which they could not escape.

The tense interest of the tragedy that assembled it lay about the courthouse. It was a special Grand Jury and concerned with a single issue—the murder of Dunmore Pickens.

There was little mystery in the identity of the assassin. By his act he had practically confessed it . . . flight is confession. The nephew, Richard Pickens, had disappeared on the night of the tragedy. He had crossed the border out of Virginia . . . ridden through the gap of the mountains into Maryland.

The sovereignty of the State required a sort of ambassadorial procedure to bring him back to face his crime, and indictment by the Grand Jury and an application to the governor of Maryland for his extradition. And so the first step in the procedure was on its way.

DUNMORE PICKENS was at the end of life when he was murdered. He was one of the wealthy citizens of the county and of a family long established in Virginia. He had no wife nor child. The two nephews who lived with him were his only heirs. He had disposed of his estate in a testament long written and locked up in a lawyer's strong box. And when it was unfolded after the tragedy these two nephews were the sole beneficiaries of that testament. It was read out in the courtroom, and it was a gruesome thing to hear the language of affection, in set legal term, passing on what he had painfully gathered together in life, with tender consideration, to the assassin who had stabbed him in the back.

It gave one a shudder of the soul to hear it.

Dunmore Pickens, in his life, was reserved and distant and, from his manner, with no tender feeling in him. He seemed to suffer the presence of his two nephews in his house, and to

Melville Davisson Post's *dramatic story of* Love *and* Justice *in Old Virginia*

Illustrated by W. H. D. KOERNER

"You did not hear anything . . . you did not hear a sound or a voice —only the horse going away on the road"

treat them with no particular regard. But written into the paper to be opened at his death there was a profound feeling of affection.

And it seemed expressed in greater measure toward the nephew, Richard Pickens, the son of a younger and favorite brother . . . this Richard Pickens who had fled away into Maryland after the detestable murder of his uncle.

The other nephew, Joseph Barnes, was indicated in the testament in more formal terms, as a matter of the customary verbiage of a legal paper rather than a feeling in the decedent.

And yet it was Barnes who had maintained the obsequious manner toward his uncle; humored and praised his foibles; labored to cultivate his favor. He had been careful and pretentious, and was never to be flushed into anger by old Dunmore's irritable temper.

The difference in the men was racial. The younger nephew had the hot, wild temper of the blood. The other had taken the nature of his father. He was not a Pickens. Perhaps a recognition of this fact lay at the base of the favoritism of the elder Pickens for the nephew Richard.

The two nephews lived with Dunmore Pickens in his house. It was a long, old brick house of the early type, with two wings sitting at right angles. Dunmore Pickens lived in one wing of it, as though in a separate domicile, and the two nephews on the

Digitized by Google
Original from
UNIVERSITY OF IOWA

upper and lower floors of the other wing.

Richard Pickens had borrowed a considerable sum of money from his uncle. He was careless of money, and he found no way to repay it. The uncle had several times remonstrated with him on this careless habit, and there followed, usually, temper and hot words. There had been a violent quarrel on the night of the tragedy.

Barnes said that later in the evening Richard had come to him in his room on the upper floor of the wing where he resided. He was in a violent passion, fired with a deadly resentment against his uncle; not only from the quarrel over the money, but also, Barnes thought, for some additional reason which the man did not make clear.

He was in a wild passion and his expressions violent. He would "settle with the old devil on this night," he continued to declare in his wild talk. He borrowed then a sum of money from Barnes, writing out to him an assignment of his inheritance in pledge for it, and, still in his anger, went down the steps and along the wing of the house to old Dunmore's room . . . later Barnes heard him ride away in the night.

THE following morning Barnes found old Dunmore Pickens lying in his library, fallen forward on the table He had been stabbed to death; a carving knife from the kitchen of the house had been the weapon. It was lying beside the dead man where the assassin had dropped it after the murderous assault.

On the table and about the room were the papers of the dead man where they had been searched and scattered. Bloody fingers had ransacked the man's body, his pocketbook and his papers, as though in search of some particular one.

Barnes said he was appalled when he went into the library on this morning. His uncle had not come out and, in some concern, he had gone into his wing of the house to seek him. He found the door to the library open and this disorder of tragedy before him as he entered. He was, as I have written here, appalled. And he touched nothing. The only thing he did was to let in the light, so that he could see if his uncle were in fact dead on the table. The blinds to the room were all pulled down and he raised one of them. It was the only thing that he touched in the room.

He saw at once that his uncle was dead, and he was careful to leave every evidence precisely as it was, for the authorities to see. These statements of the man were all established as true, and they bore out the hypothesis of the crime.

Richard Pickens had evidently "settled with" old Dunmore in a murderous fashion; searched through his papers for the note he held, secured it, and with it and the money borrowed from Barnes, fled the state.

Colonel Braxton had been employed by the State to conduct this inquisition before the Grand Jury; not perhaps for the reason that there was any doubt about the identity of the author of this deed, or any legal puzzle to be untangled. But the procedure for extradition was formal and should be conducted with a nice precision.

It was a summer afternoon, and hot.

The Grand Jury room in the courthouse was on the second story, behind the courtroom, and looked out onto the distant hills and the far-off river.

No air moved, and the windows were open. There was little form attending this assembly. The Grand Jury sat about in chairs near the windows and around the room. Colonel Braxton sat at a table in the center of the room. There was nothing on this table but some articles that he had brought in: some sheets of foolscap paper, a pen and ink, a worn law book, and a long, round package carefully wrapped in newspaper. Otherwise, the table was empty. The inquisition had proceeded at some length, the preliminary inquiry concluded. There remained only the chief witness, Barnes, to be examined, and his story of the matter was well known. It had been repeated, considered, and found to fit into the evidential facts. The story had not varied, and in all its details Barnes had been clear and definite. He waited outside in the court-room to be called. The Grand Jury were now ready to hear what he had to say and return their indictment against the absent assassin.

But Colonel Braxton appeared, strangely, in some indecision. He seemed in no hurry to conclude the hearing. He idled before the table, as though he awaited the arrival of some event.

And yet, when an event dramatic and unexpected *did* arrive, he seemed no less amazed than the men about him.

There came a knocking on the door.

When the sheriff opened it, a girl entered, a slender, dark-haired girl, with a white face. She stood bravely in the door, but her arms hung as though devitalized and her mouth trembled. The girl was torn by some tragic thing, but the spirit in her could not be whipped into servility.

The sheriff was embarrassed; uncertain what to do.

Colonel Braxton rose. His voice, when he spoke, was gentle and courteous. He indicated a chair beside him at the table.

"Come in," he said.

The girl did not at once reply. She looked vaguely about her, at Colonel Braxton, at the group of men now standing about the room. Then she spoke, her voice tense with emotion.

"I have something to tell," she said.

Colonel Braxton went around the table to the door. But the girl spoke again before he reached her.

"I did it!" she said.

It was a sort of cry instead of three simple words; something ravaged out of a tortured spirit. There was no expression in the girl's face in harmony with these words, and no attitude of manner that accorded with them. They were like words uttered by a person in dementia, or one speaking at the dominance of something outside one's self.

THERE was a strained silence. No one moved or spoke. Colonel Braxton alone seemed to grasp something of the significance of the thing. He went over to the girl, took her hand, and led her to the chair beside his own at the table. He was very quiet and gentle with her, as one with an overwrought child.

Everybody knew the girl—for it was a community of old families established in the soil. And they knew the gossip of the county. Her father's land adjoined the estate of this dead man, and the nephew Richard had grown up with her, a boy and girl together. The neighbors looked to an ultimate marriage, and the joining of the lands when old Dunmore Pickens should have gone to the graveyard and the inheritance be vested in this nephew.

The men about the room regarded her in wonder. And softly, as before the dead, they went back to their places and left the delicate conduct of this affair to the attorney.

He managed with a gentle sympathy.

"Yes, Miss Millie," he said. "Yes. . . . Yes."

But he made no comment and he put no inquiry. The girl was at the very point of breaking. Her emotion must have its way with her and its time. It could not be hurried. He sat there at the table, her hand in his big palm, and waited. . . . And presently she wept.

With a sort of abandoned gesture she flung herself forward on the table, her arms around her face. The burst of emotion flowed out, and her body, tense in its restraint, relaxed.

No one moved. The low sobbing of the girl was the only sound. The silence seemed to extend to the fields and the river in the distance. The afternoon sun entering through the open windows lay on the floor, and the vague noises from the city crept up as from a world apart.

PRESENTLY the paroxysm of emotion passed. The girl sat up, putting back her hair. The flood in her had flowed out. But it did not leave her a relaxed figure. There was courage in her, and she faced what she had come to meet.

She looked about at the men in the jury-room; but when she spoke, she addressed the lawyer. And she repeated the words she used when she had entered.

"I killed him!"

"With the knife, Miss Millie?" said the lawyer.

The girl hesitated.

"It was the same thing, Colonel." She paused, and then presently went on, as though leaving a hiatus in the story.

"I told Richard what his uncle had said to me . . . that he was a wild youth, and I must give him up . . . then it all happened. . . . You see . . . I did it."

The girl looked about the room with a high face.

"But Richard did not rob his uncle . . . he did not." She took a letter out of the bosom of her dress, and a paper from it.

"There is the note Mr. Pickens held," she said.

Colonel Braxton took the note and examined it carefully. It was in the form she said, a note of hand for the money the nephew had borrowed.

The Grand Jury gathered around the table and looked down at the paper. It was beyond question the note truly. . . . But what of that?

Did not the hypothesis of guilt, on which they had assembled to find an indictment against Richard Pickens, contemplate precisely this order of events? He had killed the man with the concealed knife that he had carried in with him, searched through his papers for the note, and with the money that he had borrowed, and the note, he had fled away across the border into Maryland. . . . Here was the note, sent back in his letter to his sweetheart. . . . But was it evidence of innocence? . . . Was it not rather evidence of guilt?

For some time there was utter silence . . . a dreadful silence that extended through the room like a pressure. The

The blinds to the room were all pulled down and he raised one of them. It was the only thing that he touched in the room

whole Grand Jury had gathered about the table, around the girl and the lawyer.

Finally the foreman spoke. He looked at the letter in the girl's hand:

"Miss Millie knows where he is?"

He seemed to avoid, as from a sense of delicacy, a mention of the assassin's name. And he spoke softly, addressing Colonel Braxton.

"Yes," replied the lawyer. "She knows where he is."

"You will ask her where he is?"

The reply of the lawyer amazed the Grand Jury grouped around the table.

"No," he said. "I shall not ask her."

The foreman shifted his weight from one foot to the other. He made a little embarrassed gesture.

"We've got to know where he is."

"Perhaps," replied the lawyer.

The big foreman repeated the word.

"Perhaps!" he said. "Why, Colonel, we've got to get him."

The girl sprang up at that. She stood defiant, with her head thrown back.

"WHY do you have to get him!" she cried. "You have got me. Hang me!"

The foreman stepped back. His face took on an expression of incredulity; of wonder.

"We couldn't hang you, Miss Millie!"

"And why can't you hang me?" cried the girl. "I'm the guilty one. . . . I'm the cause of it all . . . and the one who is the cause of a thing is the guilty one. . . . I did it all. I told him what his uncle said . . . that he was an idle spendthrift and I must not marry him. . . . I told him . . . and so it was I who put the resentment in him . . . the fury in him against his uncle. . . . Don't you see? . . . Can't you see it was my fault? . . . That I did it?"

She went on, her voice clear, vibrant, in a splendid defiance.

"He was in a good humor when he came to me that evening . . . he was gentle like a woman when he came to me . . . he loved me; he wanted me to marry him . . . and I meant to do it . . . . But . . . I don't know why . . . I said all those things to him . . . and it set him wild. . . . Now *hang* me!"

She stood up like Jephthah's daughter—her face (*Continued on page 152*)

Between foursomes, Washington Klingman, of the Equitable Life Assurance Society, and a group of his business associates talk things over on the lawn—which is a much more pleasant place than the hot prairie that Klingman, as a boy, used to tickle with a hoe

You *Can't* Tell Where You're Going

THERE was no rain. Every evening the sun went down like a red-hot copper kettle in a veil of dust, and every morning it rose to burn yet more life from the brown prairie. Wheat turned yellow before its stalks were half grown. Potato vines withered before they could blossom.

"That first year," said the bronze-faced man opposite me, "we ground corn by hand in an old coffee mill to get meal on which to live."

There were nine in the family, he added. His father was an invalid, nearing death. He, then a ten-year-old boy, was soon to become the acting head of the house.

And the second year was like the first. The third and the fourth years came and were as brown and barren as their predecessors. The whole countryside was in rags, children were sickly, women half-starved, the hope had been burned from men's eyes even as life had been burned from the land.

I asked about schools.

"There were no schools," said my companion.

"What was your house like?"

"It was built of sod cut from the prairie. The floor was the bare ground."

The few scrawny trees the settlers had planted died as soon as men ceased carrying water to them, so there wasn't even a tree or a leaf to break the brown monotony.

SUCH was Frontier County, Nebraska, in the grim, cropless four years of 1890-94. Such was Washington W. Klingman's campus, the Alma Mater of his young manhood, where he dreamed his first vague dream of "going to places." . . .

I was alone with Klingman in his New York office, a huge hall of a place with enormous maps on its walls, great broad windows, and a view of the magnificent Hudson. From this headquarters, Klingman today directs the organization and production of the 11,000 agents of the Equitable Life Assurance Society of the United States in the selling of nearly one billion dollars of life insurance a year. The fact that he holds this position marks him as one of the master insurance salesmen of his day and as a genius in training men.

"Going to places?" I repeated.

"Going to places where you want to arrive," Klingman explained. "We're all on the road to them. We're seldom satisfied where we are for long, so we keep moving, if only in thought, toward the new places that seem to promise us better things."

So that morning we talked of "going to places." . . .

Klingman had had no choice in the matter of his first journey. Born in Washington, D. C., in 1880, he was only four years old when he tumbled from his father's rickety homesteader's cart onto the prairie of Frontier County.

It was the father who was seeking better

An Interview

By WILLIAM S. DUTTON

PHOTO BY
D. JAY CULVER

At least, "Wash" Klingman couldn't, but he headed in the general direction of UP, and went from a sod hut and a livery stable to an executive suite in a great New York skyscraper, where he directs 11,000 salesmen

things. He had fought for Lincoln, and war had taken his health. The pittance he had received as a Treasury Department clerk had been insufficient to feed and clothe his growing family, so in middle-age he had staked his claim in the prairie to begin anew.

THE boy, named after the city of his birth, was large for his years. At the age of eight he was big enough to sweat over corn hills with a hoe and to take his place among the producers of this new land. A few years more, with his father an invalid and unable to work, his mother was turning to the son for advice and accepting it.

Then came the drought, four years of it. His father died. I have already told you something of those four years. A meeting was held of the impoverished settlers, who found themselves with burned fields and empty bins, with want and suffering at every door. It was decided that somebody would have to be sent to Iowa for help; and those grizzled men of this new land, casting about for the ablest ambassador among them, chose the fourteen-year-old boy, "Wash" Klingman.

"I don't know why they picked me," ruminated my companion. "It may have been because I'd already been about a little."

The previous winter he had "beaten" his way up to the copper fields of Wyoming, to work there in the mines, so that cash for food might be sent to those at home. Hidden between two cars, he had ridden "blind baggage," the only way he could afford to ride on trains.

So now, by "blind baggage" and devious ways, Klingman came to the flourishing town of Red Oak, Iowa. He was clad in his Sunday suit of clean overalls and he wore a store hat of felt. He felt mighty important. What fourteen-year-old wouldn't?

Here were fields golden and heavy in harvest, here were frame houses, rose trellises, vegetable gardens, busy stores. The bustle and the prosperity confused and frightened him. Every face was strange. Young "Wash" felt woefully self-conscious in his overalls which had seemed so fine to him back home. He almost wished somebody else had been sent. He wished—

"MORNIN', young man. Maybe there's somethin' I could do for you here, sort o' help you get your bearings."

Klingman started, for the voice was directed at him. A big, jovial-faced citizen of Red Oak confronted him and his smile was friendly. The boy blurted out his story, not the carefully prepared recital he had rehearsed in his mind, but a stumbling and limping tale, it seemed.

Gosh, what a mess he'd made of it, he thought. Why had he consented to come?

"The man took me into a store," said Klingman, "and had me tell my story again there. Then he introduced me to people and to each I told the story over. Finally he got a buggy and we went out into the country to see farmers. I guess I told that story a hundred times, and not once did I tell it the way I'd planned."

That night he slept in the house of his new-found friend, a boy filled with awe and wonder. All day, wherever he had gone, he had been showered with kindnesses. A whole community was rising to the aid of the folks in the sod huts—to the aid of people it didn't know and would never see.

"This world," the boy muttered, wide-eyed and sleepless in his strange bed, "must be filled with people who are eager to help!"

Tears of sheer gratitude and love welled up in his eyes. He wanted to hug every man and woman in Red Oak. Remember, he was only fourteen. . . . .

A few days later he went home, and with him went five carloads of clothing and food, of furniture and implements, of seed grain, medicines, shoes, tobacco.

Then, as his (*Continued on page 129*)

THE Drift Fence

By ZANE GREY

Illustrated by W. H. D. KOERNER

PART VI

MOLLY saw Jim move as quickly, just as Slinger reached him, and he appeared to strike at the same instant. The blow cracked. Its force, added to Slinger's momentum, sent him off the porch, where only a remarkable agility kept him on his feet. But he thumped solidly against the hitching rail, which broke. Horses snorted and jumped. The crowd let out a whoop. People inside the store crowded out and, joining the men, cut off Molly's view.

She edged out, back to the wall, fearful, yet tremendously impelled. She had gloried in Jim's brave front, but she felt he would be helpless in a fight with Slinger. Bumping against a bench, Molly stepped up on it.

She saw Jim go down off the steps to meet Slinger. Then began a fierce exchange of blows, with Slinger slowly forced backward in front of Mace's saloon. Something was wrong, or unusual, Molly gathered from the exclamations and whispers of the villagers. Slinger Dunn had the reputation of being able to whip his weight in wildcats. But evidently he was slow in getting started here. Suddenly a blow upset him, and he plumped down ridiculously. The crowd, warming to the fight, greeted that with yells.

Bounding up with the agility he was noted for, Slinger took a couple of nasty digs in order to get hold of Traft. He clinched and plainly sought to trip his antagonist or wrestle him down. But Jim was the heavier and stronger, for, with a whirl and a fling, he sent Slinger sprawling. This occasioned a sudden silence. Was it possible for Slinger Dunn to be worsted?

"Stand up and fight—you Indian!" yelled Traft. And indeed Dunn had the look and the suppleness of an Indian.

Dunn, now bloody and dirty, responded as if he had no control over himself, as if this taunting voice could drive him to anything. He crouched and bored in, fighting low, until Traft swung up under his guard. Dunn's head jerked up. Another blow sent it back, and a third, square on the nose, making the blood fly, landed him on his back.

This time Slinger did not bounce up. Something was being battered into his consciousness—something that had already dawned upon the crowd. He slowly and cautiously rose, a stream of red running from his nose, down across his tight lips and protruding chin. Again he changed his tactics, proving that a fury of confidence had succeeded to grim realization, and that where an ordinary fighter would have been whipped, he still had recourse to spirit and energy.

He tried a square, stand-up give and take. It grew evident that had he adopted this style in the beginning he would at least have done better, for he hit Traft now and then. But the latter could take punishment. If it hurt he gave no sign. His method grew clear to the bystanders and wagers were shouted out, backing him to win.

Slinger went down again. The blow that prostrated him was from Traft's right, and was a swing, coming at the end of a succession of short blows, delivered fast and closely, no doubt to beat his antagonist back and out of balance. Anyway, Molly saw her brother go piling into the dust.

"RECKON now Slinger will rooster him, an' it's shore aboot time," declared a young fellow in front of Molly.

Other remarks were not wanting. Evidently Slinger Dunn was not yet beaten. Though Molly had heard of the "rooster" trick in fighting, she had never seen it. But fear for Jim had fled from her. He could meet any of Slinger's backwoods tricks.

Slinger slowly circled Traft, keeping well away. Undoubtedly Traft was ready for a new attack. When he got rather close to the wall he divined that Dunn was trying to back him into such a position. Thereupon he stood stock-still and waited. Suddenly Slinger dove down with incredible swiftness, on the back of his head and neck, and elevated his feet even higher than his arms had been.

His boots were armed with long spurs. He began to kick at Jim. He actually appeared to stand on the back of his neck and his elbows.

"Rooster him, Slinger!" bawled a lusty-lunged lout. And the crowd of West Forkers roared.

Molly saw Jim back from this amazing onslaught, and that was what he should not have done. For Slinger, hunching himself on his elbows, quick as a cat, forced Jim to the wall. He dodged one vicious kick. Another caught him on his extended arm, tearing his sleeve from wrist to shoulder. Molly saw a glimpse of red. Then a cruel spur cut open Jim's chin. At this Molly screamed at her brother, but her voice was lost in the din. If Slinger did not kill Jim he would surely disfigure him for life.

UNIVERSITY OF IOWA

As he whipped up his gun, Molly stepped in front of him to shield Jim. "You'll have to kill me first," she declared resolutely

She leaped off the bench and darted here and there to get through the circle of men. Suddenly a louder yell, hoarse and thrilling, made Molly desperate. She squeezed to the front.

Jim, in bent position, had both arms round Slinger's legs. The terrible spurs stuck up, but they scarcely moved. Jim threw Slinger from him with such force that he turned clear over, his head and shoulders acting as a pivot. He fell with a flop. Jim made one jump and landed square on him with both heavy boots. This overbalanced Jim, who went down, but he went down kicking. Rolling over, he was up and at Slinger just as that blood-and dirt-begrimed individual tried to rise.

Jim fastened both hands in his neck and lifted him, and flung him sheer against the wall, where his head rang like bone on wood. Slinger sank down limp and senseless.

THE crowd grew silent. Molly had sense enough left to hide behind someone. Jim gazed down a long moment at his beaten antagonist, and then with scarf he wiped the blood and sweat and dirt from his face. He turned sidewise, so that Molly saw a pale, tense cheek.

"See here—you fellows," panted Jim, "I came down—here—to lick him—and to offer him—a job. . . . Reckon he's not worth it . . . But I'll go through with my part . . . Tell him—when he comes to—that if he can play square—there's a place on the Diamond for him."

Then Jim parted the crowd and disappeared. Molly slipped back up on the porch into the store, and never even thinking of her mother, she hurried through to the other corner and went out the side entrance. Sobbing, and in a terrible condition of mind, she ran home.

It did not help much for Molly to be home, safely hidden in her loft, except that presently she could breathe freely and would not be seen. But her mother's return warned her that she was likely to have a bad half-hour, and she tried to fortify herself.

"Molly, you up there?" came a trenchant call.

"Yes, Ma."

"Come down pronto."

Molly started promptly, but lagged slower and slower, and she thought she would drop off the last steps of the ladder. Her mother stood there, arms akimbo, gazing at her with an entirely new and astounding expression.

"Why'd you run home?" she demanded.

"There was a fight—an'—an' it scared me."

"It needn't have—since it was in your honor. . . . Molly Dunn, did you hear what that young Traft told the crowd?"

"Yes, Ma. I was there."

"And it's the truth? He *did* ask you to marry him?"

"Mother, it's the bitter truth," said Molly steadily.

"Bitter! Are you crazy, girl? . . . It tastes pretty sweet to me. . . . Did you say 'No' to young Traft?"

"Of course I did."

"But you're in love with him. That's what has ailed you ever since you went to Flag. Anybody could see you were lovesick. Aren't you?"

"Ma, I'm shore sick aboot somethin'," replied Molly.

"For heaven's sake, then, why didn't you accept him?"

"Because I'm Molly Dunn of the Cibeque."

THEN indeed the storm broke over Molly, though it was so vastly different from what she had anticipated that instead of casting her down it began to do the opposite. In fact, her mother presented a most interesting and amusing study, after the first tirade about Molly's lack of family pride. Molly learned that she was a granddaughter of Rose Hillyard, of Virginia, and had bluer blood than any Traft who ever lived.

UNIVERSITY OF IOWA

"Didn't I always try to keep these West Fork louts away from you?" demanded Mrs. Dunn, in protest at the outrageous way she had been foiled. "Didn't I bring you up different? You always were somebody, Molly Dunn. Now it's proved. You're courted by a fine young chap. He's got stuff in him. He's nephew to old Jim Traft, they tell me, who owns ranches all over, and eighty thousand head of stock. . . . You can't refuse to marry him. Why, it'll be our salvation!"

Molly had to listen and she dared not voice her protest. Temporary relief, however, came with an interruption in shape of the arrival of several young men, bringing Slinger home.

For once, her mother's tongue stopped its wagging. Arch Dunn was a spectacle to behold. He could walk, but that was about all, and he rewarded the kindly offices of those who had escorted him by driving them off. Both Mrs. Dunn and Molly stood back, afraid to approach or speak, and almost afraid to look. Slinger dragged himself around to the back porch, where he sagged to his bed.

"Arch—can I do anythin'?" faltered Molly.

"Wal, I reckon, since I cain't do for myself," was the surprising answer.

MOLLY hastened to get a pan of water, soap, and bandages, and salve, and hurried to his side. She divined that by this incident she would either gain or lose a brother. She unbuckled the long spurs, shuddering at the bloodstains on one of them. Arch had got what he deserved. The imprint of hobnails on his face appeared to be a brand. He had been treated to a dose of his own medicine. But the fatal issue might now be that he would kill Jim Traft. Molly prayed and hoped. Could not the same thing, almost, that had happened to her, happen to Arch? She pulled off his boots, and then his wet and torn shirt.

It was not pleasant to look into her brother's visage. Yet pity and tenderness came to her aid.

"Much obliged, Molly," he said, when she had finished what little she could do. "Was you in town when the cyclone hit?"

"Yes, Arch. I—I saw it," she replied, thrilled that he would talk to her in such wise. She prayed for something to make the moment helpful for this wayward brother.

"Did you see him lick me?"

She murmured an affirmative. "But, Arch, you must have—have hurt him very much, too. He was all bloody."

"Shore. I reckon so. I'd have cut him to pieces—I was thet mad. . . . Molly, I got too mad. An' at thet he hurt me wuss with his sharp tongue than with his fists."

"It'd not have been so—so bad if you hadn't tried to 'rooster' him."

"Wal, all's fair in thet kind of a fight. I don't care aboot thet any more'n I care aboot his lickin' me. He's simply a better man. I told them so. . . . But I reckon there's another way."

"Arch, you—you'll meet Jim—force him to draw?"

"Thet'd be natural-like, wouldn't it?"

"From the standpoint of the Cibeque, yes. But there's a bigger way to meet it. If you forced him to draw, you'd kill him!"

Beginning next month

PETER B. KYNE'S

NEW NOVEL

Outlaws of Eden

PETER B. KYNE is one of the most popular writers in America. For years his stories, long and short, have brought delight to millions of readers. Since the first appearance of "Cappy" Ricks he has been a continuous fiction headliner.

It is a delight to announce the appearance of Mr. Kyne's next novel in THE AMERICAN MAGAZINE. This is an enthralling story of love against a background of business intrigue—and in a very real sense it is an epic of the West.

Lovely Lorry Kershaw, last of the Kershaws, and young Nate Tichenor, last of the Hensleys, inherited the feud which for generations had wiped out the men of their families. In the strange alliance which came of this heritage—and its dramatic aftermath—lies a story that will hold you spellbound to the very end.

"OUTLAWS OF EDEN" begins in THE AMERICAN MAGAZINE for October. THE EDITOR

"Huh! I'm not so darn shore of thet. Mr. Jim Traft is a surprisin' hombre."

"Arch, I shan't beg you again," went on Molly eloquently, "but I'll *pray*."

"Pray? What fer?"

"For you to see clear."

"Aw, you talk like thet parson who was shot heah onct. . . . Molly, did Traft want to marry you?"

Solemnly Molly nodded.

"I cain't see very well. Talk. Honest now—did he?"

"Yes, Arch—an' that justified my faith in him."

"Reckon a fellar could do no more. . . . An' you wouldn't take him up 'cause you was Slinger Dunn's sister?"

"That was one reason," admitted Molly.

"What you mean?'

"Well, you've a reputation that to civilized folks would look terrible."

"Molly, I'll gamble there's wuss men than me. It ain't nuthin' to pack a gun an' use it when you're crowded. . . . Now, thet day up the canyon. I shore gave young Traft a long time to shoot. An' he had a rifle in his hands."

"That's what's wrong aboot it, Arch. He wouldn't want to kill you, in the first place—an' second, when you met him he'd forget he had a gun. Or be scared."

"Scared! Thet hombre? He was orfu scared of me today! Nope, it's jest gun slingin' wasn't brought up with him."

"It'd be plain murder."

"Wal—I'll let him off—providin' yo agree to marry him."

"*Arch!*" whispered Molly, at once rap and stricken.

"Only deal you can make with me, an you bet it's a hard one to swaller."

Molly knew Slinger Dunn and that sh must grasp at straws. "I—I'll—take-you—up—Arch," she said, in a strangle voice. "If he—asks me—any more."

"Don't worry none, sister. Thet hom bre will be heah today. An' you can mak him ask you again. Reckon, though, he' wait till dark—not wantin' you to see h mug. I shore bunged him up."

MOLLY trembled on the brink of th precipice to which she had bee driven. She dared not look over. Sh must leap with closed eyes.

"Did you—rooster him bad?" sh asked.

"Nope. Only scratched him. But was shore leggin' it fer him when h ducked an' grabbed me. . . . Fetch me drink. I'm shore parchin' fer som water."

Presently Molly stole away to her nes under the roof, thankful to let well enoug alone, so far as Slinger was concerned. T secure his promise not to kill Jim wa more than she had hoped for, a any cost. And that cost! What terrible thing to take upon hersel If Jim did not ask her again, an soon, he would not live very lon Slinger kept his promises.

Molly felt that she would die fo Jim, and it was not so very muc worse to have to marry him. Th prospect dazzled and terrified he If Jim would live in a log cabin an let her work for him! That woul be heaven. But he would want t take her away from the Cibeque-to live in the mansion of a ranc house at Flagerstown, and meet h

Slinger Dunn had the reputation of being able to whip his weight in wildcats

rich old uncle—his other relatives—and his mother.

Molly was overcome at the thought. She could not do it. But to save his life she would do anything.

She crawled down to help get supper and she took some to Arch, who could not eat; then she sat at table, more to avoid clash with her mother than to satisfy hunger.

In the dusk she wandered along outside the lane, irresistibly drawn. Her mother and brother were fools. Jim would not come. She longed for him, yet prayed he would stay away.

The bats were whirling in the clear, cool air overhead. The Diamond stood up black and bold, somehow strengthening her. All her life she had looked up to that mighty bulk. The smell of burning pine floated from the dark forest. A nighthawk flitted by with sharp note.

Then a whistle electrified Molly. She had been whistled for many times at this gloaming hour. It was one of the courting tricks of the Cibeque. But never before had a whistle sent a blade into her heart or lent her wings. Her moccasined feet pattered on the hard-packed ground.

She saw a dark (*Continued on page 115*)

A Lady *who went to the* Dogs

And among them found Fame, Fortune, *and* Happiness

By REGINALD T. TOWNSEND

IT WAS a fortunate thing for Lady Babbie, the Scotty, that her mistress had made that drawing for a manufacturer of dog biscuits. For the manufacturer, in addition to tendering Miss Kirmse more negotiable, if somewhat limited, remuneration, had sent her also several boxes of his product. It was on the contents of the latter that Lady Babbie subsisted quite comfortably, thank you, during that dismal week some seven or eight years ago. The check for the drawing had long since been spent and the Scotty's mistress had a palate which, though humble and adaptable, drew the line at puppy fare. She managed, however, to negotiate a week's line of credit with the genial gentleman who supplied her with milk and eggs, and on these she fed herself through seven dreary days, until the sun broke through, grudgingly and slowly.

But that, as I say, was seven or eight years ago. Today, Marguerite Kirmse's drawings and portraits of dogs are known the world over. This past year she sold more etchings than any other living artist. (For this, she has the word of her agents; herself, she has lost count of the number sold.) And, needless to add, her income precludes the probability of her ever being hungry again.

Miss Kirmse specializes in portraits and etchings of dogs—principally Scotties. And, so far as I know, she has the distinction of being the only artist in the world who raises her own models!

SHORTLY after her marriage—she is Mrs. George W. Cole in private life—she and her husband bought a tract of more than one hundred and fifty acres at Bridgewater, Connecticut, overlooking the lovely Housatonic Valley. At Arcady Farm, as she named the place, she established her Tobermoy Kennels.

And the story of Arcady Farm is the story of her dogs, for they are the heart and soul of the place. Most of them are Scottish terriers, and many a blue-ribbon winner has come from

the kennels. There are Airedales, too, and Irish terriers, and an occasional wire-haired terrier and Pete, a beloved English field spaniel. The dogs are of all sizes and ages, and there is often a litter of utterly adorable Scotty pups which all too soon grow up and depart for new homes. For, while Miss Kirmse founded her kennels that she might not want for models, she raises more puppies than she can take care of, and these she sells.

Quite recently she caused no end of amusement, and even consternation, by sending to her husband, who was away on a business trip, a telegram announcing the arrival of a new litter of puppies. The message read: "Six more mouths to feed. Three boys and three girls. Mother and children doing well."

BUT that's getting ahead of the story. We really ought to go back to Bournemouth, England, where Miss Kirmse was born, although she is now an American citizen and married to an American. Her parents conducted a successful private school at Bournemouth. It was early apparent that little Marguerite had a talent for music, and under the tutelage of her mother she had proved an apt pupil on the harp. Consequently, when she was sufficiently advanced, it was arranged that she should go to London and study at the Royal Academy of Music. But already she had begun to make little sketches of animals—gay, engaging drawings that brought a sympathetic smile when you looked at them Mr. Kirmse accordingly decided that his daughter might study painting as well as music.

So, what with hours of drawing and hours of practicing, those were busy days in London. They were too strenuous, indeed, for the young girl's health. Soon she had to lay aside her brushes and pencils and devote herself exclusively to music.

Then one summer night—the music had progressed very successfully by now, but drawing had been neglected—Miss Kirmse was dining with some friends who were leaving shortly for a summer in the United States.

"Why don't you come along with us?" they suggested. "The rest will be good for you, and you'll be back at your work in the autumn."

She went along—but she never did return to her native land save for an occasional visit. Not that America claimed her frantically and enthusiastically at the start. There were lean years—years when she earned a slender income playing the harp at a church in New Jersey. Once she had a chance to join an orchestra in Seattle as harpist. But, alas, this post required that she join the union, and even had she been in this country long enough to meet the organization's requirements so far as residence was concerned, she still lacked the one-hundred-dollar membership fee. So the job went by the board—and just as well, too, if you ask any lover of etchings, or of animals!

By now, Miss Kirmse was spending all her spare time (and there was all too much of it) at the Bronx Zoo in New York City, studying and sketching the animals. Soon she became a fast friend of the keepers and was given many rare privileges. She was even allowed, occasionally, to take her drawing board into the cages of the animals. Pleasant for a hobby but not very sound as a source of income. Nor was the harp. So Miss Kirmse began making sketches and studies of dogs owned by her friends. At first, she did this for fun; then she found a market for such work—limited, to be sure, but better than sketching for pleasure alone.

One day, in an idle mood, Miss Kirmse picked up a phonograph needle and began scratching a portrait of a dog on a sheet of metal. The next time she went down to her printer's she showed him the crude etching, and he instantly saw possibilities in it and suggested that she take up etching seriously. Rather hesitantly, she accepted his advice. When she had completed two or three plates, she took them to Arthur H. Harlow, one of New York's leading print dealers. He liked them—even agreed to place them on sale—and, much to Miss Kirmse's surprise, they sold almost instantly.

TODAY, Miss Kirmse brings out a new series of about half a dozen etchings twice each year. Each etching appears in a limited edition, and the plate is destroyed after a certain number of impressions have been taken. Some etchings run above a hundred to the edition, but others are destroyed when very few copies have been made. Sometimes, when the plate begins to wear thin and to make poor impressions, it is destroyed after only a dozen copies or so have been struck off. The result is that the rarer of Miss Kirmse's etchings have achieved high values. She was recently offered $750 by a dealer for an etching which sold originally for $15.

I understand that there are but two complete collections of Miss Kirmse's etchings in existence. One is owned by the artist, herself, and the other is owned by the Governor of Massachusetts. Queen Mary of Great Britain is a distinguished possessor of a Kirmse etching.

You have only to glance at one of her charming etchings to know that Miss Kirmse is a real dog lover. Her own Lady Babbie (named by her, as you might well imagine, after seeing Maude Adams in The Little Minister) has gone to dog heaven, but she has many successors. I regret to report that, before her demise, Lady Babbie's romantic name was dropped for a more descriptive one. In her later years she was known as "Black Blimpo." It seems that one summer Miss Kirmse entrusted Lady Babbie to the care of devoted friends who fed her so much that by the time Miss Kirmse returned, after a prolonged absence, the Scotty resembled nothing so much as a fat little baby blimp.

"Blimpo," Miss Kirmse told me, "was the only dog I ever knew that could tiptoe. I mean actually walk on tiptoes. She would tiptoe up to a mole in the fields and then leap into the air and land on all fours right over her victim. It was rough on lawns, but quite exciting."

By having her dogs with her at all times when she is in the country, Miss Kirmse has an opportunity to study them in all moods. On tramps through the woods, when they are all keyed up by the hope of finding an unfortunate woodchuck—the Scotties are great hunters—or resting quietly under a tree, sheltered from the hot noon sun of a summer's day, every pose is an etching.

MISS KIRMSE has a delightful studio in New York City where she does much of her work. Here she occasionally brings some of her pets when she cannot forego the joy of their companionship.

When I dropped in on her, she was busily at work on a dog portrait. In addition to her etchings, Miss Kirmse executes commissions for portraits of horses and dogs. Recently she found time to model some little bronze figures of Scotties which have been put on sale with immediate success.

The studio—a warm, inviting place, gay with etchings and paintings of dogs—is a real workroom. Half-finished proofs of etchings, rough color sketches for magazine covers, finished portraits of horses and dogs, lay all around. The Scotty note, which has, as you can well imagine, become a veritable trade-mark, was everywhere. A Scotty is on the wastebasket; Scotties are on the cigarette and match boxes. And outside the door stood Miss Kirmse's automobile, with a little silver Scotty mounted on the radiator cap.

Miss Kirmse's love for her work leaps out at you from everything she creates.

"All the hard work in the world won't give you satisfactory results unless you enjoy what you are doing," she said to me. "I love my work and I have never had too much of it—but I do have to guard against overwork. In any creative job there is danger of going stale."

Miss Kirmse produced two etchings of the same subject. One was blurred, (*Continued on page 138*)

Good morning

Box Cars of

What you eat, what you wear, the price of everything you sell or buy, is affected, maybe controlled, by these battered, plodding roamers of the sea

YOU see them drowsing at anchor in Mobile Bay waiting for cargo, or loading canned salmon at Seattle or sulphur at Galveston, or discharging Egyptian cotton, Spanish onions, and African ivory at Boston. You see them hugging in close along the coasts of California, New Jersey, and the Carolinas, for they always cut their routes as short as they safely can. Or you may, from the high, safe promenade of your big passenger liner, spy one of them breasting the fierce Atlantic rollers, taking water over her low deck from stem to stern, and you thank your lucky stars that you are where you are, and then with a shiver dismiss the shabby craft from your mind.

So the freighters go their obscure ways, linking up the commerce of the world. They touch the lives of all of us, sometimes very profoundly. Sometimes the very security of our daily existence depends upon them. Yet what do we know of them?

THEY are the true inheritors of the life of the sea. The passenger ship is a modern invention. Ever since men first ventured upon the sea, they have been building freighters to *go and get* things they wanted. The Greeks built freighters to go and get the wool and wheat of the Black Sea. The Phœnicians built freighters to go and get the tin of Britain. The Romans built freighters to go and get the corn of Egypt. And it was the craving for the spices of the East that lured the Portuguese freighters around the Cape of Good Hope and the Spaniards across the Atlantic to the discovery of a continent of which they had not dreamed.

The freighter began sea life, and it dominates it. If the sea means to you only the Berengaria and the Leviathan and the Ile de France, you will be amazed to realize how overwhelming that domination is. Of the 32,000 ships of the world, nine tenths are freighters. Of ships of one thousand tons or more under the American flag, roughly 200 are passenger vessels and 1,800 are freighters. Any great harbor will give you a sense of that dominance if you look closely at the ships—not so much in the harbor of New York or San Francisco, where ships lie widely scattered at docks or anchorages, but at crossroads such as Genoa, where you see two or three big liners moored at the inner docks, and the freighters encircling the whole narrow harbor, ranked densely two and three deep, ships of every nation, busy with the lading and discharge of the products of the world.

As for size and looks, these freighters are everything and anything—anything from a dirty coaster of a thousand tons or less, with ancient, clanking reciprocating engines, up to a brand-new motor ship as big as the average transatlantic passenger liner. There's nothing handsome about them. They are built square and solid, like boxes—the box cars of the sea.

A high, narrow deck house a little for'ard of 'midships topped by the pilot house and the bridge; a midship house long and low, up through which thrusts the funnel and on which sits the radio shack; three deck spaces crowded with hatches, winches, steam lines, booms, cargo ventilators—that is the average freighter to the outward eye. In the for'ard house live the skipper and the three mates; in the midship house, directly above the roar of the engines, the chief engineer and his three assistants, the oilers, the cooks, and the steward; and in the radio shack above, Sparks, the wireless man, reigns in lordly ease. Away aft, in the poop space, deck hands and firemen bunk and flourish above the grumble of the propeller. Only, it isn't called the poop space; for the crew, in their migration aft from that famous and infamous triangle at the bow of the ship, have carried the word "fo'c's'le" with them!

AMIDSHIPS, a climb down long flights of greasy iron ladders brings you to the peacefully thundering engine-room, and, if the ship is a coal-burner, to the stokehole 'longside it, crowded with grimy, toiling firemen, with gleams from open fire doors flashing on their sweaty, half-naked bodies. What dramas have been set in that dark heart of the ship—what lurid tales chief engineers will tell you of insurrections quelled with a slice bar or a Stillson wrench! And in hours of stress, what scenes of courage or panic!

the Sea

By
WEBB
WALDRON

Illustrated by
W. J. AYLWARD

"I stood there in that boiler-room passage four straight hours covering them spiggoties with a gun," an engineer said to me, describing how he kept his firemen at the shovel on a freighter battling desperately against a westbound gale outside of Boston.

Or, if the ship is an oil-burner, all that sweat and clamor have vanished and you find a stealthily quiet fire-room, with one or two men watching the burners. Or, if she is a motor ship, boilers and boiler-room have vanished, and there are only the tall, humming Diesels and the engineer on watch becomes a sort of King Chauffeur. All engineers on the high seas, they tell me, will some day be King Chauffeurs, so fast are motor ships increasing. In 1914, only eleven per cent of the world's tonnage burned oil, either under boilers or in internal combustion engines. Today more than one third of the world's tonnage burns it.

And that proportion will steadily increase, for over half the ships of the world now being built are motor-driven.

As I think of these deck houses and deck spaces and engine-rooms, what flashes of freighter life come back to me! The third mate and the third assistant engineer munching buns and gulping coffee in the pantry on a rainy midnight off Gibraltar and chaffing each other as mates and engineers always do. "God must be an engineer," grumbles the third mate. "There's always something leaking up there." . . . A riotous poker game back in the oi'ers' room. . . . The bridge on an icy night of glittering stars, phosphorescent seas flashing beyond the fo'c's'le head, the officer on watch pacing back and forth in the blackness, the lookout's singsong cry: "All's well; lights burning clear!". . . The drowsy engine-room, the sudden clang of the telegraph, the engineer leaping to the throttle, jerking it down to *Half Speed*, then to *Stop*, and muttering: "What to hell is the old

man doin'? Has he struck a derelict?" The after well deck on a warm Sunday afternoon along the Syrian coast, lines of fresh-washed clothes dangling from the booms, canaries and goldfinches singing in their cages, deck hands sprawled on the hatch covers, and the messman, an ex-prize fighter, giving the second cook a lecture on Socrates. . . . .

"I'D LOVE to take a trip on a tramp steamer," people often say to me when they hear I am just home from a freighter voyage.

"It wasn't a tramp steamer."

"Oh," in a tone of disappointment. "I thought all freighters were tramps."

There is reason for thinking so. Until a few years ago most freighters were tramps—ships that ramble on from port to port as cargoes call them. But the tramp has been doing away with itself. Its interweaving of the oceans has brought the world closer together, built up trade, and so made possible the establishment of regular freighter routes. It is all part of the organization and standardization of the world that we see in every sphere of human life. Fifteen years ago there were still twice as many tramps under the British flag as cargo liners; today the ratio will probably stand the other way. Here, under our flag, we have the immense fleet of the Shipping Board, all running on regular routes to South America, Europe, the Orient. Another thing is the rise of special freighter types—fruit freighters to bring bananas up from Central America and oranges around from California, tankers to carry oil from the Gulf and California to the Atlantic Coast and Europe. And, of course, the most famous special types of all are the Great Lakes carriers which pour a steady stream of red ore and yellow wheat from Lake Superior into the blast furnaces and grain elevators of the East.

The tramps are passing, but they have not yet passed.

Here is the Sea Hobo, for instance, which sailed out of Baltimore a few weeks ago with a cargo of coal for Cuba. On sailing day, Sam McCormick, the chief engineer, told his wife that he would be back home in about three weeks—in time to welcome the new McCormick expected then. The skipper had told Sam that the ship was fixed for a quick return with a cargo of phosphate rock from Tampa to Baltimore.

But when the Sea Hobo made Tampa, ten days later, the captain went ashore and came back with a long face.

"Look here, Chief," he said, "what do you think of this?"

He had an order to take that load of rock, not to Baltimore, but to Shanghai! Another ship under charter to China had had a collision and had gone to dry dock. Which meant that Sam will get home, not in three weeks, but maybe in six months—or maybe in a year. For the Sea Hobo may, in China, get a cargo of tungsten ore and buffalo hides for London, then load coal at Swansea for Buenos Aires, and come back to New York with wool, rosewood, and quebracho extract.

Sea Hobo, indeed!

OF COURSE, a cargo ship may be on a regular run part of the year and a tramp the rest. In the Argentine harvest season, the Sea Hobo may be put on a regular run between New York and the River Plate, taking down automobiles, brass beds, phonographs, fly swatters, adding machines, rubber heels, and movie films, and bringing back wheat. When the wheat-shipping season is over, she'll load coal at Norfolk for Gibraltar, get a cargo of ore in Spain for Antwerp, steam on to Hamburg, there load pulpwood for Boston, then go in ballast to Norfolk, load coal again, be off with it to the West Coast of South America, and come back to Philadelphia with nitrate!

So you see that a few months' history of one tramp steamer gives an amazing picture of the interlacing of the world's life.

I THINK one of the greatest thrills of my life has been to stand at the rail of a freighter and see that life interlace directly under my eyes. As when I saw the Exchester at Palermo discharge over one rail fifty boxes of Pittsburgh tin plate and take on board over the other rail two hundred crates of Sicilian olive oil tinned in Pittsburgh tin. Or when I saw the Extavia at Leghorn put ashore forty-four cases of hat leathers made in Connecticut and take on seventy cases of Leghorn hats sewed with Connecticut hat leathers. Or when I saw the Explorer at Naples exchange twenty-nine boxes of toy balloons made in Brooklyn to delight Italian *bambini* for seventeen boxes of Italian mouth organs destined to tickle the kids of Brooklyn. Or the Exmoor at Marseilles trade forty-five crates of American automobile tires, addressed to Samarang, Java, for two hundred and four cases of Javanese rubber consigned to Akron, Ohio.

Perhaps the apple grower of the Yakima Valley would get the kick I did if he had seen the band of Oriental pirates swarm up the side of our ship, as we came to anchor in Alexandria Harbor, rip off the

Turkish stevedores in their baggy trousers, unloading a freighter, lying in the beautiful Golden Horn, Constantinople

hatch covers and lift out into the dazzling Egyptian sunshine two hundred boxes of ruddy Puget Sound apples. Perhaps the man who screws nut No. 26 into one of the standardized sedans would get the kick I did if he had seen, as I did, one of those sedans swinging out on the end of the boom in stormy Jaffa roadstead, near the spot where the whale swallowed Jonah, while we watched breathless, wondering whether the machine was going to drop into the lighter or plunge into the Mediterranean, and the Levantine stevedores yelled their heads off. Perhaps the Dakota wheat farmer might get a kick too had he seen the Turkish stevedores, with their ridiculously baggy pants, down in our hold shoveling Dakota wheat into buckets, as we lay in the mouth of the Golden Horn,

and had he realized that our box car of the sea, by helping carry away the wheat surplus from America, was doing its vital bit to stabilize the price of his product.

Indeed, do not these shabby box cars of the sea and their voyagings touch the lives of all of us?

BUT the most intriguing thing to me about these sea box cars is the men who sail them.

"Every man who goes to sea has a reason," said Sparks, on the Exoran, a debonair Harvard man whose handsome brow, Cambridge voice, and, above all, whose off-duty spats would have fitted perfectly into a Broad Street bond house or a Madison Avenue advertising agency. He certainly had a reason. I never knew what it was. I have met many others like him, fellows obviously at sea to get away from something—a wife or a woman or a memory or a policeman.

Other men follow the freighters because it is a job like any job ashore. For most deck hands it seems to be just that: an eight-hour day chipping rust with a pneumatic hammer, polishing brass, greasing winches, scrubbing decks, painting deck houses and booms, at twenty dollars a month, board, and bunk for a deck boy, up to fifty-five dollars for an A. B. If these fellows are American-born, probably one of their chief off-duty pastimes will be grousing about the grub, but if they are foreign-born, as they are likely to be, and have served on Norwegian, Greek, or Italian ships, they will dig into the baked beans and bread puddings as luxuriously as if they were boarding at one of the best hotels.

Of course, to such men the voyage means the expectation of the next port and the chance to spend whatever wages they can draw. And how they spend! The longest voyage I have made on a sea box car was one last winter, twenty-two unbroken days from New York to Alexandria, but it was quite long enough for me to understand fully the psychology of that spending. Put a live young fellow through the monotony of those days, the same work, the same food, the same narrow scope of deck or boiler-room, the same empty sea or stretch of barren coast, then suddenly release him into the amazing streets of an Oriental city, alive with strange color, sound, smell, where he is led on in a happy gang of his pals—do you wonder he comes back to the ship in the morning with an empty pocket and a buzzing head?

"Say," said one of these happy-go-luckies, "what do you think of them guys that work on them tankers running around between San Pedro and New York? Twenty-eight days at sea, one day in port, and then twenty-eight days at sea again. That's some life!"

BUT you will also find in the freighter fo'c's'les a sprinkling of young fellows from Eastern seaboard towns and the Middle West merely out to see the world, with no idea except to sail for a voyage or two. Since they have gone to sea for fun, the monotony of it is no monotony at all, and being boys of adventurous, inquiring minds, they are more interested in quaint market places, ancient castles, cathedrals, and catacombs than in waterfront cabarets. I remember a husky, likable boy of eighteen, brought up on a Minnesota farm, who had quit the Minneapolis high school, beat his way to New York, and got a job as deck boy on a box car of the sea. The girls in the dives in Marseilles and Genoa did not attract him, and he constituted himself a guardian for older and weaker souls. Late at night he could be seen coming down the dock supporting a limp fellow sailor under each arm.

You will find, too, in the freighter fo'c's'les a few earnest fellows ambitious to make the sea as (*Continued on page 150*)

"The Crossroads"

One *Bad Turn* Deserves Another

Wherein a *Wrong Fork Picker* discovers *Back-Seat Driving* over a long distance has its advantages because it feels so good when it stops

By H. I. PHILLIPS

"LET'S go for a little auto ride—" The next time I hear that suggestion I'll put new tires on the car, stow a cookstove, mattress, table, alarm clock, and dungarees aboard, don an explorer's costume, strap a raft and Boy Scout outfit on the roof, and put a sign on the office door: "Out of Town Indefinitely."

A "little ride" in these days of good roads and good-will flights may mean anything from a run to the ice cream parlor to a transcontinental journey. I started on a trip of a few hundred miles recently and before I got back I had covered 3,000 knots, and for no good reason.

I can't quite figure out whether I've developed eagle wings or cuckoo feathers.

Until the past few months a long-distance motor trip was my favorite aversion. A fifty-mile ride was to me what that New York-to-Paris hop was to Lindy. Although I had had an automobile for ten years, my maximum mileage for any one day had been seventy-five miles. I was good only for short hauls. People who got behind radiator ornaments and tried to see how much scenery they could bounce through in a day impressed me as a little warped.

Came the dawn!

Now I'm in a bad way. Road maps have become a vice. Route numbers on telegraph poles fill me with the urge to set a new record for sustained flights through wrong detours. Arrows on signposts fascinate me. Clusters of direction signs at crossroads give me that wild-duck feeling.

I am as uneasy in one spot as an ambassador of good will with a government plane.

Six months ago, if Mrs. Phillips had suggested a drive of one hundred miles, I would have given her a frappéd stare and demanded, "Who's threatened us?"

Today, should she suggest a thousand-mile spin, I would probably reply, "What fun do you see in a trip hardly out of sight of the garage? Why not take a real ride?"

Which, when I consider all the back-seat driving I have to stand for, is quite remarkable. I don't have a grand and glorious time on a long automobile trip, inasmuch as I suffer from overdirection.

My main trouble is that too often I use the wrong fork.

Whenever there is a choice of two roads, I have a talent for taking the wrong one. This provides a lot of additional and unexpected scenery, but Mrs. Phillips prefers to take her landscapes according to the directions in the guidebook, and it leads to considerable caustic comment back and forth.

A car divided against itself cannot make headway.

If the alarming divorce rate in this country is to be cut down, it will be accomplished largely by building automobiles so that the rear seats will face backwards.

I never knew what my capacity for abuse was until I made this 3,000-mile tour, the greater part of which, I admit, was spent backing out of wrong alleys, wriggling out of roads opened by mistake, and parking at unmarked intersections waiting for an opportunity to speak in rebuttal of my wife's contention that anybody but a fool would have sensed he was off the right route long ago.

STILL, there is such a thing as becoming so accustomed to back-seat driving that one has to have it in regular doses. I have become an addict. Without it I am lost. (Even with it I am lost, as a matter of fact, most of the time.)

Whenever I come to a confusing crossroad I stop instinctively and await orders from the rear. They are always forthcoming except when the wife has swooned or I am riding alone.

It is a long jump from fifty or seventy-five miles of back-seat driving to a 3,000-mile word barrage, but I am not naturally quick on the verbal comeback, and on a long journey I get more time to think up

Digitized by Google
Original from UNIVERSITY OF IOWA

cutting answers to the red-hot denunciations of me as a person unfit to have the care and custody of a steering wheel.

Consequently, looking back on my first long automobile trip, it wasn't so bad, and I am in the market for more punishment.

"There is no fun taking a long motor trip," I had said only a week before the trip began. "An automobile is all right for getting here and there quickly over short distances, but there is nothing in these all-day drives."

AND then, out of a clear sky, I drove from New York to Florida and back, taking Mrs. Phillips and the dog. The dog was the real reason for the trip. We could have made the journey in better time and more comfortably, all things considered, by train. When riding on a train, Mrs. Phillips always leaves the driving exclusively to the engineer. She seems to trust him implicitly. Even when the train gives alarmingly sudden lurches or devotes a half-hour or more to switching operations, she takes it all calmly and never attempts to convey to the engineer the idea that he is on the wrong road and should go back and turn a sharp left by the fire house.

Last winter we were aboard a train which was shunted first one way and then another so many times in the terminals at Washington and Richmond that I took it for granted the crew were using an old A. A. A. blue book. Yet Mrs. Phillips voiced no desire to go forward to the cab and run the train herself.

For this reason I much prefer riding with her in a train, even if the engineer is a new hand and is just learning the route.

Our original destination was Pinehurst, North Carolina, where the golf fanatics go and where all the boys are lopsided from carrying overloaded golf bags shipped south by paunchy Northerners who would play much better golf if they had but one club. We had made the trip once by train, but couldn't sleep much because of the rattle of niblicks in the baggage car.

Still, it is the kind of trip that would be taken by automobile only by persons who wanted to do a thing the more difficult and bothersome way. The train takes you there overnight. You climb aboard a Pullman at five o'clock in the afternoon in the Pennsylvania Station, have dinner, retire when you like, and find yourself at Pinehurst at breakfast-time the next morning. If you are a sound sleeper, it is almost like taking a trip between two points while under ether. To go by automobile takes two days, with your foot on the gas all the way, and brings you to your destination too tired to play golf and too irritable to like anybody who does.

It is a good deal like being asked by Lindbergh to fly with him from St. Louis to Mexico City, but declining in order to make the trip on a high-wheeled bicycle by way of Russia and the Orient.

Mrs. Phillips realized this. She is as good a judge of distance as I am. But there was the dog, a Boston bull called "Penny." I don't know where he got the name. He had it when we bought him. Somebody said it was given him because, as a puppy, he didn't look as if he would ever be worth a nickel.

He has a tourist complex, and is particularly partial to motoring. Say "Automobile ride" and he will sit up and beg for it. Say "Railroad train" and he will show no interest. That's how the Florida trip got its start. Mrs. Phillips detected what she took to be a pitiful expression in Penny's eyes as we looked over railroad time-tables.

"WHY not take him in the baggage car?" I asked.

"He hates baggage cars." she replied. "He would be miserable all the way down and back. I don't see why we can't make the trip by automobile. What's the bus for, anyhow?"

"I think he will be quite comfortable in the baggage car," I argued.

"With some strange old baggageman?" demanded the wife.

"Well, maybe there'll be a young and friendly baggageman on that run, a nice, likable baggageman who loves to play with dogs and will sit up all night and feed him liver," I suggested.

Mrs. Phillips was obdurate. I somehow felt that she was on the point of suggesting that as a compromise she and Penny would ride in the compartment and I could sit in the baggage car and be fed liver by some nice, friendly, likable young baggageman.

The Author tries to reason it out with the hound

Well, I don't like being checked through in a baggage car, either, and I hate liver. So I decided to make the trip by automobile, never suspecting that before I got back I would have covered almost as much territory as Ringling Brothers' Circus or that I was in for the back-seat-driving ordeal of my life. Had I known what lay ahead, I would not only have made the trip by rail in the baggage car and eaten liver, I would have made it on the locomotive cowcatcher and eaten, raw, the cows that it caught.

Before I got as far as the Holland Tunnel I had taken my first wrong road, and by the time I emerged from Jersey City I had left myself wide open to charges of incompetency, indecision, the blind staggers, and what have you.

I'm that kind of driver and I admit it.

I achieve a given point in time, but I am prone to turn left at the soldiers' monument instead of the gas works and turn right at the library instead of the soap factory. This gives Mrs. Phillips the big advantage of the second guess, but almost always leaves her in the position of having known better in the first place. It is all very embarrassing.

ANYWAY, I managed to go on through Elizabeth and New Brunswick without getting into de Russey's lane, and on through Princeton without looping the stadium more than twice or getting stalled under the goal posts. Philadelphia gave me my first hard battle. Getting in and out of the City of Brotherly Love and Unbrotherly Signposts is always a good trick, if you do it. It always bothered Houdini more than any other feat. I finally made it despite a hot debate on the subject, "Resolved: That all men are created stupid," with Mrs. Phillips taking the affirmative.

Then I took a wrong fork again, and instead of sticking to the road through Wilmington, found myself on a back route via the Conowingo Dam. I pretended that I had chosen this road deliberately to see the dam, but Mrs. Phillips, whose interest in all dams is practically nil, was quite disturbed, and the dog didn't seem to like being carried out of his way much, either. We rolled on into Baltimore without speaking, which is a (*Continued on page 124*)

The Perfidy of Woman

By EDITH BARNARD DELANO

THE morning was one of those which gave June its reputation. Maples and elms were weighted with green, birds were caroling their love songs, bees and the scent of roses were upon the air.

An elderly gentleman sat reading the newspaper on a cool corner of the piazza; now and then, with a quirk of the lips, he looked over his glasses at a small boy decked in parts of a scout's uniform who was trying to fit a rope harness on a bored and aged collie, or at another boy crouched on the piazza steps, his chin in his hands, his eyes fixed upon the road along which the rural-delivery flivver might appear at any moment.

It was no less a person than Skidmore who sat crouched on the steps; Skidmore, the captain of the third football team of the Academy; Skidmore, the beau, the dandy, the suave and poised example; Skidmore, the mightiest over of all the erstwhile sophomores; but now, after only ten days at home, shorn of his grandeur, by his mother's command and the exigencies of family life become a chore-boy, a butt, an insignificant unit of the family cosmos—in fact, only Skidmore.

His soul would have been sunk in bitterness had it not been for his convictions concerning the inevitable and utter blindness of families in general, and for the daily visits of the mail carrier.

In front of him, on the grass, was a lawn mower. It was definitely detached from Skidmore, but its handle pointed to the gangling male creature humped there in contemplation. Its silence brought Mrs. Harrington to a window.

"Skidmore," she asked superfluously, "have you finished the lawn?" When her son neither moved nor answered, she asked more emphatically, "Skidmore, did you hear me?"

The figure on the steps did not move, but a muffled voice emerged from it. "Oh, gee, Ma, what's the hurry?"

"The lawn has got to be mowed by lunch-time," his mother informed him, "and you are not likely to get it done by sitting there star-gazing."

"Star-gazing—! Can't a feller ever think, around this dump? I should think you'd be glad to have somebody in this family do a little thinking once in a while. I should—"

"All right—think about mowing the lawn. Please get to work, Skidmore."

"I don't see why I'm expected to do all the work on this place, Mother. Why can't Dick mow the old lawn? I don't see what use that kid is, anyway."

His mother's voice took on that most exasperating of all parental tones the one of bored and weary patience. "You've got to be in town at the dentist's at two," she reminded him. "Don't let me speak to you again!"

"Why?" asked Skidmore, his spine straightening. "Now, why? I just wish somebody'd tell me why I've got to go to the dentist's. I haven't got the toothache. There isn't any sense in it. I wish somebody would—"

"Lunch will be ready at half past twelve." His mother's voice faded somewhat as she retreated from the window. "You can't go to town with *those* trousers on."

SKIDMORE sank upon himself again and resumed his watching of the road; when the flivver appeared at last, he unfolded himself and loped towards the gateway; his grandfather, eying him, bit his lip. The postman handed out a catalog of chicken-feed, two bills, a letter for Mr. Harrington and another for Skidmore's mother from his aunt. Then, at Skidmore's expression of dawning dismay, he hunted elaborately through his bundle of letters and produced an envelope that was gay with two-cent stamps.

"Well, well, here it is, after all!" he exclaimed. But before putting it into Skidmore's outstretched hand he poised his eyeglasses before his nose and inspected the address. "Yes, that's correct. It's for you," said he, and handed it over.

"You think you're funny," said Skidmore, and started to walk away. But when the carrier, leaning over the side of the car, called to him, he went back; once she had sent two letters the same day.

"If I was you," said the carrier with confidential seriousness, "I'd tell that girl of yours she's just wasting her good money, spending twelve cents a day on a letter that don't get to you any quicker on account of it."

"Yeah—and let her know I live in a hick place like this, where there's only rural delivery," said Skidmore bitterly.

The postman chuckled and passed on. Skidmore dropped all of the mail except the special-delivery letter into the gal-

"Five nothin'," said Mike, a glint appearing in his eye. "Fifteen I'm askin' for it, and I'll lose money on it at that"

vanized mail box beside the gate. As he skirted the house towards the seclusion of the barn he repeated to himself:

"Let a girl like Eileen Pendergast know what kind of a place I live in! Let a girl like Eileen Pendergast know my family's nothing but rubes! Let her know they're the kind of people that expect a man like me to cut their old grass! Sure, I'll tell her—a girl like Eileen Pendergast!"

Back of the barn, out of sight of the family, he opened his letter; when he had read it he stood for a while in a trance of meditation, his eyes round, his mouth slightly open.

HE WAS a trifle late for lunch, but he was immaculately groomed for town.

"Did you finish the lawn?" his mother asked, eying him appraisingly.

"Well, I haven't exactly finished all of it yet, but I thought you'd rather have me get ready for town," said he. "You wanted me to get ready for the dentist's, didn't you? I wouldn't want to be late for the dentist's. . . . Say, Ma, you couldn't just gi' me about a dollar and a half, or a dollar seventy-five, could you?"

"You've already had your allowance this week."

"Well—but—I got to have carfare, haven't I?"

"He's got to buy some stamps to write to his girl," the small boy across the table said pensively.

"You shut up!" Skidmore threw at him; and Mrs. Harrington remonstrated:

"Now, Skidmore, there's no necessity for your talking to your brother in that way."

"Well, that's all right, Ma, but I got to have some money. No kiddin'. I got—there's something I got to do. Please, Mother."

"You won't need any carfare today, son," said his grandfather with a twinkle. "I'm going to the dentist's too. You can drive in and out with me."

"Oh, gosh," said Skidmore, gloomily.

But when his grandfather suggested his doing the driving, Skidmore brightened; on the way home, although his grandfather would not let him pass many cars, he brightened still more.

"I suppose a fellow does need a little extra funds now and again," the old gentleman said, apropos of nothing in particular.

"Yeah," Skidmore agreed.

"Er—flowers?" his grandfather asked vaguely. "Or candy?"

"Well—no," said Skidmore. "It's for—for me."

"Oh," said Mr. Harrington. "How much do they give you regularly, Skiddy?"

"One buck a week," his grandson informed him, bitterness speeding the words. "And I call that a pretty measly allowance for a feller of my age. Lots of the fellers at school get two or three times that, and more. Fellers not as old as I am, some of 'em."

"H'm . . . We might double it, I should think, if—ah—if it remained between ourselves, man to man."

"Thanks a lot," Skiddy said gruffly.

"I hope that will help," said his grandfather.

"Sure," Skiddy agreed; but there was something in his voice that caused the old gentleman to glance at his grandson out of the tail of his eye.

"Or perhaps even that isn't enough," he suggested.

"Oh, sure! Thanks a lot, Grandpa. But—well, the fact is, I just got to have some money. Right now, I mean. I—I just got to do something. Honest. No kiddin'."

"That does happen to all of us. H'm. You've got a birthday coming, I believe. There might be some—er—discussion if I advanced the whole of your present. But would five dollars help?"

"Oh, gosh, yes!" Skiddy's eyes brightened. The car swerved to the side of the road, was righted. . . .

THERE was no one on the piazza; when something passed from his grandfather's hand to his own, Skidmore went directly up to his room, closed the door, and set a chair under the door-knob. Then from under the paper of his top bureau drawer he extracted eleven special-delivery letters and some coins. These he counted—eighty-three cents in all; then he re-read the last of the letters. For a time he stood dreaming; but when he put the letters away again, with the coins and the five-dollar bill, he said aloud:

"That's out by Belair. Gosh, I just got to get more money somehow!"

He slumped down on the edge of the bed; gradually a look of intelligence replaced the one of yearning. He got up and opened his closet door, scrambled about among the soiled garments and the impedimenta he had brought home from school, until he found a pair of battered shin-guards and a saxophone that he had recently bought from a senior in the hope of being able to join the school band next year. He took the chair away from the door, seated himself again, and put the instrument to his unaccustomed lips. As

he had foreseen, it was not so long before his brother appeared in the doorway.

"Gee," said Dick, "I didn't know you could play on that thing, Skiddy. Mother says please to stop it."

"You get out o' here," said Skidmore, but mildly, and resumed his practicing.

Dick's look was fixed upon the shin-guards. Slowly he crossed the room, picked them up.

"Say, you don't want to touch those, kid," Skiddy warned him in a kind, elder-brotherly voice that fell pleasurably on young Richard's ears. "Those shin-guards are kind o'—well, kind o' sacred. Those shin-guards played in the game between Deerfield and Loomis."

"Gee," said Dick again. "Could I—could I just maybe try 'em on, Skiddy?"

"Well. But you better handle 'em carefully."

Dick put on the shin-guards; they came well above his knees, but undoubtedly they glorified him.

"Anybody'd think you played football yourself," Skidmore remarked.

"Say, Skid, I wish—I wish I had some shin-guards like these," Dick said wistfully.

"I wouldn't want to sell those," Skiddy told him. "Anyway, they'd be worth a lot o' money."

"How much?"

"Oh, more'n you've got, kid. More'n you'd have if you borrowed your next week's allowance, even. Better take 'em off. I got to be puttin' 'em away again."

"Gee," said Dick, "I didn't know you could play on that thing, Skiddy"

"I got nineteen cents, and if Mamma'd give me my quarter in advance, I'd have twenty-five cents more."

"Take 'em off, kid, take 'em off. You don't want any shin-guards like those. They're man's stuff, they are. Go on, now, do as I tell you. I haven't got any time to fool with little boys. I got that lawn to finish."

"I'll mow the lawn for you, Skiddy."

"You don't even know whether Ma'll give you that quarter."

"I can find out," said Dick.

A few minutes thereafter Skidmore extracted a pencil and paper. "Five eighty-three and nineteen and twenty-five," he said, as he wrote down the figures. "That's six twenty-seven. Oh, gosh—I just *got* to get that money!"

AFTER dinner he wandered down the road, his hands in his pockets, thought upon his brow. His classmate, Rodney White, known in the school as Fatty, lived half a mile beyond; from his parental domain Rodney recognized Skiddy and hailed him. But Skidmore's thoughts were not to be distracted; with no response whatever to Fatty's greeting, he passed on. Beyond a far turn he came to a garage; various more or less derelict cars were in the open space back of it, but with no more than a glance in their direction, Skidmore entered the building. Once again he was the poised, genial, nonchalant youth that Deerfield knew.

"H'are you, Mike? How's business with you?" he asked debonairly. From some very private recess he extracted a package of cigarettes and proffered them. "Have one—?"

"Hello, there, Skiddy," Mike returned, and, standing under the No Smoking sign, struck a match. "Haven't seen you for a long time—not since day before yesterday. Come to buy that limousine?"

Skidmore laughed, waved the hand that held his smoke. "Quit kiddin'!" said he. "What'd I want with any ol' cut-down flivver? We got two cars on the place now."

Mike cocked his head. "Two?"

"Sure. M' grandfather's visiting us. He lets me have the use of his car all I want, so what'd I want to buy one for? Costs something to run most any kind of a car, these days."

"You'd have a lot o' fun with your own car, though," Mike submitted. "And that car don't eat any gas. Why, you can get twenty-five to a gallon with that car, stripped the way it is, easy. Maybe more."

"Yeah—stripped," Skiddy laughed. "You said it!"

Mike looked indignant. "Now, you come out here," said he, and led the way to the space where the turned-ins stood. Skiddy was aware that a portly form had drawn near; but beyond a mere nod, he paid no attention to Fatty. Mike stopped before a small and battered chassis that leaned wearily forward upon its tireless front wheels.

"Look at that, now," said he, waving enticingly. "What's the matter with that car? I'm askin' you!"

Skiddy smiled; his eyebrows went up as he exhaled a plume of smoke. "That what, did you say?"

"Well, it was a cut-down you was askin' about the other day, wasn't it? Ain't that a cut-down?"

"Looks more like a washout," said Skidmore, and laughed aloud. "Look at it—!"

"Well, what do you think you get with a cut-down, anyway?" Mike asked, with mounting injury. "A Fletcher body?"

Fatty had raised one side of the battered hood. "Looks like a pretty good engine," said he.

"Sure, it's a good engine," Mike agreed. "Of course, she needs a couple o' tires. And there ain't any windshield. And you'd have to fix on some sort of a seat, maybe. But—"

"Me? Me fix on a seat? Come, come, my friend," said the lordly Skidmore, "take a good look at me—!"

"Oh, well—I'd throw in a seat for a dollar. Even so, that car's a real bargain at fifteen."

"Mike, you amuse me. You ought to go in the Follies as a funny man."

"Oh, well, fourteen, then. Twelve. Why, you could hit up to thirty-five miles an hour in that car, easy."

Again Skidmore laughed. "Why, son, I hit it up to seventy in my grandfather's car this afternoon, coming out from town. Passed everything on the road. That's a real car."

"Eleven-fifty," said Mike. "Or, seein' it's an old friend like you, eleven. But that's a flat price. I ain't makin' any profit on it, either."

Skidmore walked wearily but slowly away, in the direction of home. But Mike did not call after him, and presently he realized that Fatty was puffing along a step behind him. As they neared the White place, Fatty drew up beside him and asked, awed and respectful:

"Say, Skiddy, did you really hit it up to seventy—no kiddin'? Gee, that must be some engine!"

Skidmore tossed his cigarette away with a languid gesture. "Oh, run along, Glucose, run along," was all his reply.

HE AWOKE in the morning to the sound of the lawn mower and to other sounds from the kitchen, below his room, that proclaimed breakfast over and the dishes under way. It was not worth while, he thought, to encounter his mother until Dick had finished the lawn; he went down the back stairs, consumed some light nourishment in the kitchen, skirted the house, and took his place against the gate-post nearest the letter box. When the carrier drew up, he looked mournfully at Skiddy and held out his hand.

"Shake," said he.

Skiddy had stepped forward hopefully, but he stopped, frowned. "What for?" he asked suspiciously.

"I want you should forgive me. It ain't my fault."

"I don't know what you're talking about," said Skidmore. "Kindly give me my mail. I'm busy this morning."

"That's what I was talking about," said the postman. "You'd better remain

"I've got you on six counts ***at least,"*** *said the officer.* ***"Heaven help whoever'll have to pay your fines!"***

a bachelor like me. Women ain't to be trusted—none of 'em. She—" he pretended to swallow, to wipe his eyes, to swallow again— "she ain't written you a letter since day before yesterday."

"Oh, you go fry yourself!" Skiddy blazed forth. "I wasn't expecting any!"

Yet, as the postman disappeared, he repeated aloud, "I just got to get hold o' some money. Good gosh, I just got to!"

HE HEARD his mother calling him, so he walked off up the road; there was nothing to take him in the direction of the garage. He scarcely knew where he was wandering; when the sound of a lawn mower penetrated to his consciousness, he actually started. But it was not his lawn mower. He had come to a part of the community where the places were smaller, and a young woman was pushing a mower over a bit of front yard. Almost at once a speculative look came into his eyes; again he was ennobled by his best school manner.

"Good morning, Mrs. McLane," said he. "Isn't that rather heavy work for you? I'd be very pleased to do it for you."

The lady looked at him over the handlebar. "Oh! It's Skidmore Harrington, isn't it? Why, it's awfully kind of you, Skidmore. My bridge club is coming this afternoon, and the boy that mows the lawn didn't show up."

"It would be a pleasure to help you," said Skidmore; and before he had finished, the lady next door came out and asked him to mow her lawn too. . . .

"Six twenty-seven and fifty and thirty-five," he repeated on his way home. "Seven and five is twelve and one to carry, three, and—gosh, I wish I had a pencil. But that ain't enough. I just got to get some more, somehow."

His mother, it seemed, had nothing to say about Dick and the lawn; Skiddy was most assiduous at the lunch table, forestalling every need of Mrs. Harrington and his grandfather, even conversing pleasantly with his brother. As they were finishing the meal he asked:

"Oh—er—by the way, Ma, would you mind if I asked George Carey out for dinner? Or maybe to spend the night?"

His mother eyed him with speculation. "I suggested your asking George out last week, Skidmore, and you called him a—something, and refused."

"A wet smack," Dick supplied, and added "Ouch!" as Skidmore kicked him under the table.

"Oh, well, I guess maybe I was upset about something," said Skidmore. "Old George is all right. Can I ask him out, Ma?"

"Skidmore," said his mother, "you're up to something. You haven't been like yourself for days. What's the matter?"

"Good gosh, can't a feller even try to do a good deed in this family without getting accused of something? I only wanted to ask him out because his mother's a friend of yours and I thought maybe he was lonesome in town. But if you don't want me to, all right! All—*right!*"

"Your opinion of George has changed very suddenly," his mother dryly observed.

But Skidmore sensed a weakening; he assumed a mature, judicial manner. "Oh, no; oh, no," said he. "I never had anything against George, personally. Maybe he's not so very popular in my crowd at school, and all that. The fellers think he's snooty because he's so lousy."

Grandpa Harrington had pushed back his chair and started towards the door, but at that remark he turned.

"What! What's that? What's that word you used before your mother, young man?" he demanded.

"Oh, that's all right, Father," Mrs. Harrington assured him. "Skidmore was not being biological. I believe he means nothing worse than that George is suspected of being purse-proud."

"Well, what do you think?" Skiddy's indignation was intense, but his grandfather left the room hurriedly. "I only meant that George is so dirty rich and behaves like a stuffed shirt about it. Gee, can't a feller even talk English in this family without somebody raising a stink?"

"You may ask George out, Skidmore," said his mother as she, too, left the table.

GEORGE was, indeed, a person of rather lordly manner, and dapper; but it was plain to everyone that Skidmore's unlooked-for attention gave him considerable pleasure and satisfaction. At the dinner table he hung upon Skidmore's words; his manners were a trifle awed, but excellent. After dinner the two strolled together in the direction of the garage; apparently Skidmore did most of the talking, but the interested look in George's eyes was answer enough. Rodney hailed them as they passed the Whites' house, and received the briefest of greetings; to the garage man both were more genial. Skiddy's manner, in fact, was quite jocular.

"You'd never believe it, George," said he, "but my little (*Continued on page 144*)

The BUS —a New Giant in Transportation

By LEWIS R. FREEMAN

SIX days ago I was in New York; today I am steaming down the west coast of Mexico *en voyage* to Panama. In the interim I have crossed the continent on air and rubber—journeyed from the Atlantic to the Pacific by continuous motorbus travel.

Four years ago—away back in the Covered Wagon days of the motorbus, when the parlor coach de luxe of the present was a jitney pup—I attempted a similar ocean-to-ocean traverse. At the end of three weeks' time—by the use of thirty or forty bus lines, four electrics, and three steam railways—I had reached the Pacific, but only at a cost twice that of rail travel and more tired physically than I have been at the end of a year in the wilds of Africa or the Arctic.

The motorbus has rolled on and on since the winter of 1925, and by early in 1929, there were several through routes by which one could cross the continent by bus in five and a half days—thirty-six hours more than by limited train. With the chaotic conditions of a short four years previous in my mind, a bus traverse in such time seemed fantastic.

The union bus terminal at the rear of the old Waldorf-Astoria Hotel was one of three or four then serving central Manhattan. It was used by a score of lines plying not only to the Pacific but to New England, Florida, Canada, and the Mexican border. At those busy ticket windows I could have purchased transportation to almost any city or hamlet in the United States.

The station manager mentioned apologetically that the terminal was crude and cramped compared with what I should see in Chicago and on the Pacific Coast, but that when New York *did* get under way, it would modernize with a rush—probably with some such place as the ground floor and basement of a thirty- or forty-story terminal-hotel. They already had twelve-story hotel-terminals in California. He regretted that I was not starting a little later so as to take advantage of the new sleeper-buses, with showers, lavatories, buffets, and berths for twenty-six passengers. But he was sure I should find the reclining chairs far from uncomfortable for a night's rest.

Pacific, Atlantic, Canada, Mexico—or where would you? These buses are threading the highways from anywhere to anywhere

PHOTOGRAPH BY
WILLIAM SHEWELL ELLIS

The announcer's calls of waiting buses were almost continuous. "Pittsburgh, Cleveland, Toledo, Chicago, St. Louis, and Los Angeles" he said, and a long, trim, streamlined road-cruiser pulled up to the platform. It well befitted the symbol of a galloping greyhound painted upon its sides. There was a passenger for every one of the thirty-two seats. Bags up to about forty pounds in weight were stowed in large, overhead racks; anything heavier went to a steel box on the roof. Inside of two minutes we were off.

NEWARK, although I had passed through it a hundred times before by train, now for the first time became more than a brick-vaulted tunnel to me and assumed its real character as the rich and populous metropolis of New Jersey. Traversing it from north to south by its main thoroughfares, with a loop around a half dozen central blocks to drop and pick up passengers at a monumental bus terminal, I was left with a clear and vivid picture of one of the nation's greatest industrial centers.

Now country estates and farms began to break the factory line, with country villages where people lived because they would and not because they must. Bound Brook I remember especially. Hitherto it had been to me merely a suburban station with a pretty name on the New York-Philadelphia railroad line. Now I saw the brook itself, with a mile or so of the attractive country homes of refugees from Manhattan and Newark.

A bridge across a dividing river led from Phillipsburg, New Jersey, to Easton, Pennsylvania, both busy industrial towns, with their narrow, winding streets thronged with Saturday afternoon shoppers. Allentown, a few miles along, had grown rich from its silk mills and the savings of the canny Dutch tillers of the surrounding hills. A swift run through Bethlehem revealed the difference between the Cradle of the Steel Industry and the Cradle of Christianity, from which it had taken its name. Hot gushes of glow from blown Bessemers suffused the gathering clouds with fluttering waves of rose and terra cotta as we rolled on westward.

The dome of the state capitol silhouetted against the paling western sky heralded our approach to Harrisburg. A drizzling rain was falling as we took the road again, with bridge and boulevard lights reflected in eerie double rows through the mists above the shallow Susquehanna River. At Lewistown, where we changed drivers, a proud young booster lounging at the door of the bus station told me of the growth of the town as a rayon manufacturing center, of the hundreds of cars of raw material that came in, of the five thousand employees of the mills, of the way they spun out the chemically-treated cellulose fibers until they were as fine as silk and even tougher.

TO PROVE that all the world and his wife and daughters were wearing rayon, he pointed through the station window to where a couple of bench-lengths of cross-legged flappers were waiting for a local bus. "All rayon but the shoes and furs," he exposited. "Fine as silk and even tougher," echoed an irreverent traveling-man climbing back into the bus.

After an hour or two we left the Susquehanna and began the long climb to the summit of the Alleghenies by the narrow valley of the Juniata River. Now we were on the route of the creaking Conestogas and the earlier horse-trail that had been ridden by Washington and Braddock, by Jefferson, Hamilton, and Aaron Burr.

We were over the summit by midnight, and my broken recollections of the swift

(Above) A huge bus designed to meet the well-known human desire for a little sleep. (Left) What's a stretch of desert to the up-to-date "covered wagon"?

descent had to do with swingings and swayings round looping spirals, with the head and shoulders of the driver showing above his spinning wheel. The dumps and runways of coal-tipples towered to left and right as we wound down the narrow valley, with the sky ahead glowing like an inferno where steel mills and coke ovens threw up a light-barrage against the coming of the dawn.

THE cold, gray, smoke-smothered daylight found us plowing through slush and history. To the left was the Monongahela and the creek where Washington had received his baptism of fire and Braddock had paid for his arrogance with defeat and death; to the right was the Allegheny River, which had borne the canoes of La Salle and the early French explorers of the Mississippi Valley. Where the two rivers joined to form the Ohio was the site of Fort Pitt, itself on the site of the earlier Duquesne, the unattained objective of Braddock. Below the junction was a plot of ground which the young George Washington had surveyed and bought for two hundred dollars and which would now be cheap at as many millions.

Steel mills gave place to the mansions of steel kings, and these to the soaring skyscrapers of modern Pittsburgh. Below and round about us everything was black, dingy, dismal, under its coat of bituminous soot; overhead, where the level rays of the rising sun struck through the smoke-clouds and gilded the coppered domes and pinnacles of the steel towers, was the seeming of a city celestial. Industrial Pennsylvania—colossal—stood symbolized.

Forty minutes' halt at Pittsburgh's crowded bus terminal—outgrown and inadequate in a single year—gave time for a shower, a change of clothes, breakfast, and a shave. With five or six hours of solid sleep to my credit during the night run, I resumed my journey.

THE highway turned away from the Ohio River at Rochester. Not far below was the point at which the family of the Indian Chief Logan had been murdered by a white renegade, giving rise to that classic lament so dear to the little red schoolhouse days, "Who is left to mourn for Logan? Not one!" Running out of the somber iron and steel villages, with their black-faced men and white-faced women and children, we crossed the line into Ohio and for a while were in a land of blue skies, fair farms, and quiet country villages. Youngstown's great factories threw a smoke screen across the sun for a space, and then it was up-hill-and-down-dale through farms and suburban homes all the way to Cleveland.

Returning Pittsburgh and Carnegie Tech students had given place to those for Western Reserve, and some of the remaining seats had been taken by members of a musical comedy company opening in Cleveland that Sunday night. College boys and chorines were blending their voices in close harmony as we pulled up to the Cleveland bus station.

Six miles through Cleveland north-and-south, and ten miles east-and-west, revealed it as one of the most beautiful of American cities; a monumental art gallery, auditorium, library, and city hall proved it also one of the most civic-minded. The fifty-story tower of the newly completed Union Station pricked the eastern skyline long after we had rolled on.

Again we were in a zone where industry was superimposed on history. Back a bit to the right was the place from which

MATERIAL SUPPLIED BY "BUS TRANSPORTATION"

(Above) An intimate inside view of a Pickwick sleeper. All it lacks is a beauty parlor and a barber shop. (Right) Seeing the glories of Zion National Park

Perry signaled: "We have met the enemy and they are ours." To the left, on the Maumee River, "Mad" Anthony Wayne had forever crushed the power of the Ohio Valley Indians in the Battle of Fallen Timbers. And for mile on mile, where the iron of Superior met the coal of Ohio and Pennsylvania, mills and factories without end flashed up and disappeared in the darkness. Toledo was almost another Pittsburgh for stacks, and, had our route lain to the north, we could have continued on another sixty miles to Detroit, in the flare of factory chimneys all the way.

BUT our route runs westward—ever westward. Returning college boys still scramble for vacant seats, but now they chatter in strange tongues—French, Spanish, and Irish. We drop them all at South Bend for Notre Dame and its Catholic preparatory schools. A lad from Bogotá, Colombia, shared my seat long enough to confide that he had just become engaged to an Irish girl in Toronto. It was his third engagement, but, as the girl's father was a policeman, he thought it might last a bit longer than the others.

Sand blowing over a wilderness of lake-end dunes was the new day's first offering, then the belching smoke and flames of the Gary steel mills, and finally the thirty miles of tangled grade-crossings that form the approach to Chicago from the south. Factories by the hundreds again, followed by broad parkways and boulevards, and at last the sky-piercing tips of the towers that have sprung from the mud of the river-mouth where Joliet and Marquette began threading the marshes on their way to the height-of-land that would lead them on to the Illinois and the Mississippi.

The two-hour halt at the new Union Bus Station on Wabash Avenue gave ample time for a bath and breakfast and a glimpse of modern Chicago—Chicago, that has destroyed one lake front and created another; Chicago, that has built the world's largest hotel and stadium and has projected the largest and tallest office building; Chicago, that has made the most determined attack on traffic congestion by constructing a double-deck street and prohibiting parking in its central area; Chicago, that is America's most typically American city—the most generous in its generosity and the most practical in its practicality of any of the big burgs of the continent.

Buses starting to the four points of the compass preceded or followed us out of the busy Union Station. Chicago is the hub of busdom as well as railroaddom, and there is hardly an hour of the day in which one cannot start on his way for the Atlantic or Pacific, Canada or Mexico. The present union stations are already outgrown, and the talk is now of a great hotel-terminal like that planned for New York.

THE next three hundred miles to St. Louis unfolded a revealing cross-section of the wealth of the state of Illinois. Here and there coal-tipples and the dumps of lead mines jazzed along the skyline, but for most of the way it was just one farm after another—the richest farms in all the land. The golden corn, alone, produced by the farms of Illinois is valued at more than the total mineral productions of all but a few of the great oil states of the union.

Culture was in the ascendant again for a spell as we halted for lunch in the shadow of the State University at Urbana; then we navigated cornfields once more to the solid (*Continued on page 81*)

"LOVE *is not* LOVE . . . *which*

By NELIA

IT WAS May. May! On the high hills azaleas flaunted their pinkness, and in the fields the earth was black. Tulips were bright in every yard, lilacs were a rain-drenched purple, and the elms along Church Street put out a green that was too delicate, too tender in its traceries against the light blue of the May sky. Oh, but it was good to be alive—in May!

Chloe stood before her mirror in her cool little back bedroom, which she shared with Edith, and let herself be happy. She ran a comb through her short brown hair. She took off the blue tie that went with her linen frock, put on one that was many-hued. She smiled at herself in the glass and combed through her hair again. All through her surged such a pleasure in the day and in herself that she felt she had to sing.

Through her window she could see bare fields, an old tree alone in a meadow. The fields with their softly waving new grass and their dandelions called to her, and the old tree seemed to beckon in wise friendliness. Oh, her mother was coming to ask her again to go with Edith! All her happiness turned to steel.

"Edith's counted on your going, Chloe!"

"Can't help it, Mother! Edie shouldn't!"

"But you said—"

"Oh, I said—*I said*—why do you and Edie pin me down with promises? You know I hate it so!"

"I know!"

"Oh, *don't!* Don't try to work my feelings up! Don't try to make me ashamed! I won't be! I just won't go. Why does she do it? Pilgrimages to the home of a dead love! Rot! Why doesn't she get a live love?"

"She can't."

"Can't? With her saint's eyes? Don't make me laugh, Mother!"

"Chloe! You're cruel!"

"Am I? I'm happy—you all hate to have me happy!"

There, that silenced her! She was gone, out of the room.

"Well, silly one," said Hugh, "we'll have a battle of violets, and see! First one to pull off ten heads beats"

alters when it alteration finds"

GARDNER WHITE

The door was closed. The outer door. They were both gone. She was alone in the house. The steel melted too swiftly into happiness again. She was alone in the house, and Hugh was coming! The house was suddenly dear and beautiful. She knew quite well that, of her making, the house would never have attained its clean comfort, and yet, even the makers of that comfort were ofttimes too many here.

She could love the comfort when she had it to herself—love the flowering almond at the porch corner; love the cool shadows in the shabby, clean rooms, the books that filled every corner, the smooth green of the lawn, her room with its prim, old-fashioned bed and bureau, its little walnut-framed mirror, its cretonne-covered box beneath the window.

It was when her sisters were here—her mother—that she grew so wistful for other places. They pinned her down to conscious pain or duty or pleasure. She wanted to live—not have life cut out for her according to their notions. Her mother thought it fine that Edie kept on being true to Carl. Three years of faithfulness—of calling on Carl's folks! Tommyrot!

But, oh, today she was alone! Hugh was coming and it was May! She ran down the stairs, singing.

She saw her books piled on the table. There were ten pages of Karl Heinrich to translate. But she made no movement toward the table. It was queer, but college didn't mean much to her. She knew the folks were giving up a lot to put her through; but, even so, it never seemed real or important. She never felt a part of the college and campus life—never. Edith had, and so would Marjory; but she didn't.

Sometimes, translating, or writing a theme, she would be happy; but it was because there was of a sudden some inner thing that welled up in her at a too-familiar thought or expression. Not anything that connected her with the life that went on daily in the classrooms on The Hill. She was forever filled with a vast impatience because they expected her to get so much from college.

She sat down at the piano and wanted to play; but she was

Digitized by Google
Original from UNIVERSITY OF IOWA

too gay for that, too happy. It was not often she was gay, but sometimes, all unbidden, she would be filled with a kind of elfin merriment. Then she could mimic till the family would shout with laughter, or she could just be so funny that she would carry them forward on a gale of jollity. But never when she was asked to or it was expected of her. She would be moody, even sullen, then.

Often she would say to herself, "What *makes* me so contrary?"

And she would loathe herself for her own hardness. Edith was always wanting her to go over to see Carl's family with her, or to read with her, or walk with her. The minute she'd suggest it, Chloe would turn inside to a hard stone of antagonism. She usually went; but Edith always knew she didn't want to. If only they would leave her alone! Why were folks always and forever trying to bend other folks to their wishes? Why couldn't Edie do her calling by herself and not feel hurt about it if she, Chloe, didn't tag along? Why couldn't Marjory have her affairs without insisting on Chloe's having one, too? Why couldn't they just let her be herself? She'd only too gladly let them alone.

Well, today, they were all away, and Hugh was coming! Would they sit here in the cool, dim living-room with its bowls of wild flowers, or would they walk out into the country? She banged a wild, glad chord on the piano, jumped up, and went to the door. He was coming.

WHAT was it about the sight of him that sent through her such a sweet, betraying weakness? What was it that made her so expectant of his coming, so reluctant to have him go? Perhaps it was because you could never be quite sure of him. Some nights, just as she looked for him, he would call up and say he couldn't come. Some summers he would let weeks go by without a letter. But when he came, or when he wrote, he would be then so boyish, so tender, so gay, so teasing—there was no withholding of forgiveness.

All day she had waited for this moment, and now it was here she was not, as always happened when she anticipated other events, let down. The expectancy went leaping up in her heart, and she opened the screen door and went out to him gladly.

"'Lo, Chloe!"

"Hello!"

"Let's walk, shall we?"

"All right. Did you ever *see* such a day?"

"Never did! I cut International Law because of it!"

They laughed.

"Gaudy tie, child!"

"Oh! And I wore it to please you!"

He threw back his head and laughed whole-hearted derision. A man, passing, grinned at them.

Oh, it was fun to be alive! And it was only three—they wouldn't need to be back until six!

"Come on—up Roke's Hill, Sukey!"

He caught her hand and they went up the hill so, hand in hand, like children. That was it, she thought happily, you could be like a child with him and it was all right. You didn't have to pretend, the way you did with grown-ups. She stopped at the top of the hill, took a deep breath.

"Oh, I *wanted* so to get out in the country today!" she said.

"And here you are, your heart's desires fulfilled! It's not bad, is it? I get an itch for the woods myself, about May fifteenth! Where's our bank 'whereon the wild thyme blows'?"

THAT was it—he remembered so, when you didn't look for it. It was so sweet to have him remember that bank and the quarrel they'd made up there! And he'd first called her that foolish name, "Sukey," that night too, and it had ever since been his name for her.

"On a little farther. Oh, look, Hugh—violets, thicker than thick!"

"And I suppose you want me to get my knees all grass stain, picking them for you! And then the violets'll all be wilted before you get home."

"Oh, but, Hugh, I love 'em so!"

"I'd rather 'twould be me! Well, silly one, we'll have a battle of violets, and see! First one to pull off ten heads beats. If you beat, I'll pick 'em; if I beat, we'll sit on the bank and—and—*talk*."

"Who's the silly one? Well, here's my champion!"

"No fair! I can't find one so big!"

"Ready! . . . One for me! *Two* for me!"

"But you've got the biggest violet ever grew in grass!"

"Three for me! . . . Oh, you yanked so hard!"

"I'm getting desperate. Get you another champion!"

"I can't find one that's any good!"

"Ha! I knew Fate was with me! Right is bound to win! . . . Seven! Eight! *Nine!* Come on, here's the last one! . . . Shame on you, Sukey, to take it so to heart that I have a little hour of rest from labor!"

They went on, hand in hand again, and came to the bank where grew grass instead of wild thyme and where a giant elm stood, to shade lovers. She sat on the grass and he stretched out lazily.

"The more I think of it, the worse I think you were, wanting me to waste time picking violets. Why, we won't have many more days together! Mental cruelty—I've just been studying a divorce case—mental cruelty! That's you, Sukey! When I'm a lawyer and have cases brought me, mental cruelty cases, I won't laugh—I'll think of you and know they may be speaking truth!"

"*When* you're a lawyer!"

"Well, it won't be long. If I get by on the bar exams. . . . I will. I'm kind of smart, Chloe."

"Yes, we all know that. You know it too, don't you?"

"Mental cruelty!"

"You need someone to laugh some of the conceit out of you."

"Well—as long as I have you—"

They were still then. It was too pleasant for so much chatter. The woods behind them were so cool, so newly green. The field, across the way, waited for seed, its black furrows open to the sunny sky. The birds made mating one ecstatic song. No one went by. It was their world, and it was May. "*As long as I have you*—" Just a joke, but how sweetly real it sounded, how sweetly real it *was!* She let her hand smooth back his hair. Once he looked up at her.

"Green eyes!"

He always teased her about her eyes. She only smiled and was content.

Presently he said, "Want me to quote poetry? It's a good day for it—I feel right sentimental!"

"Can you quote any?"

"*Can* I? . . . 'Fair daffodils, we weep to see thee haste away so soon.'"

"But they've already hasted!"

"What appreciation! Well, how's this?—

'Love is not love
Which alters when it alteration finds,
Or bends with the remover to remove:
O, no! it is an ever-fixed mark,
That looks on—that looks on—that looks on . . .'"

She laughed mercilessly.

"Well, I did know it—once. I learned it to quote to you, and this is all the thanks I get!"

"To quote to me! Do I look so gullible? More likely for that skinny little Esmay girl I saw you with the other night!"

"Oh, she's not so skinny! How catty girls are!"

"How faithful men are!"

"Well, I never swore to faithfulness!"

He always teased her so. It hurt her, and yet it was sweet too.

"No," she said. "No, you never did."

He grinned at her, but into his eyes too crept something almost serious.

"I never will," he said. "Judd Granger's got himself engaged. And Red Clark. Tied up for life—and not begun to make a living or to look around. They're fools! Not that it isn't all right when the time comes but—why, they've not had any chance to be free yet, to have any real fun!"

"Oh! . . . Well, maybe they think that will be fun!"

"They only *think* so! Listen, Sukey, I—I've been wondering—you haven't taken them seriously, the things *I've* said to *you*, have you? Girls do, sometimes. I wouldn't want to think I'd hurt you. Because I do like you—I like you better than any girl I know. But that's not tying myself up for life! You never thought I—I meant *that*, did you, Chloe?"

OVER the way, the birds still dropped to the black, smelly earth for worms. Over their heads, the air was still soft and clear and full of the fragrance of wild plum. All about them it was still May. Still May.

"Silly!" she said. "Don't take *yourself* so seriously!"

She said it lightly, neither protesting too much, nor denying too vehemently. She said it all right.

He laughed, though not quite easily.

"Well, you never know girls!" he said. "And I do like you *terribly well*, Chloe!"

After that they joked about a lot of things—about her mother's dislike of him, about his selfishness in not wanting to stay home this summer, about a bird that seemed to sing to them from a fence post near by. But, at last, she could stretch her arms above her head and say:

"I must get home! Karl Heinrich's waiting for me. *He's* faithful!" But there wasn't even any sting in that. Just banter, as always.

"Well, I'm faithful, in a way, Sukey!"

She laughed aloud at that.

"Yes, in a way," she said. "Let's go!"

But she couldn't let him kiss her nor even hold her hand as they swung down the hill.

"You anything planned for Sunday?"

"Yes, I have. Sorry."

"What? Some (*Continued on page 88*)

IF YOU ASK ME:

A mistake is a fine chance to learn something

LAST winter the head of a big industry was sketching for me his early career. The story was fascinating, but it was hard to follow the shifting scenes.

"So far as I can figure out," I broke in, "you held five jobs in seven years. Wasn't that a lot of jobs?"

He grinned. "About the right number for the blunderer that was *me*. I was fired from two; I fired myself from two—and the other I just naturally oozed out of. Not being sure of what I wanted to do, I was using the cut-and-try method.

"None of these jobs happened to fit me, but their very variety gave me the chance to make an unusual number of mistakes in a comparatively short time. That's why these seven years were so valuable!"

"Valuable?" I repeated.

"Sure!—Mistakes have been my schoolbooks. They have taught me nearly all I know. But if my early blunders had been scattered over a longer period of time, it might have been too late for me to 'get going' when I knew what I really wanted to do and had learned how to cash in on my own special aptitudes."

"Your moral is easy to miss," I said. "I've known people who blundered hopelessly all the way from the cradle to the grave. I've even chipped in to help pay for burying them."

"But there's a difference!" he replied. "I had one compensating grace—one priceless ingredient. *I really learned from my errors.* Looking back over my business career, I find that almost never have I made the same mistake twice.

"Guess you've heard that before! Sounds simple, doesn't it? But, do you know, the world is still full of people who make the same kind of mistake—not just twice—but over and over and over!"

MY FRIEND was right. I *had* heard other men of affairs give similar testimony. In the years when they were trying to find themselves, they made plenty of blunders. But these blunders did not sap their self-confidence. They kept on trying new things, and old things in new ways, despite the caustic comments of the I-told-you-so boys. After being thrown for many a loss, they still preferred to play hard rather than to play safe. Eventually, they had a ripened judgment and a weathered courage which made them bigger than anything that could happen to them.

Samuel W. Reyburn, head of a great chain of department stores, once said to me:

"The man who is afraid to make mistakes, who is overcautious about doing things because he fears failure in some of them, will never get far! If, out of a hundred chances to exercise his judgment, a man decides right seventy-five per cent of the time, he is running at a profit. Then, if he doesn't fritter away his time and energy in trying to cover up the occasions on which he was wrong, probably he will be able to decide right eighty-five per cent of the time. That will make him a tremendous success!"

EVERY little while a story is printed about the executors of some self-made millionaire finding his strong box sprinkled with worthless securities. Maybe! But if his career as a whole hadn't been studded with more right guesses than wrong guesses, he would have died in a poorhouse instead of a palace.

"Life is a chance to make mistakes," said the author of "The Cardinal's Snuffbox." . . . But not too many of them. And, certainly, few encores! Some men live and learn—others just live. Where do *you* fit in?

AVIATION
Is About to Become of
Age

By SHERMAN GWINN

"Its swaddling clothes are far behind and maturity is just ahead," says CLEMENT M. KEYS, *president of the Curtiss-Wright Corporation—Extraordinary stories of new developments in the highways of the air*

ILLUSTRATED BY CLAYTON KNIGHT

AN AMERICAN aviator who was in Europe on business sought to charter an aëroplane to take him from Amsterdam to Berlin.

"I'm sorry, but there isn't a plane available at this season," explained the polite air-field official. "You see, the tulip fields are in bloom. Every plane is carrying tulips."

"Tulips?" repeated the astonished American. "You are using passenger planes to carry tulips?"

"Exactly," smiled the official. "Our tulips, as you surely know, are the most prized in Europe, and air transport has enabled our big growers to triple the size of their market. Tulips cut here today may be bought tomorrow in Berlin, Paris, and London almost as fresh as if they just came from a local garden. The aëroplane has made this a fact."

The American took a train to Berlin, found a freshly cut Dutch-grown tulip on his breakfast table, and returned to New York to introduce a new commodity into the rapidly mounting list of things being transported by air in America.

Out in the Middle West this returned aviator, who is at the head of a noted flying service, found a grower of fine roses. The latter was shipping thousands of cut roses a day into Chicago, where they sold as high as seventy-five cents apiece.

"You can get even higher prices in New York and a bigger demand as well," reminded the aviator, and he told the story of the tulips. He described how planes, heated to exact temperatures best suited to flowers, could deliver roses overnight to New York just as quickly and efficiently as trains delivered them to Chicago.

Today, in New York City, you can buy cut roses which at noon yesterday were still nodding on their bushes in the mid-West. In Chicago you will soon be able to buy a fish which as late as the day before was still flipping its tail in the brine of the Atlantic. A scientifically chilled refrigerator plane will transport the fish, whereas a heated plane carries the roses.

It is a big jump from roses to fish, yet even as broad is the avenue of aviation development already indicated for this country, in the opinion of Clement M. Keys, president of the Curtiss-Wright Corporation.

Much of the future of American aviation, Mr. Keys believes, is already outlined in its present, barring some revolutionary change in the aëroplane itself. The present aëroplane is now twenty-five years old, a fairly finished product, so that we are reasonably familiar with its possibilities. It has been put to a variety of tests and uses in all parts of the world, which indicate the scope of its usefulness to man. In short, it has passed the guessing stage and has reached the development stage. We are no longer proceeding blindly.

"THERE is always the possibility that somebody will come along with a radical invention or discovery that will upset all that has gone before," said Mr. Keys, "but at present no such upset is in sight. Our present aëroplanes are direct descendants of the original Wright and Curtiss planes. We've built better motors, improved wing curvatures, developed superior materials and methods. Radio, better air instruments, and knowledge born of experience have given us a new security in the air. These changes, however, have been evolutionary, and not revolutionary. There has been no change in fundamental principles. It is fairly safe to assume that aviation has reached its adolescence and that maturity is just ahead."

I went to Mr. Keys to get the facts on aviation primarily as they are of concern to the average citizen and to business. What I wanted to know is to what extent this industry of the air is going to affect our daily lives and affairs. Where is it going? To what uses will its thousands of ships be put?

No man in the country is better qualified to speak on these questions than is Mr. Keys. Interested in aviation almost from its inception, since 1919 he has been a dominant figure in the industry, and during the past two years he has been personally responsible for some of its most notable commercial advances.

Transcontinental Air Transport, Inc., which is the first coast-to-coast air-rail transport system to be inaugurated in the United States—this in coöperation with the Pennsylvania and Sante Fe railroads—was Mr. Keys' idea and was organized largely through his personal efforts. He is the president and director-in-chief of this system. Lindbergh is its technical adviser.

Taking hold of Curtiss Flying Service, Inc., at a time when its base of operations was limited to a single airport on Long Island, Mr. Keys built this company into a $6,750,000 corporation which today covers the nation with airports in almost every principal center. He is the chairman of this company's board of directors.

He brought about the formation of North American Aviation, Inc., a $25,000,000 aviation investment and holding corporation, and with Gianni Caproni he was responsible for the establishing of the Curtiss-Caproni Company, to perfect and manufacture large seaplanes and aëroplanes under the Caproni rights in this country.

He is chairman of the executive committee of National Air Transport, Inc., leading contract air mail carrier, and is identified directly or through associates with a number of the country's other best known and largest aviation units.

MR. KEYS' viewpoint on aviation is primarily that of the investment banker who has directed the flow of millions of dollars into it. He looks on aviation very much as Harriman and Hill looked on railroading—through the shrewd eyes of

Winging their way through the night, great express planes

business and finance. It is this fact which makes his opinions of utmost importance.

"What, in summary, are the already indicated lines of air development?" I asked him.

"Three," he replied promptly. "First is that division of the industry engaged in selling transportation both to business and to the public; second is that engaged in training pilots; third is that represented by the private plane owner."

He continued:

"The most important of these divisions, on the score of the *number* of planes operated, undoubtedly will be the third. The most important on the score of passengers and goods carried, however, will be the first. This will bring flying closest to the average man and also closest to business."

It is logical, therefore, that we should consider at once this first, or transportation, division of the industry, a phase of development in the air which Mr. Keys stated might be compared to the development of motorbus lines on the ground.

"IN THIS division," he went on, "we have already in operation a fairly comprehensive network of mail, express, and passenger lines. These lines are being rapidly extended and will continue to be. Most of us already use the air mail to some extent, but it is believed that in the near future the bulk of our first-class mail destined for distant points will be carried by this agency.

"The express-carrying branch is due for a very marked expansion, possibly within a year. It will operate large, comparatively slow-moving planes that will provide an overnight express service between our principal cities and will be distinct and separate from the fast daylight passenger services.

"Passenger development will be slower. The passenger lines will have to prove themselves to the public by actual performance before the general public accepts them as a regular, common means of travel, supplementing the existing systems provided by motorbus and railroads. The safety factor will have to be established beyond a question, and it will probably take us five years, at least, to do this.

"Right now, in the operation of the coast-to-coast air-rail service of T. A. T., we are expending more on radio and meteorological data than on planes and pilots. Safety has been made our prime objective, and we feel that we have attained it beyond any previous conception of safety in air travel.

"However, the public isn't going to take our word for this. It isn't going to take the word of other constituted passenger lines. People will insist upon being *shown* a record of safety over a period of operation, and until this record has been made the public will hold back from air travel.

"Of course, the air lines are already carrying passengers. The number increases with each week. Some of these go by air for a thrill; others out of curiosity; still others because of some personal emergency or the demands of urgent business; but there are only a few to date who accept air travel without reservations, as something ordinary. Five years hence it will be a different story.

"Then there is the deterrent of rates. Our air lines in America operate without subsidies, as is the case in Europe, and this makes present rates high. These will become substantially lower when the volume of traffic increases; planes with a greater carrying capacity will be built to reduce the cost per passenger. It is doubtful, however, if air rates will ever become as low as rail rates per mile; the airway saving to the passenger will be primarily one of time.

"It is in the air express services," Mr. Keys explained, "that business and public will find the greatest immediate convenience and practical use. It is altogether likely that new-type planes will soon be built exclusively for express flying—ships with large cargo capacities equipped to fly mostly at night. Their routes will be such as they may cover between dark and daylight. The cities of the country will be completely linked by them. The time required for urgent express shipments will be reduced from one-third to one-fifth."

MANY such express lines are even now in operation, said Mr. Keys, and he referred me to their present uses as indicative of what their larger-scale future uses will be. Anything that is light and valuable, such as Paris gowns and hats, or that is small and valuable, such as jewelry, makes ideal air express matter. I have already cited the inception of the flower planes. Refrigerator planes are actually carrying fish and other sea food nightly between the ocean and Mexico City. There is a world of things in between the fish and the flowers.

Some months ago a mail plane was forced down and wrecked in the mountains of central Pennsylvania. Its cargo was scattered. One of the first arrivals on the scene in daylight found a valuable diamond ring, and within a few hours the entire population of the surrounding countryside was down on its knees searching the ground for jewelry. Thousands of dollars' worth of it was found and detectives had to be sent out to recover it. That was perhaps the first news to the public that aëroplanes are carrying jewelry. Fortunes in jewels are being transported every day.

carry fresh fish to Kankakee, fresh flowers to New York

Money by the millions of dollars is being carried for big banks. Money is idle when in transportation—that is, it is not earning interest. The quicker it can be conveyed from one point to another, in consequence, that much quicker may it be put to work again. Transport by air is three times faster than by rail, sometimes five times faster, and banks aren't slow in taking advantage of this. The air is a safer way to ship money. Every reputable air carrier discounts possible losses through accidents by insurance.

IN THESE days of keen retail competition it is worth money to a store in Detroit or Chicago, or in any city, for that matter, to be able to advertise an exhibit of Paris models a day or two in advance of its rivals. Several enterprising mid-West shops employed an air line and did this. Now planes are rushing hats and dresses across the country regularly, to say nothing of silk lingerie and expensive fur coats.

Drugs and all kinds of medicines are sent by air. The speed of delivery makes it unnecessary for hospitals, druggists, and doctors to keep a supply of costly drugs beyond immediate needs. A telegram to the laboratory and a parcel goes out on the next plane at a rate of a hundred miles an hour or better.

Extra parts for disabled machinery, typewriters, cash registers, calculating machines, fountain pens, advertising layouts, chemicals, dyes, rare metals, and even high explosives all contribute to the growing air express volume.

"There is no reason," said Mr. Keys, "why this country can't develop the greatest air express system in the world. I think it will."

This brings us to the question of private plane ownership—by individuals and by business. Will business houses operate fleets of planes as they now do motor trucks?

"Some already do," Mr. Keys replied to this question, "but it isn't likely that this will become a general practice. Business will make use of existing air lines as a rule. Still, present uses of planes by great companies indicate a substantial development in this direction too."

The oil industry is probably using more planes of its own than any other, and it was this industry which introduced high explosives to air transportation.

Nitroglycerin is in almost daily use in the oil fields and it isn't the safest thing to cart about in a truck. Also, when trucks are used to transport it, stores must be maintained at a dozen or more spots in a producing area. Planes simplify the matter. A single central storage is provided, from which the planes can deliver nitroglycerin for a hundred miles around on short notice. Executives and experts also use these planes and thus cover six times the territory previously possible.

Thousands of gallons of gasoline and oil are sold by aviator salesmen. The big oil sales companies all have planes because aviation fields are now listed among their most important customers. I was at a loss to understand the oil companies' eager interest in flying until I was reminded by Mr. Keys of the advertising value of selling oil of a certain brand to a famous flyer, or of furnishing the gasoline for a famous flight.

Lumber and paper companies are using planes on a large scale, and a most spectacular and yet intensely practical use of aëroplanes is being made by a great Canadian mining company. Twenty-seven men and seven planes have established a base camp on Hudson Bay at a point 1,200 miles due north of Winnipeg. Expert geologists and prospectors are in the party, the object of which is the greatest copper and gold exploration work ever undertaken on this continent. It is the plan to send up geologists in planes, from which they may "spot" localities that from the air view seem to promise gold or copper, then to convey prospectors there for local work. This survey, already under way, is to cover 60,000 square miles, right up to the Alaska line.

YOU may recall that when the new power line came through your neighborhood in the old days, or when a railroad or trolley line was contemplated, surveyors first went out with their instruments and thus "tipped off" the whole countryside to the possible right-of-way. Overnight, prices on land likely to be in the right-of-way trebled.

Those days are gone forever. Nowadays, the power company has its aëroplane photograph the proposed route of its project, and then it *surveys the photographs*. A local land dealer makes the necessary land purchases. Last of all, the surveyor steps in to check up.

Planes likewise are surveying rivers for power sites, location of dams, flood control work. Certain companies pay off every week by plane.

I was told of one such company engaged in the getting out of willow for rafts used in Mississippi flood control work about Memphis. It had taken the company all day to pay off by motorboat and just as long for an executive to make a round of the company's stations. So an aëroplane was bought, equipped with pontoons for landing on water, and it made the trip in a little more than an hour.

Then trouble started. A local newspaper announced that prohibition agents were going to look for moonshiners by aëroplane. When (*Continued on page 98*)

Why I Envy Wild Things

By ARCHIBALD RUTLEDGE

THE buck and the doe were coming daintily through the bronzed huckleberry bushes under the giant pines. I saw them from a crotch in a bay tree, into which I had climbed to watch for wild life. About me for miles stretched a green country, beautiful with spiritual springtime.

The deer came tripping forward, pausing now and then to browse upon the tips of green shoots. Coming to an obstruction of myrtles in their pathway, the buck, just like any man showing off his strength before his best girl, bowed his antlers and tore through the bush—bucked the line, I suppose! But just then the two got the scare of their lives. They ran almost into my hitched horse; and he snorted and tried to break away. A horse hates to be tied when anything unusual approaches him.

The deer, that but a moment before had imagined themselves remote and secure in their deepest forest haunt, sequestered by the falling twilight, now suddenly discovered that they had unaware encountered Man. A deer probably would not mind a horse but for the fact that it associates the danger from man with a horse. The two must have got my scent as well. It all meant murder to them. No wonder these deer jumped desperately, bolted, tore through the greenery, crashed through the young cypresses and bays, and vanished running.

Had I been in their place, miles would swiftly have separated me from such danger as they had met. But wild things are different. It happened that from my perch I could see into an adjoining glade, not more than two hundred yards off—a lovely open place, now suffused with the warm colors of sunset. I distinctly saw the two deer quietly enter the calm vale; they were walking. Moreover, they had started to browse again, apparently entirely forgetful of their late peril.

If the Thing which had menaced them had menaced a man, he would have run for a week, would have called in the police, would have been haunted day and night by the experience. Perhaps all his life he would have been shadowed by its memory. But wild creatures appear to have the fortunate power suddenly to recover their poise, swiftly to regain their equanimity, without delay to shake off the fears that beset them. And I profoundly envy them this virtue. What's past with them is past—immediately, definitely. I wish I were like them in this—and that all of us were.

Many a time I have watched wild things display this quality. Roosevelt remarked the same speedy return to normal among the frightened herds of African game animals. They run the gantlet, escape (sometimes), and then forget all about it—unchanged by the experience save, perhaps, by a heightening of general alertness, a development of keener shrewdness. If poise is one of the finest traits of character, then surely the swift recovery of it is another.

There are many other qualities in natural life that appeal to me as well worth trading for some that we possess; and I shall try to explain what I mean by telling stories that illustrate the traits rather than by trying merely to describe the traits themselves.

In our South Carolina plantation house we had a rustic basket hanging in the hall; in it we used to keep gloves. One year we were delighted to find a wren building in the basket, and the next year she reared another brood in the same place. From her home to the front door the distance was only a few feet. The third year the house was closed—every door and every window. Yet when I went there one April day and unlocked the front door, the wren darted down the long hallway ahead of me. She passed through two rooms, and I saw her apparently fly through a window pane, at least eighty feet from her nest.

Investigating, I found in the glass of the window a small hole made by the passage of a bullet. I remembered then that

Wild things have a gra

some careless boy on a picnic had let a revolver go off, and h drilled the glass with a bullet. The hole was not bigger th my thumb, and its edges were jagged in places.

The tiny brown bird, finding her home shut and barr against her, had searched (with infinite patience and intel gence, I believe) until she at last found this singular mode access. Through this minute, sharp-edged hole she had carri fresh sticks and lining for her nest. She had showed an a fectionate persistence that any human being might well env I often think of that busy, caroling songster, of her quai confiding home in the dark hallway, of her devotion to it. "Lo will find a way," says the old song. Even so. It will, when else fails.

ALL observers of nature have marked the patient persisten of wild creatures. There is a species of wasp commonly call the "mud-dauber," from its habit of making its house wet earth, plastered neatly against a wall, always out of rea of the weather. I know that our plantation porch used be disfigured every year by these curious habitations. T insect knows that the nest must be put where the rain ca not reach it; for it is not a house built upon the sand, but sand.

I tried one day, more, I hope, out of a spirit of scienti investigation than out of one of mere torment of an inferi thing, to discover how often one of these wasps would begin nest if what had been started was destroyed. I just sat on t front steps with a long cane, with my eye on the beginning o particular house.

The river is about a hundred yards from the house, an

beauty and rejoicing looks, as if their spirits were at peace. This earth is truly their home

knew that the wasp went there for his hodful of mud. It took him about four minutes to make the round trip—most of his time probably being spent in gathering his load. As soon as he had laid the foundation of his house and had flown away, I pushed the flimsy thing down with the end of the cane. In a few minutes, back he would come with another burden; and, though clearly anxious, would begin again to construct his dwelling.

To me it appeared that he must have thought that he was bringing the wrong material—stuff that would not hold up; for I noticed, as I pushed down each succeeding foundation, that the *color* of the earth the wasp was using had changed. There was more and more clay in it. Doubtless he was saying to himself: "This is a funny thing. I thought I knew exactly how to build a house. But everything collapses. It must be that I am using too much sand. From now on I am going to make a mixture that is mighty strong in clay."

IN ALL, I demolished the poor thing's house twenty-one times. Then I had to have a heart. He never once weakened, or showed any sign of giving up. Two days later, when I happened to look toward the place under the eaves where a half-dozen of these wasps had built, I noticed one nest made almost wholly of red clay.

That was long ago; but the scene is vivid to me now, and I never think of it but I say: "That wasp had the kind of virtues which make some men stand before kings; that wasp had wholesome self-examination, the ability to criticize his own work, endless patience against the most frightful discouragements, a cheerful courage sufficient to see to completion the most baffling task. I envy those virtues, and I wish that through life they might be mine."

SUPPORTING that same front porch were certain giant cypress pillars, hewn out of the swamp two centuries ago. In these a few bumblebees had drilled holes; and, as these were both weakening to the posts and unsightly, I decided to stop up the holes with putty, thinking, of course, that the bees would go elsewhere. But the day after the putty was applied, I found all of it neatly piled in powdered form beneath the holes! Then I tried successively plaster of Paris, vooden pegs, and tough clay, painted over. It was all the same. I hardly had the heart to kill the bees; and, as a result, their descendants are there, to this day.

I think I would call this virtue the Virtue of Stubborn Attack. Here an insect meets an obstruction to its home. It does not ask who put it there; it does not question whether it is worth while trying to remove it; it does not say hesitatingly, like Hamlet, "This should be scanned." It immediately makes a furious frontal attack—laying aside every consideration save this big thing of vital moment. With a pertinacity not to be denied, with a certain wild hardihood not to be gainsaid, and with intelligence sufficient for the occasion, this creature that we disdainfully call an insect goes right manfully to work.

Of the amazing, innocent, all-sufficing beauty and beneficence of nature, I feel that wild creatures must be fully aware. At least, I envy them their apparent utter contentment—and this in the face of imminent and deadly perils.

I do not believe that they are contented because they are

Digitized by Google
Original from
UNIVERSITY OF IOWA

not aware of these dangers, but rather because they have come calmly to accept them as a part of the general system of their lives. They take the matter of existence as it comes. Moreover, they do not languish for some other land, some other life, some far-off and different mode of being. What they find here and now satisfies them very well. They achieve present happiness.

NOR can this feat be attributed to mere insensibility—"brute nature," as some would call it. Wild things have a grave beauty and rejoicing looks, as if their spirits were at peace. I do not think they feel like wanderers here. This earth is truly their home. They love it, and they love the life it offers. May we not justly envy them their serenity: a calm of heart that condemns our feverish activity, our restless longings, our vain, wild yearnings? They are happy with what is given, and question not what is withheld.

One day I happened to find the nest and eggs of a marsh hen (clapper rail) hidden in the green sedges that bordered a tidal creek on the coast. The nest was anchored to the marsh-stems, and in it when I discovered it were three eggs. That was a time when I was a fisherman, so that every day, going and coming from the fishing grounds, I passed the nest. The second time I saw the nest, the eggs were gone, tipped from the structure by the tide that flooded the marsh regularly. I found the eggs in the mud under the nest where the waters had left them when they subsided.

The next day the mother had straightened the nest and had laid another egg. But on the morrow the same accident happened: The tide tipped the nest until the egg rolled out. I wondered what the wild mother would do. Within a week, a full complement of five eggs had been laid, and apparently they were safe.

It happened that the tide, at that time, was up to the bottom of the nest, and as I waited I saw the waters lift it gently and float it upward. The bird had evidently released a tie on the nest, so that now, while it was still anchored to two stout marsh-stems, the loops that held it were sliding ones, permitting the nest to move gently upward with the tide and then to move downward to its normal resting place on a bundle of broken marsh-tops.

I am not saying that marsh hens build sliding nests, but here certainly was one that did. Think of it! a frail, tiny home in the heart of the vast, waste sea marsh, visited daily by the monstrous sea tides; and the bright-eyed mother, dismayed but resolute, finding a way out of her distress. She made one of the mightiest forces in all nature work for her; what would ruin her, she, by a little deft precision of judgment, by a delicate adjustment of circumstances, made safe for her what was most precious to her.

I watched with no little fascination that sliding nest until the young were fledged. I frankly envied the lone bird with wit enough to handle a sea tide. I had never thought to find a marsh hen harnessing the main. But there it was.

A German scientist, after years of scholarly experiment in laboratories, came to the conclusion that wild things cannot reason. Well, they get along remarkably in a world in which reasoning men have a pretty hard struggle to succeed.

IN THE matter of the keenness of all their physical senses, wild things are infinitely our superiors. I have tried through many years to keep careful watch on wild creatures for the purpose of ascertaining just how far ahead of us they are in this matter of their senses. Their awareness is amazing. But not all the senses of all wild things are by any means equally developed. Birds in general see much better than animals; the animals I know seem to hear farther than birds, but perhaps not more keenly. I recall testing one day the hearing power of a wild gobbler.

It was in mid-March, the mating season for the wild turkey; and at that time the males are belligerent, seeming to take every noise as a challenge. It is quite possible to go into turkey country at such a time and make one bird gobble merely by giving a shrill whistle, whereas to call one up by imitating the note of the hen is ridiculously easy. Prima Donna Stuff

A Story of Relative Values

By MARGARET CULKIN BANNING

Illustrated by JOHN H. CROSMAN

"Temperament bunk!" said Philip. "It's nothing but greedy sulks"

SHE had told him that Philip was manager of the Mercury Shoe Company and given him the children's names—Mark, Anthony, and Deborah. The young man in the doorway, who looked so absurdly as one would expect a person connected with a census to look—pale and thin and round-spectacled—had jotted it down on the neat, semi-printed form in his notebook. He jotted her down too—Marie Fay.

"Housewife?" he asked, but more rhetorically than questioningly, for Marie had come from the kitchen, and her air of authority and short-sleeved apron gave him the fact in picture.

Marie did not answer. It was ridiculous, but she found herself irritated at being checked off so glibly by the pale young man, entered so casually in his little black book, which would list her with uncounted others. She had a sudden, irrational desire to explain to this little fellow, who saw no farther than his trim statistics and who labeled every apron "housewife," that he should not imagine she was in the same class with fat Mrs. Blitz next door, or with eager, hard-eyed young Mrs. Cook, on the other side, who thought getting into this neighborhood was a step upward socially.

She and Philip didn't really belong here at all. If the children had not come so fast, making fresh air and extra bedrooms essential, they would be living very differently. She would not be answering the door herself, either, if that operation for double mastoid had not put them behind last fall.

As for listing her briefly as housewife, the word was limp and ineffective for Marie, who had studied dramatic art at the Illington School in New York and actually been signed up for an engagement, when she had tossed it all over to take part in that swiftest of dramas, breathless love and marriage.

That was her moment's thought, blotted against the census-taker's civil farewell.

"Thank you, madam. That's everything, I guess."

Everything, she thought, looking after his imperturbable back and speeding it on its way with contempt. It was nothing! And she kept on resenting his classification of her while she went back to the kitchen and took her cookies out of the oven just in time, sliding in another long tray of them filled with thinly sliced almonds. She felt an attack of temperament coming on, but she meant to get the cookies baked first.

THAT was one thing Marie had discovered about temperament: If you had to, you could postpone it. During the first year she had been married there had been a good many attacks, and she had not timed them to suit anything but her mood. Philip had been an angel, as she always told him generously, an angel to put up with those surges of restlessness which were not so much discontent or regret as the baffling feeling of having cut off retreat.

They had plenty of time during that first emotional year for the attacks, and the patience and the sweetness of readjustment. But then Mark had come along, and, practically on his heels, Anthony, and, last of all, the unexpected and delightful Deborah, who seemed to have been chuckling ever since she was born at being such a surprise.

There hadn't been so much time for temperament then; at least, not with the shoe industry going the way it did during several years of business depression. But when the attacks came, they were blacker. At night, shut in the little houses which they occupied successively, with the sleeping babies, with Philip tired and seemingly forgetful of all the might-have-beens, the

Digitized by Google
Original from UNIVERSITY OF IOWA

dark mood would sweep over Marie, relentless and bitter.

Or it would come at a play, when she watched an actress whose part she fancied would have suited her, whose gowns were gorgeous, and who didn't have her "looks." She would sit at her dressing table when she got home after such a play, gazing into it, wondering. Philip knew the look. He usually left her alone for a while, and then came back to tell her how beautiful she was. For he had learned a good deal in six years of marriage, and among his stray bits of wisdom was the fact that a one-man audience is better than no audience at all.

And she did have beauty, the magic kind that was always there in the pattern of her face, but at times of exhilaration, or even in the dark moods, seemed to be reasserted by emotion. Philip knew all about it. If he sometimes dreaded her moments of greatest beauty, because they seemed to need and demand so much from him, he never told her so.

THE way Marie knew she was having an attack of temperament was by the way things shrank and shriveled around her. This morning, for example, there had been a certain gorgeousness about the world. The sun, of course, the new buttercup-colored breakfast cloth that the children loved to see spread, Philip's new suit, the plan to get Deborah a dress in some mad, gay color, because she was a mad, gay child with hair that curled riotously all over her head, the play to look forward to tonight, the perfection of the ice-box cookies—all those things had set her up tremendously and made life extremely interesting.

And now it was as if everything had been touched by one of those wands of which she read to the children, which were so prolific in changing gold and diamonds to frogs and toads on occasion. The sun was still there; but shining now on a dull little suburban street, exposing its commonness to the young man who went around with pencil and notebook and checked off houses and children and housewives.

The yellow breakfast cloth—who cared? How ridiculous to find a breakfast cloth or a husband's new suit important. Those should come along casually as a part of decent living. The play—a seat in the darkened house to look forward to, instead of a place on the stage!

The sound of riot in the back yard claimed her, and she went out to find the usual chaos of sand-box quarrel between the Cook children from next door and her own. Sometimes it amused her to sit on the back step and hold an informal court of justice, and see Mark gravely defend his end of the fight, and Anthony grin and try to start another. But it was not amusing now. It was grubby.

Marie told them categorically to stop fighting, or the Cook children would have to go home and stay there. They stopped abruptly in the middle of hostilities, conscious of unsympathetic authority, and she left them, only to find that between interruption and meditation the last batch of cookies was a total loss. She was scraping them off the tray and mentally fighting fate when Lynn came in. Lynn was her brother, younger, but imperceptibly so.

"Hello," she said. "How do you happen to be out here?"

"Had a prospect out in Lakeview. Rich old girl. Took a car out myself to show her how it looked with a handsome man in it."

"Did she fall?" asked Marie, in the intimate language of buying and selling.

"She's toppling," said Lynn. "It's only a question of time and a little more gasoline. She's about sixty, and so she naturally wants a sports model. Can you beat it?"

He sat down beside the pile of cookies which had not burned and attacked them methodically.

"Good," he complimented her.

"I'll show Viola how to make them," offered Marie, cheering up under praise.

"Don't bother. Don't tell her how to make cookies, whatever you do! That's what I came in about. Viola's off me."

"Not really, Lynn!"

He nodded, his thin face sinking from its habitual flippancy into a deeper cast of gravity.

"She sounded very real last night."

"What have you been doing?"

"I don't know. I guess she doesn't want to get married, that's all."

"That's just a common fit of panic."

"No. Not a bit like that. This has been rumbling along all the time. She likes her work, and it came to a choice, take it or leave it. They offered to send her to Europe twice a year to buy for them and to give her a raise; but it means, of course, that she's supposed to stay by them for a while. And she's got some idea of designing clothes and getting a big name. Gosh—as if clothes weren't crazy enough already!"

"You mean you're just fighting it out?"

"All fought. I'm ditched, that's all. Viola's sailing for Europe next week to talk over clothes with a lot of cake-eaters." The thought of it got under his skin again, and he got up and went savagely toward the door.

"I THINK it's kind of yellow," said Marie, stopping him; "pretty yellow of her."

"No," answered Lynn sharply, "I guess not. She's not feeling very gay over it. But she is dead sure that she'd regret giving up the job. Says she'd take it out on me later. I told her I'd take a chance on that, and she couldn't see it. I even told her that she could keep her darned job, and get married too. But Viola's not like that." His voice dropped into a caressing tone. "She says the thing hasn't been worked out yet, how to keep her kind of full-time job and marry, and she'd want to be thoroughly married if she went into it at all. She's so clear, you know. But she isn't happy. And I don't believe she's going to be happy, either, if you ask me." He took another turn around the room, and came back to Marie.

"Could you talk to her, do you suppose?" he asked hesitantly.

"Talk to her?"

"You know—from your point of view—tell her that marriage isn't just sticking your head in a bag. I rubbed you in—told her that you'd given up an idea of going on the stage, and that you had three swell kids and a nice home and were perfectly happy. Maybe if you talked to her yourself—"

Marie was looking at him, her dramatic eyes dark with thought.

"If you just told her," said Lynn, "that you forget all that career stuff—pretty quickly—"

UNIVERSITY OF IOWA

Philip and Marie took them to the Grandmaison Restaurant, where they ate twenty dollars' worth of something or other which did not taste very good to Philip

"But you don't."

"You did."

"I did not. I never have. I'm no person to talk to Viola. Not me." She gave an artificial little laugh, and repeated. "Not me, Lynn."

He looked at her, his lean, trained-to-be-casual face very surprised and sober.

"So you don't think much of marriage either. This is Learning Week all right."

"I do. I'm crazy about Philip and I wouldn't *not* have married. I adore having the children. But I know a lot about marriage and what it means and what it does. There's the first part, when you're treading on air, and you're so important to your husband and yourself that nothing else in the world counts. Then, if children come along, you're still very important for a while and sort of petted. Of course, it means years of mixed-up illness and happiness, washing baby clothes, and getting up nights, and feeding carrots and sloppy spinach—you can't imagine how you get to hate spinach! But still you're important, and you have a heavenly lot of fun while they're babies."

"I should say so," exclaimed Lynn. "Even a fool would know it wasn't easy; but it's worth it certainly."

Marie did not take his interruption into account. Perhaps she didn't hear it. She was talking as she thought.

"Yes—the first year, when you're a bride, is heavenly, and the baby years are so exciting you forget other things. But after that—for most women, the show in the big tent's over, Lynn. After that so much of the fun is crowded out by managing—and money. You haven't any idea how the biggest thing in married people's lives gets to be just money!"

"I'm going to make a lot, old girl," said Lynn.

"I know all about that. So was Philip. Maybe you will and maybe you won't. You boys who start with a salary or commissions, or something like that, and no capital, just have to do the best you can. Maybe you'll make a lot or maybe you'll get behind, the way we did last year. Then you've got to pare bills and get along with old clothes and do your housework yourself, and try to forget that some of the people you know are getting rich and famous and wearing good-looking clothes, and eating their breakfasts in bed while you're frying bacon.

"I don't suppose that is what really hurts, either. The worst thing is that feeling that you've let the moths get in what talent you had and riddle it. You don't want to care, and yet you feel that if you don't care, you're just another dowdy, dull, work-ridden housewife."

The last word came out somberly, dramatically.

"Curtain," said Lynn, and they both tried to laugh.

He picked up his hat.

"I guess the sober truth is that most of us haven't much

Digitized by Google

Original from UNIVERSITY OF IOWA

to offer a smart girl. Where are the kids?"

"The boys are in the sand box, fighting, and Deborah's upstairs. Wait a minute, I'll bring her down."

She carried Deborah down, all gay and curly, with one cheek flushed scarlet from sleeping on it, and Deborah contradicted or annulled everything that had been said, by the mere fact of her presence. She, too, had temperament, which led her to like all men, from the garbage man to her own father, and be wary of women.

"The attractive thing about Debby," said Lynn, walking about with her on his head, "is that she has no interest in careers. She's the only sensible woman I know."

And he lifted her down and went away, rather pathetically.

Marie met Viola that afternoon. She had left the children with the by-the-half-day nurse girl and was downtown shopping, finding it a rather maddening process. A ten-dollar bill that she had figured would take care of small cash purchases had been strangely eaten into, and she could not understand it until she remembered two charitable tickets, the newspaper boy, the half soles for Mark's shoes, her own haircut and Anthony's, and some tooth paste.

Those things had pretty well demolished the ten dollars without giving her much in return, and she had to cash another check, although she knew worriedly that at this rate she would be short again before the end of the month. She hadn't wanted to charge much, either; but she had to get some bath soap, and a new mop, and the material for Debby's summer dresses, and rubbers for all three of them, and curtains for the hall. She remembered there was a balance on most of their department store charge accounts. Not big ones, for Philip was not the kind of man who let things run, but it meant no new clothes for Marie for a couple of months.

And the shops taunted her. Their windows were full of new displays, all kinds of things, from shoes to coats, which were prettier than such things had ever been before, it seemed to Marie. Everything she saw made her feel more dowdy, conscious that she carried an envelope purse which was overlarge in a season of bright-colored pouch bags, conscious that her coat was too full and her hat crown not high enough. Thus she met Viola, who was unconsciously standing beside her outside a shop window, contemplating it.

"Hello," they said, with extra casualness.

VIOLA wore what you might have called black, if something green had not flashed as her tiny cape swung from her shoulders and shown at the edge of her pretty throat. She also wore one of the perfectly inconspicuous hats that women turn around to look at, and the simplest of cobra oxfords, outlined in lizard.

"You ought to be in a window yourself," said Marie. "Where'd you get all that?"

"Trousseau," Viola told her shortly. "May as well wear it while it's in style. I suppose you think I'm a poor kind of thing, Marie."

"Well, it's your business," evaded Marie.

Viola's arguments were near the surface. She pulled them out as if to show their quality off, perhaps to convince herself.

"I've thought until I'm stiff. It seemed to me the only thing to do. If you have a chance to get married to the man you want and don't take it, it may hurt you; but they say that heals in time. But you knock a good career on the head, and it doesn't come to again. They told me, Marie, that if I'd stay by, in ten years I could be signing articles in any fashion magazine in the country. If I didn't take that chance, I'd always regret it. I don't want to go into marriage looking back over my shoulder. It wouldn't be fair to Lynn."

Marie shook her head over the situation. She was not really thinking very much of Viola, whose competent, brittle philosophy seemed to be translated into terms of herself.

"You lose so much," she said slowly. "I know."

"Made up my mind," Viola answered, and swung away.

PHILIP knew from the very moment when he entered the house that night that Marie was having an attack of temperament. And he avoided her. All day he had been beating against obstacle after obstacle and disappointment after disappointment, and his nerves were loose and jangling. He had faith in his business, for he knew it was sound and genuine and well established. But every time some fly-by-night shoe seller came to town, it seemed to upset some of the members of the board of directors, who couldn't see farther than the ends of their noses.

"If we're going to the theater, we'll have to hurry," Marie reminded him, in that still voice which spoke of distance between them. "The children have had supper."

He had forgotten the theater, but, remembering it, thought quickly that a play would make Marie still more miserable.

"Sure you want to go?" he asked doubtfully.

"Of course. We get a good play rarely enough, heaven knows. And when it's my greatest interest—"

"Oh, well, I want to go, of course," he told her hurriedly. "I just wondered if you weren't tired."

She neglected her vegetables and hacked at her meat.

"Viola's not going to marry Lynn," she said suddenly.

He looked up. He wasn't enjoying his dinner much, either. When Marie had this mood, he never knew what she would say next.

"What's up?"

"She just happens to prefer a very profitable job and possible career."

"She's a little fool," said Philip. "Lynn's an awfully good fellow. Men like Lynn don't grow on every bush."

"Nor careers like hers." She rehashed the chance that Viola would have to get her name before the public; but it left Philip strangely cold.

"You mean to say that for a chance to write poppycock about a lot of crazy dresses she's leaving Lynn flat?"

"You wouldn't understand it, of course. Women are getting more and more like that. Why should they give up good, real, places in the world for the sake of being some man's wife, and getting in the census as another of the fifty million housewives? They aren't all like me, you know."

Philip said nothing more. He finished his dinner hastily and refused to be drawn into discussion. They had to hurry to get to the theater, and the curtain had gone up on the first act before they had parked their car and fumbled their way into their seats. Marie took off her wrap, concentrated on the stage, and then turned hurriedly to Philip.

"Philip!" she whispered. "I know that girl on the left. The one with the red dress. That's Margot Blood!"

"Dressed to match her name, isn't she?"

"Why, I never dreamed she was in this play. This is the New York company. She was in the Illington School when I was."

Philip sighed under his breath. He wasn't sure where all this was leading, but he was reasonably sure that it would mean trouble. He listened and watched for a while, but the thread of plot, maintained for the sake of the smart dialogue whose existence hung upon it, failed to hold him. His mind wandered back to shoe manufacturing and stayed there, worrying.

He was wishing at the minute the curtain fell that he could tell his board of directors to run their own company, and get out into the field for himself, start somewhere else and show what he could do on his own. But of course such a thing was out of the question. A man with a wife and three children had to put up with things, he thought.

"Just think of it," he heard Marie saying, "and Margot Blood wasn't considered one of the best in school at all. This just goes to show what can be done. She hasn't any particular ability, either, nothing but her figure and her poise and those lackadaisical eyes."

Philip did not look at her. He did not have to. He knew exactly how she looked, that something like resentment lay deep in her eyes, and that her whole face was still and brooding.

"We'll have to look her up afterward," Marie remarked.

"Why do you bother? You're tired tonight, and if she wasn't a special friend, it isn't necessary, is it?"

"Well, it's rather nice to hear about the world, Phil, even if you are out of it. We can take her to supper somewhere. The company is probably staying at the new hotel, but we can take her to the Grandmaison café and get something there."

Grandmaison, thought Philip—and by a simple and direct sequence, that his checking account was getting low at this point in the month, and this would mean cashing a good-sized check he hadn't counted on. However, he never disagreed with Marie in this mood. The curtain rose again. The girl in red, whose name was Blood, now wore an evening dress with dingle-dangles on it.

"Look at that dress," breathed Marie.

He didn't want to look at it.

MARGOT BLOOD had supper with them. So did a gentleman called Owen Falk, whom Margot brought along. The actress wore an extremely light black satin coat with a red lining, which she held together in the front with manner. Her hat was also satin and tight, and her face beneath it, with its languorous gray eyes, was very sophisticated.

The gentleman wore ordinary enough clothes, but he also had manner, an excess of it. They (*Continued on page 161*)

How To Be Funny

By WILL ROGERS

CARICATURE BY F. G. COOPER

I HAVE been interviewed in every Town in the United States, by serious-looking young College Boys, with horn-rimmed glasses and no hat, on the subject, "How would you advise a beginner to be funny?"

The interest they all show in it, you would think that all young America is practicing to be funny. I have tried to advise the Boys that I have known men in other walks of life that made more than Comedians. But its just one of the things that you cant discourage anyone from, once they have made up their minds. Its like these business men that go through life telling everybody they meet stories. The only novelty to it is that each man that tells it tells it worse than the fellow that just told you the same one down the street.

Now, you cant stop one of these fellows. Somebody laughed at him as a Boy, and it just practically ruined him. He is just doomed to go through life—"Did you hear this one? If you did, stop me." But these College Boys are aiming a little higher. They dont want to just repeat "The little Jewish fellow said to the Irishman." They have got their sights set on some humor. They are figureing on it for a profession. They figure that its like tending an Oil Station, that it is a profession that you can study and learn.

SOME of these Boys when they come to interview me had their questions written out. About the best and most complete one was handed to me at Lincoln, Nebraska, where their State University is. I was playing there that night, and back stage come just about as dejected a looking Senior as I had ever seen. He was just about to finish school and was about to have to meet the world head on, and he wanted to be fortified with a profession. So he picked out humor, and he had from then to June to "Major" in it. He was matriculating in laughter at Bryans old stronghold. But he lost all confidence in me as a funny man when I couldent answer right off the reel the few little simple questions that he had written down and handed me. So I got him to let me take the paper and send him back the answers later.

Now, here is his exact questions in the exact order he had them, and my answers:

"Is the field of Humor crowded?"

Only when Congress is in session.

"What talent is necessary? Must one be born with a funnybone in his head?"

Its not a talent, its an affliction. If a funnybone is nessasary I would say that in the head is the place to have it. Thats the least used of a humorists equipment.

"Which offers the best field, the Essayist or the Humorist Feature Writer?"

Now, I dont know what an "Essayist" is. But if its one of those fellows that write what we used to call "Essays" at school, one of those recitations that you get up and speak, I am agin em. And as to the Humorous Feature Writer, just change that H to N and you have it.

"What field of Humor offers the best field now and which is most liable to develop?"

Well, I think the "Nut" or "Cuckoo" field is the best bet now, and from what I see of modern America, I think "Nuttier Still" or "Super Cuckoo" will be more apt to develop.

"In training what should one aim for?"

Aim for Mark Twain, even if you land with Mutt and Jeff.

"Whats the best way to start being a Humorist?"

Recovery from a Mule kick is one way thats used a lot. Being dropped head downward on a pavement in youth, has been responsible for a lot. And discharge from an Asylum for mental cases is almost sure fire.

"HOW should one practice for it after starting it?"

By reading Editorials in Tabloid Magazines and three pages of the Congressional Record before retiring every night.

"Should one jot down ideas?"

No! there will be so few that you can remember them.

"Should one read other Humorists?"

If you are a Humorist, there is no other Humorist.

"Is it profitable to read other Humorists?"

Profitable but terribly discouraging.

"Do you think it does any good to play the Fool and wit at social gatherings?"

Not if they will feed you without it. But if you feel that you need the practice and just cant remain normal any longer, why go ahead. Everybody will perhaps (*Continued on page 136*)

IF *you* Have Friends *You can* Endure Anything

By HELEN KELLER

The story of my great debt to Dr. Alexander Graham Bell, friend to the deaf and inventor of the telephone

Drawing by J. HENRY from photograph

SOMEONE has said that a beautiful memory is the most precious wealth one can possess. If this is true, I am indeed rich in happy memories of Dr. Alexander Graham Bell. When I was a little girl just learning to talk, my teacher, Mrs. John A. Macy (Miss Sullivan), and I used to go with him to conventions to further the teaching of speech to the deaf. Most people know Doctor Bell as the inventor of the telephone; those who are familiar with his work for the deaf believe that what he did in this direction was at least as important a boon to mankind. I admired him in both these capacities, but I remember him not so much as a great inventor, or as a great benefactor, but simply as a wise, affectionate, and understanding friend.

I could almost call him my oldest friend. Even before my teacher, Mrs. Macy, came into my life, he held out a warm hand to me in the dark. Indeed, it was through him that Mrs. Macy came to me. From the beginning, he enthusiastically approved her methods in teaching me. Shortly after "The Story of My Life" was published, he wrote to a friend commenting on some of her letters which I included in the book. In these letters, she tells how she taught me. Doctor Bell said of them:

"They reveal a fact that has long been suspected: That Helen's remarkable achievements are as much due to the genius of her teacher as to her own brilliant mind. . . ."

Doctor Bell's work for the deaf did not originate with himself. The science of speech had long been studied in the Bell family. Doctor Bell's grandfather was the inventor of a device to overcome stammering, and his father, Mr. Melville Bell, whom I used often to meet when I visited the Bells in Washington, perfected a system of visible speech as a means of teaching the deaf which Doctor Bell considered more important than his invention of the telephone.

However, as Mr. Melville Bell is reported to have said, "There was not so much money in it." To learn speech by means of it demands more patience than our western countries have, but it has been found serviceable in the Orient.

The devotion of Doctor Bell to his father was beautiful. How like they were, and how different! Melville Bell was the more reposeful and domestic. His tastes were simple, and did not change when wealth came to his son. He continued to live in the same little house in the same contented and frugal manner. If anything kept Doctor Bell from visiting his father for a day or two, he would say, "Come, I must see my father. A chat with him is just the tonic I need."

IN Professor Bell's charming little cottage at Colonial Beach, where the Potomac broadens to meet the bay, I used often to see these two noble men sitting on the porch for hours without speaking a word, smoking peacefully and watching the steamers and boats pass along the river on their errands of service. Sometimes an unusual bird note would attract their attention, and the son would ask, "How would you record that, Father?" Then the resources of the visible speech system would be tested out, and the two men would become absorbed in phonetics, unmindful of everything about them. Every note was analyzed and visibly recorded.

Both men had an intense desire to remedy every defect of enunciation, and I have been told that it was a joy to listen to their speech. Both had at various periods been teachers of elocution, and both loved to recite.

I have known them to give many scenes from Shakespeare delightfully, but the best part of the performance was the comments and fiery retorts which flew from one actor to another, until one of them thought of proceeding with the drama.

Doctor Bell was exceedingly tender to his mother, who had become quite deaf when I knew her. I recall a spring after-

Doctor Bell and Helen Keller holding a conversation

noon when he took Mrs. Macy and me for a drive out in the country. We gathered quantities of honeysuckle, pink and white dogwood, and wild azaleas. On our way back, we stopped to give them to Mrs. Melville Bell. Doctor Bell said, "Let us go in by the porch door and surprise them." On the steps he paused and spelled into my hand, "Hush! They are both asleep!" We tiptoed about, making a bower of the flowers. It was a picture never to be forgotten—those two dear people seated in armchairs—Mrs. Bell's white head bowed on her breast, Mr. Bell's head thrown back on the chair, his beard and curly hair framing his ruddy face like that of a statue of Zeus. We left them undisturbed with the flowers and their dreams.

I was always glad to visit Doctor Bell's family in Washington, or at their summer home on Cape Breton Island. I admired Mrs. Bell for the courage and perseverance with which she conquered her handicap of deafness from infancy. She was a wonderful lip reader, and certainly she needed patience, skill, and humor to read the lips of the countless visitors who came to the house. She never spelled on her fingers, because she believed that this system of communication isolated the deaf from normal people. She loved beautiful lace and used to hold a filmy web in her hands and show me how to trace the woven flowers and leaves, the saucy cupids, the silken winding streams, and the lacy crisscross of fairy paths bordered with aërial boughs. The two small daughters, Elsie and Daisy, were always ready to play with me, and Daisy tried to spell into my hand all the bright things she heard so that I could laugh with her.

THERE were often distinguished gatherings, when I was introduced to learned scientists. Doctor Bell used to spell what they said to me. He always assumed that anyone could understand anything. He would explain to me the laws of physics or some principle of magnetism; but no matter how abstruse his discourse might be, I loved to listen to him. He could never be in a room two minutes before the whole talk converged in his direction. People chose to listen to him instead of talking themselves. He had an extraordinary gift of presenting difficult problems in a simple and vivid manner—a gift which, in my experience, is one of the rarest possessed by human beings.

Doctor Bell was never dogmatic in his conversation. He was, I think, the only person I ever knew who could look at a subject from a point of view entirely different from his own with genuine interest and enthusiasm. When it was presented to him he would say, "Perhaps you are right. Let us see."

His gifts as an orator are not known to the public in general because he chose to exercise them in behalf of an obscure group living in silence. But I know what eloquent speech is. I have stood beside Doctor Bell on the platform and felt speech coming from his lips, and eloquence in his voice, his attitude, his gestures, all at once. Never have I longed more intensely for graceful, natural speech than on these occasions.

After he had talked a while, he would touch my arm, I would rise and place my hand on his lips to show the audience how I could read what he was saying. I wish words could portray him as I saw him in those exalted moods—the majesty of his presence, the noble and spirited poise and action of his head, the strong features partly masked by a beautiful beard that rippled and curled beneath my fingers, the inspired expression which came into his face when he was deeply moved. His splendid head lifted, his nostrils dilated, his eyes flashed valor, and his gestures were large, harmonious movements of the body, like his thoughts. No one could resist so much energy, such grace.

EVERY teacher of the deaf, no matter what system he advocates, has been influenced by Doctor Bell. He broadcast his ideas in the truest scientific spirit, with no personal ambition to advance. For a number of years he maintained at his own expense an experimental school in Washington where practical work could be carried on in finding better ways of teaching very young deaf children. He strove unceasingly to make it possible for every child without hearing to acquire speech.

You who see and hear may not realize that the teaching of speech to the deaf is one of the divinest miracles of the nineteenth century. Perhaps it is impossible for one who sees and hears to realize what it means to be both deaf and dumb. Ours is not the stillness which soothes the weary senses; it is an inhuman silence which severs and estranges. It is a silence not to be broken by a word of greeting, or the song of birds, or the sigh of a breeze. It is a silence which isolates cruelly, completely. Two hundred years ago there was not a ray of hope for us. In an indifferent world not one voice was lifted in our behalf. Yet hearing is the deepest, most humanizing, philosophical sense man possesses. Lonely ones all over the world, because of Doctor Bell's efforts, have been brought into the pleasant, social ways of mankind.

Doctor Bell was a young son of an old country, a self-reliant Scot, but so nobly did he live among us, he seems our own. His life was singularly free from harassments both of temperament and circumstances. No allowance was ever needed for the eccentricity or waywardness of genius. His nature was too fine to breed rivalries or to tolerate animosities. I have never met anyone who knew Doctor Bell personally who (*Continued on page 168*)

Dark HAPPINESS

PART III

THE silhouette moved.

Slowly, as with difficulty, it started to rise—to vanish from sight toward the top of the casing. The shoulders were drawn up, the neck, then the head. The window frame was empty.

"*Ach! Ach!*" Katrina moaned again.

"See to these women," John ordered the chauffeur. "I've got to get my boots."

Irene's voice came coolly. "I'm all right. But Katrina here has fainted. I'm afraid she'll break her neck."

John lifted the maid from the danger of the stair pit. He lost precious time as he bore her to a bed. Into his own room he strode, yanked on his brogans and knotted the laces. Downstairs in the yard a tumult was growing; excited poundings, hysterical shoutings. Tripe slobbered with rage as he leaped at the windows. But the small sashes held; he failed to break through.

Irene looked in as John sought his flash-light.

"Never mind it," she cried, "the moon hasn't set."

She had slipped a loosely fitting cloak over her negligée. Downstairs they hurried and passed through the sitting-room.

The yard was filled with men. They were running, calling, waving their arms. With the kitchen door opened, Tripe added to the turmoil. From man to man he charged, barking savagely, getting kicked at and cursed. The rumpus was grotesque.

"Tripe, you devil! . . . *COME HERE!*" ordered Forsythe.

But the dog was obsessed. He clamped on a coat sleeve and clung with locked jaws. It was Enoch Baldwin's coat sleeve. A scuffle ensued, till the beast was pried loose.

"Now, then," panted Forsythe, "what's all this about?" He held the big Airedale wedged between his knees.

"Th' spook," cried Mike Austin, "went into th' barn!"

FORSYTHE glanced up. Directly over the shed ridgepole, a black oblong aperture yawned in the barn-front. A dirt-befogged window had been opened or removed.

"Where'd you come from now?" Enoch Baldwin blazed. He was a skinny little man with queer, knoblike head. His hat had been crushed and his coat sleeve was ruined.

"I came from the house," John answered, puzzled.

"So? What was you doin' in it, this hour o' night?"

"Who wants to know?"

"B'gad, *I* want t' know! Up here with th' Cravenside woman, warn't you?—an' we sort o' come an' ketched you!"

"What the devil do you mean?"

"I'm deputy sheriff 'round these parts, don't forget that. An' they's laws ag'in' such matters."

"Come on!" begged Austin. "Let's bag that dam' spook!"

"*Stop!*" Irene ordered. She was suddenly before them. She turned on old Enoch. "I'm mistress here. All of you are trespassing."

"Yeah? An' mebbe you're a city woman an' go in f'r such things—"

"What things?"

"—but up in these mountains we're respectable persons."

"Enoch," warned Forsythe, "if you don't want your head punched, be careful what you say."

"You punch my head, young feller, an' you'll find yourself jailed. I commence t' see light through this myst'ry at last. What's hauntin' this hilltop is a real live husband, aimin' t' catch his wife misbehavin'."

"Enoch, *that's enough!*" Releasing his dog, John straightened angrily.

"Enough, is it?—with you an' this female coverin' your fumadiddles—"

"I told you, that's *enough!*"

John Forsythe struck. His fist was like a mallet. It met Enoch's mouth and whipped his head backward. The deputy wheeled and went down on his back.

"Great heavens!" cried Irene. "Supposing you've killed him?"

"I haven't killed him. I've only knocked him out. I'm sorry I had to hit him in front of you. But I couldn't stand by and hear him insult you."

"Is he hurt?" asked Irene. She bent above the body.

"Mouth's bleedin' a bit," Gleason answered, kneeling. "He'll get you for this, John Forsythe."

"All right, let him. Where have you come from, to show up here so?"

Mike Austin shrugged his shoulders. He was lean and ungainly, with an absence of chin. "We follered Blind Jessie. We knowed from th' first you was tryin' t' stall us—"

"Never mind that now," a hoarse voice protested. "Jake's opened the door; let's see to the barn!"

"STOP, *I command you!*" Irene's tone was deadly. "You hear me, all of you! If anyone goes into that barn, I'll have him arrested for malicious vandalism."

"But, ma'am—"

"You're up here on mischief that implicates my husband. That's *my* affair, and the matter is private."

"Th' hell it's private!" a bass voice retorted. "Private, is it, to have spooks—"

"*IT'S GETTIN' AWAY!*" wailed a voice across the yard.

Down near the silo, where a view of the far south mowing was obtainable,

O. F. SCHMIDT

another of the villagers was excitedly gesturing. Control the rest of them, John could not. Despite Irene's anger, they bolted for the meadow—even old Gleason. Across Enoch's form he leaped with a stumble.

"We'd better go along," John cried in dismay.

"You go! Try to get ahead of them. I'll stay with Mr. Baldwin."

"But—"

"Go, go! If it's Donald, protect him!"

TRIPE had gone already; propelled by steel muscles, he sprang down the grade. And John got in motion. Fanned in an arc, the others ran ahead, forgetting the dog as the dog forgot them. Instinctively the Airedale saw what was wanted; it raced ahead swiftly with short, angry barks—jumping like a rabbit when grasses screened its quarry. That quarry was plain, fleeing crazily southward. It made for the wall and the pasture beyond. A floppy, sprawly, long-legged "specter," it gained the stone wall and crashed over out of sight. Tripe went over also. . . .

Had the figure been La Flemme?—Cravenside?—a stranger? Forsythe couldn't tell. The distance was too great. But when they reached the wall, John was in the lead. He mounted the stones but did not go over. The pasture before him was a labyrinth of bushes, shoulder-high blueberry interspersed with birch In the paths amid these bushes the Airedale hunted, barking.

The cursing was voluble.

"'Tain't sense, follerin' in there," Austin cried sharply. "Besides, why should we? Ghosts don't leave tracks. We been chasin' a *man!*"

"Yeah, but what man?"

"Seems t' me they's only one man who'd be snoopin' around, tryin' t' find who was lovin' his wife!"

"No more o' that!" the big surveyor snapped. "I never set eyes on Mrs. Cravenside before tonight."

"Then you're a fast worker—or she is!—I'll say that for one o' you."

"Have you boys gone crazy?"

"You go off on trips, don't you? How do we know they been f'r th' gov'ment? You might o' went t' see Donald 'bout his property an' somehow met his woman. Then he disappears, no one knows where, but they's stories gets out his Shape's snoopin' 'round here. Well, an' why not? What proof we got that Don Cravenside ain't been watchin' you f'r weeks, waitin' f'r this t' happen? An' we took him for his ghost!"

John suddenly laughed. It was all so ridiculous.

"Where have you boys been tonight, that I didn't see you when I looked from my window?"

His mirth discomfited those below him. Austin said sourly:

"We hid in th' orchard till Jessie come out. Then we follered her home."

"'Way home?"

"Naw—we lost her over in Cravenside's Woods."

"Over here beyond the pasture, you mean? She went that way, *alone?*"

"Far's we could see. We dassent get too close, or she'd know we was behind. After she crossed th' log-road bridge, it was too blamed dark f'r us t' go further."

"You haven't been till this time of night following Jessie to the brook!"

"Naw—we went back t' th' store an' stood around an' talked. Then Enoch says he aimed t' have more speech with you, 'bout th' things you said t'night in th' lane. We 'llowed we'd tag along. But we got t' your house an' found nobody home. That was so funny that Enoch got riled. Said if you was sleepin' up t' th' Homestead, th' whole explanation was right under our noses. So we went up through th' orchard an' hid in th' grass."

"DID everything appear all right, over to my house?"

"Near's we could see."

"Were any lamps burning?"

"Naw—your house was dark."

"Was Hives La Flemme with you?"

"I reckon so—yaas."

"He warn't with us to the store," old Gleason contradicted.

"Come to think of it, John," a cooler voice declared, "he ain't been with us since we turned back at the brook. I remember he was with us to the pasture, but after that we lost him."

"Go on, Mike. You found my house closed and came up through the orchard. Were the lights out in the Homestead?"

"All but one in the east room upstairs. Baldwin was all f'r goin' in an' ketchin' you then, but some o' th' boys 'llowed we'd better give you th' chance t' get t' sleep. Then we'd *break* in. 'Bout a half-hour after the east room light went out, we heard noises in th' barn—like things fallin' over—or bein' bumped into. We heard a funny squeakin' noise, too, like a rusty pulley workin'."

"Go on—hurry up!"

"Well, it made us forget 'bout you an' Mis' Cravenside. If Don was in th' barn, we thought we'd let him settle his own mess. If a ghost was in th' barn, we'd stay an' see what happened. But a long time we had t' wait—most an hour, seemed-like—'fore that window opened an' a Shape showed on th' shed. It worked along th' ridgepole on t'other side fr'm us. Then it hitched itself up on th' roof o' th' ell. Them roofs don't slope much—"

"Go on—for heaven's sake, hurry!"

"Well, we crept 'round th' barn after a time, an' there was that Somethin' *hangin' head down'ards*. Over th' edge. It give us th' creeps."

"How could anything human manage it, and not pitch off on its head?"

Digitized by Google

UNIVERSITY OF IOWA

He was ashen with terror at sight of his captors. His clothing was wrecked; he had lost off a shoe. "I didn't mean t' do it!" he wailed

"Looked as if rotted shingles had been pulled off, t' give a leg-hold on th' timbers underneath. Th' small west window is th' only one close enough t' th' eaves anywheres upstairs t' make such a stunt possible."

"Yes, I know that."

"Anyhow, whilst we was waitin' t' see whether th' Thing hoisted itself back up, or went headforemost into th' window, some female inside started screechin' her head off—"

"Enoch's comin' down th' mowin'," Gleason interrupted.

The group turned around.

"Mis' Cravenside's with him. Let's get over th' wall, then we won't be on her property."

"Boys, you're all wet," Forsythe said persuasively. "I've never laid eyes on that lady till tonight. If Don's on this property, in this pasture, anywhere in this district, I'm as anxious to know it as anyone present—"

"You gotta show us!"

"All right, I will. We're going to beat this pasture. We'll fan out the whole width of it, within calling distance of one another, and advance abreast—"

"Hark! . . . *f'r cat's sake . . . WHAT'S THAT?*"

Yes, what was it? . . .

A CRY had reached them. From over at the back of the pasture it reached them—high-pitched, long-drawn, heart-throttling. It cut through the night above the barking of the dog, above their caustic conversation, echoing against the hillside and dissolving in the silence. The group shrank together. Came a younger man's hoarse whisper—

"I heard hosses shriek like that—in France—"

"That warn't no hoss," Austin protested.

"No," said Joe Gleason, "a human give that yowl. A human that's been hurt. Over there towards th' woods!"

"Tripe's found somethin' that's got him troubled."

They listened in the moonlight for the cry to be repeated. Over toward the west the Airedale had worked, an altered note now in its vocal excitement.

"S'pose he's bagged th' feller, whoever we was chasin'?"

"More likely he's injured himself," John said nervously, "poking his way through this poorly lit pasture. Come on . . . we'll find out!"

He dropped from the wall. On the opposite side he started through the scrub.

UNIVERSITY OF IOWA

noch, with Irene, had almost reached the oup. John wanted no more bickering ith old Baldwin for the present.

He headed toward Tripe's barkings. ushes scratched his wrists; fronds clawed s trousers. Occasionally he stumbled here moss-covered boulders made humocks in the sod. But bush after bush skirted, ever deeper in the labyrinth umined by weak moonshine. Once he rned and glanced back. No persons ere following. There was no vocal evince that they had even crossed the wall.

"All right," he said grimly, "I'll go alone!"

N AND out through circular lanes he worked, around clumps of low birch, ld azalea, and sheep laurel; over spaces rpeted with sweetbrier and checkerry; flanking rocky ledges; falling over mps that were hidden in barberry. earer and nearer he drew to the dog.

Occasionally, for long intervals after he rived at the center of the pasture, the g would be silent. At such time the rcher lost his direction. Ten minutes ssed. Fifteen. Twenty. Some stretches traversed by circuitous route, to avoid cked brier clumps where passage was impracticable. At times he paused to listen. . . .

Water trickled somewhere . . . no other noises. In all that moonlit area no other persons seemed moving or following. Far away, on his right, a half-mile nearly, the Homestead on the hill was vague against the stars. Nearer, at his left, the mill brook was flowing. Beyond the brook were woods—spruce, hemlock, white birch, shag hickory—a dark and sinister barrier. Within the half-hour the moon would sink behind it. John ventured a shout.

"Helloo-oo!" he called. And waited.

He fancied someone answered, a woman's voice apparently, but over northeastward, the way he had come. Then Tripe aroused to barking. On the southern side of the brook he responded, though a distance still ahead.

John waded the stream. Thence he came on an aisle that ran crookedly but smoothly—some sort of log road bordering the timber. He turned along this cleared space. Rounding a curve, he kicked something rakish, something metallic that clicked against a rock. He stooped and picked it up . . .

"*Lord!*" he exclaimed. A shudder ran through him. He had picked up the scimitar stolen from his study.

Someone had thrown it, fleeing along the brook. It had struck the sod obliquely, resting on a hummock till John's boot dislodged it. John touched its blade with hesitant finger tips.

A SECOND shudder, a shudder more grisly, played havoc with his nerve. In reflex action, he wiped his fingers on his trousers . . .

Then he saw Tripe. Out of the brush at his right, the dog bounded. But he did not leap toward his master in greeting. In the pathway he halted, ears and tail erect, to whimper worriedly, sniff the ground about his paws, and wait till John reached him. John followed fearfully—the brook now on his right.

Almost at once he saw human legs—man's legs!—thrust from the bushes, with feet pointing downward. He straightened in shock. He dropped the lethal weapon.

The man he had turned over was the long-missing Cravenside!

Donald Cravenside!

Dead!

Donald Cravenside dead! . . .

Twenty years (*Continued on page 139*)

Stop CODDLING Yourself!

By WILLIAM S. SADLER, M. D.

THE other day, preliminary to examining a man's heart, I had him engage in some simple exercises. In a few minutes this big six-footer was all tuckered out. "Doctor," he gasped, "I guess I am getting soft. I've been coddling myself too much during the past few years."

He was dead right about being soft. Upon examination, I found his muscles soft and flabby, including his heart muscle; his circulation was sluggish, and before I was through I discovered that his brain and liver were also sluggish.

I am afraid that as a nation we are on the road to "getting soft." Modern civilization, with its labor-saving devices and inventions and luxuries, is taking toll of our stamina and lessening our vitality

There's a sort of thrill in getting back to nature

Several years ago, when making strength tests of different parts of the body, I was greatly impressed by the fact that the tests of the muscles of the legs showed a marked decrease in comparison with standards that had been made twenty-five years before, and I presume, with still more automobiles in commission at the present time, I should find an even greater weakening in the leg muscles if I were to repeat these tests today. Now, when our leg muscles get weak, it is more than likely that the abdominal musculature is also weakened. I could fill this article with stories of indigestion, constipation, supposed auto-intoxication, and other abdominal miseries, that have been cured by a restoration of the walking habit.

I BELIEVE that the average healthy man or woman would be greatly benefited by walking five or six miles every day in the open air. Of course, this presupposes that this five- or six-mile walk represents the sum total of the exercise for the day. If one is doing housework, climbing stairs, or engaged in other occupations which necessitate walking, the distance referred to should be cut down. I merely mention a five-mile walk as representing an agreeable form in which the required daily physical exercise may be profitably taken by an ordinary individual in good health.

Not long ago a neighbor of mine kept complaining about headaches, indigestion, and constipation. I could not find anything wrong with him, and so I finally advised him to use his car only for week-end outings. I made him promise to walk the three miles from his home to his office six days a week. In less than six months his headaches and indigestion had disappeared. I suppose he would have got well in two or three months if I had made him walk both ways.

While I am speaking about muscles, I want to make it clear that a muscle does not have to be big in order to be healthy. I would rather see good, solid, small muscles than a great big, overgrown musculature.

Some people are born with big muscles, just as others are born with big feet or big noses, and they don't have to exercise to keep these muscles big. As a matter of fact, there is a great deal to be said against overdevelopment of the muscles. If you are too athletic when you are young, you may overdevelop your heart, and then later in life there is danger of fatty degeneration if you don't keep your exercise right up to snuff. I advocate moderate, *regular* exercise to keep in ordinary good health.

It is the law of Nature to allow any organ or structure rapidly to deteriorate when we fail to make proper use of it. I believe that the great trouble with our teeth in modern times is not just the fact that the diet of children is deficient in lime, phosphorus, and other salts, but can be attributed in a greater measure to failure to use the teeth vigorously. We are subsisting more and more upon soft foods that do not require mastication.

If we were to go back to some of the dietetic practices of our forefathers and eat more rye bread, graham bread, hard-tack, sauerkraut, and hominy, we should be less bothered with pyorrhea, indigestion, constipation, and auto-intoxication.

While on the subject of teeth, I should like to say something about digestion. I think many persons are falling into the habit of coddling their stomachs. Now, I am fully aware that s stomachs must have proper di but I am talking just now ab well stomachs. There is a deci tendency nowadays to pamper stomach and feed it only w viands that are easy of digesti This is very weakening. stomach is a hollow, muscular gan—it needs work, it thrives work. A good mess of sauerkr or corned beef and cabbage w do some stomachs good; they hard to digest, but a hea stomach thrives on hard work. course, if you have pampered y stomach for fifteen years, you going to have trouble if you s right in on a big dose of co beef and cabbage. Give stomach four to six weeks to up and get ready for a real d work like this. The stomach cles are getting soft, just like the muscles, because we don't use them.

Let me say again that I am tal about well stomachs. I don't want reader who ha gastric ulcer or some of chronic indigestion to take this a too literally. If your doctor put you diet, stick to it, regardless of what saying here; but if you have a he stomach, don't be afraid to give it a hard job now and then.

ANOTHER way in wh ch we are be ing soft is shown by our inabili withstand cold. We are developing i hothouse race. Furnace and steam have led to overheating of both our l and working quarters. Most indivi begin to shiver if they come into a

r ancestors did not ve to drive themselves exercise—they were driven to it!

the winter that is 68° F. When you get uch above 70°, insensible perspiration mes out on the skin, and evaporation ills you unless you get the temperature to 75° or 80° F. If you stay around F. it is better, but we are so used to is overheated atmosphere that most of feel chilly at the proper temperature. Several years ago, I was attending a mily of eight persons—father, mother, andmother, and five children. Three or ur of them were sick most of the time ith colds, influenza, or bronchitis. Finally, managed to dig down to the root of the ouble. The family had developed cold-hobia—the members were all afraid of ld air, cold drafts, cold baths, and every-ing else cold. They kept the tempera-tre right up around 80° F. The air was ry and super-heated. It required six eeks to get them acclimated to a room mperature of 68° F., but even Grandma ally got used to it. The humidity was proved by means of evaporating pans. nce this family has adjusted itself to this wer room temperature, colds and re-iratory troubles have practically disap-ared.

F YOU have poor circulation, start early in the fall to train your skin to react rmally to moderate temperatures, cold r, and even drafts. This is best ac-mplished by means of hot baths followed a cold shower, or by cold baths taken a warm room so as to insure a vigorous action afterwards. By improving the in circulation in this way, we are less bject to the chilling effects of drafts and dden exposure to cold air.

A good, healthy skin reaction is Nature's vercoat for winter. While we often iticize women for under-dressing during e cold season, there is probably less to e feared from this practice than from e habit of over-dressing. However, e thing to do is to avoid both extremes.

Too many of us are trying to earn our ving only by the "sweat of our brains." fact, I don't know when some folks ould indulge in the luxury of a good veat if Nature didn't turn on the heat uring the summer season.

But nowadays when we prescribe sweat-g as a health measure, many people pre-r to sit in a cabinet and have a trained urse turn on the electric lights or steam, rather than go out and work up a natural sweat either at manual labor or sport. Of course, I am talking about healthy people. I would be the last one to decry the use of various forms of sweat baths as a remedial measure; they are invaluable. But why should well folks resort to the technique of the sick in order to enjoy a good sweat?

And this question of sweating is closely linked up with water drinking. We get hungry two or three times a day by the clock—whether we need the food or not; but we don't seem to get thirsty unless we sweat, and we don't drink, as a rule, unless we are thirsty. And when we don't drink enough water, sooner or later our kidneys are bound to suffer. Kidney irritation, overaccumulation of acid toxins in the blood, and numerous other ill effects are more or less due to the failure of people to sweat freely and drink a sufficient amount of water.

I think the majority of individuals would do a great deal to assist their skin vigor if they trained themselves in the practice of wearing the same weight of underclothes in the winter as they do in the summer, adjusting the outer garments only to the temperature.

There is no doubt that this decline in a healthy circulation of the blood through the skin is one of the most positive indications that we have begun to suffer as a result of our various "coddling" practices. We are becoming more and more the victims of "chilly drafts," and naturally this is making us afraid of cold weather and the winter season, with its tonic, invigorating, and health-promoting influences.

Even fatigue has become a bugaboo to thousands of people. They don't know how to reconcile themselves to the ordinary, common, everyday sensations of being tired. They want something to "pep them up." I had a case of the kind not long ago. The woman's only complaint was that she just couldn't bear her feelings of fatigue. She was turning the world upside down and dosing herself with three or four different sorts of medicine, trying to escape fatigue. If we have muscular fatigue, a night's sleep or a little extra rest will soon fix us up; and if we have nervous fatigue, we are not going to get away from it by chasing thrills. Sane, healthful living is the only cure for that.

We suffer from many unnecessary backaches, headaches, and a lot of other aches and pains through our tendency to pamper, coddle, and otherwise debilitate our physical resistance.

And we may be sure that Nature will exact a good, stiff penalty from us if we continue to pamper and coddle ourselves.

I am not asking you to overload your stomach, or put an undue strain on your vital organs, or overtire your muscles, in order to harden yourself. I am merely asking you to give your organs and muscles good, healthy, natural work to do, so that they will not deteriorate and become flabby for want of proper use.

Nor do I advocate that you give up the luxuries of civilization. That would be foolish. Nobody wants to go back to the crude, primitive days. Nevertheless, we must remember that our ancestors were put through some mighty valuable "health paces" in the days when legs were used as a means of locomotion and the professional baker, the steam laundry, the delicatessen, modern inventions, and the canning factory had not invaded the home.

IF WE want to regain the sturdiness, vitality, and stamina of our forefathers, we must put ourselves through some daily "health paces" that will counteract the softening influences of too much civilization.

Let us begin the "hardening" process by recovering the use of our legs.

A brisk walk of several miles daily will do a great deal toward preventing and curing indigestion, constipation, and other abdominal troubles.

Make a practice of drinking more water—at least eight glasses a day.

Force yourself to eat a certain amount of coarse food daily. Remember that the stomach thrives on hard work, and the best way to massage the gums is by real chewing.

Perform some vigorous daily exercise that will work up a sweat and increase your lung capacity by making you breathe deeply.

Train your skin readily to react to changes of temperature as a preventive against colds.

Do not live in overheated rooms. 68° F. is the proper temperature to maintain during the winter months.

Finally, give yourself a chance to "rough it" occasionally. If possible, utilize your summer vacation to get back to Nature and learn for a short time to do without bathtubs, soft beds, easy-chairs, superfine cookery, and the rest of the superficial trimmings that belong to this *de luxe*, overcomfortable age. (*The End*)

If you are scared to death that you'll have indigestion, you'll probably have it

Mr. Money

DIXIE WILLSON'S *delightful story of what love—and a legacy—did for Anson Abbott*

Illustrated by
JOHN M. CLEMENT

ANSON ABBOTT worked in the general store in Hotchkiss. He had brown, meek hair, and his shoes squeaked. He boarded one block from Main Street, at Mrs. Trolby's, where also boarded the telegraph operator and the milliner and the school-teacher.

One Saturday night, Mrs. Trolby called supper without remembering that she hadn't any bread. And before she *did* remember it, she heard the milliner asking the telegraph operator to ask Mrs. Trolby for the bread.

Mrs. Trolby was so en*tire*ly conscientious that no bread for the boarders was like heaven coming down! All of a quaver, she hurried from the kitchen to explain that she'd been doing such a mess of cooking for Sunday, she'd forgot, God forgive her, to get any bread! But if Miss Horn would watch the coffee on the stove with half an eye, it wouldn't take a minute to run to the bakery!

"*I'll* go to the bakery," Anson Abbott said.

"Oh, Mr. Abbott!" Mrs. Trolby fluttered. "*Would* you?"

He shoved back his chair and took the dime Mrs. Trolby had in her hand. The milliner giggled at his shoes squeaking to the front door.

It was June . . . stars just coming out . . . damp buds in the trees.

Myra Kemp worked in the bakery. She was like a little gold canary—soft yellow hair with little tendrils curling around her face—wide blue eyes—quick little feet—fresh aprons. She was pink and white as a new wild rose. Quick little hands wrapping the pies, folding cake boxes.

When she gave Anson the change, he asked abruptly if she'd go to the band concert with him that evening. She lifted her shoulders and laughed—breaking off the string around the bread.

"*No*, thank you," she said.

He went back to Mrs. Trolby's, and gave Mrs. Trolby the bread, and the change, and sat down at the table again. He felt like a machine that goes on because it is set and wound and *has* to go on. Myra Kemp! Myra Kemp! Damp little curls—wide blue eyes—flushing pink and white skin. Why did he go on and on thinking nothing but Myra Kemp—Myra Kemp? Why did he walk by and by and by the bakery, just to look in at her? Why did he keep imagining—imagining—what it would be like if Myra loved him? Why couldn't he be satisfied with Dellie Harris, who had all but asked him to marry her? Why couldn't he take Dellie and stop filling himself full of nothing but how beautiful—how wonderful—*Myra* was?

HE COULD make up something to do at the store . . . and walk by the bakery . . . and look in again. . . .

The boarders all talking . . . yes . . . no . . . surely *must* rain tomorrow. . . .

And then the gong on the front door was ringing—Mrs. Trolby answering—and when she came back from the front hall, she said somebody wanted to see Anson Harper Abbott.

Anson was surprised.

"*Me?*" he said. "*I* don't know anybody!"

"It's a tall gentleman with gold glasses and terrible good clothes!" Mrs. Trolby told him—whispering.

The boarders smiled at his shoes, squeaking now to the pa

Mrs. Trolby found something to c the front hall—by the parlor door— suddenly came back, half running, the kitchen, so profoundly excited the boarders could see the red gath around her ears!

"I think I'll get me some hot cof the milliner said, and went crisply int kitchen after Mrs. Trolby.

"Mis' Trolby! What *was* it?" asked sharply, under her breath.

Mrs. Trolby, reaching for a frayed jacket on the hook on the door, caug her heart and looked toward heaven.

"Oh," she gasped. "Oh, my! Somebody's dead, that hadn't no relative but Anson! The man in there named off more money than I knew there was figgers for! I'm going after ice cream!"

The ice cream was sold at the bakery. Mrs. Trolby—too excited not to *talk*—breathlessly told what had happened, while Myra was getting the paper pail out of the stack and lifting off the frosty cover of the ice cream can, and filling the pail.

Back at Mrs. Trolby's, the gentleman was shaking hands with Anson at the front door when Mrs. Trolby hurried in the side gate. In the dining-room, all the boarders were watching the hall door to see how Anson would look when he came in. But he only came in, and sat down, and asked Mr. Eenis to pass the cabbage. Mrs. Trolby scooped a gold dish from the sideboard.

"I'll get some hot, off the stove," she said, and hurried out, and brought back the gold dish full of hot red cabbage.

"I'd like some bread," he said.

Eight hands passed it to him.

The telephone rang. Mrs. Trolby answered. And called Anson Abbott's name.

"*Me?*" he said. "*I* don't know anybody!"

"Hello," he said. "Yes . . . oh . . . why, yes . . . yes. . . ." His forehead grew red. He smiled. "Well—girls are sup*pos*ed to change their minds. Yeh—the band begins at eight. Thanks."

He went back to his place at the table—ate a little of the cabbage.

"More coffee, Mr. Abbott?" Mrs. Trolby asked, hovering over him.

"Yes," he said. "I mean, no—no thanks."

He got out his handkerchief and wiped his forehead that was suddenly perspiring.

"Mrs. Trolby," he said, "could you get time to press my good suit before eight?"

ONE evening Anson didn't come home to supper. Mrs. Trolby kept the lamb stew hot for an hour, but he didn't come. And while she waited for him, the boarders had only one thing to talk about. Anson in love! Poor Anson so terribly in love!

"It's a *shame*," Miss Horn said. "A wicked *shame*! Dellie's good as gold, and eating her heart out for him, and Myra Kemp only leading him on by the nose be-

cause he's got money! She don't give a snap for him and everybody knows it! Everybody *knows* she's just leading him on by the nose!"

"That's right," Mr. Eenis said. "She never treated him half decent before!"

"Mr. Abbott is a fine young man," Mrs. Trolby said. "He should be *told!* I'm going to *tell* him!"

The next morning she went to the store and fussed through the green tin trays, picking out vegetables, till there was nobody around but herself and Anson.

"Anson," she said, "I came a-purpose to tell you something you'd ought to know. You're bein' hoodwinked by Myra Kemp, Anson, and everybody knows it. Everybody knows she don't give a *snap* for you except the money you've come into. Dellie Harris is cryin' her *eyes* out about you. Dellie and everybody else knows Myra's only pullin' wool over your eyes, Anson, and it's *some*body's duty to tell you!"

Anson pushed one hand back over his forehead—over his meek brown hair—and smiled a little.

"I—I hope that isn't true, Mrs. Trolby," he said. "Last night at the Baptist parsonage—Myra and I——got married!"

FROM the time when people lived with simple joys—like, for instance, spicy, old-fashioned flowers, fat little bean crocks, fresh-scrubbed wooden floors, basket socials in the church basement—there are still a few people left, like Myra and Anson after they had been married eleven years.

They lived on a corner in Hotchkiss, two blocks east of Main Street, in a little square house with green shutters. Anson owned the general store, and in the vacant lot behind their house he raised chickens—leghorns. He had made a concrete chicken house, with the latest ventilators and adjustable roosts. He had a hatchery and a brooder. And one spring he had five hundred chicks in the incubator all at once.

"Abbott Leghorns" took all the prizes at the county and district fairs; Abbott's eggs sold for four cents more a dozen than any others; and next to loving Myra, the greatest thrill life had for Anson was every incubator setting of yellow chicks, wakening into Life, out of *eggs*, because *his* hands had lighted and tended the lamps! Five hundred eggs that were nothing but *eggs*, becoming, by his hands, living, breathing, functioning creatures!

Chickens were his plan for something to keep busy at while he and Myra were waiting for him to be forty, when they would have the money. Then they would go to New York City—and Palm Beach—and Paris—and Cairo—and China. Myra wanted to see the desert. She wanted to see Paris—and Palm Beach—and China.

Uncle Anson's will read like this: "Until the fortieth birthday of my only surviving relative, Anson Harper Abbott, shall be held in trust for said Anson Harper Abbott, the sum of seven million dollars, and all my worldly estate; said possessions to go to charities as named, in case of the death of said Anson Harper Abbott before his fortieth year."

Anson didn't think a good deal about it—about what seven million dollars would mean to him. *Some*times he did. Yes—it ought to be quite a day! A car! He had always wanted to own a car! Always wanted to see the ocean!

But the first years after his marriage to Myra were so filled with just the wonder of possessing her that he was conscious of nothing else—conscious of nothing but the heaven of her presence; the ecstasy of the realization that she was *his!* His wife! Every day she had grown more beautiful. Every day he had loved her more. He would have been living in golden paradise, except for just one stinging, biting insect of a thought: The remembrance of what Mrs. Trolby had come to tell him, the day after he and Myra had been married!

ELEVEN years! One more year and little Myra Kemp would be the wife of a millionaire!

She would have a butler, of course. (She had acquainted herself fully with what people expected of their butlers.) Diamonds. (She had read of pear-shaped diamonds. She would have one of those—or several.) Town house—country house—town car—yacht. Many a duchess did her imagination entertain at tea in the little parlor behind the shutters. Ambassadors, dukes, earls, kings, and queens, no less! On her center table you didn't find any of the things you had a right to expect—"Home Needlework"—"House and Fireside"—"Key to the Scriptures"—but only the latest magazines on style—gowns—earrings—Monte Carlo and Biarritz.

After they had been married four or five years, Anson had begun to see that everything she said or did was in relation to what they were to be when they had their money. It had begun to seep into his mind that what Mrs. Trolby and "everybody else" had said must be true. For *this* had Myra Kemp become Mrs. Anson Abbott—for this had she "loved" and married him!

He would be looking at the price of chick-feed and new brooders, and figuring what spring goods to order for the store, when she would look up and say, "*An*son! Men in Paris are wearing *cor*sets!" She would laugh that little bird laugh and say, "I suppose every morning I'll have to help you into your corset!" Or she would say, "Anson, men's trousers must be slightly tucked now—slightly tucked"—observing his, which were *not* slightly tucked!

Feeding that insect of what Mrs. Trolby had said! Growing it a little larger! Making the sting a little more! Sometimes his mind got so full of the thought, he felt crowded *out* of *himself*. Tangled—imprisoned—with the thought that to Myra he was nothing at all but the medium to seven million dollars. The glory *he* felt in every hour of their companionship was to *her* only the handle of a dipper that would one day bring up seven million. She had not married *him*, but the dream of seven million dollars. Mrs. Trolby and "everybody else" had known it. Everybody had known it but himself. . . . (The insect growing to octopus proportions!)

But this is how he tried to face it: "Well—all right. For eleven years Myra has washed dishes, and baked bread and cooked and hung out clothes on a Monday and packed eggs and scrubbed the kitchen, and if she has been willing to trade this for a dream—all right!"

The saving thing was that not by one second did it change his love for her! Not by one hour did it change his devotion! In spite of anything he might guess or presume about her love for *him*, his love for *her* was only more—and more—and more!

Eleven years! In one year he would be forty. And she would be thirty. And they would possess a fortune.

"If you were only taller, Anson," she said once. "For evening I'm sure you can never wear anything but a tuxedo. In Paris," she laughed, "you'll have to wear a top hat in the afternoon, and pin stripes, and say '*Donnez-moi du café*,' when you want a cup of coffee!"

It astonished him, all she had learned of how people were millionaires. He didn't even know what she *meant*, when she said "tuxedo."

Across the street from them lived Dellie Harris, married to Noah Gelsby, who ran a truck garden. Dellie and Myra exchanged bread starter and foliage slips. Dellie and Noah, and Myra and Anson walked to church together on Sundays and on Wednesday nights, and spent winter evenings together. Dellie was happy with Noah. She loved him. She had three children. Her Melissa was the prettiest baby ever born in Hotchkiss. But Myra always seemed to show off to Dellie just a little how devoted Anson was. Always wanted to show off a little to Dellie, it seemed, which one of them, after all, had got to be Mrs. Anson Abbott!

One day Anson got a little catching pain around his heart, and suddenly began to be afraid he would die before he was forty and cheat Myra out of the dream she had bought and already paid for. Poor little Myra, if he should die! No, he *mustn't* die and cheat her!

ONE night he sat making out an order for bedroom slippers and Norwegian sardines in mustard, Myra across the room rocking—rocking—reading a book about Vienna—the palaces of Vienna! *Vienna* crowding into this little house where every creak of the stairs, every scar on the wall was *theirs*—en*fold*ing them! Spice of flowers in the pots Myra had tended. Squares of sunshine across the kitchen floor on Saturday afternoons, damp streaks of the boards that stayed wet longest from scrubbing. Nearer and nearer—this thing that was going to root him up—pry him out— It couldn't *wait!* It must even come here and close in upon this peace—this heaven—this room in which there was nothing but Myra—her presence—no sound but her breathing—her chair rocking—her pages turning! Nearer—and nearer—the thing coming to crash this little world that was all his—with Myra!

Suddenly he was stumbling at her feet, on the floor, on his knees, his lips against her hands, tears all over her fingers. Blubbering over his wife's hands after eleven years!

"Myra—I love you! I—I love you!"

Kissing her fingers—tears on the palaces of Vienna—Myra staring at him—puzzled—surprised—

"Why, Anson! Get up off the floor! Are you—*ill*, Anson?"

And then her arms folded around him. He felt her bending down to him—her face against his—her cheek warm against his—her hair soft and fragrant—and she kissed him.

"I *know* you love me, Anson," she said. "I love you too. I—love you—too."

A moment—her arms around him, her lips close to his—(*Continued on page 165*)

It is much more comfortable and smugly self-righteous to be ashamed of other people—BUT

I Am Ashamed of Myself

By ALBERT PAYSON TERHUNE

UP TO the evening of December 13, 1928, I was rather well satisfied with my own rank in the army of good fellows. Then, in a mere handful of time, I was forced to revise my list of the world's "white men," and to give myself a far lower place. Wherefore, as my title shows, I am ashamed.

Here is the story:

I had been writing all day, and I was planning a two-hour session at my desk for that evening. Nothing clears my mind and gives it a fresh grip on work like a brisk five-mile walk. So, directly after dinner, I set off for an hour's tramping.

It was pitch-dark. Thus I stuck to the highroad, instead of striking across country as usual. That meant I left my dogs at home. For our North Jersey highroads are no longer safe for dogs to travel on. Cars are too many and too fast and too carelessly driven.

I had a splendid hike, along the hard concrete, at something better than a four-mile-an-hour gait. The brisk exercise braced me and gave me zest for the writing I had planned for that evening.

I neared a curve in the wide road, about a mile from Sunnybank, on my return journey. A car, driven at furious pace, whizzed round the bend toward me.

Always I walk on the very edge of the concrete and on the left of the road. That was the order given at the training camps during the war; the theory being not only that a car facing a pedestrian is easier to dodge, but that drivers will allow more leeway for such a pedestrian than if they come up behind him. Often I had proved the truth of this.

On that night I had just time to notice that the speeding car was unduly close to my edge of the road. I prepared to step off onto the wayside dirt. My left foot had stepped from the concrete, when the car hit me.

NOW, I want to pause long enough to say that all the innumerable swats I have received in many years of strenuous athletic work cannot be compared to the merest touch of a large and rapid car. In my boxing days I received most ungodly punches in my various bouts with Jim Jeffries, Tom Sharkey, Jim Corbett, and many another pile-driving hitter. Also, in football scrimmages and tackles, I have been thrown hard and with breath-expelling vehemence. A kick from my Arab saddle horse, in the Syrian wilderness, is also among my more violent memories.

But none of these earnest impacts were worth the most casual mention in comparison to the tap administered to me by the mud guard of that fifty-mile-an-hour motor car. (I mention this to make fast drivers realize something of the hideous power they are exerting and the effect it has on any human or dog in its path.)

The car hit the outside of my right leg, about nine inches below the hip I went high and rapidly through the air, landing on my right wrist in the ditch and then rebounding, through no effort of my own, several feet into the air again and hitting the bottom of the ditch with a bang that knocked out what breath I had left.

THERE I lay, fighting for breath. The car was already out of sight around the next curve, a quarter-mile farther on. The term, "hit-and-run," took on a new and personal meaning to me.

I tried to get up. But my entire right side was as powerless as it was torturing. It was a winter night. Cars were few along that black road. Where I lay at the back of the ditch I knew I should be invisible to any driver. So, with my left arm and left leg, I wriggled to the edge of the concrete. Then I took my handkerchief and prepared to wave it as a signal for the next car which might come along.

One such car spun past. Either its driver did not see me or else he thought the waving handkerchief was some ruse of a holdup man. Or perhaps he was in a hurry.

Then, after ten minutes, another car came along at about fifteen miles an hour. I waved industriously. A hundred feet farther on, the car halted and backed. It stopped beside me. A man and woman stepped out. They were on their way home after a long day's work.

I asked them to stop at the nearest garage and telephone to Sunnybank for a car. They would not hear of it, although they had been going in the opposite direction. As tenderly and efficiently as if I were their best-loved brother, they got me into their car. Driving slowly and avoiding every inequality in the road which might jar me, they took me home.

I did not know either of them, although they said they knew me well by sight. Incidentally, one or the other of them telephoned nearly every day for weeks thereafter to ask after me and to beg leave to be of any possible service.

They were strangers. Yet, not only did they put themselves out for a stricken man by carrying him to his home, but day after day they offered eagerly to make use of their own scanty spare time to be of further assistance. The man's name was Lester Nilan. I saw him only in the dark; and probably I should not recognize him if I should see him again. But my memory of him and of his wife is far more keen than for men and women whom I have met a hundred times.

Well, I was put to bed, and a brace of doctors were sent for. I was then able, by great effort and greater agony, to move the injured leg an inch or two; which delighted me greatly.

The right arm still was useless. But something was pressing against it. I looked down. Our great collie, Sunnybank Gray Dawn, was crouching beside my bed, shivering as if in mortal pain and pressing his furry head against my injured hand.

For the next month and more, Gray Dawn would not willingly leave my bedside, day or night; nor for the first few days would he eat. He established himself as my chum and guard, finding his way back into the house and into my room every time he was put out.

Ever he stood close beside the bed when the doctor was dressing my hurts. I was forced to learn self-control, on the dog's account. For, once, when the pain of the manipulations and dressings wrung a half-audible grunt from me, Gray Dawn was ravening instantly for the throat of the man who was hurting me. Luckily my physician was enough of a dog man to understand the collie's viewpoint. He did not resent it. In time, Dawn became egregiously fond of him and stood beside him with a most ridiculous aspect of medical colleagueship, all the time Doctor Colfax was working over me.

THERE were minor drawbacks, as well as many hours of good comradeship, in having Dawn as a roommate. He slept on the floor beside my bed, his shoulders resting against the lower end of one of the bedposts. In the middle of the night, a flea would bite him. Dawn retaliated by scratching with all his mighty vigor. I would wake up (*Continued on page 156*)

DAVE

INTERVIEW
by
MAGNER
WHITE

Drawing by
B. J. ROSENMEYER
from photograph

IRON bars separated the young man and the young woman. It was to be their last visit for more than eight years. There was tenderness and sympathy in the woman's voice as she said:

"Dave, you say everybody is down on you. Well, I am not. You have made a terrible mistake—but I still believe in you. You can live it down because deep down in your heart you're really fine. No matter how many years it is, Dave, I'll wait for you."

The young man—he was then around twenty-four and had already been in jail some time awaiting disposition of his case—looked down at his right hand. The index finger was gone, and where it had been was a deep scar.

"No, honey," he said, "I've no right to ask you to do that. I love you, but I'm not worth waiting for. You are young; you will meet someone else—"

"No!"

"Yes, Minnie. It will be better that way."

"No, Dave. You're going to come out all right—and I'm going to be waiting, and thinking about you—and knowing that you're not as bad as everybody thinks you are. I believe in you."

The next day, Dave Tucker was taken out of the Wallowa County jail at Enterprise, Oregon—six miles down the valley from Joseph, Oregon, where he had run into the experience that had changed his life and blighted his wedding plans—and was transferred to the Oregon State Penitentiary at Salem, to serve an eight-year sentence.

They were hard, bitter years—the kind of years the law deals out to young men who participate in bank robberies.

When Dave came out, his sweetheart was waiting, just as she had promised. But it was not the same Dave whom she greeted.

The reckless youth had disappeared. In his place was a man who was right with himself.

"How I wanted to marry her," Tucker told me, "but I said, 'No, not yet—my name is still not worth having. Give me a little time.'

"She waited five years longer. In those five years I built my reputation up again, and then—after she had waited thirteen years altogether, believing in me and loving me faithfully—we were married."

Dave Tucker, now a prosperous, much beloved rancher and cattleman in the very town where he lost his reputation thirty-five years ago, and I were sitting in a hotel room overlooking the bank that figured in the dark episode in his life.

It was springtime, and apple blossoms were out on the trees in yards down the street. Off to the south were the snow-capped mountains on which the eyes of Dave Tucker had often looked when he was a boy.

"DID you ever see a prettier country than this eastern Oregon country in the spring?" Tucker asked, glancing out of the window. "It was just about this time of year I was taken away to the penitentiary."

Afraid of that dark chapter in his life? Dave Tucker isn't afraid of anything.

"He has paid his debt to society—and then some," an old-time resident of Joseph told me. "Everybody in this valley loves and respects Dave Tucker. He came right back here where he had lost his reputation and made a new one. Don't let anybody say anything to you against Dave Tucker. This whole community is solidly back of him." The old-

more inspiring story than that of

TUCKER

Who is now VICE PRESIDENT *of the* Bank *he once* robbed

timer's eyes narrowed and he shifted his tall-crowned hat back over his gray locks. "It wouldn't be healthy for a body to say anything against Dave Tucker."

Not only has Dave Tucker become a respected citizen, and admittedly one of the most expert farmers and cattlemen in all the Wallowa valley. Not only is he the head of a wonderful family of two boys and a girl—all nearing maturity now. Not only is he consulted, and his advice followed to the letter, on everything affecting his community. Not only is he a director in nearly every local business and civic enterprise at Joseph. But—and this seems to me the crowning indication of just how far he has come since he was shot down in the streets of Joseph thirty-five years ago—

He is vice president today of the very bank he helped to rob when he was a wild, reckless young man!

TUCKER is fifty-eight now; gray-haired, short, stocky; bronzed by sun and wind and hardened by the cold of the high Oregon country. He lives in the saddle most of the time, looking after his cattle and overseeing his 2,200-acre ranch and farm. A square-jawed, clear-gray-eyed man, he looks every other man straight in the eye.

And his philosophy is rich with tolerance and inspiration—for it is the philosophy of a man who has touched the depths, and has climbed out.

It was three years after I heard of him before he told me the story of his early mistake. This is it:

On the first Thursday afternoon in October of 1894, at three o'clock, four masked men rode up outside the First Bank of Joseph and tied their horses to the hitching rack. All were armed.

The leader was a man named Fitzhugh. He was older than the other three; a born leader, highly intelligent, but a man with a wrong slant on life. He was thirty-five years old, a cold, calculating, yet suave man—a hero to the youthful Dave Tucker, whose hard life in a frontier country had filled him with vague longings and strange ambitions.

Second in rank, as the gang was organized, was a man named Brown. Like Fitzhugh, his partner, he was a gambler, a man of the world—and a thoroughly incorrigible criminal.

The other two were boys in their early twenties—Dave Tucker, and a young friend. This friend was a soft youth, easily led by the ruthless, glittering, suave Fitzhugh.

They went into the bank.

Tucker and his young friend stood in the doorway, as guards and lookouts.

"Throw up your hands, and pass over all the money you have!" Fitzhugh commanded, confronting the cashier.

The cashier pushed the money till across the counter. Brown took its contents—less than $2,000—and put it into a sack. Then someone fired a shot.

INSTANTLY men poured out of saloons and stores, armed. Bullets sang up and down the streets. A man ran into the doorway of the bank and fired into the building at the four men.

Brown dropped the money sack with a thud, and fell over dead.

"I forgot everything then," Tucker said, "and ran to Brown to try to help him.

"Firing at the crowd, Fitzhugh leaned over and, in a cold and heartless voice, said, 'Never mind him, Dave; he's dead. Get that gun o' yours busy, and let's get out o' here.'

"Fitzhugh grabbed the money and made his way through a hail of bullets.

"I turned away from Brown—and found myself face to face with men I'd known all my life. And they were shooting to kill me. I raised my gun and fired twice—wildly.

"Then a man whipped up a long rifle an'—thank God!—shot my gun out of my hand. The bullet went in at the base of the trigger finger, and took the finger off with it. I ran outside—and a charge of shot struck me in the side. Another hit me in the legs.

"I staggered to my horse. Everything was whirling. A man who had recognized me ran up, back-ended his gun and struck me on the forehead. He was wild with anger. 'Dave Tucker,' he said, 'I'm goin' to blow your worthless brains out!'

"'Well, make a good job of it,' I said. But he didn't fire, because I toppled over and was captured. They already had my friend, the young boy.

"Fitzhugh, the man who had led us into all this, got away safely with the money. He was never heard of again. My young friend and I had to face the music.

"I felt that everybody hated me—and I hated everybody. I felt that I was now a criminal and against all society.

"Often I think of how near death I was, and am convinced that only the kindness of God saved me for the better things that have come to me—that and the great, forgiving love of the woman who is now my wife and the mother of my children.

"There is nothing in the world greater than true love." Tucker's weather-bitten face softened, and there was something beautiful in his eyes.

"They took me down to the jail at Enterprise. I pleaded guilty, but my friend stood trial, and was convicted.

"When I came into court, I learned that still another crime had been charged against me—one of which I was innocent. A man accused me of being a member of a gang of cattle thieves. What was *my* word worth against his? I was given seven years for the bank robbery, and another year for cattle stealing.

"Just before he died, the man who had sworn falsely that I had stolen cattle wrote me in prison and asked my forgiveness. I gave it, for by that time I had decided to get right with myself, and you can't be right with yourself if you hold any grudges.

"SO THAT you'll understand how I was led into my trouble, I'll tell you something about my background.

"I was born in Arkansas, the oldest of fourteen children. My parents were very poor and Mother had her hands full raising us.

"In 1876, when I was five, we came West, to Oregon. Father took up a homestead, and we lived a hard life—up before sunrise and to bed after dark—working all the time.

"There wasn't even a wagon road here then, and Joseph didn't exist. Later, the town came. The country was wide open. There was no law, except Judge Colt's—the law of the six-shooter.

"There were five saloons in Joseph and nearly everybody gambled and drank.

"And nearly everybody—among the wild young men, I mean—stole cattle! It was considered a sort of game to get your brand on any unbranded cattle you found on the open range—and sometimes this led to disputes and killings.

"This was the kind of environment I grew up in!

"I went to school for three four-months' terms only—but I was hungry for knowledge. I used to go to protracted meetings—after I had worked all day—and sit and enjoy every word the preacher said. Whenever (*Continued on page 174*)

Master of his ship at seventeen, Captain Bernier built, sailed, and sold clipper ships in the days of their glory, before he turned to arctic exploration

Ancient Mariner *and* Dean *of* Arctic Explorers

TWO hundred and seventy voyages—thirteen of them to the Arctic, the rest all over the world. That's the distinguished record of Captain Joseph E. Bernier, ancient mariner and famous Canadian navigator, whom Commander Richard Byrd affectionately refers to as "the dean of arctic explorers."

Captain Bernier has in his possession a stack of letters from arctic explorers, noted sea captains, and eminent persons in all parts of the world asking his advice in connection with their nautical and scientific problems, commending his work in the Arctic, and acknowledging his valuable counsel and coöperation in various polar expeditions.

But he was a master mariner for many years before he became an arctic explorer. The first part of his career envisages the palmiest days of the merchantmen and all the romance that belongs to those who go down to the sea in ships, and the second covers the period in arctic exploration when steam power enabled explorers to complete the work so ably begun under more trying conditions by Franklin and others in sailing vessels.

Captain Bernier comes of a seafaring family. Both his father and grandfather sailed ships out of the St. Lawrence River for over a hundred years between them. The son has bettered this fine record, having followed the sea for sixty-six years, ever since he was eleven years old. He was a master at seventeen, probably the youngest deep-sea captain in the world.

Jack London would have made a hero of Captain Bernier in a dozen volumes, for he was trained in a rough school and experienced all the hard knocks that fell to the lot of ships' boys at the hands of callous masters and mates. But one day the injustice of his treatment roused the tiger in the husky sixteen-year-old boy, and to the astonishment of the sailors who had mishandled him and the officers who had abetted them, he made a flying leap upon his uncle, the master of the ship, and thoroughly thrashed that relative for countenancing those who had taken advantage of him. After that he was accepted as a man among men.

While he was always just in his dealings with the crews of the one hundred and ten ships that he commanded in his time, nevertheless on numerous occasions he had to assert his authority over mutinous sailors by an unsparing use of his fists. The sailors of that day were a rough lot, often criminals, and nothing in such crises but brute force could make any impression on them.

In his father's shipyard at Quebec the young Joseph had become an expert shipwright and overseer. Not many master had his advantages. He acquired an in timate knowledge of naval architecture, technical discrimination in selecting an buying the materials that go to the mak ing of ships, the ability to design vesse for special purposes, and the skill to buil them in a manner to command the higher prices in London and Liverpool.

This all-round expertness resulted in h becoming a ship salesman for the ship yards of the St. Lawrence. It was h business to take ships to Britain and se them to best advantage. A fast passag and a smart appearance of the vessel an personnel were factors which he played u in selling his wares. He drove his ship persistently, keeping the deck at nigh with all sail on. The consequence wa that many of these ships were sold into th clipper class on the strength of their sai ing qualities as demonstrated by this ma ter of ships.

When the building of sailing ship waned, Captain Bernier commande pleasure yachts for American millio aires, among whom were Drexel of Phil delphia, McCormick of Chicago, an Mark Hanna of Cleveland.

In a period ashore as an official in th Department of Marine he was able to d vote himself to his hobby of collecting an studying the literature relating to arct

Digitized by Google

exploration. He had been accumulating charts, books, and documents for years, and without fully realizing it, he had become an authority. He was convinced that a powered vessel could make the Northwest Passage in a month from Quebec and then a fast passage through whenever the season proved favorable and the way clear.

He also conceived the idea of reaching the North Pole in a proper ship through Bering Strait.

The Alaska boundary decision in 1903 profoundly impressed him. In a flash he saw his life work before him, that of gathering up the loose ends of territory in the Arctic north of Canada all the way to the pole, thus confirming the important work done by British explorers by actually taking possession of the lands which England had renounced in Canada's favor in 1880. The Canadian government had not taken the trouble formally to secure possession of those numerous islands and had thus left the door open for any country to come in and annex them.

The Dominion government and the Canadian public were apathetic. Captain Bernier stumped the country, lecturing and indoctrinating the people with his ideas, incidentally spending all he had saved, a modest sum of $21,000. Finally his efforts bore fruit. He had asked for $100,000, and the authorities gave him double the amount and the C. G. S. Arctic, at that time the best-built ship for ice work in the world. In this stanch vessel he was able to accomplish his purpose, gathering up the records and mementos of previous explorers, taking possession of the islands, erecting caches, exploring by land and sea, and mapping the whole area.

The Archives department at Ottawa has been enriched by all the documents and a vast quantity of materials left in the north by previous explorers. The Franklin Memorial, erected by England and America on Beechey Island, has been repaired, and the Royal Canadian Mounted Police are now established in the Canadian Arctic, patrolling that region and administering it with their traditional efficiency.

Captain Bernier's one desire now is to live long enough to see a traffic rivaling that of the St. Lawrence flowing to and from Europe by way of the Hudson Bay route to Churchill and the Canadian and American West. He has been a consistent advocate of that route from the beginning and says that in the five open months the navigation is safer than that of the St. Lawrence, since there are no fogs and shoals and daylight is almost continuous in the summer months.

From his earliest boyhood Captain Bernier has religiously kept a diary in which he has jotted down his impressions and the occurrences of each day. From these journals he is compiling an intensely interesting book, which will vividly record for posterity the glory and romance of the old sailing vessel days

ARTHUR P. WOOLLACOTT, F.R.G.S.

Edith Keating *is* Paid *to* Look Down *on the* Human Race

THREE thousand feet above the earth, in a plane going ninety miles an hour, with a camera set for an exposure of 150th of a second, Edith Keating, aërial photographer, watched with skilled eyes for the bit of geography she was to shoot. The pilot circled over the locality. The photographer tilted her camera to the right angle, closed the shutter, and got her picture. Then the cabin plane swung down to earth and taxied to a standstill, and Edith Keating hopped out.

"I don't go up for the thrills," she told me, "but since I'm in the commercial photographic field and talking to people every day about aërial views, I have to be familiar with taking pictures and able to talk intelligently about them.

"And it's not always easy to get the object. The camera weighs sixty pounds and works on a pivot. When a heavy wind is blowing, I have to hold it so close to me that my chest is all black and blue with the effort."

"If you think aerial photography is easy," says Miss Keating, "try handling a sixty-pound camera in an airplane going one hundred miles an hour, with the wind blowing great guns"

Edith Keating, magnetic, spontaneous, making dangerous occupation her daily bread, has never been born so far as records and birth certificates go—for all documentary evidence of her existence was tossed sky-high in the Halifax disaster of 1917, when the S. S. Imo, a relief ship heading for Belgium, and the S. S. LeBlanc, loaded with three million dollars' worth of T. N. T., collided in the harbor and wrecked the town.

Edith was the oldest of five whose father was in Flanders. She had grown up, as girls did before the war, with the intention of finishing her studies and then pursuing some thoroughly feminine avocation. But the blast that destroyed every vestige of the past turned the future into direct action.

She went to Boston to enroll with the American Red Cross but the day she arrived there the armistice was signed. She had fifty dollars and a passionate desire to work, so she kept on going and landed in New York.

Fifty dollars had a limit, but young courage had none, so jobs broke for her after a while—all kinds of jobs. She worked all day, went to night school, and got ahead, as one full of vitalizing force will.

In 1919 she began to be restless. She did not feel that she had yet found herself. So she started out with a friend on a series of glorious and practical wanderings. She carried a camera with her, and it was this love of turning vanishing views into lasting pictures that eventually opened the door of opportunity to her.

During three years they visited forty-three different states, working at any odd jobs that might turn up. With a strange attraction for convulsions of nature, she had some surprising adventures with earthquakes and cyclones and similar disturbances. But Edith Keating has a charmed way of escaping unscathed.

In 1925 she returned to New York and entered the employ of the Fairchild Aërial Survey Company as a stenographer. She at once knew she was in the right place but the wrong job, and proceeded, as soon as she could, to find her way to the photographic department.

From the beginning, the idea of aërial photography fascinated Edith Keating. So one day she went out to a flying field

Digitized by Google
Original from UNIVERSITY OF IOWA

and got a pilot to take her up for a flight. In the air she took some views. It required quick judgment and apt calculation to snap a shot at an altitude of several thousand feet with the plane flying close to a hundred miles an hour. But Miss Keating had thought that all out beforehand. Later, when the pictures were developed, they turned out to be good, and Edith Keating knew that her special niche in life was in the air.

She became an assistant in the Oblique Aërial Photography Department and had many opportunities to go up and get pictures. Commissions to fly and obtain views followed in close succession and she loved it. She was at home in the air—it was her element. Today she has the proud distinction of being the only woman photographer in the world with a recognized camera and under contract to an aërial firm, flying with a $20,000 Fairchild equipment: camera, plane, and staff.

Miss Keating's time is divided between flights and work as a departmental executive, or, as she puts it, "it is proportioned between earth and air."

"Where do you prefer to be?" I asked her, "in the air or on the ground?"

"In the air," she replied, without a moment's hesitation. "I feel safer up there."

BRETT YATES

When Ernest Sniffed Grease Paint The World Lost a Doctor

"Ernest Carlton Brimmer? You're kidding us," say film fans; "that's Richard Dix"

SIXTEEN years ago, Mr. Brimmer and his son Ernest, a medical student, went to see "The Christian," which was playing at a local Minneapolis theater. The boy was keenly impressed with this drama of Sir Hall Caine's and had little to say on his way home. But the next night, at the supper table, Ernie astounded the family by announcing that he had decided to quit the study of medicine for the study of dramatics.

Pa Brimmer, an extremely religious man, pushed back his chair and stood up: "I want it clearly understood," he said, "that no member of my family can be an actin' fool."

"All right, sir," Ernie replied, "then I guess I'l have to leave home."

At this, Mother Brimmer began to cry. But she didn't dare oppose her husband. However, "Doc" Brimmer, the older son, whose two joys in life were the practice of medicine and the welfare of his eighteen-year-old brother Ernest, said:

"It's no use for us all to get upset. If Ernie wants to be an actor, let him be one. If Pa don't want an actor in his family, then Ernie can just give up the family name. Now, let's all sit down quietly and pick out a good stage name for him." And the name they picked out for Ernest Carlton Brimmer was Richard Dix!

"I was born in St. Paul, Minnesota," Dix said, "thirty-four years ago, and lived there until I was sixteen. The family then moved to Minneapolis to be close to my brother, 'Doc,' who was practicing medicine in that city. After two years in high school, I took up preparatory work with the idea of going to medical college. But when I had seen 'Doc' perform two major operations, I knew I wasn't cut out to be a doctor.

"After seeing 'The Christian,' I knew I *wanted* to be an actor. But Pa was so upset I didn't quite know what to do about it. 'Doc' said: 'Don't worry about it now. Just hang onto the idea and get whatever work you can to do, and something will turn up.'

"I got a job as bank messenger which paid me twenty-five dollars a month. At nights, I read and studied Shakespeare as best I could. But I needed a teacher. So, a little later, I joined an evening dramatic class. A few months afterwards, we put on a show.

"That play was my undoing. Once I sniffed grease paint, there was no going back to the bank for me. I decided to get a job on the real stage—even if I had to carry a spear.

"Curiously enough, that's what I had to do when I did get a job as a super in a local theater in Minneapolis. I carried a spear and spoke exactly six words. However, James Neill, who happened to be playing in the 'College Widow' with the St. Paul Stock Company, saw me in my spear-carrying stunt, and needing a juvenile, he offered me fifteen dollars a week to join the St. Paul Company.

"I stayed with the company a year, but New York was calling me. So off I started, with seventy-five dollars in my best clothes.

"On Broadway I saw another side of the theatrical picture. From agency to agency I went—week after week—and always I was met with the same old story: 'Nothing today.'

"When at the end of my seventy-five dollars, I was given a contract by the Packard Agency. But it wasn't on Broadway. It was in Pittsburgh, with the Pitt Players—at thirty-five dollars a week.

"I was getting along fine with the Pittsburgh Company when I received a telegram from home: 'Brother very low. Come at once.' It was signed 'Mother.'

"When I reached Minneapolis, 'Doc,' who had stood by me through thick and thin, was dead."

Dix never returned to Pittsburgh. He went from his brother's funeral to Dallas, Texas, playing in stock at fifty dollars a week. A lot of money, that seemed, for a twenty-year-old boy. But it wasn't. For, shortly after 'Doc's' death, Dix's father lost everything he had and the boy assumed the burden of supporting his father and mother and sister.

With his new responsibilities, Dix matured overnight. He found it increasingly hard to play comedy rôles He wanted serious parts, but nobody would listen to him. While playing in stock in Los Angeles, he was given a movie test and received his first picture rôle in "Not Guilty."

"I had a tough time getting the lead in 'The Christian,'" Dix said, "for Mr. Goldwyn wanted Barrymore for the part. But eventually I got it."

That was ten years ago. Since then Richard Dix has played in all sorts and kinds of pictures, and his following has grown to hundreds of thousands of people throughout the world.

And now, through the medium of the "Talkies," his fans can both see and hear him. "No longer, thank Heaven," says Dix, "will I be asked to jump off cliffs and save the honor of the heroine. I can cut the comedy hokum and play real parts."

An aid to economy that actually improves your meals!

Wise economy reflects nothing but credit on those who practice it . . . In fact prosperous people are among the first to take advantage of every improvement that brings them a better value at less expense . . . That is why Campbell's Vegetable Soup is a regular item in the "best homes" . . . Now as never before, women are on the alert to see that their food dollars go the farthest . . . The result has been to sweep such a modern and progressive household help as Campbell's Vegetable Soup to its tremendous nation-wide popularity . . . Fifteen health-giving vegetables — a meal in itself . . . Less other food to buy, less kitchen work, a real saving . . . And it's the best food that money can buy . . .

At your grocer's . . .
12 cents a can.

I'm rolling home to Campbell's
As hungry as a bear!
I hear my tummy calling
For the soup that's waiting there!

A choice for every day in the week

CHEVROLET

WHEREVER you go, the new Chevrolet Six will thrill you with its quiet, powerful performance. The new six-cylinder motor delivers its power with that smooth, even, velvety flow which is so essential to motoring satisfaction. Steering is delightfully easy. Gears shift quickly and quietly. And the big, four-wheel brakes are positive in action and easy to apply. The new Fisher Bodies are more beautiful than ever with the introduction of a wide variety of color combinations that are now available. But most remarkable of all, the new Chevrolet Six actually sells *in the price range of the four* . . . with economy of better than 20 miles to the gallon of gasoline! See your Chevrolet dealer today.

The Roadster, $525; The Phaeton, $525; The Coach, $595; The Coupe, $595; The Sport Coupe, $645; The Sedan, $675; The Imperial Sedan, $695. All prices f. o. b. factory, Flint, Michigan.

Doc Waddell—Circus Pastor

SUNDAY comes on Wednesday afternoon to the Dodson's World's Fair Shows. That is the day the management "closes for business" at 2:30 so that Doc Waddell, pastor to the show's six hundred performers and employees, can call them for religious services.

A Sabbath stillness pervades the midway. The ballyhoo is silenced. Spielers, performers, roustabouts, ice cream, peanut, and hot dog vendors troop into the canvas church, and the show's three massed bands swell the chorus of old-time hymns.

Doc Waddell, who is probably the only circus pastor in the world, was born with the circus virus in his blood. His maternal grandfather was an animal trainer and his mother had been a circus performer. At the age of ten he ran away and found a job selling peanuts in the circus that employed his animal-training grandfather.

The lad grew into a side-show spieler and became famous in circus circles. Then came his conversion and his retirement from show life.

But not for long. Waddell wrote an article, "Why Don't the Shows Clean Up?" The manager of the T. A. Wolfe Shows saw it and wrote to the author to come and provide some religious influences for his employees.

So, back into the circus fold stepped Doc Waddell, to work with the people he knew and loved. Six days a week he is adviser, confidant, and guide to the members of his show. On Sundays, when the show, which makes a one-week stand in each town, is on the move, Doc busies himself visiting the local jails or speaking in Salvation Army citadels.

"A unique pulpit," says Doc Waddell. "Why, it's the most interesting pulpit in the world." GEORGIA WILLIAMS MORITZ

The Bus—A New Giant in Transportation

(*Continued from page 45*)

factory zone of East St. Louis, and so came to the Mississippi. The Father of Waters rolled seaward beneath our spinning wheels. There was the Eads Bridge, there the levee to which the Lee had beaten the Natchez to the thunder of a continent's applause. Just above was Bloody Island, where there were "Pistols for two and coffee for one" in the old days of St. Louis.

Half Northern, half Southern, wholly American, and attractive from every angle—one caught the Spirit of St. Louis even in an hour that was mostly given to bath and breakfast and a rechecking of luggage for California.

We followed the beautiful valley of the Merramec to its fount in the Ozarks. A county sheriff who boarded us from his ditched car assured me that the "strangeah" who fared farther than the Ozarks might also fare a lot worse.

YELLOW-BROWN fumes, shot through with furnace-glare, heralded the approach to Joplin, and we stopped for midnight supper in the heart of America's greatest lead and zinc smelting area. We were over the Oklahoma line in another hour, and darkness still shrouded the land when we rolled through the empty streets of rich and populous Tulsa, often spoken of as the Oil Capital of America. Roads which had been steadily growing worse since we left Missouri were disclosed by daylight as quagmires of red mud running through a barren rocky country that looked as worthless for farming as for grazing. A ruffle of derricks on the skyline showed that the worthlessness was only skin deep, however, and a glance at the map revealed that we were skirting the edge of fabulously rich Seminole Oil Field.

Oklahoma City, with monumental public buildings and twenty-story skyscrapers on a site that had been staked in quarter-sections in the land-rush following the opening of Indian Territory a scant three decades before, amazed with its progressiveness and modernity.

An hour or two beyond Oklahoma City one became aware he had passed that unmarked boundary line of "where the West began." Soil darkened and deepened, oil fields gave way to cornfields, and these in turn to cattle ranges. Bunch grass and red, white-faced, hornless steers stretched to the far horizons as darkness fell.

WE CROSSED the Texas line in the night, and early in the morning rolled into Amarillo, whose name means "Yellow" but whose viewpoint has never been anything but "Rosy." It is the only city in the country with a bus terminal really abreast of its needs.

We were still on the plains beyond Amarillo, but plains that were tilted sharply upward as the base of the White Mountains was approached. The Whites are really a southern extension of the Rockies, and, in crossing them, the highway, at eight thousand feet, reaches a point considerably higher than that at which it surmounts the transcontinental divide in New Mexico. We were in a foot of snow at the summit, and for the last two thousand feet of climb the driver had to make a carburetor adjustment to suit the rarefied air.

The wild and once inaccessible White Mountains had been a great outlaw refuge in the old days. A grizzled mountain rancher in a seat behind me sang the saga of "Billy the Kid" half the night, identifying many points along the route made famous by the exploits of that diverting youth.

I drowsed through much of the epic recital, but always seemed to rouse at the approving chorus which greeted the oft-reiterated "An' yu kyant tell me a guy whot does good like that is an en'my uv sosyety!" It appears that the kindly and amiable Billy, more sinned against than sinning, emulated Robin Hood in stealing only from the rich to give to the poor.

Attracted by a road that was literally a winding tunnel through cedars and druid oaks, I roused and rode with the driver during the latter half of the night as we descended to the flat desert plain of New Mexico. A half dozen times deer galloped with or through the golden light-beam, and once a bristling lynx spat venom and indignation at the menacing monster that charged past the bend where it was suppering on a freshly caught quail. Glare-blinded rabbits darted past or under the wheels at every turn.

A shaft of the unrisen sun playing on blue-brown turrets of smelter smoke gave the bearing of El Paso, and, once the line back into Texas was crossed, we rolled on at a dizzy pace over asphalt pavement. The dust storm roaring in across the Rio Grande from old Mexico made the morning bath doubly welcome.

A half-breed cowboy trying to bite chunks out of the concrete sidewalk in front of the bus station was diagnosed by a nurse-passenger as in the throes of an epileptic fit. Local experts thought differently—also diversely. One said "Pulque," another "Mescal," and a third "Tequila." Then the chief of police drove up, and the "Mescals" had it. Mescal, it might be mentioned, is liquid fire distilled from the heart of the cactus.

FIELDS green with alfalfa or white with ripe cotton bordered the road all the way to the picturesque town of Los Penitentes, where the fanatical Indians still have to be restrained from maiming themselves at their annual festival. Then, with the morning sun gilding the pipes of the Organ Mountains to the east, we turned westward into the great desert which stretched with no more than scanty man-made oases, all the way across New Mexico and Arizona and halfway across California.

By midafternoon we were over the Arizona line and entering that weird land of fantastic colors and formations where Geronimo and his Apache bands had played their grim game of hide-and-seek with the troopers of Miles and Lawton.

The tang of the blown-fumes of arsenic and sulphur told that the skyglow of early

The Great Tomorrow By Walter B. Pitkin

The Whole World on Time

We're so accustomed to clocks which are set hourly by telegraph from the United States Naval Observatory that nobody will bat an eye over the forthcoming watch that will be regulated by radio. Germans and Americans are racing against each other to get this invention on the market.

Priceless Speed

We have become so accustomed to speed that we forget its cash value. So consider this: If we increase the average speed of American freight cars as little as one mile *per day*, we are virtually adding 100,000 cars to the rolling stock of our railroads. J. H. Parmelee, Director of the Bureau of Railway Economics, shows that, since 1920, more than five miles per day have been added to that speed; hence, merely by moving cars faster, the railways have created the equivalent of 500,000 cars. This has saved them about $750,000,000 which would otherwise have gone for extra cars to handle the steadily mounting burden of freight.

By reducing grades, eliminating sharp curves, doing away with grade crossings, and putting in extra tracks for express traffic, railroad managers are steadily accelerating trains. And so, too, are car designers, who are putting roller bearings on the axles and are reducing dead weight by the use of finer metal. Nor were there any revolutionary inventions.

We Knew It Was Coming

You've heard of the artificial larynx, of the artificial lung, of all the rest. And now comes the artificial ear—or, no! Not quite that yet. C. A. Andree and R. F. Norris, of the University of Wisconsin, who've developed it, call it the electric ear, except when talking to scientists—then they call it the acoustimeter. To be sure, it only records echo effects far more keenly than the human ear can; but, next thing you know, somebody'll hook it up to little Robert Robot and his synthetic throat, lungs, and the rest; and then we'll have a Synthetic Listener for Synthetic Conversation.

When you consider how cheap talk is, and how plentiful, what's the use?

evening was from the copper smelters of Globe and Miami. Then we swayed and lunged along a new mountain road threading the lofty mountain sources of the Gila River, before descending, in the first flush of the early dawn, to the cotton and alfalfa fields and the fragrant orange and lemon groves of the Salt River Valley and so to Phoenix, gay and salubrious capital of the desert Southwest.

CROSSING the red-brown Colorado, we entered a wilderness of mountainous dunes where the highway has had to be raised on a concrete viaduct many miles to avoid submergence in drifting sand. Verdant fields and groves and the shimmer of sunlight on flowing canals and ditches identified the famous desert garden of the Imperial Valley, most productive of all the world's reclaimed regions—and the one most exposed to disaster. As on a relief map, one could read the whole story—past, present, and possible future—at a sweep of the eye. Lying in the below-sea-level area, cut off when the silt of the Colorado River built up a damming delta cone across the ancient arm of the Gulf of California, it needed but one great flood to turn the creating river to a destroyer and fill the fertile and populous valley to the level of the still clearly marked beaches at the foot of the desert mountains to the west and north. Some hundreds of millions of dollars in ranches and cities and homes had been literally created in two decades and a half by bringing the regulated waters of the Colorado to the rich silt beds deposited on the floor of the ancient gulf. There below us, written plain enough for one who rolled at forty miles an hour by bus to read, was the reason for the great Black Canyon Dam to equalize and control the floods of the Colorado.

On the eastern outskirts of the pretty little city of Holtville we crossed the narrow silt-walled gorge of a small but violently flowing river—the Alamo.

From soup to fruit, my lunch during the noonday halt at El Centro was a strictly below-sea-level affair. Chops and steaks, milk and ice cream, figs, dates, melons, limes, and oranges—all were Imperial Valley products, and the best of their kind. The cactus candy lent a fitting touch. This desert garden is practically sufficient unto itself, even to the production of movies.

The main bus route by which I traveled now turned northwesterly toward the mountain pass leading through to Riverside and Los Angeles. My bus climbed up out of the desert, threaded the mountain passes under the age-old snows, and then dropped down into orange groves and rose gardens and traffic jams composed of cars from the ends of the earth. The whole fifty or sixty miles from Redlands to Los Angeles we were in unbroken traffic and practically continuous settlement. One did not have to be a native booster to realize that here in southern California, fifty miles wide from the mountains to the sea, there must in time grow up perhaps the largest city in the world.

In a terminal so busy that the traffic had to come and go on two levels beneath what will soon be a height-limit hotel, our bus drew up to a covered platform and discharged passengers and luggage.

Three quarters of an hour later I was dropped at San Pedro.

LESS than twenty years ago the first primitive motorbus to be operated in the Western Hemisphere chugged its way up Fifth Avenue, to the not inconsiderable consternation of the horses straining at the traces of the other common carrier vehicles plying that famous thoroughfare. Today there are close to one hundred thousand motorbuses operated in the United States alone—half again as many as the total number of passenger railway coaches. In 1928 the mileage of bus lines was almost three times that of the route mileage of the railways, and the buses carried three billion passengers. There is hardly a crossroads store, desert camp, or mountain hamlet that cannot be reached by bus. A single bus company in New Jersey carried 300,000,000 passengers last year; a similar concern, centering on Chicago, operates bus lines which reach from Canada to Mexico, from the Atlantic to the Pacific. One can travel from coast to coast in Pullman-type buses in five days and a half. Sleeping-buses with berths, lavatories, restaurant service, and general accommodations for twenty-six passengers are in regular service on the Pacific Coast. Bus stations—as complete in their way as the great railway terminals—are building or planned along all the main trunk routes. Combination bus and aëroplane services were operated last year in Minnesota and on the Pacific Coast, and this year will be available on the transcontinental runs.

THE interurban motorbus was the outgrowth of the so-called jitney outbreak, which swept the country like a flight of locusts in the year or two immediately preceding the War. The jitney—usually a private-owner-driven auto—called into being to fill a real transportation need, soon developed to the proportions and perniciousness of a pestilence, and, as such, had to be stamped out. With its passing the need remained, and it was into this breach that the first forerunning progenitors of the modern motorbus were driven.

But, in the first chaotic years of the motorbus, few of the railway leaders read the signs aright. Most of them saw in the surging knots of people pushing into the dirigible boxes that were the early buses only a further drifting away of their passenger traffic, and they acted accordingly. They could not stem the drift by hitting the private automobile. Just as well try to land a solar plexus on a flight of locusts. But the bus looked like an easier mark. Because it was becoming a common carrier, the bus must be regulated like the steam and electric railways. The bus was hampered but (fortunately for the country and the railways themselves) not seriously hurt. Here and there, as in New York State, progress was slower than in other sections; but, by and large, the bus rolled on. And the reason for this was the perfectly simple and obvious one. The public had found in the motorbus something they needed and liked; they were going to have it. That was all there was to it.

Among the railway leaders there were several who were conspicuously absent from the war on the bus. Level-headed Samuel Rea, of the Pennsylvania Railroad, doubtless deriving strong consolations

This Coupon is our ad

Words, we know, will never win you. So we stand or fall on 7-days' trial. Yet this simple test has made Palmolive Shaving Cream a leader quickly

GENTLEMEN: All any advertising can accomplish is to secure a trial of the product. After that the article itself must do its own selling.

So great is our confidence in Palmolive Shaving Cream that we do not ask you to buy; rather, to try it at our expense. For we find that 86% of men who try it buy it. And its great success is based on the fact that it sells itself every time you use it.

So we print our coupon conspicuously, for your convenience. When you mail it to us, half our job is done. Will you send it now?

5 remarkable features

Palmolive Shaving Cream was created to suit dissatisfied shavers. 1,000 men pointed out the things they'd sought. Our great laboratories experimented. Finally the 130th formula brought success. For in one remarkable shaving cream these 5 important features are combined:

1. Multiplies itself in lather 250 times.
2. Softens the beard in one minute.
3. Maintains its creamy fullness for 10 minutes on the face.
4. Strong bubbles hold the hairs erect for cutting.
5. Fine after-effects due to palm and olive oil content.

Now a trial, please

Whether or not you are suited, try Palmolive Shaving Cream. For seven days know its supreme luxury. You stand to win—at least, you take no risk. Please mail the coupon.

With the new unbreakable Bakelite top

4415

To add the final touch to shaving luxury, we have created Palmolive After Shaving Talc—especially for men. Try the sample we are sending free with the tube of Shaving Cream.

PALMOLIVE RADIO HOUR—Broadcast every Wednesday night—from 8:30 to 9:30 p. m., eastern time; 7:30 to 8:30 p. m., central time; 6:30 to 7:30 p. m., mountain time; 5:30 to 6:30 p. m., Pacific Coast time—over station WEAF and 39 stations associated with The National Broadcasting Company.

THE GREAT TOMORROW

(Continued from page 82)

Pastureless Cows and Cowless Pastures

Now they're beginning to concoct food for Bossy in the chemist's laboratory. First comes a dehydrated menu—which is enough to give any conservative cow water on the brain, isn't it? The Walker Gordon Milk Company reports that it makes healthy cows and excellent milk. In the Great Tomorrow, who will pray to be led into green pastures and beside still waters? Only the golfer and his caddy, perhaps. The cow that yields condensed milk will no longer go to grass. She will prefer special brands of canned grass and fodder from the chain store—perhaps on the installment plan, too.

Such a Labor-saving Device

Every day, in every way, man gets lazier and lazier! Fifth Avenue jewelers tip us off that the self-winding wrist watch is ready. They say the advance demand is immense, in spite of the high cost. The watch winds itself with a mechanism set in motion by your arm, as you swing it in walking. The principle is somewhat similar to that of a pedometer. The watch stores up enough energy during the normal day's walking to keep it running throughout the night or for much longer. Which reminds us that, free for nothing, we've been wanting to offer the watch manufacturers an elegant slogan: No Present Like the Time.

Here's a Mechanical Health Department

Every city's water supply is a constant source of danger. If polluted water gets into the reservoirs or other sources only one hour ahead of the Health Department's patrol, an epidemic can gain foothold. To prevent this, Ernest Watzl, a Swiss chemist, has devised a machine so sensitive to impurities in the water that flows through it that it automatically releases chlorine as needed.

Being automatic, it does not make mistakes as to the amount needed, as is often the case when the treatment of water is left to man. At the same time it writes a record of its own good deeds.

from the fact that the automobile had given his system (along with most other lines of the country) more in freight than it had taken away in passengers, stated, as far back as 1922, that short-haul passenger traffic was becoming increasingly unprofitable to the railways, and that the loss of it to motor vehicles was a form of blessing in disguise in that it would give costly present-day terminal facilities a new lease on life. Other railway executives—notably in New England where the compensatory return in auto freight had not gone so far as in other sections to make up for passenger losses—were studying the bus, not fighting it; but the first one of these to translate thought into action was the clear-visioned young engineer who had so quietly but competently filled Jim Hill's big chair in the Great Northern's office.

President Ralph Budd was keenly alive to the losses of the railways in short-haul passenger traffic. He knew that there had been a falling off of thirty-three per cent in a few years—that they were actually carrying fewer passengers in 1924 than they did in 1911.

BUT Ralph Budd did not, for that reason, join in the attack on the motorbus. His common sense, supplemented by a few figures, told him that the irresistible suck which had created the back-flow of rail riders was to be sought in the fact that there had been 3,300,000 private automobiles in the country in 1916 and 20,000,000 ten years later. He even suspected that the drain of passengers to the motorbus had been almost negligible.

This heretical theory was confirmed when studies carried on along his own line revealed a sixty-five per cent loss of passengers over a given period at representative stations where there was no competing motorbus service, while, at a number of equally representative stations where there was such competition, the loss had been nine tenths of one per cent less. Subsequent investigations disclosed a similar condition in various parts of the country.

Having established the fact that motorbus competition was of slight, if any, injury to the railway, the next point studied was as to the possibilities of making it help. There were two promising leads here—one negative, one positive. The first had to do with reducing operating costs through replacing non-paying trains by buses; the other with building up bus operation as a profitable business of its own.

The Great Northern Railway formed a million-dollar subsidiary for the purpose of general bus operation. As a practical means of putting his plan into effect, Ralph Budd bought the Northland Transportation Company and used it as the nucleus of a consolidation of bus lines which soon covered all of the northern two thirds of Minnesota. Eric Wickman remained at the head of the enlarged Northland Company, and with him was associated as general manager O. S. Cæsar, of the Superior White Company, whose line had been included in the consolidation.

Backed by Great Northern capital and Ralph Budd's brain, and with two of the ablest young men of the rising bus industry in active management, one is not surprised to learn that the Minnesota experiment with coördinated and coöperative railway-bus operation was a success from the outset. This is true both from the standpoint of operators and the public. The initial saving from unprofitable trains eliminated would alone have warranted the move, but the crown of success is the fact that motorbus operation is profitable. Within two years the hundred and fifty buses of the Northland Company were carrying more than 3,000,000 passengers annually over 2,750 miles of Minnesota highways, and at an average fare of 2.4 cents per mile. Studies and experiments in supplementary bus service practically contemporaneous with those of the Great Northern were carried on by the Boston and Maine and the New York, New Haven and Hartford Railroads, and with equal success.

The Minnesota and New England experiments with buses marked the passing of the era of the active opposition of the railways to motor transportation on the highways. The reorientation of the railways came as suddenly as the turn of a Fundy tide. One could point with his finger on the calendar to the season of the counter-drift—almost to the month and week. Samuel M. Vauclain, then president of the Baldwin Locomotive Works, sounded the new note during a railway convention in the fall of 1926, when he said that "the railroads would, in a few years, be swamped by the business brought them by cross-lines of buses and trucks."

RESPECTING the future of the motorbus in its relation to other forms of transportation, I am fortunate in having permission to quote from a letter recently received from President Ralph Budd, of the Great Northern Railway, in reply to my query as to his "opinion of the trend of the bus during the next five or ten years—the place it will ultimately occupy in our transportation system."

"I believe [he writes] the continuing decline in local passenger traffic indicates the public has definitely turned from the railway to the highway for such journeys. The greatest question in my mind as to the future growth of the bus business is whether the number of private automobiles will so greatly increase that nearly all local travel will be in private vehicles and no considerable part of it either in buses or on railway trains. The present trend does not indicate that the growth of travel by private automobile is affecting adversely the travel by bus, because people who think in terms of the highway when planning local trips seem to be inclined to use the buses when their own or some friend's automobile is not available for making a trip.

"I still think that the railways will handle the bulk of long-haul passenger travel, although I recognize the fact that the improved highways and the perfection of the buses themselves will attract a considerable portion of such traffic from the railways. While that business will grow, I do not think it will ever supplant or even seriously reduce the amount of long-haul travel by railway trains as it has reduced, and in some instances supplanted, the local travel by train."

All branches on the same tree; all growing out of the Chrysler root principle of standardized quality

Passing progress along so all can enjoy it

BEHIND this stout door is a compartment where a saline fog does its worst with the materials used in a motor car. Since no man could live in such an atmosphere, the test is observed through a small window.

ALL units of Chrysler Motors operate hand in hand, pooling their experience and resources, conducting group research and experiment, holding council together, exchanging ideas—and in each case the public is the principal gainer.

Instead of small groups of engineers working independently of each other, really pitted against each other, Chrysler Motors engineers are marshalled together as one vast creative force—with all thought and all effort keyed in a common spirit of teamwork and helpfulness.

There is no petty rivalry, no jealous contention, no hiding away of secrets. On the contrary, the combined group carries on its studies and development work in one great laboratory. Progress, as a result, is not selfishly confined to any one product, but is automatically extended all along the line.

Advancements worked out for any one Chrysler Motors car are, wherever possible, adapted and applied to all the others. Thus, as each Chrysler Motors car advances in quality, performance and value, all advance.

And, inasmuch as there is a Chrysler Motors product for every pocketbook, this means that the finest results of automotive progress are passed along to be within the reach of *everybody*.

Plymouth *out-reaches its field* *FIVE* different ways

CHRYSLER MOTORS PRODUCT

THE FULL-SIZE 2-DOOR SEDAN (Special equipment extra)

FULL SIZE PLYMOUTH

PLYMOUTH

AMERICA'S LOWEST-PRICED FULL-SIZE CAR

TO ANYONE with an eye for value, it is plain to be seen that the improved Chrysler-built Plymouth is the dominant car of the low-priced field.

Strictly speaking, there are just five main points on which to judge a motor car — Beauty, Performance, Comfort, Safety, Economy —and the newly refined Plymouth takes the head of its class on all five counts. The reasons are obvious.

One: Plymouth is the *only* low-priced motor car that can boast the refreshing charm, individuality and smartness of Chrysler designing.

Two: Plymouth is the *only* low-priced car that can demonstrate the smooth, flexible, animated performance that comes of Chrysler engineering principles.

Three: Plymouth is the *only* full-size automobile at anywhere near the price. It has the roominess of many a high-priced car.

Four: Plymouth excels in rugged, dependable construction, and is the *only* low-priced car with the safety of modern internal-expanding 4-wheel *hydraulic* brakes—self-equalizing, weatherproof and permanently noiseless.

Five: Plymouth can show a better record of low upkeep cost and at the same time match all comers in sparing consumption of gasoline and lubricating oil.

These are the facts. All comparisons simply go to show that Plymouth has made a clean sweep in obsoleting all the old rules and notions so long observed in the low-priced field.

The result is a constant upward swing in Plymouth sales, for motorists have long desired a car such as Plymouth — a car with *pride* appeal as well as *price* appeal.

How They Got That Way

By Dale Carnegie and Albert T. Reid

"Love is Not Love"

(*Continued from page 48*)

other man?" he asked her teasingly.

"Yes."

"Why, Sukey! You ought to pretend it's not, anyway!"

"I don't like pretending. . . . Well, then, no, silly—of course it's not any other man! It's some girls from Fairley who are in town, and they're coming out for supper."

"That's better! Well, I'll see you soon!"

SHE went into the house. Her mother and Edith were not home yet and the house was very cool and still. She went out to the kitchen and began, hurriedly, to get things ready for supper. She wanted to go up to her room and shut the door, but she dared not. If she did, she would not be able to come out again. She set the table and brought up a can of pineapple from the cellar. She took great pains with everything. She broke off a few sprays from the little almond tree and put them in the queer old green vase for the middle of the table. There, they were coming. Her hand tightened on the bread knife.

"Oh, you home, Chloe? I thought you and Hugh were off somewhere."

"We're back."

Edith, so queer and still after a visit to Carl's folks, gave her a look. Oh, if she tried to make her sorry for not going with her! But she didn't.

"It's such a nice day! Did you go to the woods?"

"Yes."

Oh, to get away from Edith's eyes! She supposed Edith was thinking of how she and Carl—Oh, how terrible life was! She ought to ask after Carl's family. She couldn't. She could not even try. Her father came, and Marjory, and they sat down to eat. She could only sit through the meal in numbness and silence.

"Don't you feel well, daughter?"

"I feel all right!"

Her voice was impatient and resentful. Oh, to get away from this table!

"You don't look up to par."

"I'm all right."

Oh, snoop, snoop, snoop! You couldn't have a thought but what it was pried into!

"Chloe, don't you want to walk down to the mail box with me?"

"Can't, Dad. Got to do Karl Heinrich."

Got to do Karl Heinrich! He's faithful! Got to do Karl Heinrich! Got to get away from here! Got to be alone! What was she writing? Two lines, over and over and over. "Oh, yes, Dad—it *is* nice out!" Karl Heinrich—*he's* faithful! . . . "Oh, good night! . . . 'Night—I'll be right up, Edie!" Those two lines, over and over and over and over. Her hands on the little yellow book—why did they shake so? What could she do to ease this intolerable ache in her chest? Were they all gone upstairs? Was she really alone here?

HER book fell on the floor with a little thud of despair, and she fled in a panic to the darkness of the porch. There, pulled up into a queer, hurting huddle, she sat against the post and tried to cry. Why couldn't she cry? Her heart was going to burst if she could not let the tears out.

Hugh! Hugh! Hugh! Why, he was hers! He'd always been hers, ever since she'd first known him! He *had* meant the things he'd said: He had! He had! For all his teasing, he'd meant them. Oh, always she'd known he was like that—faithful, in a way—but she couldn't have it proven so! Oh, Hugh! Hugh! Hugh!

She could smell the lilacs, just opening. And the faint fragrance of the lilies-of-the-valley at the end of the porch. The soft air touched her face so gently. A couple, passing, laughed with tender softness. She pulled her knees up tight against her, hugging them till her arms ached. She could not bear this sweetness! She could not bear it!

But suddenly she relaxed sharply, tiredly, went in and up to her room. So that was over.

SHE didn't see him again that year. He did call up commencement week; but she had waited too long then and found herself saying she was very busy.

"But, Sukey, I'm going home in two more days!"

"Sorry."

"Yes, you are!"

"Yes, I are. But I can't make it!"

"Well, write to me—say are you *sure* you're going to be busy tonight?"

"Sure."

"Well, good-by, then—and write!"

When she turned away from the phone, Edie said, "Why, Chloe, what's the matter? You're as white as a sheet!"

She didn't answer, but went past Edith upstairs to her room. Oh, why would people say such things? Couldn't they see that her heart was breaking, and leave her alone? *She* wasn't forever prying into other folks' affairs! Why did they do it?

She saw him Commencement Day, in the long queue of black-gowned seniors.

Then it was summer. In August came a card:

"You see, I *am* smart, Sukey! I passed my bar exams."

Yes, he was smart. He was smart enough to make her love him and not to tie himself to her in any way. She didn't answer the card, though she wanted to every day for weeks.

She wasn't very pleasant that summer. She was cross, and knew it. But she was thin and they forever picked at her about it. They advised this or that tonic. They wanted her to go somewhere for a visit.

"Oh, for heaven's sake, leave me alone!" she told Edie at last. "I don't *want* to visit anyone! I'm sick to death of folks—why should I take on any more?"

That hurt Edie; but she couldn't seem

NEWS
for the owners of
Buick
Hupmobile
Auburn 8
Graham-Paige
Nash

We have proved in thousands of miles of test driving on the Atlantic City Speedway, and in hundreds of laboratory tests, that the New Mobiloil "BB" gives the greatest summer protection and adds the most power to Buick (1929, 1928, 1927 models), Nash (Advanced and Special Six 1929, 1928, 1927 models), Hupmobile (All 1929 and 1928 models), Graham-Paige (All 1929 and 1928 models), Auburn 8's (1929, 1928, 1927 models). If you own one of these cars remember to *ask for Mobiloil "BB"*. The price is 35¢ a quart (price slightly higher in Rocky Mountain and Pacific Coast States), and there is a Mobiloil dealer always nearby.

Mobiloil "BB" is also recommended for other makes of cars. See chart at the right. If your car is not listed in it, consult any Mobiloil dealer.

No matter which make of car you drive, the way to be sure of correct lubrication for your automobile engine is to buy oil according to the Mobiloil Chart.

Regular draining and refilling with the New Mobiloil will keep the first-year feel in your engine for at least 30,000 miles.

VACUUM OIL COMPANY
Makers of high-quality lubricants for all types of machinery

FIND YOUR CAR

Here is a partial Mobiloil Chart covering most of the leading passenger cars made in the United States. Check up now. Find the correct grade of Mobiloil for *your* car. The recommendations below were made after practical and scientific tests of the New Mobiloil in your type of engine. Make this Mobiloil Chart your guide.

Longer-Lasting Shave Spares Embarrassment

Here's a new way to shave closer —to get a shave that lasts longer.

It's a satisfaction . . . to realize in the evening that your morning shave has lasted. How to get a close shave has been solved for you by Colgate chemists with small-bubble lather, the kind that can get down to the roots of the beard . . . and moisten it properly for a close shave. So why run any risk of an unshaven appearance?

Compare with ordinary lather

The minute you lather up with Colgate's, two things happen: 1. The soap in the lather breaks up the oil film that covers each hair. 2. Billions of tiny, moisture-laden bubbles seep down through your beard . . . crowd around each whisker . . . soak it soft with water.

Instantly your beard gets moist . . . easier to cut and pliable . . . scientifically softened right down at the base . . . then your razor can do its best work.

Better grooming—the utmost in shaving comfort. A world of critical men, after various experiments with big bubble lathers, have found that Colgate's is supreme. You, too, will agree. Let us help you in deciding—note our offer below.

COLGATE LATHER
Colgate's lather (greatly magnified) showing moisture contact with beard and minimum air. A common-sense principle scientifically authenticated and proved out practically by millions of men.

ORDINARY LATHER
Ordinary, big-bubble lather (greatly magnified). Note air-filled bubbles which can't soften the beard efficiently. Only water can do the job. Only small bubbles permit sufficient water.

COLGATE, Dept. B-1715, 595 Fifth Avenue, New York

to make amends for having said it. It was the way she felt.

"How'd you like to go to New York with me, Chloe?" her father said one day. "I have to go, and it would be fun, having company!"

"Oh, *no! No*, Dad! You can't afford it —and, if you can, take Mother. *I don't want to go!*"

His hurt eyes stayed with her all day long, but she made no apologies. Why didn't they let her alone? She throbbed with her resentment.

THEN the campus was full again and she was starting her last year. There was no point to it, any more than there had been to the other years. She was going through with it because it was expected of her; but it didn't mean anything. It meant, now, less than ever. If she could, maybe, have studied music—but no one had ever thought she had any special talent for it.

Edie and Marjory didn't bother her so much now. They acted almost afraid of her. Well, that was good, only it wasn't as if they let her alone because it was right; it was because they dared not intrude. That took most of the satisfaction from her solitariness.

But there came a day in English VIII, when Professor Eaton said: "For next week, we will learn three sonnets—the one on page 89: '*Love is not love . . .*'"

And there were those words coming blackly up to her out of the page—and all about her it was May and her hands stroked back his thick, brown hair while he said: "Well, how's this, then? . . . '*Love is not love Which alters when it alteration finds, Or bends with the remover to remove: O, no! it is an ever-fixed mark, That looks on—that looks on . . .*'" A strange darkness seemed to fill the October-bright room, and the rest got up and left her sitting there a long moment, too numb to rise and go about her day.

"Did you want something, Miss Bartley?"

"No—no!"

She stood up and went out of the room and down the worn old wooden steps, out onto the campus strewn with leaves and bright with sweaters. Everything was so clear to her eyes, as if she had never before seen the campus. And something was clear within her, where before had been a fog of hurt and incomprehension. The hurt was there still; but it was different now. "*Love is not love—love is not love which alters when it alteration finds—*"

Why, she had let it alter all her life! When she had had Hugh, how gay it had made her, how glad to be alive! And now she was not glad for anything—for anything at all. And yet she still loved him. It was all she did do. But—love is not love that alters when it alteration finds—if she could just get that clear. She had wanted *him* to do all the loving—was that it? Well, not exactly—but, now that he wasn't doing any, it had done something to her love. Did her love depend on his? No, oh, no; it didn't.

Well, then, why didn't her loving him still make her gay and joyous as she used to be? Was love, then, a giving or a taking? It ought to be a giving, ought it not? But she was letting hers spoil her life, and make of it a dour, lone thing. Was love like that? Really? She'd been thinking love

"Thank God! At last I'll be able to read and write."

HOW would you feel if you could not read the news of the world? No newspapers, magazines, books, letters, not even a danger sign or a warning notice?

Somewhere near you is a grown person groping in the dark, in many ways helpless as a child, because he cannot read or write. You can bring sunlight into his darkened life. More than that, you may be the means of bringing him better health—even of saving his life.

Today he cannot read messages on disease prevention. He does not know, unless someone tells him, the important rules of health or how to keep his family from having diphtheria, smallpox, or typhoid fever. These and other preventable diseases often make illiterate localities their breeding places and thus endanger the health of the educated, despite all their precautions.

Perhaps you share the mistaken belief that it is impossible to teach grown-up illiterates how to read and write and that they are content to be illiterate.

Get the confidence of an illiterate and ask him if he would like to be able to read and write. Tell him he can learn to write his name in 30 minutes and learn to read in a few months. In all probability his eager response will amaze you.

It may surprise you to learn that the majority of illiterate persons in the United States are native born—more than three million illiterate Americans. Many of them have never had a chance to learn and do not know where to look for instruction.

Illiterates are not hard to find—a servant, a farmhand, an employee in your own or your neighbor's shop, a laundress, a deliveryman, a laborer in your neighborhood.

There are more than 5,000,000 men and women in the United States who cannot read health messages concerning sanitation and prevention of disease—more than 400,000 of them are in the State of New York, more than 300,000 in Pennsylvania, about 150,000 in Massachusetts. You can find them in every State of the Union—in cities, in towns and in country districts.

Will you give someone a present that he would not exchange for hundreds of dollars—the ability to read and write—a present which costs you nothing?

Find *your* illiterate. If you will help him to learn to read and write, the Metropolitan Life Insurance Company will send you, free of cost, grooved writing pads and illustrated lessons for beginners.

Ask for Booklet 99-A.

LIVINGSTON LUDLOW BIDDLE, III

"master" of

SUNNY RIDGE FARM

Protected by this simple plan every mother can use

Livingston Ludlow Biddle, III is the son of Mr. and Mrs. Livingston Ludlow Biddle, II of the Philadelphia Biddles, whose winter estate is Sunny Ridge Farm, Pinehurst, N. C. He is the grandson of that famous financier, Anthony J. Drexel Biddle

STURDY and rosy, the little boy trots about his father's peach orchards at Pinehurst. Livingston Ludlow Biddle, III—who has enjoyed every advantage of social position, every luxury of wealth, since the day he was born.

In his yellow head there's no idea of the constant care surrounding him. Yet at Sunny Ridge Farm—the lovely country home to which he is heir—all centers on his happiness and welfare.

The best child specialists watch his physical progress. His exercise is planned, his play regulated, his diet supervised.

All this expert knowledge heaped on one small boy! Yet they've decided one important thing just as almost every mother decides it for herself.

Advised by famous child specialists, Mrs. Biddle gives Livingston for breakfast and supper, that *hot, cooked* cereal long thought of as the children's own—good old Cream of Wheat.

Livingston's outdoor play, like his Cream of Wheat breakfast, is part of Mrs. Biddle's health program

"Livingston was a very young baby when the doctors first prescribed Cream of Wheat," says Mrs. Biddle. "He's been eating it ever since, and is wonderfully healthy."

This decision of the Biddles' physician is supported by 221 members of leading medical societies in New York, Chicago, San Francisco and Toronto. When questioned recently, *every single one* of these distinguished specialists approved Cream of Wheat.

They know how abundantly rich in energy it is—how amazingly quick and easy to digest, because all the harsh part of the grain is removed.

Let your youngsters have this simple little care that's given Livingston Biddle—a good hot bowl of Cream of Wheat every morning.

The Cream of Wheat Corporation, Minneapolis, Minnesota. In Canada, made by The Cream of Wheat Corporation, Winnipeg. English address, Fassett & Johnson, Ltd., 86 Clerkenwell Road, London, E. C. 1.

FREE—this simple plan that makes children enthusiastic about their *hot, cooked* cereal. The children's H. C. B. (Hot Cereal Breakfast) Club, with 734,000 participants. Badges, pictures, gold stars, etc. All material free, sent direct to your children. Just mail coupon to:

was like that. She'd been believing love was like that. But—"*Love is not love which alters when it alteration finds—*"

When she came to the house, her mother was getting lunch and she looked up at Chloe anxiously.

"I made some of that pear salad you used to like so well, Chloe," she said.

For an instant the familiar resentment, bred of habit, swept over her; then she saw, with that queer new clarity, the anxiety in her mother's eyes for what it was. It was love. Love for her, Chloe. A giving love—a love that didn't stop giving just because she was so cross and resentful and bound up in her own hurt.

"Mm! How good it looks!" she heard herself saying with a strange, new warmth of gratitude.

She could not meet the relief in her mother's eyes because of the shame that welled up in her heart.

Next day, when Edith said, not expectantly, "I'm going down to Carl's folks for Thanksgiving dinner," Chloe suddenly knew a strange thing—she knew that Edith did not any longer love Carl in that way, that perhaps she had not for a long time; but that, nevertheless, she felt compelled to make these visits for some reason beyond Chloe's understanding.

"Let's have them here," she made herself say. "You don't want to be away on Thanksgiving Day."

She got up and left the table because she could not bear Edith's silent gratitude.

ON Thanksgiving Day she watched Edith curiously all day long. She had to know, somehow, what it was compelling Edith. Edith was so gentle, so understanding of these hurt, older people, so careful never to rub their wound. And yet—and yet Chloe knew Edith didn't love Carl any more. Why, then?

Her heart kept groping after some truth that her mind said must be before her very eyes. And then, quite sharply, she saw. She saw that there was a love more inclusive, bigger than any she had known. She saw that Edith and her mother—yes, and her father—possessed this love that included their own and other people's loves. That, after all, she'd not had much, only a little, selfish thing that could hardly be called love. She felt sick with the realization of her own smallness.

A few days after that she was studying calculus, which she detested, and it came over her, suddenly, that she didn't hate it any more, that it was part of some bigger whole of learning—as her love for Hugh had been part of some infinity of love of which she had not dreamed. Her whole college course began in that moment to mean something to her, something that had nothing to do with sines and cosines, with French irregulars, with the history of Italian art—but something that took them all in and was valuable beyond all comprehension. She began to grow.

She thought, one day, that she should have answered Hugh's card about the examinations; but now it was too late for that. And he did not write again.

It was a strange, long winter. There were nights when she walked with her father and found she didn't have to talk to him much, after all; that the moon on snow-laden campus branches meant something to him, too, that didn't have to be put into words. And Edie, who lived her

FREE Get a generous sample tube of Colgate's Ribbon Dental Cream—the cleansing dentifrice—simply mail the coupon below and be convinced.

A 25c tube of Colgate's contains more toothpaste

. . . than any other leading brand priced at 25c.

More important—Colgate's cleans better—its penetrating foam washes away decayed impurities in crevices not reached by brushing.

COLGATE'S has become the largest-selling dentifrice in the world because it not only polishes the outer surfaces of the teeth, but more important, because its wonderful penetrating foam washes away the decaying food particles and mucin deposits lodged in the tiny crevices of the teeth, not reached by ordinary brushing.

Recent scientific tests confirm the fact that Colgate's has a greater penetrating* power than any of the leading dentifrices on the market. This means that it gets down into every tiny crevice. There it softens and dislodges the decaying impurities, washing them away in a detergent wave.

In this foam is carried a fine chalk powder, a polishing material used by dentists as safe yet effective in keeping teeth white and attractive.

Consider Colgate's two superiorities. It not only polishes the surface thoroughly, but because it contains the world's greatest cleansing agent, it cleans where brushing can't . . . an extra not found in ordinary toothpaste.

If you have not yet become acquainted with Colgate's, may we send you a generous trial tube and an interesting booklet on the care of the teeth and mouth? Just mail the coupon.

How Colgate's Cleans Crevices Where Tooth Decay May Start

Greatly magnified picture of tiny tooth crevice. Note how ordinary, sluggish toothpaste (having high "surface-tension") fails to penetrate deep down where the causes of decay lurk.

This diagram shows how Colgate's active foam (having low "surface-tension") penetrates deep down into the crevice, cleansing it completely where the toothbrush cannot reach.

LISTERINE Shaving Cream

Glycerine film ends razor pain

YOU can confidently expect the most amazing shaving comfort, the first time you try this new-type cream.

You will think your blade has suddenly acquired some magic smoothness. You will marvel that your skin is not drawn tight but relaxed, not harshened but soothed, not heated but cooled.

That's what glycerine does in a shaving cream. And this is why. At the cutting line of the hairs, Listerine Shaving Cream deposits a microscopic film of this cosmetic lubricant. Gone is the friction between beard and blade. The steel edge slides on that film. There is no slashing or sticking. Smooth and clean, off come the whiskers, with your skin unruffled and gladdened by the healing Listerine ingredients.

The next time you are buying a bottle of Listerine, remember to ask for Listerine Shaving Cream. That will end your search for the utmost in shaving comfort.

157 shaves-50c

Will you have to pay more for lubricating lather and Listerine benefits? No. The big tube contains 118 inches of cream, more than enough for 157 shaves, easily a five-months' supply. Try it for tomorrow's shave.

LAMBERT PHARMACAL CO., *St. Louis, Mo.*

life so capably and quietly—she found that Edie had come to love Professor Lemming—but there were Carl's folks. She found that Marjory, who looked so pretty and so useless, wanted with all her soul to write poetry, but was yet ashamed to let it be known.

How queer it was that all this was clear to her now, when she had been blind to such things all her life! She seemed by this insight to have acquired some power that let her turn gayety on or off at will, and many an evening of song and reading made the house into a place it had never been whole-souledly before.

Not that there weren't nights—long, hideous, wakeful hours—when all she knew was the fact that he hadn't meant *that*. But she had learned something—not to let her nights spill over into her days and spoil her every contact with people. She had learned to be stronger than that!

BUT, after winter, came spring, and spring is hard to bear, with a hurt in your heart. It flaunts its merry, upward-soaring gladness in the face of bitterness, and snaps its fingers at old wounds. All she could do was to try, in gentleness, to make Carl's family see the rightness of Edie and Professor Lemming together.

In April, it was, when she came home to find a letter on the desk in the hall. She stood staring at it before she could put her fingers to it.

"Did you find your letter, Chloe?" her mother called from the sewing-room.

"Yes."

But still it was a full moment before she put out a hand for it. Then she ran upstairs to her room, shut the door, sat down on the box by the window and opened the letter.

Dear Sukey [*oh, that silly old name*]—Dear Sukey—I'm coming to Syranac City the tenth of May. Could I see you while I'm there? Your *successful* attorney—HUGH STAINS.

And suddenly the tears she had not shed these long months just past came flooding. Could he see her? *Could he see her?*

Dear Hugh—Of course!—CHLOE.

Was that too eager? Well, too eager or not, it was said. It was sent.

She could not join in much on things in the weeks that followed. And, she thought once, puzzledly, she didn't have to. They seemed to understand her better now, and to let her alone when she desired it.

Trees began to show faint red and green. May was come! May first—May second—May third—the days crept by. The ninth.

The morning of the tenth she woke with that old crazy expectancy throbbing through her. She thought: "I wonder if I'll always feel so, knowing he's coming!" She went to morning classes, came home, ate only a bite of lunch. Then she went to her room and put on the old linen dress, the gay tie.

"Chloe! Chloe! Here's Hugh, dear!"

"*Here's Hugh, dear!*"

She came down the stairs slowly, but her feet seemed to dance a tune. "Here's Hugh dear! Here's Hugh dear!"

"Hello, Sukey!"

And there he was, just the same as always—so friendly, so whimsical, so teasing, so *dear!*

"Hello, Hugh!"

To get the Most Out of your Inter-city Calls

While every hour is telephone hour, there are certain periods of the day better than others to place your inter-city calls. Between the hours of 9.30 a.m. and 11.30 a.m., for instance, executives are busy answering correspondence, seeing visitors and attending to other details. Your calls —those that do not have to go through immediately—are more likely to receive undivided attention if made in the less crowded periods of the business day.

In fact, many business men prefer being called by telephone before 9.30 in the morning, others just before 2 o'clock, and still others after 4 in the afternoon. Telephone calls to other cities are easy and convenient, and the time and money they save are surprising. A New York executive had a business matter to be settled in Indianapolis. He was too busy to go. He placed a telephone call and made the round-trip without leaving his office.

The Bismarck branch of a packing concern estimates that it saves $2450 a month in costs and time out of the office by the use of inter-city calls. Calling by number takes less time. Bell Telephone Service is *Convenient . . . Economical . . . Universal.*

"I WILL NOT RAISE MY BOY TO BE A JANITOR"

This is the Age of Automatic Home Heating . . . founded on Automatic Heat Control

"What's that, Dad?" "It's a heat regulator, son. It runs the checks and drafts by itself and keeps the rooms heated to just the right temperature all the time. It saves mother and me a good many trips to the basement to fix the fire. Every morning it gives me an extra hour of sleep because it wakes up the fire and warms the rooms before we get up. When you get older you'll appreciate how much disagreeable janitor duty that little instrument does for us." . . . Women who live in homes guarded by the Minneapolis-Honeywell Heat Regulator are freed from the drudgery and responsibility of constant fire-tending during the day. They know, too, that the comfortable, uniform temperature maintained by the heat regulator prevents many colds and helps to keep the family well and strong. . . . . .

Your family can secure all the priceless advantages of automatic heat control—the foundation of automatic heating—in two ways: Install a heating plant burning coal, oil or gas automatically (the leading makes, you will find, depend on Minneapolis-Honeywell Controls). Or equip your present heater with a Minneapolis-Honeywell Heat Regulator, modest in cost but destined to give you a lifetime of faithful, automatic service. May be purchased on modern finance plan. Write for free booklet, "The High Cost of Overheating."

MINNEAPOLIS-HONEYWELL
HEAT REGULATOR

MINNEAPOLIS-HONEYWELL REGULATOR CO., (Also manufacturers of Jewell Temperature Regulators) Executive Offices: 2763 Fourth Avenue So., Minneapolis. Factories: Minneapolis, Minn. and Wabash, Ind. Branch offices and distributors in principal cities. Authorized factory-trained representatives in almost every city.

"Let's go out somewhere—shall we?"

"Yes, let's!"

Down the street toward the country.

"So you're a successful attorney?"

"Oh, *most* successful! I made a hundred and twenty-five dollars last month! Of course, that's my best month—I don't want to seem to brag!"

"How remarkable!"

They were at the forks.

"Up Roke's Hill?"

He asked it this time.

"All right!"

"And how goes it with Chloe? Phi Beta Kappa, I suppose!"

"Yes, likely! My marks are *poor!* But I don't mind so much—I—I—"

"You what?"

"Oh, nothing! Let's talk of something besides marks. It's a sore spot! Tell me—do you have a regular office?"

"Honest to Peter! With gold letters on the door!"

"And mental cruelty cases by the score, no doubt?"

"Only one."

"And did you think of me?"

"Yes."

FOR an instant there was something in his voice, some seriousness she had never heard there, and it both frightened her and made her glad.

"Why, here's our bank—and the thyme's as green as grass! I suppose—I suppose you've been here with—with other—"

"Oh, droves of others! Can't you see we've sat the grass 'most all off? Silly!"

There they sat again beneath the elm tree, which was showing now but faintest green. The blue sky bent to them. The violets bowed royal heads to them. The birds caroled ecstasy for greeting.

"Sukey—"

Oh, the foolish sweetness of the way he said that old name!

"What?"

"Do you remember all that nonsense I talked, last time we were here—about—freedom—and all that?"

"Yes. I remember."

"Well, I've had my year of freedom."

"Was it fun?"

"Not so much. . . . No, it wasn't fun at all, Sukey. Not fun at all!"

She couldn't answer that. She'd never heard his voice *meaning* things so.

"Sukey. . . ."

"What, Hugh?"

"You can't be free if you're already bound. I've found that out. Or I guess I don't mean that—I mean you can't be free unless you admit you're bound—something like that. I didn't want to be tied down. Well, I haven't been—except in my heart. My—my heart's been tied down for a long, long time. Only, I've been ashamed to tell you, after what I said to you—that day. I didn't find it out right off, anyway. But I've known it quite a while. . . . Sukey, I love you!"

Remembrance of the past year quivered its hurt through her.

"Hugh!"

"I do. I don't suppose you believe me—or—or care. I've always been so—so childish. . . . Chloe, I've thought of the rest of that thing I tried to quote to you—'*That looks on tempests and is never shaken*—' that comes next. Do you remember? I—I was afraid of tempests.

SHOOTS a 76 . . . *but can't get in a club*

IT sounds incredible until you know the facts as they know them in San Francisco.

Aside from his deadly ability at golf, he possessed a natural charm that made him most engaging to both men and women. Yet no one was willing to propose him for club membership, for he had one fault that simply could not be excused. He, himself, didn't realize what it was—and no one had the courage to tell him.

Only those blind to facts assume they never have halitosis (unpleasant breath). Actually 1 out of 3 offends, occasionally or habitually, surveys show. This is due to the fact that everyday conditions such as pyorrhea, defective teeth, fermenting food particles between teeth, and minor infections of the nose and throat cause it.

Why offend others, when you can keep your breath beyond suspicion by using full strength Listerine three times a day, as a mouth wash?

Being an active germicide,* it attacks the cause of odors and then, being a powerful deodorant, destroys the odors themselves. Keep a bottle handy wherever you are. Lambert Pharmacal Company, St. Louis, Mo., U. S. A.

* * *

***Though safe and healing in action, full strength Listerine kills the virulent Staphylococcus Aureus (pus) germs in 15 seconds; also the Bacillus Typhosus germs—200,000,000 of them—within the same period.**

BRIGGS tells *Jim Henry*

"MAN—it's a grand and glorious feeling!"

"WHEN you wake up all grouchy . . . and your whiskers look as if they are made of extra tough barbed wire . . . and you cuss the fact that you've *got* to shave . . . and you yank out your tube of Mennen . . . and then you work up a fine lather in no time . . . and your razor s-a-i-l-s through your beard . . . and your face feels better every minute . . . and you finish looking like a successful bank president . . . Man! It's a grand and glorious feeling!"

The grand and glorious feeling of the Mennen Shave comes from the scientific principle of Mennen Shaving Cream—*Dermutation*—the exclusive Mennen process which softens the beard, lubricates the blade, tones the skin and conditions it for the day.

NOW! TWO TYPES OF MENNEN—*with and without menthol*

Mennen Shaving Cream (in the good old green-striped carton) is the familiar favorite of millions of men. Now there is also a new Mennen cream. It is Mennen Menthol-iced—with the triple-cool tingling lather for those who want the extra thrill of coolness in their shave. Packed in an orange-striped carton.

MENNEN SHAVING CREAMS

TWO KINDS—MENTHOL-ICED AND WITHOUT MENTHOL

TALC TALKS by Jim Henry

There are still a lot of he-men who think that talcum powder belongs only on feminine noses. They're all wrong. A man's skin needs talcum especially after a shave or after a bath. And I don't care how tough your hide is, brother, it needs protection against weather, *before and after*. So Mennen makes this special talcum for men.

First of all Mennen for Men doesn't show. Neutral tint—that's why. It's soft, pure, slightly medicated too. Absorbs moisture and facial oils. Corrects "shiny skin." Cooling, soothing!

SPECIAL BARGAIN—Big size can for a quarter—or, if you want a bargain, get the traveler's size free by buying the new Mennen After-Shave Special.

Contains full 50c tube of Skin Balm with special size Talcum for Men, both for half-a-dollar. *Jim Henry*

Mennen Salesman

I'm not, now. And I want to say I *did* mean all the things I've ever said to you. I meant them then; but I was afraid. And now I'm afraid it's too late to tell you so. I don't know how to stop my nonsense, and make you see—"

"Oh, Hugh, dear, I *do* see!"

"Sukey! Sukey, sweetheart!"

She wanted to tell him of all she'd come to see through her love and her hurt, but that would keep. Oh, that would keep! Never again would she need fear she'd not have any chance to tell him things!

She let her hand smooth back his hair.

"Green eyes!" he said, in his old teasing voice—yet not quite that voice, either.

"Are the gold letters on the door—paid for?" she made counter-teasing.

AND presently they went down the hill, hand in hand, and he sang a parody of an old college song:

"Oh, Sukey, tender Sukey,
Scorn me not, I pray!
I'll be a famous lawyer yet,
And—tra-la-la-la—Why don't you help me find a rhyme, Chloe?"

And it was so good to be gay, really gay at heart, that she answered him with nonsense, but all the time something was singing inside her: "It was best this way—to wait—it's better now, our love!"

They had both run into tempests, and their love had not been shaken—not been shaken! It never would be, now they knew for eternity what love was!

"Oh, Sukey, tender Sukey," he sang again,

"Scorn me not, I pray!
I'll be a famous lawyer yet,
And—"

"And be faithful in a way!" she finished for him in happy mockery.

Aviation is About to Become of Age

(*Continued from page 53*)

the company's plane made its next trip, rifles cracked below in obscure places and bullets zipped about the wings. The moonshiners mistook the plane for the heralded prohibition spy.

A rubber salesman in the mid-South has been using a plane for three years, and in that time he has doubled his business. The territory he sells is mostly flat, the towns aren't large, and he has little trouble about landing fields. At some towns where no regular flying fields are maintained he comes down in a local hayfield or level pasture. He has the whole area indexed in his head as to its landing possibilities in emergency.

Mr. Keys mentioned another case that even more strikingly illustrates how planes may be used for local service by an individual or by a business. On a large ranch in Montana it once took the owner the best part of a week to make a tour of his property by horseback. Then he bought an automobile and the time was cut to a day, which enabled him to make a complete inspection of the ranch once a week, except in bad weather seasons. Now he owns an aëroplane and does the swing around the ranch every morning before breakfast in a manner far more

NEW DEPARTURE BALL BEARINGS

In automobile transmissions the smooth, silent meshing of gears is made possible by the use of antifriction bearings.

Particularly is this true in transmissions where New Departure Ball Bearings are employed, for they are the highest type of anti-friction bearings. *Nothing rolls like a ball* and New Departures contain the most uniformly perfect spheres made by man, rolling freely between raceways of equal perfection.

New Departures are, therefore, practically frictionless and permit transmission of motor energy with the least waste. Wear in them is negligible—consequently the correct operation of shafts and gears is steadfastly maintained. Transmissions and clutches containing them never have to be torn down for bearing adjustment.

These are the reasons why so many automobile builders pay the higher cost of New Departures to give their customers the utmost in performance and economy.

In Automobile Transmissions

—by one of them

"I am a grouch. My father was a grouch and so was my Mayflower ancestor. I have long been loaded with crepe and vinegar. On my honeymoon, my wife diagnosed the cause. 'Quit using caffein,' she said. I did it for a week, then weakened. For 18 years I used caffein and remained a grouch.

"Then one morning my wife made some Postum. It looked good. I drank a cup and then a second. Now for more than a month, caffein has meant nothing to me. I no longer read myself to sleep. Yesterday, I weighed 131 pounds – six pounds more than a month ago. I find I can whistle and stir up a smile.

"I started by proclaiming myself a grouch and I stick to it. But if you don't believe I have thrown off some of the crepe and vinegar and taken on some honey and molasses, just ask my wife."

Cecil Eastman
225 East Robinson Ave., Orlando, Fla.

• • •

Rasping nerves and lack of sleep can make a grouch of the most cheerful man living. A man simply can't smile when he has risen, tired and grumpy, from a sleepless bed. But the sad part of it is that so many men fail to trace their grouchiness to its source—often the artificial stimulant they take with their meals. They fail to realize that caffein, by disturbing sleep and the calling for use of much reserve energy, has turned many a man into a "bundle of nerves."

Try this test and see how it works in your case! Eliminate caffein from your diet for thirty days—drink Postum with your meals instead. Then judge!

Postum contains no trace of any artificial stimulant—nothing to fray nerves, keep you awake, or impair digestion. Postum is made of roasted whole wheat and bran. A wholesome drink with a rich, full-bodied flavor—a flavor that millions prefer.

Postum costs less than other mealtime drinks—only one-half cent a cup. Order from your grocer. Or mail coupon for one week's free supply, as a start on your 30-day test. Indicate whether you wish Instant Postum, made instantly in the cup, or Postum Cereal, the kind you boil.

© 1929, P. Co. Inc.

Postum is one of the Post Food Products which include also Grape-Nuts, Post Toasties, and Post's Bran Flakes. Your grocer sells Postum in two forms. Instant Postum, made in the cup by adding boiling water, is one of the easiest drinks in the world to prepare. Postum Cereal is also easy to make, but should be boiled 20 minutes.

MAIL THIS COUPON NOW!

thorough than was possible either by motor car or by horse. He spots a break in a fence, a field that needs attention, wheat that is ready to cut, and at about nine o'clock he telephones his orders to his foremen.

NOW, what about private plane ownership, for sport and for pleasure? Aëroplanes may be bought today for as little as $2,000. Men who never thought of flying before are thinking of it now. Aëroplane advertising is beginning to appear side by side with automobile advertising in our newspapers and magazines.

"The question of private ownership," said Mr. Keys, "is one which involves a second question, that of training pilots. There will be no more planes sold than there are trained pilots to operate them. It is absolutely necessary that these pilots be well trained, that ships be approved and tested, that again the safety factor be kept in the forefront.

"The automobile owner purchased his first car and learned to drive it after a few hours of instruction, a most simple procedure. The exact opposite is the case with aëroplanes. To begin with, the pilot of an aëroplane must have good health, good sight, and good hearing. He must have a good sense of balance, should be between eighteen and forty-five years of age, and should have had the equivalent of a high-school education or better.

"Before becoming even a student flyer, he must produce an approved medical certificate of physical fitness, and before gaining his private operator's license, which permits him to fly for pleasure but not for hire, he must spend time and money in learning to fly.

"In addition to actual flying experience, which is now from ten hours solo for a private license up to two hundred hours for a transport pilot's license, the applicant must pass a written examination covering a variety of subjects, principles, and theories. This examination is no mere formality, but a serious test conducted by Department of Commerce examiners.

"In other words, the industry simply can't put aëroplanes into the air without first training pilots to fly them, and these pilots must be well trained or they will do flying more harm than good. This is a check on all branches of aviation development that must be considered: Good schools are as essential to aviation progress as good flying fields and good ships.

"Schools are being rapidly established. The head of the Curtiss schools estimates that no less than 15,000 persons will take instruction in flying this year. How many of this number will qualify as pilots remains to be seen, but the figure is an indication of popular interest.

"Personally, I think the heart of the matter is in these flying schools. Not only popular aviation development, but also the commercial growth of the future is in large measure dependent upon them. Already some colleges are considering courses in subjects pertinent to aviation training, which is an excellent sign. I am an optimist on the future of aviation schools, as I am an optimist on all phases of aviation development."

You'll want the added features *offered only by Frigidaire*

YOU'LL want the Frigidaire "Cold Control"... the simple patented device that gives you ice cubes even faster than ever . . . that enables you to regulate at will the freezing time.

You'll want the added certainty, the priceless protection to health offered by the powerful Frigidaire compressor; power that keeps the food compartment below 50° . . . regardless of hot days in the kitchen or sudden weather changes.

You'll be glad that this quiet compressor is completely out of sight and out of the way in the base of the cabinet . . . away from dust and dirt. You'll find it immeasurably convenient to have food shelves you can reach without stooping . . . to have a cabinet lined with seamless porcelain enamel . . . to have a refrigerator that's beautiful and well-proportioned.

In other words, you'll prefer Frigidaire, the only electric refrigerator which gives you all these essential features . . . features that have led more people to buy Frigidaire than all other electric refrigerators *combined.*

And when you investigate, you will be amazed by the new low prices and by the liberal General Motors deferred payment plan.

We urge you to call at the local Frigidaire display room. You place yourself under no obligation.

And . . . *today* . . . mail the coupon for the new Frigidaire catalog and a copy of the book of recipes for making frozen delicacies. Frigidaire Corporation, Subsidiary of General Motors Corporation, Dayton, Ohio.

Frigidaire Corporation,
Dept. C-107, Dayton, Ohio.
Please send me a free copy of the Frigidaire catalog and the recipe book of frozen delicacies.

DOWN FROM THE SUN SPEEDS A MYSTERIOUS

NOW in a familiar food . . .

Hiding from the sun in office, factory, school, home, a "sun-starved" race is growing up—soft-boned, weak-muscled, teeth a prey to decay . . . Read how you can *eat* your sunshine now in a famous health food.

THERE is mystery, fascination in the great healing power of the sun. For centuries persons with sick bodies, who could afford to go where the sun was, have bathed themselves in its light, to be cured.

But millions today must spend the sunny hours in cave-like offices and factories, in sunless schools, shops, homes. Victims of a sunless age, they are literally "sunlight starved."

An astonishing discovery promises to end all this!—a discovery hailed as the greatest health advance in twenty years. A brilliant scientist in one of America's leading universities has made it possible to capture the health energy of the sun and place it, intact, in a simple, inexpensive food.

Fleischmann's fresh Yeast is this food. Already an average of one person out of every three has eaten Fleischmann's Yeast—and benefited. It has proved itself the easy, natural way to banish constipation—to renew appetite and digestion—to clear up long-standing skin complaints.

But now the health value of this famous food has been enormously increased! The *new* Fleischmann's Yeast, "irradiated" by a unique patented process, brings you the mysterious "sunshine" vitamin—the vitamin "D" of science. It is the richest food

How much healthier we would be

source by far of this vitamin. Our laboratories estimate that three cakes are equivalent to the ultra-violet effect of a whole day in the summer sun!

Most people, especially those of growing age (under twenty-five), need the "sunshine" vitamin now in Fleischmann's Yeast. Without it, your system cannot absorb enough lime and phosphorus — elements essential to bones, teeth and muscles. With it, bones and teeth grow straight and strong. Your body is harder, tougher.

The expectant or nursing mother needs it daily. Her bones and teeth tend to soften as the infant drains her body of phosphorus and lime. The "sunshine" vitamin enables her to assimilate these bone- and tooth-hardening elements. This also fortifies the unborn or nursing child against

The NEW FLEISCHMANN'S

POWER TO MAKE SICK BODIES VIGOROUS · WELL

the health value of hours in the Summer Sun

if we could get plenty of sunshine

rickets (soft, crooked bones and teeth).

Eat Fleischmann's Yeast, as before, to keep your whole intestinal tract active, healthy and clean—to speed up elimination and check the poisons that upset digestion and cloud the skin.

And now, eat Fleischmann's Yeast for the energizing, bone-hardening "sunshine" principle every cake contains. Start now! Eat three cakes regularly every day, before each meal or between meals, plain or in water, cold or as hot as you can easily drink. At grocers, restaurants and soda fountains, in the familiar foil package with the yellow label. It is as effective as ever for baking.

Write for booklet. The Fleischmann Company, Health Research Dept. J-68, 701 Washington Street, New York.

In the front rank of Italian physicians is Dr. Lorenzo Cherubini, of the University of Rome. He has lectured frequently in America.

Many consider Dr. Maurice Delort, of the Hospital of St. Michel, in Paris, as Europe's greatest stomach and intestinal specialist.

Director of the famous Institute for Experimental Therapy at Dahlem, near Berlin, Prof. Dr. Carl Neuberg is a leading German physician.

READ WHAT WORLD-FAMOUS DOCTORS SAY:

Dr. Cherubini: "Few people indeed get enough sunshine. Untold health benefits are thus made available by the 'sunshine' vitamin—vitamin D—now in irradiated fresh yeast. It builds strong bones and sound teeth and tones up the muscles. It is important for expectant and nursing mothers."

Dr. Delort: "Ergosterol, which exists in large quantities in fresh yeast, is converted by irradiation into vitamin D. This vitamin brings about the deposit of calcium in the bones."

Dr. Neuberg: "The vitally important pro-vitamin, ergosterol, which becomes a true vitamin upon irradiation, is found more abundantly in yeast than elsewhere."

Modernizes Steam Heat... keeps radiators hot longer

Have this fuel-saving comfort with your present heating system

Steam heat in your home or building? Without radical or expensive changes you can make it the most modern kind of heating system! In a few hours it can be converted into a *vacuum* system at a small fraction of the cost of a new one.

WHY VACUUM?

—because. . . .

in a vacuum, water boils at low temperatures. In a vacuum heating system, radiators heat up far quicker. In a vacuum system, they stay hot far longer. Naturally, less fuel is consumed.

ANY good heating contractor can do the job for you in jiffy-time. He tightens up the system to keep out air; places a Hoffman No. 16 Valve on the basement main, to clear the pipes of air; and installs a Hoffman No. 2 Vacuum Valve on each radiator.

That is all. You will then have a modern one-pipe vacuum system. With uncanny efficiency *every* radiator heats up *15 minutes* after drafts are opened. When the fire is banked, or the oil or gas burner shuts off, the vacuum keeps heat in radiators for *three hours* or more, just as though you had steam up all the time. This means that in the coldest weather radiators stay hot all day long without frequent raising of steam pressure. Can you imagine a more efficient heating system?

And that is not all. In the thousands of homes whose heating systems are vacuum-ized with Hoffman No. 2 Vacuum Valves, they are saving as much as five dollars per radiator every year in fuel bills.

Ask your heating contractor to come up and estimate the cost of vacuum-izing. When you learn how little it costs you will find it hard to believe our claims. If so, send for the booklet, "How to Lock Out Air, the Heat Thief", which tells and *proves* the whole story. Do not put it off. Hoffman Specialty Company, Inc., Dept. P-18, Waterbury, Connecticut.

When I Became the First Lady

(*Continued from page 13*)

The members of Washington society were not the only ones who partook of Vice Presidential hospitality. We were also at home to a family of mice who had a private entrance behind a large davenport placed across one corner of the dining-room, which served as a sitting-room, for we had our meals downstairs in the main dining-room. Seated at my desk, one evening, I was suddenly aware that I had a visitor who had arrived unannounced and was sitting up looking me over quite as critically as any other guest who favored me with a call. Finding me amiable, he got down and began an inspection of the place. I made no protest, sitting quite still and allowing him to go about at his will. Having completed his tour of investigation, he disappeared beneath the davenport, presumably to report on his findings to his family, and I arose to do a little investigating of my own, discovering that he had made his exit by way of a small, semicircular hole in the baseboard just above the concrete flooring.

ON SEVERAL succeeding evenings we were dining out, but on the next evening which we spent at home my little visitor in gray was back again and brought one of the children. In accordance with the rules of hospitality, I served tea. The larder afforded only pieces of dry cracker, but these seemed to meet with approval and were quickly nibbled away. From then on, Father Gray looked to me for daily food for his family, consisting of himself and his wife and several children. Mother Gray was a rather portly lady, and when she paid me a visit she found the doorway a bit low and narrow, but she was resourceful as well as plump and she managed to enter by turning over on her back, placing her feet against the baseboard and pushing herself through.

I brought all sorts of delicacies from the hotel table for the delectation of these visitors of mine and I firmly believe that I thus acquired some friends in Washington who would have pronounced me the perfect hostess. Their favorite form of amusement was to scramble up the outside corners of the metal scrapbasket and from the edge jump into the waste paper in the bottom, as I have seen boys climb to the beams of a hayloft and jump into the hay. When all were buried in the bottom, I would tip over the container, and after they had run out, set it up again, and they would repeat the performance. I think they missed me when I had gone and I often wonder how they fared.

I saw them last in the spring of 1923. The short session of Congress adjourned on the fourth of March and we went home. When we returned unexpectedly in August, all was changed and there was so much hustle and bustle, so much moving about of busy feet that the shy little creatures dared not venture forth even if they were there.

More rooms were added to our small suite to accommodate secretaries, stenographers, and telephone operators, for the executive work of the Government

"America's finest medium-priced automobile," say thousands of Oakland owners

The 2-Door Sedan · Body by Fisher

HAVE you ever owned an automobile so completely in accord with your conception of a truly fine car that every moment spent at its wheel was a joy . . . a car so thoroughly delightful to drive, so utterly dependable in any situation, that it seems to be a living thing devoted to serving you? Unfortunately, that is not a common experience. Yet it is one which owners of the Oakland All-American Six are enjoying today. It is this experience which has caused thousands of these enthusiastic owners to call the Oakland "*America's finest medium-priced automobile.*"

Why is Oakland such a wonderful car to own? Comparison with other cars in its field will show you. For example, it is the only car in a field of twenty-one which combines the riding ease, the style and the roominess made possible by a wheelbase 117 inches in length, with the handling ease promoted by a turning circle to the left only 36 feet in diameter. It is the only car in the field which offers the consummate smoothness achieved through the combined use of the Harmonic Balancer which eliminates torsional crankshaft vibration, and rubber "biscuit" engine mountings which completely insulate the engine from the frame.

In 878 individual comparisons between Oakland and the twenty other cars, Oakland proves distinctly superior in 451 points or 51.37 per cent. The twenty cars are at best equal to Oakland in 382 points or 43.50 per cent. And thirteen of the twenty cars are higher priced than Oakland!

Ask the nearest Oakland-Pontiac dealer to give you the detailed results of this exhaustive analysis. He will show you that on every basis of comparison Oakland clearly outranks its field. More than that, he will demonstrate Oakland superiority in a manner that will prove a revelation. Know today's Oakland before you buy any car within three hundred dollars of its price.

Prices, $1145 to $1375, f. o. b. Pontiac, Mich., plus delivery charges.

LOOK AT THE FRONT END OF THE AUTOMOBILE YOU BUY TODAY

for this mark of Engineering Progress

ONE engineering achievement above all others commands the attention of new car buyers today. It's an improvement you can *see*—one whose vital principle of protection is known to millions.

"Look at the front end," say the engineers of America's leading cars. On more than 20 of them you will see this unmistakable evidence of engineering progress—Pines Automatic Winterfront.

These manufacturers have taken into their own hands this problem of keeping the motor at the *right* operating temperature—and relieved their owners of repair expense that engineers say has reached a staggering total in the past.

Chrysler Imperial with built-in Pines Automatic Winterfront

Each has proved—within his own laboratories — and upon his own testing grounds—that Pines Automatic Winterfront is an engineering necessity.

These fine cars are equipped with built-in Pines Automatic Winterfronts

PIERCE-ARROW 133-143
WILLYS-KNIGHT 66B
STUTZ ROLLS ROYCE
STEARNS-KNIGHT DeLuxe 8-90
PEERLESS 125 JORDAN 8
HUPMOBILE 8
GRAHAM-PAIGE 621, 827, 837
GARDNER 130
DODGE SR. SIX CHRYSLER 75
CHRYSLER IMPERIAL
DURANT 60 and 70
BRADFIELD CAB (Kissel)
CHECKER CAB
BLACKHAWK
and others—names on request

If the new car you are considering is not already equipped with an Automatic Winterfront, assure yourself that there are no obstructions on the radiator which would interfere with having one installed. You may purchase a detachable type shutter which gives you the same advantages as the built-in type.

Are you buying a new car?

If you are — remember that the vital function of Pines Automatic Winterfront is one of absolute protection to the motor and all its parts. It has won its enviable place in the automotive industry because it definitely prevents the damage that results from operating an underheated motor.

Do you own a car?

If you do—watch the thermometer—and equip your car with a Pines Automatic Winterfront at temperatures ranging 60° Fahrenheit and below.

No car is immune. No more tangible evidence of the necessity for this vital protection could be offered you than the fact that these leading manufacturers take this vital precaution into their own hands—and make Pines Automatic Winterfront an integral part of their cars.

Bring your car up to date. And remember—there is only one automatic radiator shutter on the market. If your dealer cannot supply you, write us. Pines Winterfront Company, 426 No. Sacramento Boulevard, Chicago, Ill.

Authorized Winterfront Service is available through the National Pines Automatic Winterfront Distributing Organization. Thermostats are guaranteed.

PINES WINTERFRONT —*It's Automatic*

centered here for a time. Secret Service operatives and newspaper representatives took up their position in the corridor outside. A President had laid down the burden, another had taken it up.

We were occupied with plans for the days just ahead, but our hearts beat in sympathy for a brave woman who was coming back to the great White House, which would seem empty to her without the presence of him for whom she had dreamed and planned and at whose side she had worked through many years of active life.

In the afternoon of a day late in August, we went to live in that beautiful home which has sheltered every President since President Washington, a home rich in tradition, mellow with years, hallowed with memories. As we passed through the open doorway into the columned corridor, the sun was shining in at the south windows and a soft summer breeze stirred the leaves of the evergreen magnolia outside. Birds were twittering in its branches and the hum of bees and the chirp of crickets mingled in nature's symphonic welcome.

IT IS difficult to describe my feelings at this time. There was a sense of detachment—this was I, and yet, not I—this was the wife of the President of the United States and she took precedence over me; my personal likes and dislikes must be subordinated to the consideration of those things which were required of her. In like manner, this man at whose side I walked was the President of our great country; his first duty was to its people. It therefore became quite natural to refer to him as The President and to address him as Mr. President in the presence of others.

Deference to the office was required of our children. At luncheon one day during a vacation from school, the older boy told his father that he was going to a tea dance, and he might be a little late for dinner and not have time to dress. A moment of silence followed; then his father spoke: "You will remember that you are dining at the table of the President of the United States and you will present yourself promptly in proper attire."

Once comfortably settled in the rooms at the southwest corner of the house on the second floor, I set about familiarizing myself with the running of the establishment. I found that the domestic problems of the mistress of the White House were not different from those of the housewife of any well-run household. To be sure, a housekeeper was provided whose duty it was to look after the details, but I felt that it was necessary for me to have general oversight.

There were eighteen domestic servants. Among them, there were, in the kitchen, a chief cook, a second cook, a kitchen maid, and a kitchen boy; in the pantry, a butler, a second man, and a pantry man. There were three cleaning men on the main floor and the floor below, and two men on the second floor who cleaned and did valet duty for guests, two chamber maids, and a valet for the President and a personal maid for his wife. Another maid assisted with the cleaning and did some of the mending. All these servants were on the Government payroll, but their food was provided by the President. Some of the maids and the personal maid

They make furniture moving so much easier

. . *and*

what a difference they *do* make in the life of carpets, linoleums, fine floors!

The new

"Drive-on" NoMars

the modern furniture rests

GONE! The tearing of carpets . . . gouging of linoleums . . . scratching of polished hardwood! Gone too, the ugly spotting of rugs where heavy furniture has stood.

NoMars . . . the new furniture rests . . . are ending the havoc that unguarded furniture legs once caused. They glide so smoothly —leaving never a trace of their passing. Their round-edged bases of unobtrusive brown spread the weight of heavy tables, divans, set pieces.

Here's welcome news

And now you can get NoMars for furniture not bored with holes for casters. "Drive-ons," they're called. They can be applied in a minute or so, . . . and once on they're on to stay,— unbreakable,— sure-footed, —a thing of beauty till the chair or sideboard is an heirloom.

Do try them

Get a few sets. See what a difference they make, in the preservation of floors,—in lightening housework. For a trifling cost you can make the test, . . . a cost that will be many times repaid in the saving of rugs, linoleums, hardwood.

Stop at your nearest dealer and ask for NoMars. (Say *"Drive-on"* NoMars if your furniture hasn't caster socket-holes.) If you can't get them nearby, let us know. We'll see that you are supplied. If you'd like a copy of the helpful Floor Protection booklet, about NoMars and Bassick Casters, just clip the coupon and send it. One way or another, do prove to yourself what a difference NoMars make.

Bassick Casters, No-Mar furniture rests and Bassick Period Hardware are the finishing touches of excellence for fine furniture.

THE BASSICK COMPANY
Bridgeport, Conn.

Drive-on NoMars are packed 4 to a set with the handy driving tool included in each set.

The sizes and prices are:

No.	
10—1¼"	$.50 per set
20—1½"	$.60 per set
30—2"	$.70 per set
40—2½"	$1 per set

had rooms on the third floor; the others lived outside.

Our breakfasts were served in our apartment at a quarter before eight. Guests were served in their rooms at any hour designated by them. Luncheon at one o'clock and dinner at seven were served in the State dining-room. Personally, I was partial to the small dining-room on the north side of the house, known as the private dining-room, and would have preferred having luncheon served there, but the President liked the large one better.

The book in which the menus for the day had been written was sent to me with the breakfast tray, and I O.K.'d them, suggesting any changes which I wished to have made. This was then taken to the housekeeper and she did the ordering.

THE President was in his office at eight-thirty, unless he had a stenographer come to his study on the second floor to take dictation when he was at work on a message to Congress or an address which he was to make. When he was in his office I made it a point not to disturb him and I knew nothing of what took place there. Consistently I declined to plead anyone's cause, advising them that it would be to their advantage to take the matter up directly with him. What knowledge I had of public affairs I obtained from the daily papers and other sources of information open to everybody. To bear me out in this statement, I will relate what occurred on August 2, 1927.

We were spending the summer in the Black Hills of South Dakota. A Senator from the Middle West was a house guest, a Congressman from nearer east was expected for luncheon. As the President was leaving for his office that morning, he remarked to me, "I have been President four years today." That was all. About two hours later the Senator came to me and said that he thought he would ride down to Rapid City with the President's aide and his physician, if that was agreeable to me. I saw him go, and started off on my daily walk. Shortly after one o'clock we were all back; the Congressman had arrived and we sat down to lunch. Immediately afterwards, the President retired to his room to take his afternoon nap and the other three of us sat in the living-room in comfortable, leather-covered rocking-chairs.

"Quite a surprise the President gave us this morning," remarked the Senator, and he looked over at me sharply. From his expression I realized that something unusual and unexpected had taken place. "Of course you know all about it," he went on. "I don't believe I do. What was it?" I asked. And then he told of the statement which the President had given to the Press at noon, declaring that he did not choose to run for President in 1928. Relating this to a friend of his who has known him longer than I have, I saw a look of incredulity pass over his face and he intimated that it might be as well if this fact were not generally known; but I think I am rather proud of the fact that after nearly a quarter of a century of marriage, my husband feels free to make his decisions and act upon them without consulting me or giving me advance information concerning them.

THE WORLD KNOWS THAT "BUILT BY BUICK" MEANS BUILT SUPERLATIVELY WELL

Motorists everywhere know that the new Buick, recently introduced, marks a strong advance over all previous standards in the Buick field, and are welcoming it with an enthusiasm never before manifested for any fine car.

It has often been said that Buick . . . and the great army of men and women who purchase Buick motor cars . . . are not merely buyer and seller, but *friends.*

Just how deep and strong this friendship is—and how diligently Buick labors to merit it—is demonstrated by the character of the new Buick car and the reception it is enjoying.

Millions have visited Buick showrooms in all parts of America during the past few days. Others are steadily coming to see the new Buick. Scores of thousands have requested or already taken demonstrations. And everywhere the story is the same—

Not only the warmest welcome ever accorded any quality car . . . not only the kindliest expressions of praise for Buick improvements and advancements . . . but a great outpouring of orders, more than double the record of any other automobile priced above $1200.

Men and women pay glowing tribute to the beauty of line, finish and appointment of Buick's new Bodies by Fisher. They revel in the comfort and luxury of its spacious interiors. And they know positively that only Buick can satisfy them when they experience its swifter, smoother, more powerful performance, and consider its new low prices.

They have pronounced this new Buick the greatest Buick of them all—and are awarding it what promises to be a record demand.

The builders of Buick and Marquette gladly acknowledge a debt of gratitude, and pledge continued precision in the manufacture of both Buick and Marquette cars, that motorists may always know that "Built by Buick" means built superlatively well.

Your Children ... is their food safe?

YOU, as a conscientious mother, buy the best food for your children, prepare it with scrupulous care and cook it correctly. Yet, in spite of all, you may be giving your children food which is not wholesome—possibly dangerous!

For even the best food becomes unsafe to eat unless it is *kept* at the proper degree of cold, which medical authorities agree should be 50 degrees or less—always. Above that temperature, bacteria multiply, food is contaminated—it becomes a menace to health.

There is only one way to be sure that your children's food is fresh and healthful—correct refrigeration. There is one refrigerator that assures you of scientifically perfect refrigeration at all times—the General Electric. Faithfully, quietly, day and night, it maintains a temperature safely below the danger point—50 degrees.

The General Electric is ideal for the home. Its simple mechanism which you never need to oil, is mounted on top of the cabinet and hermetically sealed in a steel casing. It has a simple and accessible temperature control, makes a generous supply of ice cubes, creates no radio interference. It has the only *all-steel*, warp-proof cabinet—easily cleaned, sanitary.

The price of this new all-steel refrigerator—the small-family model—is now

$215 AT THE FACTORY

Your dealer will be glad to explain the spaced payment plan, which makes it so easy to own this faithful watchman of the family health. Let him help you select the model you need. If there is not a dealer near you, write Electric Refrigeration Dept., General Electric Co., Hanna Building, Cleveland, Ohio, for booklet A-9.

An unmatched record

There are now more than 300,000 homes enjoying the comfort and protection of General Electric Refrigerators—and not one of the owners has ever had to pay a single dollar for repairs or service.

GENERAL ELECTRIC

ALL-STEEL REFRIGERATOR

Why I Envy Wild Things

(*Continued from page 56*)

I located a big bird near the river by hearing him gobble defiantly when a rooster crowed in the yard of a negro cabin hidden away in the forest. I approached within two hundred yards and whistled loudly, and was answered by a perfect torrent of proud abuse. Far up over the dreamy pines I saw a red-tailed hawk soaring. As it was away from the river, it must have been at least twice as far from the turkey as from me.

Faintly I heard it give a scream, so far that I hardly distinguished it; yet the gobbler heard it, and the hawk promptly received a defiant berating. I stole along quietly through the thicket until I reached an old rail fence, beyond which was a clearing bordering the placid, wide river.

Full in view, some eighty yards off, I saw the gobbler strutting, his mighty fantail spread, his wattles crimson, his aspect regal, yet so overbearing as to be ludicrous. I think there is nothing more pompous in wild life than a strutting turkeycock.

Now was my chance to test his ears. I was close hidden behind a dense fall of jasmine vines that draped a wild-orange tree. It was necessary for me not to make any sounds that the turkey might detect as human. Carefully, therefore, I imitated the notes of certain birds, the cries of certain beasts. The gobbler, remember, was full eighty yards off. Yet so keen was his sense of hearing that my most diminished notes and calls were heard. It seemed to me that I could utter no sound at all that he did not detect. If it was audible to me, it was to him.

Of course, it is difficult to be exact in estimates of this kind; but to me it appeared that the gobbler could hear a noise as clearly at eighty yards as a man could at a few feet. Finally, almost under my breath, I said a few natural words. Instantly, the huge bird, a moment before all fluffed out and full of abounding pride, shrank, glistened with swift stealth, became, under my very eyes, a trim racer, and in a moment was gone into the friendly depths of the sheltering forest. He had not only heard keenly but discriminatingly.

I USED to have a horse named Redbird; and though certainly not wild, he had senses that used to put mine to shame. One night, I remember, I was riding him down a lonely road, and, just as we were dipping into a hollow, he suddenly snorted and came to a stand. I coaxed gently, then with spur and whip, for turning back would mean a ride of six miles farther. We had to cross the swamp at this place or not cross it at all.

But Redbird had evidently made up his mind. I could feel him tremble and shiver under me. I knew then that he had the wind of something perilous. After a few moments more of useless urging on my part, we turned back. For an hour after that he was fidgety, and the least thing made him shy violently.

Next day a negro brought to the planta-

Go to High School *at* Home

You can secure a high school education right at home by studying the splendid new courses prepared by the International Correspondence Schools.

These courses are equivalent to the courses given in resident high schools. They have been specially arranged for men and women who wish to meet college entrance examinations, to qualify for a business position, or to make up the education they missed when forced to leave school too soon.

The College Preparatory Course, the High School Commercial Course and the High School English Course include English, algebra, ancient, medieval, modern and U. S. History, physiology, literature, geography, Latin, bookkeeping, drawing, geometry, shorthand, physics, chemistry, salesmanship, advertising, civics, trigonometry, economics, corporation finance, banking, business and trade economics, etc. A diploma is given at graduation.

The lessons are easy to understand and you will make rapid progress because you will be *in a class by yourself* and you will study under the guidance of instructors who are sincerely interested in helping you to get ahead and achieve the bigger things in life.

Just mark and mail the coupon and we will gladly send you interesting free booklets describing the High School Courses of the International Correspondence Schools or any other subject in which you are interested.

International Correspondence Schools

Founded 1891 *Scranton, Pa.*

IRON CLADS No. 922 get instant approval. Chiffon, silk to the top, with the new French panel heel at only $1.50 the pair. Choice of the latest and loveliest shades—sunbronze, suntan, breezee, mistery, Manon, beach tan, Cuban sand, Reveree, mirage, light gun metal, evenglow, pastel parchment, pearl blush, grain, skin, atmosphere, white and black—size 8 to 10. If your dealer can't supply you, send us his name with your remittance and we'll mail your hose direct, postage prepaid.

Assurance

. . . that snug feeling of well being . . . clicking okay in critical eyes. What is more important than beautiful stockings to heighten the impression of a perfect ensemble?

There's a wealth of assurance in Iron Clads . . . soft silken wisps of airy loveliness . . . gently dissolving angles . . . revealing beauty of charming natural lines. Clear . . . sheer . . . flawless . . . their delicate texture belies the strength woven so firmly and surely into every pair of Iron Clads.

Surprising economy in Iron Clads, too. They are made to wear and wash and wear and wash, again and again. They will not fade or lose their soft silken lustre. And there's an Iron Clad guarantee of satisfactory service or a new pair of stockings to prove it!

COOPER, WELLS & COMPANY
204 Vine Street, St. Joseph, Michigan

Iron Clad

tion a diamond-back rattlesnake that he had killed.

"Where did you meet it?" I asked.

"By Pinckney Run,' he answered, referring to the swamp that Redbird had refused to cross.

"When?"

"Yesterday morning," he told me.

It must have been twelve hours later that my horse had caught the scent of the snake. Of course, the place where the snake was killed was deeply impregnated with its scent; nevertheless, Redbird's nose had been good; and I found it easy to forgive his behavior when I saw the thing whose scent he had feared.

I do not say that I covet his ability to smell a rattlesnake, for I have but meager personal ambitions in that direction. But I do covet his power to wind a scent infallibly. A human nose is a very degenerate organ. If we get, at a few yards, the scent of a rose bed or of a petunia plot, we are fortunate. I have seen a bird dog halt, lift his head to a damp breeze, and stand statuesque ninety yards from a covey of quail. I think we must completely miss, especially in the woods, many of the more delicate aromas, many of the more shyly wafted dim sweetnesses, less of the earth than of the air, sidereal and evasive.

Except, of course, in the sense that the Creator made some creatures to prey on others, wild things are singularly independent. They do not spend their lives trying to reform other creatures. They live fully and freely, untormented by the envy and malice that distress our lives. Depending utterly on nature and on themselves, they have a certain tawny ruggedness of spirit reserved to those into whose lives the artificial never enters. They possess that fortitude that we always associate with trees and rocks and rivers; finding the unfailing source of their strength in the fathomless serenity of earth's bosom.

WILD things appear to have definite laws that guide their lives; so do we. But they show a sense and an alacrity in obeying them that should make us hang diminished heads. I am thinking, of course, of the great natural laws, such as temperance, continence, obedience, the sacrifice of the will of the one for the safety of all. Of the almost pathetic obedience of wild children I have seen many instances.

One day a negro turpentine worker brought me a tiny fawn that he had found in the woods, and as such a creature is easily reared I decided to make a pet of it. It was so young that it could stand only in wobbly fashion, and take only a few uncertain steps on its shining miniature hoofs. Every morning I gave it a bottle of milk.

Then I noticed that it became restless, and tried to get into the patch of oats before the house. I carried it there at first, and later it went there itself. All day long it would lie curled up snugly in the oats.

When I went late in the afternoon to bring it into the house for the night, it would always be just where I had left it. Why? Because, in the one or two days that it had been in the woods with its mother she had taught it to stay where she told it to lie, when she left it to go away to feed. Now that it was with me, it remembered its mother's injunction, and obeyed.

Because deer teach their young this obedience, it is not hard to walk up to a couched fawn. I have caught several; and their attitude plainly showed that they permitted themselves to be approached, not because they did not fear me but because, in lying still, they were obeying a higher law. Such, at least, has been the conclusion that I have drawn from cases of this kind. It is for the reader to judge whether I have misinterpreted the meanings of things.

MATTHEW ARNOLD, in his great "Rugby Chapel," praised his father for having been the kind of man who made the gapped ranks close, who praised the brave, who encouraged the weak, who restored order when demoralization among those in his care was imminent. I have noticed a tendency among wild things to stand together—to call up the stragglers, to shelter the weak. There is a concert of action, a community morale that is remarkable.

Even a person who has never before taken any interest in observing wild things will be persuaded of their extraordinary tribal spirit if he will spend an hour watching a hill of ants, or a flock of crows, or a school of fish, or a hive of bees. Of course, among the larger animals, as civilization scatters the herds they live a more solitary and individual existence, yet always they are, in pairs or in groups of hundreds, able to execute, perfectly, mass maneuvers. To this day I get a thrill out of watching wild ducks coming into their feeding fields at sundown.

Here, for example, will come a flock of forty green-winged teal. A charge of shot could hardly be swifter. The speed of this arrowhead of flight had been carefully measured at a hundred and twenty miles an hour. When they are within fifty yards of me, I show myself from behind a marsh tussock. The flock makes a thrilling veer, whirls in the track like a racing car that is being wrecked; but this racing machine never skids.

The teal had been flying only twenty feet above the marsh, and I was close to them. When they passed above me they were more than a hundred feet up. To flare swiftly, enigmatically, yet with precision, is to them a business that they have long since mastered. It is not so much their speed that saves them, but their bewildering power to execute, as a body, at the proper second, without warning, and while going at cyclone speed, the exact maneuver fit for the occasion.

I am not saying that their beautiful swift dress parades in the sky, gallant and breathless and dashing, always insure their safety. But I am envying their ability for such speed; and, in such speed, their capacity to manifest a coördination and a control that must ever be the despair of a blundering mortal.

Patient wasp, buck and doe swift to recover your peace of mind, timid marsh hen bitting the sea-tide—I know you and love you. And when I say I envy you, I mean I am jealous for some of your clear virtues.

...and of the BRAN Cereals

HERE'S THE FAVORITE!

As a cereal or in muffins millions prefer it because it is so effective . . . so good to eat

Post's Bran Flakes, the most popular bran cereal in the world —how easy to understand why!

Here's the bran cereal so tempting that you'd want to enjoy it every day in the week, even if you knew nothing of its effectiveness. Richly mellowed with other nourishing parts of the wheat—here's a bran cereal in its most delicious form, in tender flakes—crisp on the tongue—gentle, normal, natural in action. Little wonder that Post's Bran Flakes is the leader of them all! So effective—so good to eat.

For tomorrow's breakfast, which will you try first—the favorite bran cereal of the nation, served crisp from the package with milk or cream? Or piping hot bran muffins with all the full mellow flavor of the most popular bran cereal in the world?

Cases of recurrent constipation, due to insufficient bulk in the diet, should yield to Post's Bran Flakes. If your case is abnormal, consult a competent physician at once and follow his advice.

"NOW YOU'LL LIKE BRAN"

HAVE YOU TRIED THEM?

POST'S BRAN MUFFINS

1 cup sifted flour — 1 egg, well beaten
3½ teaspoons baking powder — ¾ cup milk
¼ teaspoon salt — 3 tablespoons butter, melted
2 tablespoons sugar — 1 cup Post's Bran Flakes

Sift flour once, measure, add baking powder, salt, and sugar, and sift again. Combine egg and milk. Add flour, stirring as little as possible. Add butter and Post's Bran Flakes. Pour into greased muffin pans, filling them ⅔ full. Bake in hot oven (450° F.) 25 minutes. Makes 12 medium-sized muffins. *All measurements are level.*

POST'S BRAN FLAKES

Can *any* toothbrush actually provide a pleasant surprise?

With one of these replace the brush you used this morning — then compare results

If your toothbrush gives you whiter, cleaner teeth it does you a lot of good for a very small sum of money.

And the right brush, properly used, will do exactly *that* for you. It will *not* turn you into a movie star over night. *But it will give you whiter teeth —*

Just get the right brush — *small,* and of proper shape.

Then — *don't keep it in service after honest wear has impaired the cleansing and polishing qualities.* Most people do. That is why we offer this reminder.

Dr. West's brush is famous for the polishing action made possible by its correct design. Now it is made doubly effective by use of still finer materials.

These snowy, springy bristles are the costliest the world's markets supply. Only Dr. West's new brushes have them. They are specially trimmed and spaced to enter and sweep clean all crevices.

Without Cost: *25c tube of delightful* Dr. West's *Tooth Paste — with purchase of this famous 50c toothbrush.*

Your druggist has new Dr. West's toothbrushes for every member of your family. Adult's size, 50c; youth's, 35c; child's, 25c; "professional brush," 50c. Each brush sterilized, sealed, and fully guaranteed. Get some today. *Results may surprise you.*

The Easy, Correct Way *to brush teeth*

Brush always away from gums towards the cutting edges of the teeth; always *with* the crevices, never across. This is what dentists advise. And they recommend Dr. West's because of its correct shape and modern small size.

Why It Cleans *every tooth and crevice* — This shows how Dr. West's toothbrush sweeps every crevice clean — cleansing and polishing every tooth.

The Drift Fence

(*Continued from page 25*)

n at the gate, leaning on the bars. ran on. Yes—Jim! . . . Then some- she was sitting on the top bar—one d at her bursting breast and the er, which was her left, in Jim's grasp. spoke, but she did not distinguish at he said, and she could not reply. She his rough, strong hands. He was ping something on her finger. A ring! Then from the gloom behind rasped a , hard voice: "*Hands up, Traft!*" Dark forms appeared out of the brush, nost without rustle. One man shoved a n against Jim's back. Seth Haverly! went Jim's hands. Molly recognized m Haverly. The third man came close laid a powerful hand on her.

"If you yap we'll kill him!"

Molly would have fallen but for his ld. It was Hackamore Jocelyn.

"Turn 'round, Traft, an' march," or- red Seth Haverly.

WHAT'S this? A holdup?" queried Jim angrily.

"Keep still—or it'll be wuss!" hissed averly.

"Fellars, I'm takin' the gurl along," nounced Jocelyn.

Haverly made a fierce gesture, which cluded his gun. "You air not! I'm lin' you ag'in, Jocelyn, thet I'm runnin' is outfit. Stay heah an' keep her quiet l we git away with the hosses. Then ller after us."

"But, Seth, I want the gurl," replied ocelyn, low and doggedly. "I'll divvy y share of Traft's ransom with you."

"—— you, Jocelyn!" cursed Haverly. We'll have trouble enough without that. o you want Slinger Dunn on your trai ? . . Stay heah an' hug the gurl, who asn't no use fer you, if you're that much a sucker. But foller us pronto."

The Haverlys then forced Jim ahead of em, vanishing in the gloom of the lane ack Jocelyn loomed over her.

"Molly, I'm takin' you willin' or by rce," he whispered, bending down to peer t her. "An' don't fergit—if you make ven a peep they'll shoot Traft."

"Where they goin'?" gasped Molly.

"Up back on the Diamond. Thet asn't my idee. They don't know Curly rentiss. They're goin' to hide Traft an' old him fer ransom. But when they git e money they'll kill him. Hang him on e drift fence! Thet's the plan. An' the nly chanct of savin' his life is fer you to o with me."

"How'll that—save Jim?"

"I'll do it. I'll stick out fer lettin' him o. If it comes to a pinch I'll force them."

"You swear to Gawd?" demanded Molly, in fierce passion.

"Shore. I swear to Gawd."

"Slinger will kill you. I'm warnin' you, ack Jocelyn!"

"I heah you," he replied grimly. But ll hev my stake an' we'll ride out of the ountry. You an' me, Molly Dunn. low, will I hev to hawg-tie you?"

"I'll go. But keep your hands off me!"

He led her down the darkening lane, ut of the clearing into the forest. . . .

When Jim Traft heard that rasping ommand to throw up his hands and felt ae hard prod of a gun against his back, he came down to earth with a sickening thud.

Behind Molly he saw a dark form rise and loom. He recognized it. Hack Jocelyn! With a muttered curse at his heedless disregard of Andy Stoneham's warning, he lifted his hands above his head. Then another dark form clinked into sight. He was ordered to face round. A swift glance was the last he had of Molly. Jocelyn's looming over her further added to his dismay.

At the point where the lane entered the road to town three other men waited with horses. Jim was amazed to make out his own horse, saddled and bridled.

"What's your game, Haverly?" queried Jim, breaking into a whispered colloquy.

"We're holdin' you fer ransom," came the gruff reply. "We'll take you to a hidin' place an' send a rider in to Flag."

"Well, I'll recommend my uncle's paying it, provided you agree to two things."

"An' what's them?"

"That the ransom isn't made out of all reason—and that Hack Jocelyn doesn't share in it."

Haverly let out a grunt which might have meant anything.

"This man Jocelyn is no good," went on Jim. "He had friends on the Diamond and he double-crossed them. He plays both ends against the middle. You fellows are a lot of suckers."

"Sam—you heah thet?" sharply ejaculated Haverly.

"Jocelyn is using you Cibeque fellows to his own end and you can bet on it," concluded Jim, thinking this entering wedge enough for the moment.

"Seth, I'm gettin' leery myself," replied Sam Haverly. "An' I'm sorry I plugged Jocelyn's game. When he killed Andy Stoneham tonight, right in the road, I shore throwed a fit. Nobody but Boyd an' Hart an' me seen it done. But you can gamble West Fork will lay thet onto us."

"Killed Andy Stoneham!" ejaculated Seth, leaning forward. "Wal, I'll be——! What on earth fer?"

"Jocelyn swore Stoneham was spyin' on him an' givin' us away to Molly Dunn."

"Ahuh. Jealous of poor Andy! Lord but thet fellar is crazy aboot Molly Dunn. . . . We better not wait fer him."

JIM was told to climb into his saddle. They started off at a trot and soon turned off the road into a trail. It was dark and overgrown with branches of trees that had to be dodged or brushed aside. Jim knew that he had not ridden down to West Fork by that trail.

He grew darkly active in thought, contending with the problem that presupposed Jocelyn was following with Molly. And while he cudgeled his brains he rode on into the denser forest. Through that long night his captors were silent, keeping to a trot on level ground and a walk over rough places and up grades. In the gray of dawn they rode up at last into open, grassy parks where no hoof tracks would show, down again and up once more, to descend a pine- and spruce-timbered slope, to enter at daylight a beautiful, white-grassed park, fringed by forest.

Jim saw a shaggy, gray log cabin at the

How Much Education Will Satisfy You?

FOR some people a grammar school education may seem sufficient; some believe that a high school training or its equivalent is necessary; others would never be content unless they or their children continued education at least through college. Many of the professions require both college and post graduate training.

The greatest thinkers—statesmen, writers, preachers, and eminently successful business men—have repeatedly said that education must never stop; that to be happy and successful to one's capacity one must continue study throughout life.

How much education will satisfy you, and help you most toward your objectives? There is no doubt that, by careful selection of subjects, everyone can reap great benefit from continued study. Whether the objective is a greater ability for service, a larger financial reward, a more interesting social life, or a richer background to train one's children, there are available to all, who will give spare time, valuable and attractive courses prepared especially for study at home.

Columbia University invites you to inquire about them, and to enroll for courses that seem suited to your needs

COLUMBIA UNIVERSITY

Offers Home Study Courses of University Grade in the Following Subjects:

Accounting	European History
Algebra	Fire Insurance
American Government	French
American History	Geometry
American Literature	German
Applied Grammar	Government
Astronomy	Grammar
Banking	Greek
Biblical Literature	Harmony
Biology	History
Botany	Investments
Business Administration	Italian
Business English	Juvenile Story Writing
Business Law	Latin
Business Mathematics	Library Service
Business Organization	Literature
Chemistry	Magazine Article Writing
Child Psychology	Marketing
Classics	Mathematics
Composition	Personnel Administration
Dramatic	Philosophy
English	Photoplay Composition
Various Languages	Physics
Lyric Poetry	Psychology
Contemporary Novel	Psychology in Business
Drafting	Public Speaking
Drama	Religion
Drawing and Painting	Secretarial Studies
Economics	Short Story Writing
Economic Geography	Slide Rule
English	Sociology
English Literature	Spanish, etc., etc.

IN this country we are in the midst of an adult education movement. University home study courses are one of the important factors in this progressive movement, for they offer expert guidance under educators qualified to direct.

Our courses have been prepared by our instructors to meet the special requirements of study at home. While all basic material essential to the full understanding of each subject is fully covered, sufficient elasticity is allowed to permit adaptation to the individual needs of the student. Everyone who enrolls for a Columbia course is personally taught by a member of the University teaching staff. Special arrangements can be made for group study.

The University will send on request full information about these home study courses. A coupon is printed below for your convenience. If you care to write a letter briefly outlining your educational interests our instructors may be able to offer helpful suggestions. Mention subjects which are of interest to you, even if they are not listed here, as additions to the courses offered are made from time to time.

HIGH SCHOOL AND COLLEGE PREPARATORY COURSES

COLUMBIA University Home Study Department has prepared courses covering the equivalent of four years of High School study. This complete High School or College Preparatory training is available to those who can not undertake class room work. We shall be glad to send you our special bulletin upon request.

COLUMBIA UNIVERSITY, University Extension —Home Study Department, New York, N. Y. Please send me full information about Columbia University Home Study Courses. I am interested in the following subject: Amer. Mag. 9-29

THE NEW KELVINATOR Four

The Record Price for Kelvinator Quality and Reliability

THOUSANDS of families for years have staunchly believed that there is no equal for Kelvinator reliability and quality in automatic electric refrigeration.

They have patiently waited until that reliability and quality would come to them at the most favorable price in Kelvinator history.

Today their waiting is ended. The new Kelvinator Four is the first Kelvinator ever to be marketed at anything like its price.

The new Kelvinator Four confers unprecedented benefits to health and economy upon every home which adopts it.

Traditional Kelvinator quality. The silent, reliable Kelvinator mechanism is located in cabinet case, Porcelain interior. Heavy Parkerized furniture steel cabinets. Proper cold maintained by automatic control. Automatic quick freezing of desserts, ice cubes. A constant reservoir of cold minimizes operating periods and running costs. Flexible rubber ice tray ejects ice cubes in a flash. Food capacity, including defrosting tray, 4.23 cubic feet, with 8.87 square feet of shelf area.

Food is kept at the scientifically correct cold of 40 to 50 degrees. It is better kept, therefore more appetizing, more healthful. Flavor is improved. Milk is kept pure and sweet. Greens are fresher, more crisp. Spoilage is eliminated and the family budget is conserved.

All this with the ultimate degree of automatic control and operation. The unvarying range of cold is automatically maintained day in and day out, regardless of changing temperatures inside and outside the home.

All Kelvinator dealers offer immediate installation on the basis you can afford, by means of Kelvinator's attractive ReDisCo monthly budget plan.

KELVINATOR CORPORATION, DETROIT, MICHIGAN
KELVINATOR OF CANADA, LIMITED, LONDON, ONT.
KELVINATOR LIMITED, LONDON, ENGLAND

We Endorse the National Food Preservation Campaign For September

edge of the pines. Smoke issued from the rude, outside stone chimney of the cabin. A man appeared, rifle in hand. Haverly let out a shrill whistle. Another man appeared, and he shouted a hoarse welcome.

"Wal, we're heah," announced Seth Haverly to Jim, as they came to a halt at the cabin. "I cain't say that you squealed much on the way. I reckon Jocelyn had you wrong when he said you was a dude tenderfoot. Or else he lied like a streak."

Seth was a thin, wiry young man, blond, with hazel eyes, clear as light, which certainly did not have any shifty quality. His beard was like fine, amber moss.

"No, Haverly. I'm not a squealer," replied Jim. "Am I to get down?"

"Shore. Pile off."

"Was Jocelyn in West Fork yesterday when I had a little set-to with Dunn?"

"Nope. But I was, an' I seen your little set-to. . . . Might I ask, Mr. Traft, what you'd call a *big* set-to?"

"Well, there'll be a pretty fair one when Curly Prentiss and the Diamond hole you fellows here," responded Jim cheerfully. "And a real one when Slinger Dunn meets Hack Jocelyn. I wouldn't be in Jocelyn's boots for a million."

"Huh! Wal, I kinda like you, Jim Traft, an' I reckon I did thet fust day at Limestone, when I rid into your camp with Slinger. Do you recollect?"

"Yes, I remember you, and that you seemed to have some sense."

"Wal, I used to. But I'm darned if I don't think it left me when I fell in with Jocelyn."

MEANWHILE, the horses were unsaddled, hobbled, and turned loose. And Jim had a chance to look over the men. Sam Haverly was also blond, almost red of hair and complexion, more sturdy than his brother, less lean of face and intelligent of eye. Hart Merriwell could not have been picked out of a group of cowboys for any distinct individuality. Boyd Flick was dark, small, and hobbled around in enormous chaps.

Jim had yet to hear the names of the two members of Haverly's outfit who had been keeping camp here in the park.

"Whar's our new boss?" one of them inquired, after greeting Seth, and his tone did not lack sarcasm.

"Matty, you can cut thet talk," replied Haverly. "Or I'm gonna get sore . . . Jocelyn stayed behind." And in succinct words he gave his questioner a few details of what had detained him.

"If you're hungry, come an' git it before I throw it out," called the other fellow from the cabin.

"Make yourself to home," said Haverly to Jim, leading him in. Then, "Wal, Traft, do I hawg-tie you or not?"

"I'm sure I can't read your mind. As a matter of fact, Haverly, I don't think you've got much gray matter, or you'd never have let Jocelyn persuade you into this deal."

Haverly took that retort gravely.

"Wal, Mr. Jim, you 'pear to be a straight-talkin' fellar. You can set around heah in comfort. But if you run we'll wing you. Thet's my order. Savvy?"

"Sure. And much obliged. Molly was right when she said you were a pretty decent fellow—it was only bad company that was making an outlaw of you."

FREE—a priceless tooth paste formula *to try*

Made to remove the dangerous film that forms on teeth—that stains and darkens teeth and is the chief source of decay and pyorrhea. Urged widely by dentists. Will you accept a free supply to try?

MAY we send you, free, enough Pepsodent to give far greater brilliance to your smile? Enough to show you how by removing dingy film teeth are made whiter, and serious tooth and gum disorders are combated at the source?

Over half of the people who brush their teeth know how utterly different Pepsodent is from other methods. If you do not, please return the coupon at once.

What this film is

You can feel film with your tongue—a slippery, viscous coating. Food and smoking stain that film. Germs by the millions breed in it . . . germs of many different kinds.

Film hardens into tartar. And germs with tartar are the chief cause of pyorrhea. Film is also the basis of decay.

The special way to remove it

Ordinary brushing ways are not successful in removing film from teeth. You must employ the scientific method that first curdles film so that light brushing can easily remove it in perfect safety to enamel.

You marvel at the natural whiteness of children's teeth. Yours may once again regain that color. May take on a brilliance that is actually amazing. Lustreless, dull teeth are known to be unnatural.

Test FREE for 10 days

Perhaps unattractive teeth have cost you too much in society and business. You must not delay another day in testing this method. Get a full-size tube wherever dentifrices are sold, or send coupon at right to nearest address for your free 10-day tube.

Sillimanite Is

(Nature's Finest Insulator)

Your Guarantee of Champion's Superior Performance

THE greatest single factor in spark plug efficiency is the insulator. For on it ultimately depends the maintenance of peak efficiency, irrespective of operating speeds, temperatures and pressures. If the insulator is of inferior quality, engine performance and economy are greatly impaired. ¶ Champion sillimanite is a rare mineral used exclusively in Champion Spark Plugs. ¶ Possessed of a natural high resistance to electric, heat, and mechanical shock, it is ideally adapted to withstand the ravages of combustion, intense pressures and temperatures of modern engines. Sillimanite insures the motorist of the full, even production of power which he expects from modern engines. ¶ With such obvious superiorities Champion Spark Plugs excel and outsell throughout the world.

CHAMPION

SPARK PLUGS

TOLEDO, OHIO . WINDSOR, ONT.

"Wal, so Molly said thet!" Seth ejaculated, with a queer look on his face. And he fell into a profound revery.

Sam Haverly spoke up. "Matty, you ain't heard aboot Jocelyn shootin' Andy Stoneham last night?"

"Andy! Fer heaven's sake! Thet good-natured clerk of Enoch's?" exclaimed Matty, aghast.

"Fellows," broke in Jim, "Hack Jocelyn is too deep for you. He had the Diamond standing on its head. Even after I saw through him I had a job convincing some of them."

"S'pose you give us a hunch aboot this deal," suggested Seth Haverly.

"I will," declared Jim, "provided you agree to what I asked."

Seth turned to Matty, who evidently was an important member of the outfit. "Traft says he'll advise his uncle to pay a ransom, providin' it's not out of all reason, an' thet Jocelyn don't git no share."

"Strikes me hard," said Matty.

Jim had a wild idea. "Haverly, would you trust *me* to get the ransom for you?"

That rendered the eager group speechless. Before Haverly regained his voice, the cook, who had gone outside to empty a pan, whistled low and sharp. Seth strode out, to be followed by the others.

"Jocelyn comin' down out of the woods—ridin' double," said the cook, pointing.

Jim's eyes roved and strained, at last to espy a horse coming under the pines. It was some moments before he made out Molly clearly. She was riding astride, behind Jocelyn's saddle, and appeared to sit there easily. Her dark head grew distinct—then her face—then her eyes. Jim wondered how he would ever have the courage to look into them. A long night ride through the wild forest with that vicious cowboy!

Jocelyn had a gray, corded face—eyes like gimlets. He threw the bridle and, hands on hips, regarded the silent group.

"Missed the trail an' was lost till daylight," he explained.

Seth Haverly took a step out in front of his comrades. He was slow, guarded, but not afraid.

"So, Jocelyn, you kidnaped Molly?" he queried harshly.

"Nope. She come willin'. Ask her yourself."

"MOLLY, is he tellin' me straight? Did you come up heah of your own accord?" demanded Haverly.

"Yes, I did, Seth," replied Molly calmly.

Jim dragged himself forward, and there might have been a chain with iron balls attached to his legs. Yet something sustained him.

Molly's face was wan. The big, dark eyes gazed straight down into Jim's. He read in them love, hope, meaning. They told him all he wanted to know.

"Did you come with Jocelyn willingly?"

"Reckon so, Jim. But I didn't have a lot of choice," drawled Molly, and from behind Jocelyn's shoulder she gave him a deep, warning look.

Jocelyn laughed sardonically. "My word goes a long way in this heah outfit!"

"You fetched her ag'in' my order," declared Seth Haverly, and turning to Molly: "Get down, gurl. You shore look fagged. Fletch will fix you somethin' to eat. An' I'll make a bed for you."

He picked up an ax and strode off toward a clump of spruce. Molly slid down and limped to a seat under the extension.

Jim's gaze followed her devouringly. Happening then to shift it to Jocelyn, he was struck by that worthy's deep-set eyes, smoldering fire. Jim read intuitively that his very life was in peril at that moment. Sitting down, back to a log, he studied the ground and tried to catch at whirling thoughts.

Seth returned, carrying a huge bundle of spruce boughs, which he took into the back of the cabin, where a stall-like partition hid a corner. Evidently, behind this he made a bed, for he came out to get a blanket. After which task he reappeared, to approach Molly.

"You can sleep back there an' be out of the way," he said, and Molly disappeared behind the partition.

Finally Jocelyn dismounted and, uncinching the wet horse, he threw saddle and blankets, unbuckled the bridle, and let him go.

"I'll go in an' eat somethin'," he said. "An' then we'll talk."

PRESENTLY he appeared again in the doorway and, giving his belt a hitch, he stalked out under the overhang of the roof, a strong figure, sure of himself and his resourcefulness. Among these men, anyway, he had no superior, and knew it.

"What's on your mind, Seth?" he queried.

"Shore, there's a plenty, Jocelyn, an' you're part of it," replied Haverly gruffly.

"Ahuh. Mr. Traft's been talkin' to you. The man who gets your ear last has you on his side. Come away from these crawfish of yours, an' we'll settle this deal pronto."

"Nope. Sam an' the rest of my outfit air goin' to heah every word I say."

Jocelyn rolled and lighted a cigarette. He leaned against the log post of the cabin and smoked, his hard eyes studying every one of them.

Seth Haverly, after a pause, went on speaking: "I'm sore aboot your shootin' Andy Stoneham."

"Thet's none of your bizness," snapped Jocelyn.

"But it is. You're in my outfit now. We'll all be held part responsible for thet. I reckon it don't make a lot of difference—if we get away with this ransom deal. But your stealin' Molly Dunn from her home—thet'll let us out."

"Haverly, I didn't steal her. You've got ears, man. You heerd her say she came willin'. She's goin' away with me to marry me."

Haverly got up, red in the face.

"It's none of my mix, if Molly means to marry you. But it looks darn queer to me. I *know* thet gurl. She wouldn't double-cross a Cibeque dog. . . . You're playin' a purty high hand, Jocelyn. Your murderin' Stoneham an' runnin' off with Molly—that puts a bad complexion on the whole deal. I've a mind to back out of it."

"You will like thunder!" asserted Jocelyn. "You'll go through on this deal or you'll have me to square up with."

The scarcely veiled threat had its solid effect upon Haverly. "Wal, we ain't got a lot of time to palaver," he said. "Curly Prentiss is on Traft's trail, you can bet. The West Forkers air goin' to give him a

THE NATIONAL AMATEUR MEET . . . PEBBLE BEACH

AT SUCH pinnacle sport events as The National Amateur Golf Championship at Pebble Beach, California, Studebaker straight eights and sixes throng the motor-park. Men and women accustomed to far costlier cars have turned by thousands to Studebaker, Builder of Champions. They have been drawn, not only by Studebaker performance, which won and holds *every* official stock car speed and endurance record, but also by the lively, youthful style, the suave and pulseless power, and the unique restfulness which Studebaker gives. Finding such spirit, smartness and travel ease, in cars so moderately priced, motoring America has rewarded Studebaker with world leadership in the sale of eight cylinder cars. Illustrated is The Commander Eight Brougham for Five . . . $1675 at the factory, including six wire wheels and trunk. Bumpers and spare tires extra.

FOR MANY DIFFERENT REASONS
YOU'LL AGREE

"There's a Reason"

BUT IT'S MOSTLY A MATTER OF TASTE

Grape-Nuts makes a small breakfast a safe one. Served with whole milk or cream, it provides more varied nourishment than many a meal.

THAT'S A REASON

Wheat and barley. These meaty grains — plump to bursting with vital elements that bring health and strength — are blended in Grape-Nuts.

THAT'S A REASON

Crisp, crunchy Grape-Nuts encourages proper chewing, thus giving teeth and gums exercise they need.

THAT'S A REASON

Irresistible, tempting *flavor*—there's the chief reason why millions choose Grape-Nuts daily. Wonderful —this nut-like taste of wholesome grain, so delicately touched with the *natural* sweetness of pure malt sugar.

THAT'S A REASON

Grape-Nuts is a real "energy" food. It gives needed nourishment in a form the body can easily digest.

THAT'S A REASON

hunch. An' wurst, Slinger Dunn has got to be considered. Shore as thunder Slinger Dunn is on your trail right this minnit. He knows every hole in these hills, an' he's shore a hound on a scent."

Suddenly Jocelyn took hold of Haverly and dragged him out of earshot of the listeners. There in plain sight under a pine they argued, with Haverly growing less and less protesting. Finally they reached some kind of agreement and returned to the cabin.

"Sam, we've made the best of a bad bargain," announced Seth. "The hitch was Molly. I jest don't care to be around if Slinger happens along. Wal, Jocelyn has agreed to take the gurl an' go to the haid of the draw up heah, an' stay hid in thet trapper's cabin at Turkey Spring. A rifle shot will warn him to rustle. . . . As fer the deal—we'll send Boyd to Flag pronto with the letter to old Traft. Boyd's got the fastest hoss, an' allowin' half a day to get the money, he can make it in less'n two days. What you say?"

"Suits me," said Sam laconically.

"Wal, it ain't so slick," added Matty. "Tomorrer is Sunday an' no bank is open. Suppose Boyd don't find old Traft at home?"

Jocelyn waved this aside as if unworthy of consideration. "It's the letter thet'll fetch results. Blodgett or any of Traft's friends would dig up ten thousand."

"Oh, will they?" queried Matty dubiously. "I'll write the letter. It'll be short an' sweet. It'll say if thet money isn't heah with Boyd in twenty-four hours, we'll kill Jim Traft an' hang his body over his drift fence!"

JOCELYN opened a saddlebag, to take out a small packet, which he laid on the ground. Then, as if it was an afterthought, he lifted out a large flask, which he shook, with satisfaction. Placing it back, he next removed a bottle half full of dark-red liquor. He drank from it. And then he slipped that in his hip pocket.

"You're a bright fellar, Seth," he said, "but you ain't as bright as I am. My idee is to make Traft write this letter to his uncle."

"Shucks. I thought of thet long ago. An' fer thet matter he offered to do it. But he made the offer providin' I didn't ask fer too much ransom, an' thet you wasn't to hev no share."

"Oh! The hell you say!" returned Jocelyn, with a dark glance at Jim. Then he opened the packet and laid writing paper, pen, and ink on the woodpile. "Fetch a box."

One of the party procured a box from inside. "Now, Mr. Jim Traft, I reckon you'll put one of your accomplishments to good use," declared Jocelyn.

"Wait," said Haverly. "Jocelyn, I'll agree aboot sendin' fer the money. But I'm daid set ag'in your double-crossin' old Traft. I weaken on two points of your deal."

"An' what's them?"

"Layin' the blame on Slinger Dunn—"

"Too late. I've already fixed thet in West Fork. Never mind the other point."

Jim had heard enough to divine Jocelyn's diabolical plot. Whether that ransom was paid or not, he realized that Jocelyn meant to decorate the drift fence with his dead body, like a scarecrow hung up in a cornfield.

"You already fixed the blame—on Slinger!" ejaculated Haverly.

"Shore did. An' nobody but you fellars can prove *he* didn't shoot thet store clerk. I've no time to tell you how I put the job up on Dunn. But it's *done*. If he has started on our trail, he'll never be able to clear himself. Thet's all."

At this juncture Jim, whose eyes kept continually traveling back to the corner of the cabin, made the startling discovery that Molly was peeping round the corner of the stall. He tried to move round where he could warn her to be careful.

"Somebody tie up this fellar," ordered Jocelyn, who apparently could see in all directions at once. "He's snookin' around. Reckon he'd like to get back there with my ladylove."

IT WAS just possible for Jim to resist leaping at Jocelyn, who he knew would shoot him upon the slightest excuse.

"Turn 'round an' lean ag'in' the post," Hack commanded. "An' put your hands behind you." With that he proceeded to bind Jim's hands and feet. Then he kicked Jim's feet from under him, letting him down. It so happened that Jim slid round in falling, and there he sat, back to the post, helpless and devoured by wrath.

Whereupon Jocelyn drew his bottle from his hip pocket and took a drink.

"To celebrate the day, Mr. Traft," he said. "An' when I drink the rest of this I'll set the bottle on your head an' treat you to some real shootin'."

Repairing to the box, he sat down again before the writing materials. When he had finished the letter he read it over with evident satisfaction.

Seth Haverly held out a lean hand. "I'm askin' to see what you writ."

Imperturbably Jocelyn sealed the letter. "Reckon you couldn't read it, if I let you," said Jocelyn.

"You're demandin' more'n we agreed on," shouted Haverly, beside himself with rage.

"I shore am. Ten thousand wouldn't begin to do me. You're a fool, Haverly. Old Traft will *pay* to save his nevvy's precious life."

"Yes, an' he'll pay all in vain," snarled Haverly, white to the lips.

Jocelyn gave little heed to him, and turning to Flick, he presented the letter. "Get this in Traft's hands today, or Blodgett's. An' if they ain't handy, go to Tobin, at the bank. Any one of them will pile out the greenbacks. An' you ride back, pronto."

"I ain't stuck on the job," declared Flick brusquely, rising to his feet. "I'll do my darnedest—but I'm tellin' you straight: Jocelyn has busted the Cibeque!"

Jocelyn stood up, to tilt his bottle and drain the contents. Then, stalking over to Jim, he pulled him up to an erect sitting posture, rapped his head against the post, and set the bottle upon it.

"There!" he exclaimed with elation. Drawing his gun, he stepped off ten long paces and turned.

Jim saw that the hammer of the gun was up. Next instant he looked into the small, black, tubelike barrel of the quivering weapon. And that deadly little hole suddenly belched fire. Particles of shattered glass fell on his head and shoulders.

SIMONIZ
Your Car

MAKES THE FINISH LAST LONGER

And You Will Get More on the "Trade-In"

WHETHER you drive ten or fifty thousand miles, a Simonized car brings more when "traded in," for after years it still looks new and beautiful.

Simonizing is the modern way of caring for all fine motor car finishes, including Duco and lacquers. It protects the finish, makes it last longer and keeps the colors from fading.

Anyone can Simoniz a car . . . it's fun. Like magic a little Simoniz Kleener on a cloth restores the finish to its former beauty. Then Simoniz provides that hard, beautiful surface of protection.

Insist on Simoniz—and your car will always look new and beautiful.

Writing

a source of income that many people neglect

MANY people who *should* be writing never even try it because they just can't picture themselves making "big money." They are so awe-struck by the fabulous stories about millionaire authors that they overlook the fact that $25, $50 and $100 or more can often be earned for material that takes little time to write—stories, articles on home or business management, sports, travels, recipes, etc.—things that can be easily and naturally written, in spare time.

Mrs. Theodora R. Ellsworth, 1492 Locust St., Dubuque, Iowa, is but one of many men and women trained by the Newspaper Institute of America to make their gift for writing pay prompt dividends. She writes:

"May I step out of the routine of the course long enough to tell you that I received today a cheque from the American Magazine for an article written for their Interesting People Department. The article was written in interview form. This will be my first entrance into the big-time monthlies."

Another of our student members who tried is Mr. C. F. Rothenberger, 301-36th St., Altoona, Pa. He writes:

"Notwithstanding the many corrections to my stories which I am getting in the course of my studies with the N. I. A., I succeeded in selling my first article to the Philadelphia Sunday Inquirer of November 18th, 1928. So I am satisfied that I am making a little progress at least, for which I thank you."

You, too, can learn to write! How? By WRITING!

The Newspaper Institute of America offers an intimate course in practical writing—a course as free from academic "isms" and "ologies" as a newspaper office—a course as *modern* as the latest edition of this morning's paper.

Week by week, you receive actual assignments—just as if you were right at work on a great metropolitan daily. Your writing is *individually* corrected and constructively criticized. A group of men with 182 years of newspaper experience behind them are responsible for this instruction. Under such sympathetic guidance, you will find that (instead of vainly trying to copy some one else's writing tricks) you are rapidly developing your own distinctive, self-flavored style. You are learning to write by writing—acquiring the same experience to which nearly all well-known writers of short-stories, novels, magazine articles, etc., attribute their success.

How you start

To insure prospective student-members against wasting their time and money, we have prepared a unique Writing Aptitude Test. This tells you whether you possess the fundamental qualities necessary to successful writing—acute observation, dramatic instinct, creative imagination, etc. You'll enjoy this test. Newspaper Institute of America, 1776 Broadway, New York.

Newspaper Institute of America
1776 Broadway, New York

Send me, without cost or obligation, your *Writing Aptitude Test* and further information about writing for profit, as promised in American Magazine—September.

91269

When Jocelyn leveled the gun again Jim's consciousness seemed unclamped. Jocelyn was aiming a little lower this time. Back of the gun gleamed the eyes of a cat playing with a mouse.

Then came a rush and patter of moccasined feet. Molly flashed out. She struck up the gun so violently that it went off harmlessly in the air.

"Hack Jocelyn, put away that gun!" commanded Molly furiously.

"Say, little lady, you cut quite a figger in my eyes, but you ain't givin' orders yet," drawled Jocelyn.

"Put it away—or I'll—"

Seth stepped out unsteadily. "Molly, you better stay back. Honest, gurl. . . . Hack was only foolin'. He ain't really goin' to hurt Traft."

"You're a liar, Seth," snapped Molly. "You know better. An' you're a lot more than a liar. Flick was right, only the Cibeque *is* busted. You let Jocelyn drive Slinger out an' now you're—"

"Shet up," ordered Jocelyn, sheathing his gun. "Molly, you're darn pretty when you're riled, but you're goin' too far. Shet your mouth, or I'll slap it good an' hard."

"You *dare* touch me!" she blazed, with such passion that it affected even Jocelyn.

Jim, loving Molly so deeply, and feeling her emotion so tremendously, had an intuition of a change in her that was not wholly explained by her fears for him.

"Wal, I'll touch you a plenty an' pronto," replied Jocelyn.

And that brought Jim's gaze back to the leader in this woodland drama. He was in time to note Jocelyn as he espied the ring on Molly's left hand.

"Where'd you get thet ring?" demanded Jocelyn, suddenly hot.

"None of your mix, Hack Jocelyn," retorted Molly, and she put her hands behind her back. Then Jim imagined he saw her look over Jocelyn or behind him.

Jim peered across the grassy open to the wooded slope. On that side the pines were scattered, and on the instant Jim sighted the flash of a dark form vanishing behind a tree trunk.

"You two-faced hussy!" ejaculated Jocelyn, dark with jealous wrath. "Stick out your hand. . . . Lemme see."

Molly coolly brought her hand around and extended it. "It's my engagement ring," she said.

"Engagement!" echoed Jocelyn. "Molly, who gave you thet ring?"

"Mr. James Traft," replied Molly, blushing deeply.

Jocelyn bellowed like a bull.

"Since when? How long you bin engaged to this — — tenderfoot?"

"I reckon—since the night of the rodeo dance in Flag."

PERHAPS nothing else could have shaken Jocelyn as this mortal blow to his vanity. Perhaps Molly was working on that very weakness. If so, she was taking desperate chances and she knew it.

As Jocelyn whipped up his gun, Molly stepped in front of him, to shield Jim. Slowly Jocelyn backed her toward where Jim sat, his head against the post, still holding the broken whisky bottle.

"Oh, Seth Haverly, but you're a rotten coward!" cried Molly. "You leave it for a girl to face this devil."

"But, Molly, devil or not, I'm in a deal with him," expostulated Seth, as if stung.

"Deal, yes—a dirtier deal than you know. He's—"

"Molly Dunn," cut in Jocelyn, "shet your jaw—or it'll be too late."

"Too late! Do you think I'd believe you again? . . . You can kill me an' Jim—an' this yellow bunch, for all I care. But, by heaven, I'm givin' you away."

Jocelyn made a fierce reach for her. But he did not quite lose himself in the passion of the moment. He had to stand clear, to be free, to watch the Haverlys. So he dared not close in with her.

"I'm warnin' you onct more!"

Molly must have kept her burning eyes on him, at bay, while she denounced him to the Cibeque.

"Seth, *he* cut the drift fence, even while he was workin' on the Diamond. An' after. He aimed to get you an' Slinger blamed for that. He's double-crossed you as he did Jim. He means to take *all* the ransom money . . . to murder Jim an' lay that onto you. . . . He got me up heah—by swearin' he'd save Jim's life if —if I'd give in to him. I agreed. An' then he kept at me—all night long—an' once I had—to fight him. But I—I wouldn't give in—"

SUDDENLY the gun banged. Jim felt the bottle blown off his head. Molly screamed.

"Right under your arm, Molly," said Jocelyn. "How's thet fer shootin'?" And he began to step from one side to the other, the gun extended about even with his hip.

Molly did not back away from his formidable advance. She blocked his every move, interposing her body between the gun and Jim. Then, like a cat she pounced upon Jocelyn's hand, shoving it out of line. Bang! The bullet scattered dust and gravel over Jim. Both her hands and then her teeth were locked on Jocelyn's wrist.

"Leggo!" he yelled lustily, wrestling to get free. But he could not free himself. With left hand he lifted Molly by her hair. He swung her clear of the ground, her weight nothing to his powerful arms. But he could not shake her grip.

"Bite, — — —!" he cursed. And lifting her, he tried to get the gun on Jim. But as he pulled the trigger, she swung desperately, spoiling his aim. The gun roared, and a bullet tore splinters out of the post beside Jim's ear and whirred away into the forest. The shock of this explosion, right at her ear, appeared to weaken Molly, for she let go with her teeth, and her weight sagged on Jocelyn's arm. He shifted his left hand from her hair to her neck, where his long fingers shut like a vise. His malignant cry, hoarse and exultant, attested to the victory he saw.

Then Jim's distended sight caught a shadow of something passing him. "*Hey, cow-puncher!*" rang out the voice of Slinger Dunn.

Jocelyn jerked up his head, and a fleeting consternation showed on his convulsed face. He let go of Molly's neck. Like a whipcord Jocelyn's gun leaped. But as it leaped, Dunn's crashed. Jocelyn appeared to be arrested. Then, shot through the heart, he staggered forward, with an awful look that set blankly, and plunged, step by halting step, to fall clear outside of the cabin.

(*To be concluded*)

40% MORE AIR·COOLED POWER!

Up hills like an airplane's zoom.. Flashing pick-up at fifty—power to pass in a pinch! Speedy get-away in second—as quiet as high. And the light, bright, sparkling performance, characteristic of its air-cooled motor—power plant of that newer generation that travels the pathways of the skies—

These are high-spots of today's Franklin—a Franklin with 40% more power than any previous model!

To appreciate this new-day motoring sensation you must drive this car yourself.

Its confident, *smooth* flow of power, its floating riding qualities and its sure-footedness will give you an entirely new sense of road mastery.

You will understand instinctively why Franklin today holds all the major American road records. If you have flown, you will instantly recognize the "airplane feel" of the Franklin.

The critical eye finds a sense of fitness in the smooth, sleek lines of the Franklin—suggestive of its essentially youthful performance. Those that seek the ultimate in motoring comfort appreciate the extra roominess of Franklin bodies—proportionately greater than any other car. And new thousands can now enjoy the advantages of air-cooled performance and fine car ownership through lower Franklin prices.

For a new enthusiasm in motoring, by all means drive this Franklin!

Will You Be Clerk or Manager Ten Years from Now?

SURELY, this could never happen to *me*," you say—"that I should be sitting at the same desk—be doing the same work, *for ten straight years!*"

But wait a minute—

Exactly the same thing is happening to thousands upon thousands of men throughout the country. It has probably happened to men right in the company you now are working for. *And—unless you deliberately fit yourself for a better job—there is a very good chance that it will happen to you!*

Unthinkable? That's what R. M. Whitney, of Rochester, N. Y., said to himself. Yet lack of training kept him slaving away at low wages for more than twenty years . . .

Trebled His Salary in Three Years

—For more than twenty years, till finally, at the age of 47, *and still receiving only thirty dollars a week*, R. M. Whitney resolved to be a bookkeeper no longer. He enrolled with LaSalle for training in Higher Accountancy, and completed the course. Almost immediately came the offer of a bigger job.

Less than three years later, the Davenport Machine Tool Company—*the very company he had worked for as a clerk*—invited him to come back. He returned as Auditor, at a salary-increase of better than 300 per cent.

Today, he is Treasurer of this great company; and in a letter to LaSalle, after commenting on the opportunities LaSalle affords to men in their forties or early fifties, he adds, "And for the *young* man, who is just getting a foothold in the business world, LaSalle Extension University training is the most profitable investment he could make."

Says Good-bye to Clerkship—Now Heads Successful Firm

We have told you about a man who *waited*—at a cost to himself of probably not less than $100,000. Now consider the experience of a younger man—G. Roy Eshelman, of Decatur, Illinois—

Eshelman was occupying a subordinate position in the purchasing department of a manufacturing concern—salary $16 a week. Visualizing the opportunities for skilled accountants, he enrolled with LaSalle for training in Higher Accountancy.

"Through this training," writes Mr. Eshelman, "I became interested in the Auditing Department and often remained after working hours watching the Auditor at his work. Observing my interest, he soon placed me in his department at a 50% increase in pay, and as I progressed with my LaSalle work, I was shortly rewarded with an additional 40% increase.

"My studies rapidly equipped me to strike out for myself, and at present I have an extensive practice as a Public Accountant, employing other accountants. It is sufficient to say that my present income is *many, many times greater than when I enrolled.*"

Send For These Two Books and Start Toward Real Success

Need you hear more before you investigate the opportunities in Accountancy? Shall we tell you about Hyde—or Gray—or McDuffie—all of them commanding incomes better than $10,000 a year *and all of them still young men?*

Or will you face the problem of your future NOW—and send to LaSalle and get further facts and particulars?

Without cost or obligation, the coupon will bring you two books—one a 64-page book entitled, "Accountancy, the Profession that Pays;" the other, "Ten Years' Promotion in One."

How about those next ten years—will you wait, or will you START TODAY to realize the opportunities that lie ahead of you through sound and practical home-study business training?

Measure your grit and ambition by what you do with this coupon—NOW.

One Bad Turn Deserves Another

(*Continued from page 37*)

good mood for a man and wife to take on a long trip. If I can get Mrs. Phillips so disgusted that she will not speak to me, I generally can get along quite well on a motor trip, long or short.

At Laurel I made another wrong turn and was lost for some time, the wife caustically remarking that it was a wonder I hadn't driven onto the race track and made a few loops of it before discovering my error. Reaching Washington, I got lost again, and no matter where I turned, I kept winding up at the Capitol.

"What's the idea?" asked my wife. "Are you lobbying for something?"

"If you keep rattling me, I'll be here until the Democrats get into power again," I replied.

Leaving Washington through the help of six traffic cops, a motorcycle policeman, four letter carriers, a few dozen street cleaners, and countless innocent bystanders, I again got mixed up and started toward Gettysburg.

The trip from Washington to Fredericksburg I made without any trouble, as there is but one paved road, anyhow, and there is a tablet every few feet marking the spot where Generals Grant, Lee, Hooker, Burnside, Jubal Early, Stonewall Jackson, or some other Civil War hero did something in a big way.

This part of the journey was not without its back-seat reverberations, however, as I wanted to drive slow and read the tablets, while Mrs. Phillips was for stepping on the gas and getting out of the war zone.

BEFORE starting the trip, Mrs. Phillips had promised to take turns driving and, as she had made no offer to take the wheel so far, I suggested at Richmond that she do her bit. This led to another argument, as she contended I should ask her to drive in the country and not in the cities.

"Besides," she insisted, "if I am driving I can't look for direction signs too, and you would be no help to me in that respect. Wait until we get out of the city."

During this repartee I had passed the street at which I should have turned into the route out of Richmond to Petersburg and had covered about three miles before realizing it.

"Why didn't you watch for the sign?" she demanded.

"Why didn't you?" I retorted.

"You're driving the car, aren't you?"

"Only by ear," I countered.

"Goodness, but you have a mean disposition!"

"Ha!"

"Don't you 'ha' me. I'm sorry we ever started on this trip."

"You're no sorrier than I am. If hadn't been for the dog, we'd have been on a train."

"There you go blaming it on the poor dog!"

"Don't talk about the poor dog. He the only member of this party enjoying the ride."

"If he knew how far out of the way you were driving, he would be miserable, too

"I convinced her there was no safer way to invest her money"

GENE C. GOULD, President of the San Juan County Bank, Friday Harbor, Washington, tells how he helped a widow to financial independence.

"Mrs. B . . . .'s case was typical.

"MRS. B . . .'s case was typical," said Mr. Gould. "She was a widow. We all know that widows who have been left sums of money in life insurance are particularly good prey for fake stock promoters and high pressure speculation men.

"Mrs. B . . . came to me one day and said: 'Mr. Gould, how can I safely invest this $8,000 from my husband's life insurance? I can live on my present earnings, and I want to invest this surplus for the future.'

"I immediately advised Mrs. B . . . to put her $8,000 in a group of sound bonds, which I selected for her. I convinced her that there was no safer way to invest her money.

"That was twenty years ago," Mr. Gould observed. "Today, Mrs. B . . . hasn't a position—she doesn't need one. By careful investment of the principal and consistent reinvestment of the interest from her $8,000, Mrs. B . . . has a modest competence, and is financially independent.

"I have been pleased to advise many widows, in just such circumstances," Mr. Gould concluded, "and have shown them how to invest their life insurance money in sound, safe securities."

Mr. Gene C. Gould, President of the San Juan County Bank, Friday Harbor, Wash., is a banker held in high esteem by his community. His father was President of the San Juan County Bank before him.

. . .

Throughout America, in communities ranging from large metropolitan centers to small trading centers, bankers who have the confidence of their communities will invariably be found the most ardent advocates of safety as the first, and most important, principle for setting up a serious program of investing. Throughout America, too, bankers favorably know Straus offerings and choose from them for recommendation to investors and for their own reserves.

From bankers everywhere, investors seriously interested in finding conservative outlets for their funds, can get sound and sympathetic advice. From a banker, as from a high grade investment house, the investor can learn how much he can reasonably expect to get, in income, from bonds that have the required degree of safety.

The banker, or investment banker, also, can advise an investor how his investment program can be further fortified by judicious diversification among seasoned issues in widely separated fields—municipal, railroad, industrial, public utility, real estate, and foreign bonds.

Indeed, from the offerings of S. W. Straus & Co., in all these groups of securities, thousands of investors have made their selections, many of them exclusively, for over twenty years and more.

As a help to all who are interested in studying the principles of sound investment, S. W. Straus & Co. has prepared an interesting, easy-to-understand booklet, "How to Invest Money." Every person seriously concerned in safeguarding his future should own a copy of this booklet. It will be sent without charge. Write for Booklet I-1021 or fill in the coupon below.

"If you don't like my driving, why not take the wheel? It's your turn, anyhow."

"I'm too nervous."

"How did you get nervous? I'm the one to feel the strain."

"Your driving would make anybody nervous."

This sort of thing helped to pass the time until we reached Petersburg, the scene of another battle.

Once out of the city limits and on the road, Mrs. Phillips took the wheel, but this didn't prove any happier, as her driving made me creepy and I was always expecting her to hit a trolley car or ice wagon. Once she actually did go around a corner on two wheels, causing a colored man in an ox cart to turn white.

"What's the idea?" I shouted, grabbing the wheel.

"The brakes don't work," she replied.

"They don't work of their own accord," I agreed. "You have to step on them. If you had struck that ox cart, you would have hit so hard you would have put a backspin on the ox."

"You've got me all unstrung with your faultfinding. I just won't drive any more just now."

Ultimately, we wound up at Miami.

The dog seemed well and strong and in good humor, but the same could not be said for Mrs. Phillips and me. We had covered 1,500 miles, much of the time having been spent in intensive debate whether we were on the right road, whether I had enough gas, why I wasn't more careful crossing railroad tracks, and whether it wasn't time to stop and take the dog out for a little exercise again.

"Well," I said in the hotel at Miami, "whoever thought when we started from Seventy-second Street, New York, that we would drive all the way here?"

"Now that it's over it wasn't so terrible," said the wife.

"But I wouldn't drive back home again for a million," I declared.

"Nor I," she agreed. "We'd have to be crazy to do it."

"We'll stay here a few weeks, motor back to Jacksonville, ship the car back on the boat and we'll go home by train," I said.

"That's the only way," said Mrs. Phillips. "Penny won't like the baggage car, but he will have to stand it. I wouldn't go through an auto trip like that again for anything."

Consequently, I arranged to ship the car back on the Clyde Line, and bought railroad tickets and a compartment. Our train was to leave Wednesday night.

TUESDAY morning at breakfast Mrs. Phillips remarked, "I'm terribly afraid Penny will have a miserable time on the train."

I sensed something coming and waited.

"We've got two days to wait around for the train, haven't we?" she sighed.

"We have."

"Isn't it sort of foolish?"

"How so?"

"Well, it will cost us a lot of money for railroad fares and for shipping the car, when we could drive home, you know."

"Drive home!" I repeated, in astonishment.

"Yes," she said, "we could get started ahead of time; we'd get home before the train and, after all, the drive down wasn't so awful. Penny loved it."

"It was bad enough, with all your back-seat driving."

"Let's motor back. I'll drive half the way and never give any back-seat advice."

"What, never?"

"Well, hardly ever."

"You said we'd have to be crazy to drive back."

"Well, maybe we are. But the dog is still in his right mind and he doesn't like baggage cars."

And, believe it or not, we drove back to New York.

My percentage of wrong forks on the return was lowered materially. I wasn't off the right route more than half the time. The exasperating feature of it all was that I didn't really get completely lost. However, until I came out of the Holland Tunnel onto Manhattan Island again after a month's absence, I found the bright lights, the rush of traffic, and the maze of streets so bewildering that I had to ask a policeman how to get to Seventh Avenue.

"You're in it," he said.

"Tst! Tst! I never saw a man like you for getting lost," said Mrs. Phillips.

"Aw, keep still, you big . . ."

"Big what?" she demanded.

"You big back-seat driver," I snapped.

IT'S curious how a long trip like that will get into one's blood. We got home Thursday night at six o'clock, and I went back to the office Friday morning I had been traveling in an automobile so steadily, however, that I had difficulty settling down at a desk. I missed trees, gasoline pumps, telegraph poles, bridge abutments, billboards, salad signs, hair oil posters, and miscellaneous scenery whizzing past my ears. I missed the bumps, the sudden turns, the ruts, and the honking of flivver drivers signaling me to move over and let a good car pass.

Most of all I missed the back-seat driving.

From eight A. M. until noon—four hours without a criticism!

It was too much.

I craved relief.

After driving a car steadily for four days without earlaps, a man shouldn't be asked to give up driving all at once. He has to taper off. By two o'clock I could stand it no longer and reached Mrs. Phillips on the phone.

"Get your things on," I said, "and have the dog ready."

"What for?" she asked.

"A short auto ride. I find I can't lay off driving so abruptly."

"Isn't that strange," she replied, "I was just sitting here feeling the same way about it. I know a road that has no signs on it and is terribly confusing. You will be sure to go wrong on it and I can have a lovely time telling you about the right fork."

And so it came to pass. Inside of three or four days I found I could stay in the office all day and not yearn for scenery in one-hundred-mile strips.

Since the Florida trip we've driven to Maine and to Canada. This fall we expect to take a trip to the Pacific coast. Three thousand miles. Phooey! It's like crossing the street!

P S.—Of course, the dog is going too.

These VITAL FEATURES .. make a car truly modern

and WHIPPET IS THE *ONLY* LOW-PRICED SIX THAT HAS THEM *ALL!*

7-BEARING CRANKSHAFT
EXTRA LONG WHEELBASE
FULL FORCE-FEED LUBRICATION
SILENT TIMING CHAIN
INVAR-STRUT PISTONS
"FINGER-TIP CONTROL"
BIG 4-WHEEL BRAKES

THE experience and progress of twenty-two years of building quality motor cars have entered into the construction of the new Superior Whippet Six—the Six that is giving thousands of owners an advanced idea of automobile value. In addition to being the only inexpensive Six with *all* the fundamental advantages listed at the left, the new Superior Whippet is also stronger and safer, having more frame cross members and a larger braking area than any of its competitors. The new Superior Whippet Four also embodies features not found in other cars of its price class. Both the Whippet Four and Six are notable for outstanding beauty, larger bodies, more speed and power, and economical operation.
